Johann Bernard Bach (*41*) (*b* Ohrdruf, 24 Nov 1700; *d* Ohrdruf, 12 June 1743). Son of Johann Christoph (*22*). He studied with Johann Sebastian (*24*) in Weimar and Köthen in 1715–19, and was organist of the Michaeliskirche, Ohrdruf, from 1721. Spitta mentions two harpsichord works by him (now lost), a suite in E♭ and a sonata in B♭.

Johann Christian Bach (*7*) (*b* Erfurt, bap. 17 Aug 1640; *d* Erfurt, bur. 1 July 1682). Son of Johann (*4*). He was taught music by his father in Erfurt and by his cousin Johann Christoph (*12*) in Eisenach, and became director of the Erfurt town music in 1666 or 1667.

Johann Christian Bach (*32*) (*b* Erfurt, bap. 31 March 1696). Son of Johann Christoph (*17*). He worked as a musician in Sondershausen.

Johann Christian Bach (*50*) (*b* Leipzig, 5 Sept 1735; *d* London, 1 Jan 1782). Son of Johann Sebastian (*24*); see §III (12) below.

Johann Christian Bach (*69*) (*b* Halle, 23 July 1743; *d* Halle, 20 June 1814). Son of Georg Michael (66). He studied in Halle with Wilhelm Friedemann Bach (*45*), who gave him the autograph of Johann Sebastian's *Clavierbüchlein für Wilhelm Friedemann*. He was a teacher at the Pädagogium (preparatory school) in Halle and is known as the 'Clavier-Bach'.

Johann Christoph Bach (*13*) (*b* Arnstadt, bap. 8 Dec 1642; *d* Eisenach, bur. 2 April 1703). Son of Heinrich (*6*); see §III (2) below.

Johann Christoph Bach (*12*) (*b* Erfurt, 22 Feb 1645; *d* Arnstadt, bur. 28 Aug 1693). Son of Christoph (*5*). In 1666 he was a town musician in Erfurt, and from 1671 was a court and town musician (violinist) in Arnstadt.

Johann Christoph Bach (*22*) (*b* Erfurt, 16 June 1671; *d* Ohrdruf, 22 Feb 1721). Son of Johann Ambrosius (*11*). He studied in Erfurt in 1685–8 with Johann Pachelbel, and in 1688 was briefly organist of the Thomaskirche in Erfurt. He then deputized for his sick uncle and godfather Heinrich Bach (*6*) in Arnstadt, was organist of the Michaeliskirche in Ohrdruf from 1690, and from 1700 also taught at the Lyceum there. In 1696 he declined an invitation to succeed Pachelbel as town organist in Gotha, evidently made on Pachelbel's own recommendation. In 1695–1700 Johann Christoph taught his younger brother Johann Sebastian (*24*), who lived at his house in Ohrdruf after his parents' death, and dedicated to him the Capriccio in E BWV993, 'In honorem Johann Christoph Bachii', probably soon after leaving Ohrdruf himself. According to contemporary accounts, Johann Christoph was regarded as an *optimum artifex*, but it is not certain whether his reputation was confined to his practical abilities or whether he was also a composer. His wide-ranging musical interests are evident in two extensive collections of keyboard music compiled by him: the *Andreas Bach Buch* (*D-LEm* Sammlung Becker III.6.4; see Johann Andreas Bach (*44*) above), and the Möller manuscript (*D-Bsb* Mus.ms.40644). As well as being among the most informative keyboard and organ manuscripts of the period around 1700, they are also important sources of J.S. Bach's early works. No compositions are expressly attributed to Johann Christoph, but some keyboard works that have been assigned to Johann Christoph (*13*) could be by Johann Christoph (22) instead. See C. Freyse: *Die Ohrdrufer Bache in der Silhouette: Johann Sebastian Bachs ältester Bruder Johann Christoph und seine Nachkommen* (Eisenach, 1957); H.-J. Schulze: 'Johann Christoph Bach (1771–1721), "Organist und Schul Collega in Ohrdruf": Johann Sebastian Bach's erster Lehrer', *BJb 1985*, 55–81; and documents in Bitter, iv, 40–47.

Johann Christoph Bach (*17*) (*b* Erfurt, bap. 13 Jan 1673; *d* Gehren, bur. 30 July 1727). Son of Johann Christian (*7*). After studying music with his father and attending the Erfurt Gymnasium, he became Kantor and organist in Niederzimmern, near Weimar. From 1695 he was Kantor and organist at the Thomaskirche, Erfurt, and from 1698 he pursued a similar career in Gehren. He compiled an organ book that later came into the possession of his son Johann Günther (*33*; see below) and a collection of works by Johann Pachelbel, J.C.F. Fischer and other 17th-century masters, including also some compositions of his own (*US-NH* LM 4983).

Johann Christoph Bach (*28*) (*b* Eisenach, bap. 29 Aug 1676). Son of Johann Christoph (*13*). He was a harpsichordist in Erfurt. In 1702–3 he was in Lübeck (perhaps studying with Buxtehude) and on the death of Johann Christoph (*13*) both he and his brother Johann Nikolaus applied for their father's post as organist in Eisenach. However, their cousin Johann Bernhard Bach (*18*) won the appointment. In 1706 he attended Jena University, and then went to Hamburg, where evidence of him is dated 1708–9 and where he married. He later went to Rotterdam (1717–20) and then to England, and seems never to have returned to Germany. It was evidently from him that the Duke of Chandos bought a harpsichord with two rows of keys in June 1720 for the sum of £572 (W. and M. Eisen, eds.: *Händel-Handbuch*, iv (Leipzig, 1985), p.93). See C. Oefner, 'Neues zur Biographie von Johann Christoph Bach (geb. 1676)', *DJbM*, xiv (1969), 121–3.

Johann Christoph Bach (*19*) (*b* Erfurt, bap. 17 Aug 1685; *d* Erfurt, bur. 15 May 1740). Son of Johann Aegidius (*8*). He was taught music by his father and attended the Ratsgymnasium in Erfurt. He was organist at the Thomaskirche, Erfurt, and from 1705 a member of the town music there, becoming its director in 1716.

Johann Christoph Bach (*26*) (*b* Arnstadt, 12 Sept 1689; *d* Blankenhain, bur. 28 Feb 1740). Son of Johann Christoph (*12*). He was organist in Keula in 1714, and from 1729 an organist, teacher and merchant in Blankenhain.

Johann Christoph Bach (*42*) (*b* Ohrdruf, 12 Nov 1702; *d* Ohrdruf, 2 Nov 1756). Son of Johann Christoph (*22*). He was in the service of the princely court at Sondershausen, and from 1728 was Kantor in Ohrdruf.

Johann Christoph Friedrich Bach (*49*) (*b* Leipzig, 21 June 1732; *d* Bückeburg, 26 Jan 1795. Son of Johann Sebastian (*24*); see §III (11) below.

Johann Christoph Georg Bach (*75*) (*b* Ohrdruf, 8 May 1747; *d* Ohrdruf, 30 Dec 1814). Son of Johann Andreas (*44*). He was organist of the Michaeliskirche in Ohrdruf from 1779.

Johann Elias Bach (*39*) (*b* Schweinfurt, 12 Feb 1705; *d* Schweinfurt, 30 Nov 1755). Son of Johann Valentin (*21*). He studied theology at Jena from 1728 and then in Leipzig from 1738. He lived in the house of Johann Sebastian (*24*), was his pupil and until 1742 acted as his private secretary and tutor to the younger Bach children. In 1743 he went to Schweinfurt as Kantor of the Johanniskirche and inspector of the church boarding-school. See K. Pottgiesser: 'Die Briefentwürfe des Johann Elias Bach', *Die Musik*, xii (1912–13), 3–19; F. Beyschlag: 'Ein Schweinfurter Ableger der thüringischen Musikerfamilie

Bach', *Schweinfurter Heimatblätter*, xi (1925); P. Wollny and E. Odrich: *Die Briefentwürfe des Johann Elias Bach (1705–1755)* (Hildesheim, 2000).

Johann Ernst Bach (*25*) (*b* Arnstadt, 5 Aug 1683; *d* Arnstadt, 21 March 1739). Son of Johann Christoph (*12*). He studied in Hamburg and Frankfurt, and in 1707 became organist of the Neukirche in Arnstadt in succession to Johann Sebastian (*24*), for whom he had already deputized during winter 1705–6 when Johann Sebastian was visiting Buxtehude in Lübeck. From 1728 he was organist of the Liebfrauenkirche in Arnstadt.

Johann Ernst Bach (*34*) (*b* Eisenach, bap. 30 Jan 1722; *d* Eisenach, 1 Sept 1777). Son of Johann Bernhard (*18*); see §III (10) below.

Johann Friedrich Bach (*29*) (*b* Eisenach, *c*1682; *d* Mühlhausen, bur. 8 Feb 1730). Son of Johann Christoph (*13*). He succeeded Johann Sebastian Bach (*24*) in 1708 as organist of the Divi-Blasii-Kirche in Mühlhausen. An organ fugue in G minor by him is extant (*D-Bsb*).

Johann Friedrich Bach (*35*) (*b* Erfurt, bap. 22 Oct 1706; *d* Andisleben, nr Erfurt, bur. 30 May 1743). Son of Johann Christoph (*19*). He attended the Ratsgymnasium in Erfurt and then worked as a schoolmaster, Kantor and organist in Andisleben. From 1739 he deputized for his father as director of the Erfurt town music, returning to Andisleben in 1742.

Johann Georg Bach (*70*) (*b* Eisenach, bap. 2 Oct 1751; *d* Eisenach, 12 April 1797). Son of Johann Ernst (*34*). He succeeded his father in 1777 as court and town organist of Eisenach, titular Kapellmeister, notary and town treasurer.

Johann Georg Bach (*b* ?Güstrow, 1786; *d* Elberfeld, 6 Dec 1874). Not a member of the Wechmar line. He was the son of Johann Michael Bach (see §III (13) below) and taught music in Elberfeld.

Johann Gottfried Bernhard Bach (*47*) (*b* Weimar, 11 May 1715; *d* Jena, 27 May 1739). Son of Johann Sebastian (*24*). He was a pupil of his father, and was organist of the Marienkirche in Mühlhausen, 1735–7. He then became organist of St Jacobi in Sangerhausen (a position for which his father had applied in 1702). He left Sangerhausen in spring 1738, with what intention is not known. In a letter of 26 May 1738 Johann Sebastian complained bitterly of his 'undutiful son', whose character was apparently unstable and who had got into debt. He matriculated as a law student at Jena University on 28 January 1739, but died only a few months later 'of a high fever'.

Johann Günther Bach (*15*) (*b* Arnstadt, bap. 17 July 1653; *d* Arnstadt, bur. 10 April 1683). Son of Heinrich (*6*). From 1682 he was assistant organist to his father in Arnstadt, where he also made keyboard instruments and violins.

Johann Günther Bach (*33*) (*b* Gehren, 4 April 1703; *d* Erfurt, bur. 24 Oct 1756). Son of Johann Christoph (*17*). He was a town musician (a tenor and viola player), and at some time before 1735 became a teacher in Erfurt. The *Günther Bach Buch* in the Lowell Mason Collection (*US-NH*) was compiled by Johann Christoph (*17*; see above).

Johann Heinrich Bach (*43*) (*b* Ohrdruf, 4 Aug 1707; *d* Öhringen, 20 May 1783). Son of Johann Christoph (22). He was taught by Johann Sebastian (*24*) and while at the Thomasschule, Leipzig, in 1724–8 was one of his principal copyists (*Hauptkopist* C). He then became assistant to his brother Johann Christoph (*42*) in Ohrdruf, and in 1735 went to Öhringen in Hohenlohe as Kantor and organist.

Johann Heinrich Bach (*53*) (*b* Hamburg, bap. 4 Nov 1709). Son of Johann Christoph (*28*). According to the *Ursprung* he was 'a good keyboard player'.

Johann Jacob Bach (*3/60*) (*b* Wolfsbehringen, 12 Sept 1655; *d* Ruhla, 11 Dec 1718). Son of Wendel (*b* ?Wechmar, 1619; *d* Wolfsbehringen, 18 Dec 1682), a farmer 'who could also sing well', and grandson of Wendel (*b c*1580). He went to school in Eisenach, later became organist in Thal, near Eisenach, and then Kantor in Steinbach (1679–90), Wasungen (1690–94) and Ruhla. The Schweinfurt inventory of 1689 lists a vocal work by him, *Schmücke dich, o liebe Seele*, for four voices and instruments.

Johann Jacob Bach (*16*) (*b* Erfurt, bap. 14 Aug 1668; *d* Eisenach, bur. 29 April 1692). Son of Johann Christian (*7*). He served as apprentice and then journeyman Stadtpfeifer under Johann Ambrosius (*11*) in Eisenach.

Johann Jacob Bach (*23*) (*b* Eisenach, bap. 11 Feb 1682; *d* Stockholm, 16 April 1722). Son of Johann Ambrosius (*11*). He trained as a Stadtpfeifer in Eisenach under Johann Heinrich Halle, his father's successor, joined the Swedish Guard as an oboist about 1704–6 and went to Turkey with the Swedish army under Carl XII. In Constantinople he took flute lessons from Pierre-Gabriel Buffardin, and from 1713 he was a chamber musician with the Stockholm court ensemble. The occasion for the composition by Johann Sebastian (*24*) of his *Capriccio sopra la lontananza del suo fratro dilettisimo* (BWV992) has often, but without plausible grounds, been identified with Johann Jacob's departure from Germany about 1704–6. See C. Wolff. 'The Identity of the "Fratro Dilettissimo" in the Capriccio B-flat Major', *The Harpsichord and its Repertoire: Utrecht 1990*, 145–56.

Johann Lorenz Bach (*38*) (*b* Schweinfurt, 10 Sept 1695; *d* Lahm im Itzgrund, 14 Dec 1773). Son of Johann Valentin (*21*). In 1715–17 he was a pupil of Johann Sebastian (*24*) in Weimar, and from 1718 organist and Kantor in Lahm. A fugue in D by him is extant (ed. D. Hellmann, *Orgelwerke der Familie Bach*, (Leipzig, 1967)), and the existence of other compositions by him is documented (*BJb 1949–50*). See O. Kaul, *Musikgeschichte der ehemaligen Reichstadt Schweinfurt* (Würzburg, 1935).

Johann Ludwig Bach (*3/64*) (*b* Thal, nr Eisenach, 4 Feb 1677; *d* Meiningen, bur. 1 May 1731). Son of Johann Jacob (*3/60*); see §III (6) below.

Johann Michael Bach (*14*) (*b* Arnstadt, bap. 9 Aug 1648; *d* Gehren, 17 May 1694). Son of Heinrich (*6*); see §III (3) below.

Johann Michael Bach (*30*) (*b* Eisenach, bap. 1 Aug 1685). Son of Johann Christoph (*13*). He left Eisenach in 1703 and was later active as an organ builder in Stockholm, but nothing is known for certain about his later life.

Johann Michael Bach (*b* Struth, nr Schmalkalden, 9 Nov 1745; *d* Elberfeld, 1820). Not a member of the Wechmar line, but from a subsidiary Hessian branch of the family; see §III (13) below.

Johann Nicolaus Bach (*9*) (*b* Erfurt, bap. 5 Feb 1653; *d* Erfurt, bur. 28 July 1682). Son of Johann (*4*). He was trained in music by his father and in 1673 became a member of the Erfurt town music as a viol player.

Johann Nicolaus Bach (*27*) (*b* Eisenach, 10 Oct 1669; *d* Jena, 4 Nov 1753). Son of Johann Christoph (*13*); see §III (4) below.

Johann Philipp Bach (*77*) (*b* Meiningen, 5 Aug 1752; *d* Meiningen, 2 Nov 1846). Son of Gottlieb Friedrich (*68*). From 1790 he was court organist and painter (*Kabinettsmaler*) in Meiningen.

Johann Samuel Bach (*31*) (*b* Niederzimmern, nr Weimar, 4 June 1694; *d* Gundersleben, 1 July 1720). Son of Johann Christoph (*17*). He was a musician and teacher at the princely court of Sondershausen and then a schoolmaster in Gundersleben.

Johann Sebastian Bach (*24*) (*b* Eisenach, 21 March 1685; *d* Leipzig, 28 July 1750). Son of Johann Ambrosius (*11*); see §III (7) below.

Johann Stephan Bach (*3/62*) (*b* Ilmenau, bap. 5 June 1665; *d* Brunswick, 6 Jan 1717). Son of Johann (*59*). From 1690 he was Kantor at Brunswick Cathedral (St Blasius). He was also a poet, and there are reports that he wrote sonnets.

Johann Valentin Bach (*21*) (*b* Themar, 6 Jan 1669; *d* Schweinfurt, 12 Aug 1720). Son of Georg Christoph (*10*). From 1694 he was a town musician and head tower watchman (*Obertürmer*) in Schweinfurt.

Lips [Philippus] Bach (*3/b*) (*b c*1590; *d* Wechmar, 21 Sept 1626). His relationship with the family of Veit Bach (*1*) is not clear, but he too was a musician.

Melchior Bach (*3/55*) (*b* 1603; *d* Arnstadt, 7 Sept 1634). Son of Caspar (*3/a*). He was a town musician in Arnstadt.

Nicolaus Bach (*3/58*) (*b* Arnstadt, 6 Dec 1619; *d* Arnstadt, 1 Oct 1637). Son of Caspar (*3/a*). He was a town musician in Arnstadt.

Nicolaus Ephraim Bach (*65*) (*b* Wasungen, bap. 26 Nov 1690; *d* Gandersheim, 12 Aug 1760). Son of Johann Jacob (*3/60*). He was a musician from 1708 and organist from 1719 at the Meiningen Court. In 1724 he became organist in Gandersheim.

Philipp Christian Georg Bach (*72*) (*b* Ohrdruf, 6 April 1734; *d* Wernigshausen, 18 Aug 1809). Son of Johann Christoph (*42*). In 1759–72 he was Kantor of the Michaeliskirche in Ohrdruf, and from 1772 he was a pastor in Wernigshausen.

Philipp Ernst Christian Bach (*78*) (*b* Eisenach, bap. 20 May 1780; *d* Eisenach, 29 March 1840). Son and pupil of Johann Georg Bach (*70*). He was an official copyist in Eisenach, and was also active as an organist and an authority on organs. After the death of his father in 1797, and again in 1809, he applied for the post of organist at St Georg and was considered on the grounds that his 'father and forebears ... have filled this position with credit for almost a century and a half'. However, when the choice was narrowed down he did not get the post. This was probably less to do with the claim made by Kehl, the organist who held the post in 1797–1809, that the organ of St Georg was ruined since Philipp Ernst had played it 'wildly' than because the other candidates had greater practical and theoretical knowledge. With Wilhelm Friedrich Ernst (*76*) he was the last musical member of the family.

Samuel Anton Bach (*67*) (*b* Meiningen, bap. 26 April 1713; *d* Meiningen, 29 March 1781). Son of Johann Ludwig (*3/64*). He studied with Johann Sebastian (*24*) in Leipzig around 1732, and was later organist, and for a time also painter, at the Meiningen court.

Tobias Friedrich Bach (*40*) (*b* Ohrdruf, 21 July 1695; *d* Udestedt, 1 July 1768). Son of Johann Christoph (*22*). From 1714 he was organist of the Dreifaltigkeitskirche in Ohrdruf. He was appointed court Kantor in Gandersheim in 1717, Kantor in Pferdingsleben in 1720 and Kantor in Udestedt in 1721.

Tobias Friedrich Bach (*71*) (*b* Udestedt, bap. 22 Sept 1723; *d* Erfurt, 18 Jan 1805). Son of Tobias Friedrich (*40*). In 1747 he became Kantor at the school of the Reglerkirche in Erfurt, and he was appointed Kantor of the Barfüsserkirche there in 1762.

Veit Bach (*1*) (*b* Pressburg [now Bratislava], *c*1555; *d* Wechmar, nr Gotha, 8 March 1619). As a result of the Counter-Reformation he emigrated from Hungary to Wechmar. The founder of the Wechmar line, he was a miller and baker by trade, and was the first to show musical inclinations and talent in what was to become an extensive family of musicians. Veit Bach had a house in Wechmar, and he and his son Hans (2) are explicitly mentioned as 'musici' in the Wechmar local registry of 1600–10. See §II below.

Wilhelm Friedemann Bach (*45*) (*b* Weimar, 22 Nov 1710; *d* Berlin, 1 July 1784). Son of Johann Sebastian (*24*); see §III (8) below.

Wilhelm Friedrich Ernst Bach (*76*) (*b* Bückeburg, bap. 24 May 1759; *d* Berlin, 25 Nov 1845). Son of Johann Christoph Friedrich (*49*); see §III (14) below.

II. Family history

The Bach family lived and worked in central Germany, primarily in Thuringia, with the Ernestine Saxon duchies and principalities of Eisenach, Gotha, Meiningen and Weimar, the county of Schwarzburg-Arnstadt, Ohrdruf in Hohenlohe, and the town of Erfurt in the electorate of Mainz. This area was relatively densely populated at the time, and although bitterly split politically it was denominationally unified. In this economically sound and culturally sophisticated context musical life flourished, encouraged in particular by ambitious displays of magnificence on the part of miniature courts, an awareness of musical tradition in the churches of the area (which apart from the Catholic enclave of Erfurt belonged to the Lutheran heartland), and the desire for prestige of many towns both large and small. The rise and decline of the musical Bach family is closely connected with these social conditions: first with the construction and expansion of musical practice in courts, churches and towns towards the end of the 16th century, then with the gradual decline in importance of such leading musical institutions as court orchestras, church choirs and town bands as the middle-class musical culture of the later 18th century began to develop. Musical life in Thuringia was notable for its wide variety within a small area, but it lacked a major centre (with an opera company, for instance), so that there was nothing to attract really famous musicians to it. In the Bach family itself sound, average competence was the norm. Only a few of its members achieved anything extraordinary, and most of those who did left Thuringia.

The unusual concentration of musical gifts within one family in such a narrow regional context has long interested students of genealogy, heredity and talent. The continual reappearance of musical gifts through the generations, with an increasingly large and then suddenly declining number of prominent family members culminating in the remarkable figure of Johann Sebastian Bach, remains a unique phenomenon. An essential prerequisite

for the development of such a dynasty was certainly a general attitude to music as a craft to be learnt, so that the careers of male family members were more or less decided from early childhood. Musical training was usually provided within the family. This was typical even of later generations. For instance, Johann Sebastian, who had himself studied with his brother Johann Christoph (*22*), is known to have taught six of his nephews – Johann Ernst (*34*), Johann Lorenz (*38*), Johann Elias (*39*), Johann Bernhard (*41*), Johann Heinrich (*43*) and Samuel Anton (*67*) – as well as his own sons. Carl Philipp Emanuel regarded it as quite natural to take his youngest half-brother Johann Christian (*50*) into his care. Studies or educational tours outside the region were uncommon, although there are instances in the Italian journeys of Caspar Bach's sons (*3*/*54–8*; cf the *Ursprung*), of Johann Nicolaus (*27*) and finally of Johann Christian (*50*). In these circumstances even Johann Sebastian Bach's journey to Lübeck to study with Buxtehude must be considered decidedly out of the ordinary.

In a self-contained circle of this kind, which was in the nature of a guild, it was natural for relationships with other musical families and intermarriage with them to be frequent. There were other families of musicians in Thuringia, if not as extensive as the Bach family itself. They included the Hoffmann family of Suhl and the Schmidt family of Eisenach. A series of marriages took place with these two families: Johannes (*4*) and his brother Heinrich (*6*) both married daughters of the Hoffmann family; Johann Christian (*7*) and Johann Aegidius (*8*) married daughters of the Schmidt family. Johann Sebastian himself is a typical example of close relationships between musical families: his first wife was a Bach and his second a descendant of the Wilcke family of musicians from Zerbst.

The family was very close because of its shared social standing and musical interests. Their social status as 'outsiders' (for in the 17th century musicians did not normally have rights of citizenship) and their strict religious views were other important features. Some of the family members even showed a tendency towards sectarianism. Family gatherings were held regularly, and must have resembled small-scale music festivals. A particular speciality of the Bachs was the performance of quodlibets at such gatherings. Drawing on information from J.S. Bach's sons, Forkel wrote in 1802:

> The meeting place was usually in Erfurt, Eisenach or Arnstadt. They devoted their time together wholly to making music. Since the company consisted entirely of Kantors, organists and town musicians, all of whom had to do with the church, and in any case it was then still the custom to begin everything on a religious note, the first thing they did on being gathered together was to strike up a chorale. They proceeded from this pious beginning to jests that were often in great contrast. For they now sang folksongs, some of a rather comic and indelicate content, in such a way that the various improvised parts made up a kind of harmony, but the texts for each part were quite different. They called this kind of extempore harmonizing a quodlibet, and not only enjoyed a hearty laugh at it themselves, but provoked equally hearty and irresistible laughter in all who heard them.

The family was well aware that it was maintaining a musical tradition. It is no accident that Johann Sebastian, in a letter of 28 October 1730 to Georg Erdmann, described his children as 'born *musici*', and even the first brief biography of Bach in J.G. Walther's *Musicalisches Lexicon* (1732) and the more extensive account of his career in the obituary of 1754 refer expressly to the great master's background in a remarkable family of musicians.

It was Johann Sebastian himself who systematically investigated the background of the family and its musical heritage. His genealogy of the family, drawn up about 1735, is still the most reliable document on the family history, particularly in its early generations. (The original manuscript of the *Ursprung* is lost, but several copies are extant, including an especially important one with additions by C.P.E. Bach.) Johann Sebastian's estate also contained a collection of compositions by the most important earlier family members, under the title 'Alt-Bachisches Archiv' (the original, containing 20 works, was once owned by the Berlin Singakademie; it was thought lost in World War II, but was rediscovered, along with other Bach manuscripts, in Kiev (Ukraine) in 1999. This collection was probably begun by Johann Ambrosius, as a number of entries in his hand suggest. Johann Sebastian later reordered it, providing new title-pages, and also made practical use of it, preparing some instrumental parts.

The *Ursprung* traces the family tree without a break to Veit (*1*) in the middle of the 16th century. However, many of the details are unclear up to the generation of Veit's grandsons, the sons of Hans (2), and they cannot be fully clarified for want of insufficient archival documents (for instance, the Wechmar church records do not begin until 1619). Studies of the Bach family have sometimes assumed that Veit Bach was born in Thuringia and merely happened to live in Hungary for some time, or that he was born in Wechmar and was the son of an older Veit who had already emigrated from Hungary in 1545, but these theories are untenable. There is no reason to doubt the data in the *Ursprung*, particularly as Johann Nicolaus Bach (27), in a letter of 24 April 1728, clearly stated that 'The Bachs come from Hungary' (see Schulze, 1989).

It has been shown that other Bachs as well as Veit had settled in the little town of Wechmar, near Gotha, but it has proved impossible to trace the family relationship. For instance, there was a Hans Bach living in Wechmar in 1561, and later a Lips (Philippus) and another Hans Bach. They may have been close relations who had left Hungarian Moravia at some earlier date, and whom Veit then followed, or they may have been more distant relations who had been living in Wechmar for some time. The name of Bach (pronounced with a long 'a', as 'Baach', and often written that way as well) was already common in the Thuringian region, and can be traced there to the 14th century, although there is no evidence of musical activity on the part of these earlier Bachs. Where musicians do occasionally appear (for instance, a trumpeter called Eberhard Heinrich Bach from Rohrborn near Erfurt, who was the son of a Heinrich Bach and went to Indonesia by way of the Netherlands in about 1598), there is no evidence of any concrete family relationship. It seems best to regard the close circle of the musical Bach family as confined to those mentioned in the family genealogy of the *Ursprung*.

Family tradition in that work says of Veit Bach, a baker by trade, that he often amused himself by playing a 'cythringen' (a small cittern). The explicit comment – 'This was, as it were, the beginning of music in his descendants' – seems to indicate that none of Veit's ancestors was a professional musician. Nor indeed was Veit himself. He came from the area of Moravia and Slovakia in what was then the kingdom of Hungary with its capital city of Pressburg, now Bratislava (according to

Korabinsky, Veit's native city), but his date of birth is not known. Nor is it known why and when he emigrated to Thuringia, but at the time of the Schmalkaldian Wars (1545–7) Protestants were being expelled in the wake of the Counter-Reformation, and there were probably restrictions on the practice of Lutheranism in Hungary in the following decades. The mention of Hungary in the *Ursprung* as the Bach family's country of origin should be regarded, in accordance with the terminology of the times, as referring to the central area of the Habsburg possessions in general, including Bohemia and Moravia. There are records of various people surnamed Bach in the 16th and 17th centuries in Moravia and elsewhere in the Habsburg territories, for instance Hans Bach the *Spielmann* (violinist; see §III (1) below).

Veit Bach settled in Wechmar, where he became a householder, and died there on 8 March 1619. Hans Bach (*2*), his son (probably the eldest) was the first family member to have a thorough musical training; he then practised as a musician, although he was also active in other capacities. His sons were the first of the family to devote themselves entirely to music. Their acceptance of salaried positions shows that they had settled in one place, thus taking the first step towards entering the urban middle classes and breaking with the tradition of the itinerant *Spielmann* or 'beer-fiddler', although their varied activities as instrumentalists point to the *Spielmann* tradition behind them.

Genealogical problems arise with a number of family members who were certainly connected with Veit's main Wechmar line but whose precise origin is unclear. There is a lacuna in the *Ursprung* itself concerning the brother of Hans (*2*); no name is given under the number (*3*), only the man's trade (he was a carpet maker), although there is at least brief mention of three of his sons who were musicians. Obviously Johann Sebastian Bach, as author of the *Ursprung*, lacked clear information on this point, and the result was some confusion between two family members. It seems possible that Veit had two sons as well Hans (*2*) – Johann Sebastian Bach's great-grandfather – and that these sons, Caspar (*3/a*) and Lips (*3/b*), have been merged into a single figure in the *Ursprung*. However, it is also possible that Hans Bach and/or Lips Bach of Wechmar were brothers of Veit.

The mention in the *Ursprung* of visits to Italy by the nephews of Hans (*2*) can in fact refer only to the sons of Caspar (*3/a*); documents show that the Count of Schwarzburg-Arnstadt encouraged the project. Moreover, Caspar had a son Heinrich (*3/56*), mentioned in the register of deaths as being blind, who must surely be identical with the 'blind Jonas' of the *Ursprung*; the nickname 'Jonas', deriving from the biblical Jonah, would presumably have referred to his adventures. On the other hand, the forebears of Johann Ludwig Bach (*3/64*) can go back only to one Wendel Bach, who must have been either a third brother of Hans (*2*) or, more likely, a son of Lips. This brother could only have been the elder Lips or the elder Hans. In any case, however, the younger Hans (*2*), Caspar (*3/a*) Wendel, Lips (*3/b*) and Andreas must have been closely enough related to each other for family tradition to trace them back to a common origin. The forebears of the Meiningen Bachs were originally farmers, although it is said of the younger Wendel that he could 'also sing very well'. The descent of Andreas Bach in particular is obscure. He was a councillor of Themar, and his son Johann (*59*) was first Kantor in Lehnstedt and later a pastor, like several of his descendants. The *Ursprung* expressly mentions that Johann Stephan's brother was a priest. As Georg Michael (*66*) was present at his funeral in 1738, the Meiningen and Lehnstedt lines must have felt they were closely related, and in that case it can hardly be doubted that they were connected with the main Wechmar line.

In accordance with their origins, nearly all the Bachs were first and foremost instrumentalists. Keyboard instruments headed the list of the instruments they played, but almost all other kinds are also represented. In the true Stadtpfeifer tradition, most of the Bachs learnt several instruments. A number of them were also instrument makers, for instance Johann Christoph (*12*), Johann Michael (*14*), Johann Günther (*15*), Johann Michael (*30*) and Johann Nicolaus (*27*), who is credited with the invention of the lute-harpsichord. Johann Sebastian, who was a great expert on the organ, promoted the development of the viola pomposa and criticized Gottfried Silbermann's construction of pianos, clearly shows this aspect of the family's talents. The tendency of most of the Bachs to become instrumentalists made composition a subsidiary pursuit, reserved for those who both had the necessary training and were expected to provide musical works. At least in the 17th century, this meant almost exclusively organists, so it is not surprising that no compositions by Johann Ambrosius (*11*) are extant. As a court trumpeter, if he composed at all it must have been only as a marginal activity. On the other hand his two organist cousins, Johann Michael and Johann Christoph, were very productive as composers, primarily of works for non-liturgical use (sacred works were the responsibility of the church Kantors). In particular, they wrote funeral motets, no doubt a profitable sideline.

By 1700 the musical Bach family was so widespread in Thuringia that the name 'Bach' was often used as a synonym for 'musician'. In many towns, particularly Erfurt and Arnstadt, they occupied all the key musical positions, and it was typical for a Bach in any post to be succeeded by another Bach. For instance, when Johann Christoph (*13*) left Arnstadt his younger brother (*14*) succeeded him, and Johann Sebastian was succeeded in Arnstadt by his cousin Johann Ernst (*25*) and in Mühlhausen by another cousin, Johann Friedrich (*29*). The post occupied by Johann Christoph (*22*) was even passed down through two generations. That of organist at St Georg in Eisenach was held by members of the family for almost 150 years, and it was in the same tradition that C.P.E. Bach applied for his father's position as Thomaskantor in Leipzig.

However, this almost automatic inheritance of musical positions became more difficult when the old institutions, which had enabled musicians to function as a guild, began to break up. It was these institutions that had provided the means of existence for such musical families as the Bachs, who rose gradually from their simple *Spielmann* origins to all positions in the musical hierarchies of the courts, towns and churches. They had been court musicians – Konzertmeisters or Kapellmeisters – Stadtpfeifers, directors of town musical ensembles, organists and Kantors. After the middle of the 18th century at the latest, structural changes were taking place that ran counter to the Bach family's old way of life. Moreover, the family now belonged to the middle class, and its sons had new

educational opportunities (almost all the members of the generation of J.S. Bach's sons attended university) fitting them for a number of different professions, whereas previously they had few alternatives to becoming musicians. It is only natural, therefore, that fewer and fewer of them turned to music as a career. Some family members moved into another artistic field, that of painting: the descendants of Johann Ludwig (*3/64*) were court painters, and the younger Johann Sebastian (1748–78), son of C.P.E. Bach, went to Italy with a high reputation as a gifted painter and died in Rome at the age of 30. In view of the abundance of musical talent in over six generations, it may at first seem surprising, but is understandable if we look back at the circumstances in which they lived and worked, that at the unveiling of the Bach monument donated by Mendelssohn and erected outside the Thomaskirche in Leipzig in 1843 Wilhelm Friedrich Ernst Bach (76) was the last and only representative of a family tradition that had lasted for over 250 years.

III. Individual members

(1) Hans [Johann] Bach (*b* Andelsbuch, Vorarlberg, *c*1555; *d* Nürtingen, 1 Dec 1615). Violinist and court musician. He became a *Spielmann* (violinist) and jester at the Stuttgart court of Duke Ludwig of Württemberg about 1585, and in 1593 he followed the widowed Duchess Ursula to the court of Nürtingen, where he

remained until his death. He apparently often travelled, both alone and in the court entourage. Of his work all that survives is the text of a narrative song of 1614 describing a visit to the town of Weil (*Hanss Baachens Lobspruch zur Weil der Statt*: 'Es ist nun über zwantzig Jahr'); its manner is reminiscent of the late medieval style of Oswald von Wolkenstein. There are two extant portraits of him, an etching of about 1605 and an engraving of 1617. The etching bears the inscription:

Hie siehst du geigen/Hansen Bachen
Wenn du es hörst/so mustu lachen
Er geigt gleichwol/nach seiner Art
Und tregt ein hipschen/Hans Bachen Bart.

Nothing is known of his extraction; he was probably related in some way to Veit Bach (*1*) of the Wechmar line – Hans was Protestant (no matter of course in the Catholic south) and like Veit he came from Habsburg lands. His portrait of 1617 was in the collection owned by C.P.E. Bach, but since C.P.E. Bach's *Nachlassverzeichnis* of 1790 cited him as 'Bach (Hans), a Gotha musician' his ownership of the picture cannot be taken as confirmation that Hans was a member of the family. He had obviously been confused with the *Spielmann* Hans Bach (2), who trained in Gotha.

(2) Johann Christoph Bach (*13*) (*b* Arnstadt, bap. 8 Dec 1642; *d* Eisenach, bur. 2 April 1703). Composer and organist, son of Heinrich Bach. He was probably the most important member of the family before (7) Johann Sebastian (*24*). He received a thorough musical grounding from his father, and on 20 November 1663 was appointed organist of the Arnstadt castle chapel. Two years later he was invited by the Eisenach town council to apply for the post of organist at St Georg, and after an audition on 10 December 1665 he was appointed to that position and also to the post of harpsichordist in the court Kapelle of the Duke of Eisenach. He retained both positions until his death.

Little is known of his work in the court Kapelle. From 1675 the Kapellmeister was Daniel Eberlin, later to become the father-in-law of Telemann, who also conducted the Kapelle on occasion, and for a short while (1677–8) Pachelbel was a member of the Kapelle. During much of his time there Johann Christoph's most important colleague must have been his cousin, the violinist Johann Ambrosius (*11*); Ambrosius often served as his copyist, and their relationship was doubtless a close one. The young Johann Sebastian must also have received his first impressions of organ music from his father's cousin. While Johann Christoph's court position was one of high standing, his tenure of the civic one was marred by a succession of quarrels between him and the town council, for which he was not entirely blameless. It must be said in extenuation that throughout his years in Eisenach he was constantly beset by severe family difficulties, particularly the illnesses of his wife and children. His quarrels with the town council were mostly about his salary and the council's refusal to provide an official residence for him, a deficiency eventually made good by the court. For many years he also battled with the council over the long-overdue restoration (or reconstruction) of the organ at St Georg; he was successful only in 1696, and then did not live to see the completion (by G.C. Stertzing) of the famous instrument in 1707 (his copious, expert notes on the organ's reconstruction are extant; see Freyse). He died in 1703, just ten days after the death of his wife.

Within the family Johann Christoph was highly respected as a composer (a 'profound' one according to the *Ursprung*). In Johann Sebastian's obituary notice of 1754 he is mentioned expressly as one who 'was as good at inventing beautiful thoughts as he was at expressing words. He composed, to the extent that current taste permitted, in a *galant* and *cantabile* style, uncommonly full-textured ... On the organ and the keyboard [he] never played with fewer than five independent parts'. Johann Sebastian performed some of his motets and vocal concertos in Leipzig, as also did C.P.E. Bach later in Hamburg. Although Johann Christoph was primarily an organist and harpsichordist, his extant keyboard works are few, but they show him as a capable composer, stylistically akin to Pachelbel though in general less pedantic. His organ chorales (probably in effect written-down improvisations) demonstrate his mastery of the small form, while the strength of his artistry is developed in his extended harpsichord variations. His vocal works, in particular the motets and concertos, are notable for the variety of their settings. The concertos are characterized by their full instrumental writing, with unusually interesting inner part-writing. While the vocal writing is for the most part technically undemanding (the choral sections were intended for school choirs), the instrumental parts are usually highly elaborate and often call for a virtuoso solo violin (as in the two *lamenti* and the wedding concerto *Meine Freundin, du bist schön*). Johann Sebastian and Carl Philipp Emanuel thought particularly highly of his 22-part concerto for Michaelmas, *Es erhub sich ein Streit*, one of the finest vocal works of the late 17th century. Basically his double-choir motets follow the traditional central German model including both *Spruch* and chorale, with cantabile melodies and often lively alternation of tutti and soloists – a genre which indeed reached its peak in the works of Johann Christoph and his brother (3) Johann Michael (*14*). In both composers' works the older style of writing, with alternating chordal and imitative sections, still predominated, for instance in the motet *Der Gerechte, ob er gleich zu zeitlich stirbt*, which is also a particularly fine example of Johann Christoph's expressive harmony; but the newer style, with its livelier lines (including melismatic semiquaver passages) and looser, more concertante writing, is found in *Sei getreu bis in den Tod* and *Der Mensch, vom Weibe geboren*, obviously later works. The lack of documentation and the small number of the surviving works preclude the establishment of a reliable chronology of Johann Christoph's music.

WORKS

VOCAL

Editions: *Altbachisches Archiv*, i, ed. M. Schneider, EDM, 1st ser., i (1935) [S]
Johann Christoph Bach: Sämtliche Motetten, ed. E. Franke (Leipzig, 1982) [F]

Arias: Es ist nun aus mit meinem Leben, SATB, bc, S, F; Mit Weinen hebt sichs an, SATB, bc, 1691, S, F

Motets: Der Gerechte, ob er gleich zu zeitlich stirbt, SATTB, bc, 1676, S, F, ed. in Musica sacra, xxxix (Berlin, 1860); Der Mensch, vom Weibe geboren, SSATB, bc, S, F, ed. R. Kubik (Stuttgart, *c*1984); Fürchte dich nicht, SSATB, bc, F, ed. G. Graulich (Stuttgart, *c*1992); Herr, nun lässet du deinen Diener, SATB, SATB, bc, F, ed. G. Graulich (Stuttgart, *c*1980); Herr, wenn ich

nur dich habe, SATB, SATB, bc, *D-Bsb* (anon.), F; Ich weiss, dass mein Erlöser lebt, SATTB, bc, F, ed. G. Graulich (Stuttgart, 1994); Lieber Herr Gott, wecke uns auf, SATB, SATB, bc, 1672, F, ed. G. Graulich (Stuttgart, *c*1994); Merk auf mein Herz, SATB, SATB, bc, BWV Anh.III.163, ed. P. Wollny (Neuhausen-Stuttgart, 1991); Sei getreu bis in den Tod, SSATB, bc, S, F, ed. R. Kubik (Stuttgart, *c*1983); Unsers Herzens Freude, SATB, SATB, bc, F; Was kein Aug gesehen hat, SATB, SATB, bc, *Bsb* (anon.), F

Vocal concertos: Ach, dass ich Wassers gnug hätte (Lamento), A, vn, 3 va, bc, ed. T. Fedtke (Stuttgart, *c*1976); Die Furcht des Herren, SSATB, SATTB, 2 vn, 2 va, bc, S, ed. H. Bergmann (Stuttgart, *c*1986); Es erhub sich ein Streit, SATBB, SATBB, 4 tpt, timp, 2 vn, 4 va, bc, ed. D. Krüger (Stuttgart, *c*1960); Es ist nun aus, SATB, bc Kiev, Archive for Literature and Art (formerly Berlin, Singakademie); Herr, wende dich und sei mir gnädig (Dialogus), SATB, 2 vn, 2 va, bc, ed. H. Bergmann (Stuttgart, *c*1988); Mein Freundin, du bist schön (Dialogus, wedding piece), SATB, 4 vn, 3 va, bc, S, ed. H. Bergmann (Stuttgart, *c*1989); Mit Weinen hebt sichs an , SATB, bc , Kiev, Archive for Literature and Art (formerly Berlin, Singakademie); Wie bist du denn o Gott (Lamentation), B, vn, 3 va da gamba, ed. in DTB, x, Jg.vi/1 (1905; attrib. J.P. Krieger), ed. D. Hellmann (Stuttgart, *c*1976)

Lost: Auf, lasst uns den Herren loben, S, insts, listed in Schweinfurt inventory, 1689; Der Herr ist König, B, insts, listed in Schweinfurt inventory, 1689; Gott schweig doch nicht also, 5vv, insts, listed in Schweinfurt inventory, 1689; Nun gehe ich hin, B, insts, listed in Schweinfurt inventory, 1689; Unsere Tage fahren alle dahin, a 10, listed in Stettin inventory, 1702

INSTRUMENTAL

Aria Eberliniana (15 variations], hpd, 1690, *D-EIb* (facs. (Leipzig, 1992)); ed. C. Freyse, Veröffentlichungen der Neuen Bachgesellschaft, Jg.xxxix/2 (1940)

Sarabande, G [12 variations], hpd; ed. H. Riemann (Leipzig, n.d.)

Aria, a [15 variations]; ed. G. Birkner (Zürich, 1973)

Praeludium und Fuge, E♭, org, doubtful; ed. D. Hellmann, *Orgelwerke der Familie Bach* (Leipzig, 1967)

44 chorales with preludes, org, ed. M. Fischer (Kassel, 1936)

4 chorales, org: Ach Herr, mich armen Sünder; Allein Gott in der Höh sei Ehr; An Wasserflüssen Babylon; Wer Gott vertraut, hat wohl gebaut; ed. C. Wolff, appx to *Johann Michael Bach: Sämtliche Orgelchoräle* (Neuhausen-Stuttgart, 1987)

Lost: 8 chorales, org , listed in *GerberNL*, i, 209

(3) Johann Michael Bach (*14*) (*b* Arnstadt, bap. 9 Aug 1648, *d* Gehren, 17 May 1694). Composer, son of Heinrich Bach (*6*). He received a sound musical education from his father and the Arnstadt Kantor Jonas de Fletin; the latter's influence may account for his early interest in vocal music. In 1665 he succeeded his brother (2) Johann Christoph (*13*) as organist of the Arnstadt castle chapel. After an audition on 5 October 1673 he succeeded Johann Effler (who later preceded Johann Sebastian as castle organist in Weimar) as town organist in Gehren. He was also active as an instrument maker there and held the important administrative post of town clerk. On 17 October 1707 his youngest daughter, Maria Barbara (*b* Gehren, 20 Oct 1684), married her distant cousin (7) Johann Sebastian (*24*).

A pamphlet issued by the Gehren council refers to Johann Michael as a 'quiet, reserved and artistically experienced subject'; within the family he was considered a 'skilful composer' (*Ursprung*). As a composer, in fact, he is on almost the same level as his brother Johann Christoph. Especially in the chorale motet, a genre to which he devoted himself with particular intensity, he composed works of real distinction, and his strophic arias, with their parts for obbligato instruments and their resourceful and expressive ritornellos, are also of undisputed value. A notable feature of his music is his varied, natural and convincing treatment of vocal declamation, whether in biblical texts, chorale verses or free poetry. In his motets, as in his brother's, the older, strongly homophonic style predominates; but in such works as *Sei lieber Tag willkommen* he turned to the freer and more modern style with melismatic passages. His works for double chorus stand firmly in the tradition of Schütz's *Psalmen Davids*, but go beyond their models. The nine-part funeral motet *Unser Leben ist ein Schatten*, which has been erroneously attributed to Johann Bach (*4*), is particularly moving in its illustrative and expressive qualities. His vocal concertos are less extended than those of his brother, but he too favoured a full-textured orchestral palette, which is often quite sophisticated and frequently includes a virtuoso solo violin part.

Almost all the extant keyboard compositions by Johann Michael Bach are organ chorales. They are mainly in the central German tradition of concise, contrapuntal and practical settings, showing a clear relationship to similar works by Johann Pachelbel. Recent discoveries have trebled the number of Johann Michael's extant chorale settings and, although the total remains considerably less than the '72 verschiedene fugirte und figurirte Choralvorspiele' cited by Gerber, these permit a fairer assessment of Bach's merits as an organ composer than was previously possible. The central German organ chorale underwent a slight shift of emphasis in the work of Johann Michael Bach. His four-part figured chorales with the melody in the highest part, as well as others that combine forms more freely, show him to have been a decidedly independent composer, and he must have influenced the young Johann Sebastian in particular. Gerber wrote of him in 1812: 'There is great variety and diversity in the preludes, after the manner of that period, and none is entirely unworthy of the name of Bach'.

WORKS

VOCAL

Edition: *Altbachisches Archiv*, ed. M. Schneider, EDM, 1st ser., i–ii (1935) [S i–ii]

Arias: Ach, wie sehnlich wart ich der Zeit, S, vn, 3 va da gamba, bc; Auf, lasst uns den Herrn loben, A, vn, 3 va da gamba, bc: ed. in S ii, ed. H. Bergmann (Neuhausen-Stuttgart, *c*1985)

Motets, SATB, SATB, bc unless otherwise stated: Benedictus, SATTB, ?bc, ed.; Das Blut Jesu Christi, SATTB, bc, ed. in S i, ed. R. Kubik (Neuhausen-Stuttgart, *c*1981); Dem Menschen ist gesetzt einmal zu sterben, ed. in S i, ed. R. Kubik (Kirchheim, *c*1985); Ehre sei Gott in der Höhe, ed. in DDT, xlix–l (1915), ed. D. Melamed (Neuhausen-Stuttgart, 1992); Fürchtet euch nicht, ed. in S i, ed. R. Kubik (Neuhausen-Stuttgart, *c*1980); Halt, was du hast, ed. in S i; Herr, du lässest mich erfahren, ed. in S i; Herr, ich warte auf dein Heil, ed. in S i, ed. R. Kubik (Neuhausen-Stuttgart, *c*1984); Herr wenn ich nur dich habe, SATTB, bc, ed. in S i, ed. R. Kubik (Neuhausen-Stuttgart, *c*1984); Ich weiss, dass mein Erlöser lebet, SATTB, bc, ed. in S i; Nun hab ich überwunden, ed. in S i; Nun treten wir ins neue Jahr, ed. D. Melamed (Neuhausen-Stuttgart, 1992); Sei lieber Tag willkommen, SSAATTB, bc, ed. in S i; Sei nun wieder zufrieden, ed. G. Graulich (Stuttgart, 1993); Unser Leben ist ein Schatten, SSAATTB, ATB, bc, ed. in S i (attrib. Johann Bach (4)); Unser Leben währet siebenzig Jahr, SATTB, bc, ed. in S i

Vocal concertos: Ach bleib bei uns, Herr Jesu Christ, SATB, 2 vn, 3 va, bc, ed. in S ii, ed. H. Bergmann (Neuhausen-Stuttgart, *c*1985); Es ist ein grosser Gewinn, S, 4 vn, bc, ed. in S ii, ed. H. Bergmann (Neuhausen-Stuttgart, *c*1985); Herr, komm hinab, SATB, 2 vn, 2 va, bc, ed. H.M. Balz (Merseburger, 1995); Liebster Jesu, hör mein Flehen (Dialogus), SATB, 2 vn, 2 va, bc, ed. in S ii, ed. H. Bergmann (Neuhausen-Stuttgart, *c*1985)

Lost, listed in Ansbach inventory, 1686 (see Schaal): Conditor coeli, a 8; Der Herr is König, a 12; Ich freue mich des, a 15; Lobet, ihr Knechte des Herrn, a 12; Mein Sünd betrüben mich, a 8; Miserere, a 15; Omnipotens Deus, a 12; Pater noster, a 12; Siehe, lobe den Herrn, a 12; Was willtu meine Seele, a 6; Welche ich lieb habe, a 10

Lost, listed in Schweinfurt inventory, 1689 (see Wollny): Auf meinen lieben Gott, SATB, 2 vn, bc (also formerly in Berlin, Singakademie); Benedicat tibi Dominus ex Sion, 5vv, insts; Der Gott Abraham, der Gott Isaac, 5vv, insts; Dies ist der Tag, 6vv, insts; Gott ist mein Heil, 4vv, insts; Herr, lehre uns bedenken, 5vv, insts; Mag, 4vv, insts; Sit nomen Domini benedictum, 5vv, insts; Unser Herr Jesus Christus, B, insts; Wem ein tugendsam Weib, 5vv, insts; Wenn mein Stündlein vorhanden ist, 5vv, insts; Wenn wir in höchsten Nöten sein, 5vv, insts; Wie bin ich doch so herzlich froh, 5vv, insts

Others lost: Ist nicht Ephraim, SATB, 4 va, bc, formerly in Berlin, Singakademie; Wie lieblich sind deine Wohnungen (see Brück); Zion spricht: Der Herr hat mich verlassen, listed in Stettin inventory, *c*1702

INSTRUMENTAL

Edition: *Johann Michael Bach: Sämtliche Orgelchoräle*, ed. C. Wolff (Neuhausen-Stuttgart, 1987) [W]

Chorales, org, ed. in W: Allein Gott in der Höh sei Ehr; Auf meinen lieben Gott; Der du bist drei in Einigkeit; Derr Herr ist mein getreuer Hirt; Dies sind die heiligen zehn Gebot, also ed. D. Hellmann, *Orgelwerke der Familie Bach* (Leipzig, 1967); Es spricht der Unweisen Mund wohl; Gelobet seist du, Jesu Christ, BWV 723; Gott hat das Evangelium; Gott Vater, der du deine Sohn (anon. in source); Herr Christ, der einig Gottes Sohn; In dich hab ich gehoffet, Herr, also ed. in EDM, 1st ser., ix (1937); In dulci jubilo, BWV 751; Jesus Christus, unser Heiland, der den Tod; Komm, Gott schöpfer, Heiliger Geist (anon. in source); Kommt her zu mir, spricht Gotte Sohn; Mag ich Unglück nicht widerstahn; Meine Seele erhebt den Herren; Nun freut euch lieben Christen gmein; Nun komm, der Heiden Heiland; Nun lasst uns Gott dem Herren; O Herre Gott, Vater in Ewigkeit; Von Gott will ich nicht lassen; Warum betrübst du dich, mein Herz; Wenn mein Stündlein vorhanden ist, also ed. D. Hellmann, *Orgelwerke der Familie Bach* (Leipzig, 1967); Wenn wir in höchsten Nöten sein, also ed. in EDM, 1st ser., ix (1937) and ed. D. Hellmann, *Orgelwerke der Familie Bach* (Leipzig, 1967); Wo Gott der Herr nicht bei uns hält, also ed. in EDM, 1st ser., ix (1937)

Other works: Partita, a, hpd, *US-NH*; Stark besetzte Sonaten, lost, cited in *GerberL* and *WaltherML*

(4) Johann Nicolaus Bach (*27*) (*b* Eisenach, 10 Oct 1669, *d* Jena, 4 Nov 1753). Composer and organist, son of (2) Johann Christoph Bach (*13*). After his early musical training at home, he entered the University of Jena in 1690, pursuing his musical studies with J.N. Knüpfer (son of Sebastian Knüpfer, Thomaskantor in Leipzig). After a journey to Italy, the purpose and duration of which are not known, he succeeded Knüpfer in 1694 as organist of the town church in Jena. The university authorities were however reluctant to allow him to act in addition as organist at the Kollegienkirche, as Knüpfer had done, and it was not until 1719 that he finally took on the double post of town and university organist. In 1703 he had refused an appointment at St Georg, Eisenach, as successor to his father, primarily, no doubt, because of the better salary in Jena, where he lived in modest prosperity. Presumably he was in contact with his relative Johann Georg Bernhard (*47*) during the latter's period of study in Jena, 1737–9. From 1745, in consideration of his age, he was provided with an assistant organist. In the *Ursprung* Johann Sebastian called him 'present senior of all the Bachs still living'.

Johann Nicolaus was a skilful composer, but his few extant works – some student music, *Der Jenaische Wein- und Bierrufer* (ed. F. Stein, Leipzig, 1921), and an organ chorale, *Nun freut euch lieben Christen gmein* (*D-Bsb*) – hardly permit an assessment of his style. There are, however, no noticeable italianate aspects such as might have resulted from his stay in Italy. Apart from being an organist, the leader of the university's collegium musicum and a composer, he was also an instrument maker, particularly of harpsichords. Adlung called him the inventor of the Lautenklavier, and in a letter of 1728 Bach referred explicitly to a 'Lauten Clavier' which he had sold to a Hungarian nobleman in Jena. As an expert on organs he supervised the reconstruction of an instrument with three manuals and 44 stops in the Kollegienkirche, 1704–6. Among his pupils was F.E. Niedt, author of a well-known thoroughbass method, *Musicalische Handleitung* (Hamburg, 1700–17).

(5) Johann Bernhard Bach (*18*) (*b* Erfurt, bap. 25 Nov 1676; *d* Eisenach, 11 June 1749). Composer and organist, son of Johann Aegidius Bach (*8*). He studied with his father and about 1695 took up his first post, as organist at the Kaufmannskirche in Erfurt; in 1699 he went to Magdeburg, and in 1703 he replaced his kinsman (2) Johann Christoph (*13*) as town organist and court harpsichordist in Eisenach, a post which Johann Christoph's son Johann Nicolaus (*27*) had declined. Repeated rises in salary show the esteem in which he was held, particularly in the court Kapelle, which was directed by Telemann in 1708–12.

His only extant works are instrumental; some of the organ works are in copies made by his pupils in Erfurt, who included J.G. Walther (according to Walther himself). Johann Sebastian Bach evidently valued his orchestral suites, for he had five of them copied (he himself was involved in some of the copying) for his collegium musicum in Leipzig. J.S. Bach's obituary notice of 1754 says that Johann Bernhard 'composed many beautiful overtures in the manner of Telemann', no doubt referring

particularly to the forces he employed (*dessus*, *haute-contre*, *taille* and continuo) and to the programmatic movement titles ('Les plaisirs', 'La toge') in the French tradition.

WORKS

(6) Johann Ludwig Bach (*b* Thal, nr Eisenach, 4 Feb 1677; *d* Meiningen, bur. 1 May 1731). Composer, son of Johann Jacob Bach (*3/60*). Nothing is known of his musical training, but he probably received some early instruction from his father before attending the Gotha Gymnasium in 1688–93. From 1699 he was a court musician at Meiningen, from 1703 Kantor and from 1711 court Kapellmeister. In 1706 he had unsuccessfully applied to succeed A.C. Dedekind as Kantor of St Georg, Eisenach, although he had been interested only in the musical and not the teaching duties of the post. His patron of many years, Duke Ernst Ludwig, died in 1724 and Johann Ludwig wrote the music for his funeral.

Johann Ludwig wrote an imposing number of vocal works. Although orchestral music was probably his principal activity from 1711 onwards, hardly any music at that type is extant. The preservation of the cantatas is due primarily to Johann Sebastian, who performed 18 of them, as well as the two masses, in Leipzig in 1726; some were given again between 1735 and 1750. *Denn du wirst meine Seele* was long considered an early work by Johann Sebastian (BWV15). The cantatas constitute the most important part of Johann Ludwig's work; in contrast with the main corpus of Johann Sebastian's cantatas, they represent the older type of mixed cantata, consisting essentially of biblical text and chorale in the following scheme: text from the Old Testament; recitative; aria; text from the New Testament; aria; recitative; chorus; chorale. The standard scoring is for four-part choir, strings and (usually) two oboes; in one cantata two horns are required, but there are no solo woodwind. These works had at least some small influence on Johann Sebastian, for example in his use of a string ensemble to accompany the words of Jesus.

WORKS

manuscripts in D-Bsb unless otherwise stated

Messe sopra cantilena Allein Gott in der Höh, e, 1716, BWVAnh.III.166 [opening of Gl by J.S. Bach]; ed. K. Hofmann (Stuttgart, 1976)

Mass, G, BWV Anh.III.167

Magnificat, 8vv

(7) Johann Sebastian Bach (*24*) (*b* Eisenach, 21 March 1685, *d* Leipzig; 28 July 1750). Composer and organist. The most important member of the family, his genius combined outstanding performing musicianship with supreme creative powers in which forceful and original inventiveness, technical mastery and intellectual control are perfectly balanced. While it was in the former capacity, as a keyboard virtuoso, that in his lifetime he acquired an almost legendary fame, it is the latter virtues and accomplishments, as a composer, that by the end of the 18th century earned him a unique historical position. His musical language was distinctive and extraordinarily varied, drawing together and surmounting the techniques, the styles and the general achievements of his own and earlier generations and leading on to new perspectives which later ages have received and understood in a great variety of ways. The first authentic posthumous account of his life, with a summary catalogue of his works, was put together by his son Carl Philipp Emanuel and his pupil J.F. Agricola soon after his death and certainly before March 1751 (published as *Nekrolog*, 1754). J.N. Forkel planned a detailed Bach biography in the early 1770s and carefully collected first-hand information on

Bach, chiefly from his two eldest sons; the book appeared in 1802, by when the BACH REVIVAL had begun and various projected collected editions of Bach's works were under way; it continues to serve, together with the 1754 obituary and the other 18th-century documents, as the foundation of Bach biography.

1. CHILDHOOD. The parents of Johann Sebastian were Johann Ambrosius Bach (*11*) and Maria Elisabeth Lämmerhirt (1644–94), daughter of a furrier and town councillor in Erfurt, Valentin Lämmerhirt (*d* 1665). Another Lämmerhirt daughter became the mother of Bach's cousin J.G. Walther, suggesting that Lämmerhirt blood was perhaps not unimportant for the musical talents of the Bach family's greatest son. Elisabeth's elder half-sister Hedwig Lämmerhirt was the second wife of Ambrosius Bach's uncle, Johann Bach (*4*), organist of the Predigerkirche in Erfurt. Elisabeth and Ambrosius, who had worked in Eisenach since 1671 as Hausmann and also as a musician at the ducal court of Saxe-Eisenach, were married on 8 April 1668, and had eight children, five of whom survived infancy; as well as Johann Sebastian, the last, these were three sons (nos.*22*, *71* and *23*) and a daughter, Maria Salome. The date of Johann Sebastian's birth, 21 March 1685, was carefully recorded by Walther in his *Lexicon*, by Sebastian himself in the family genealogy, and by his son as the co-author of the obituary. It is supported by the date of baptism (23 March; these dates are old-style) in the register of St Georg. His godfathers were Johann Georg Koch, a forestry official, and Sebastian Nagel, a Gotha Stadtpfeifer. The house of his birth no longer stands; it is not the handsome old structure (Frauenplan 21) acquired by the Neue Bachgesellschaft in 1907 as the 'Bachhaus' and established as a Bach Museum. He would have been born in the house in the Fleischgasse (now the Lutherstrasse) that Ambrosius Bach bought in 1674 after gaining Eisenach citizenship.

After the time of the Reformation all children in Eisenach were obliged to go to school between the ages of five and 12, and (although there is no documentary evidence of it) Sebastian must have entered one of the town's German schools in 1690. From 1692 he attended the Lateinschule (as had Luther, also an Eisenach boy); this offered a sound humanistic and theological education. At Easter 1693 he was 47th in the fifth class, having been absent 96 half-days; in 1694 he lost 59 half-days, but rose to 14th and was promoted; at Easter 1695 he was 23rd in the fourth class, in spite of having lost 103 half-days (perhaps owing to illness, but probably also to the deaths of his parents). He stood one or two places above his brother Jacob, who was three years older and less frequently absent. Nothing more is known about his Eisenach career; but he is said to have been an unusually good treble and probably sang under Kantor A.C. Dedekind at St Georg, where his father made instrumental music before and after the sermon and where his relation (2) Johann Christoph Bach (*13*) was organist. His musical education is matter for conjecture; presumably his father taught him the rudiments of string playing, but (according to Emanuel) he had no formal tuition on keyboard instruments until he went to Ohrdruf. He later described Johann Christoph as 'a profound composer'; no doubt he was impressed by the latter's organ playing as well as by his compositions.

Elisabeth Bach was buried on 3 May 1694, and on 27 November Ambrosius married Barbara Margaretha, née Keul, the daughter of a former mayor of Arnstadt. Aged 35, she had already been twice widowed. Her first husband had been a musician, Johann Günther Bach (*15*), and her second a theologian, Jacobus Bartholomaei (both marriages had taken place in Arnstadt), and she brought to her third marriage two little daughters, Catharina Margareta and Christina Maria, one by each of her earlier husbands. A month before Ambrosius's own second marriage, on 23 October 1694, he and his family had celebrated the wedding of the eldest son, Johann Christoph (*22*) in Ohrdruf. The music on that occasion was by Ambrosius Bach, Johann Pachelbel from nearby Gotha and other friends and family members. This was probably the only occasion on which the then nine-year-old Sebastian met Pachelbel, his brother's teacher. Barely three months after re-marrying, on 20 February 1695, Ambrosius Bach died after a long and serious illness. On 4 March the widow appealed to the town council for help; but she received only her legal due, and the household broke up. Sebastian and Jacob were taken in by their elder brother Johann Christoph, organist at Ohrdruf.

Both were sent to the Lyceum. Jacob left at the age of 14 to be apprenticed to his father's successor at Eisenach; Sebastian stayed on until 1700, when he was nearly 15, and thus came under the influence of an exceptionally enlightened curriculum. Inspired by the educationist Comenius, it embraced religion, reading, writing, arithmetic, singing, history and natural science. Sebastian entered the fourth class probably about March 1695, and was promoted to the third in July: on 20 July 1696 he was first among the seven new boys and fourth in the class; on 19 July 1697 he was first, and was promoted to the second class; on 13 July 1698 he was fifth; on 24 July 1699 second, and promoted to the first class, in which he was fourth when he left the school on 15 March 1700 and went to Lüneburg.

In the obituary Emanuel stated that his father had his first keyboard lessons from Christoph, at Ohrdruf; in 1775, replying to Forkel, he said that Christoph might have trained him simply as an organist, and that Sebastian became 'a pure and strong fuguist' through his own efforts. That is likely enough; Christoph is not known to have been a composer. Several early biographers told the story of how Christoph would not allow his brother to use a certain manuscript; how Sebastian copied it by moonlight; how Christoph took the copy away from him; and how he did not recover it until Christoph died. Emanuel and Forkel assumed that Christoph died in 1700, and that Sebastian, left homeless, went to Lüneburg in desperation. Later authors, knowing that Christoph lived on until 1721, and that the brothers had been on good terms, have tended to reject the story – perhaps unnecessarily, for it may illustrate contemporary attitudes to discipline and restraint. In fact, the story fits in well with the little that is known of the Ohrdruf years, and with the idea that Sebastian taught himself composition by copying. Most probably he recovered his copy when

he went to Lüneburg. As for its contents, Forkel implied that it contained works by seven famous composers, three of them northerners. He probably misunderstood Emanuel's reply to another of his questions; according to the obituary, the manuscript was mainly southern (Froberger, Kerll, Pachelbel) – as one would expect, since Johann Christoph had been a Pachelbel pupil. (A good idea of its contents can be obtained from a manuscript collection compiled in 1692 by another of Pachelbel's pupils, J.V. Eckelt.) The larger of the two organs at Ohrdruf was in almost unplayable condition in 1697, and Sebastian no doubt picked up some of his expert knowledge of organ building while helping his brother with repairs.

No documentary evidence exists to establish when Bach started to compose, but it is reasonable to suppose that it was while he lived in Ohrdruf – not least because other contemporaries, and his own sons in due course, began composing original music before reaching the age of 15. The earliest organ chorales in the Neumeister manuscript, as well as such works as BWV749, 750 and 756, provide plausible examples of pieces composed before and around 1700. They are characterized by sound craftsmanship, observance of models provided by Pachelbel (his teacher's teacher) and everywhere the sense of an endeavour to break away from musical conventions and find independent answers.

2. LÜNEBURG. According to the school register, Sebastian left Ohrdruf 'ob defectum hospitiorum' ('for lack of board and lodging'); clearly Christoph no longer had room for his brother. Since the latter's arrival he had had two children; by March 1700 a third was expected; and (if local tradition can be trusted) his house, now destroyed, was a mere cottage. The brothers' problem seems to have been solved by Elias Herda, Kantor and a master at the Lyceum. He had been educated at Lüneburg, and no doubt it was he who arranged for Sebastian to go north; probably he similarly helped Georg Erdmann, a fellow pupil of Sebastian's, three years older, who left the school just before Bach (for the same reason). According to the obituary they travelled together. They must have reached Lüneburg before the end of March for both were entered in the register of the Mettenchor (Matins choir) by 3 April 1700 and probably sang in it within a matter of days for Holy Week and Easter.

The Michaeliskirche, Lüneburg, had two schools associated with it: a Ritteracademie for young noblemen, and the Michaelisschule for commoners. There were also two choirs: the 'chorus symphoniacus' of about 25 voices was led by the Mettenchor, which numbered about 15, and was limited to poor boys. Members of the Mettenchor received free schooling at the Michaelisschule, up to 1 thaler per month according to seniority, their keep, and a share in fees for weddings and other occasions (Bach's share in 1700 has been put at 14 marks). From the arrangement of the pay-sheets it has been deduced that they were both trebles. Bach was welcomed for his unusually fine voice; but it soon broke, and for eight days he spoke and sang in octaves. After that he may or may not have sung, but no doubt he made himself useful as an accompanist or string player. As the last extant pay-sheet is that for 29 May 1700, no details are known; but it is clear that the school was short of instrumentalists at just this time.

At school, Bach's studies embraced orthodox Lutheranism, logic, rhetoric, Latin and Greek, arithmetic, history, geography and German poetry. The Kantor was August Braun, whose compositions have disappeared; the organist, F.C. Morhard, was a nonentity. The organ was repaired in 1701 by J.B. Held, who had worked at Hamburg and Lübeck; he lodged in the school, and may have taught Bach something about organ building. There was a fine music library, which had been carefully kept up to date; but whether choirboys were allowed to consult it is uncertain. If Braun made good use of it, Bach must have learnt a good deal from the music he had to perform; but his chief interests probably lay outside the school. At the Nikolaikirche was J.J. Löwe (1629–1703), distinguished but elderly. The Johanniskirche was another matter, for there the organist was Georg Böhm (1661–1733), who is generally agreed to have influenced Bach. It has been argued that the organist of the Johanniskirche would not have been accessible to a scholar of the Michaelisschule, since the two choirs were not on good terms, and that Bach's knowledge of Böhm's music must have come later, through J.G. Walther. But Emanuel Bach stated in writing that his father had studied Böhm's music; and a correction in a note to Forkel shows that his first thought was to say that Böhm had been his father's teacher. This hint is supported by the fact that in 1727 Bach named Böhm as his northern agent for the sale of Partitas nos.2 and 3. That seems to imply that the two were on friendly terms; it is likelier that they became so between 1700 and 1702 than at any later date.

Bach went more than once to Hamburg, some 50 km away; probably he visited his cousin Johann Ernst (25), who was evidently studying there about this time. The suggestion that he went to hear Vincent Lübeck cannot be taken seriously, for Lübeck did not go to Hamburg until August 1702, by which time Bach had almost certainly left the area. He may have visited the Hamburg Opera, then directed by Reinhard Keiser, whose *St Mark Passion* he performed during the early Weimar years and again in 1726; but there is no solid evidence that he was interested in anything but the organ and in particular the organist of St Katharinen, J.A. Reincken, whose influence on the young Bach as both theorist and practitioner it would be difficult to overestimate. Marpurg's familiar anecdote makes the point neatly: how Bach, returning almost penniless to Lüneburg, once rested outside an inn; how someone threw two herring heads out on the rubbish heap; how Bach – a Thuringian, to whom fish were a delicacy – picked them up to see if any portion were edible; how he found that they contained two Danish ducats, and was thus able not only to have a meal, but also 'to undertake another and a more comfortable pilgrimage to Herr Reincken'.

J.A. Reincken (?1623–1722), a pupil of Sweelinck and organist of St Katharinen since 1663, was a father figure of the north German school. Böhm may have advised Bach to hear him; and his showy playing, exploiting all the resources of the organ, must have been a revelation to one brought up in the reticent tradition of the south. As for the organ itself, Bach never forgot it; in later years he described it as excellent in every way, said that the 32′ Principal was the best he had ever heard, and never tired of praising the 16′ reeds. Whether he actually met Reincken before 1720 is uncertain. If he did, Reincken might have given him a copy of his sonatas; Bach's reworkings of them (the keyboard pieces BWV954, 965 and 966) are more likely to have been made soon after

1700 than 20 years later, when Bach no longer needed to teach himself composition.

The market-place in Lüneburg had been graced since the end of the 17th century by a palace used for the visits of the Duke of Celle-Lüneburg and his court; the principal ducal residence and seat of government lay in Celle, some 80 km to the south. The duke, married to Eléonore d'Olbreuse, a Huguenot of noble birth, was a pronounced francophile and maintained an orchestra consisting largely of Frenchmen, which played in both Celle and Lüneburg. Thomas de la Selle, dancing-master at the Ritteracademie next door to Bach's school in Lüneburg, was also a member of the Celle orchestra. Emanuel Bach knew that his father was often able to hear this 'famous orchestra' and thus to become acquainted with French taste. It cannot be ruled out that Bach occasionally helped out as an instrumentalist when the court orchestra played in the ducal residence in Lüneburg.

The date of Bach's departure from Lüneburg is not known, but we may suppose that he completed his final school year after two years and left school at Easter 1702. It seems unlikely that he remained in Lüneburg for any length of time after that, for he left without hearing Buxtehude and took extraordinary pains to do so in winter 1705–6. He probably visited relatives in Thuringia after Easter 1702. All that is definitely known is that he competed successfully for the vacant post of organist at St Jacobi in Sangerhausen (the organist was buried on 9 July), but the Duke of Weissenfels intervened and had J.A. Kobelius, a somewhat older man, appointed in November. Bach is next heard of at Weimar, where he was employed at the court as a musician for the first two quarters of 1703; the court accounts have him down as a lackey, but he described himself as a 'Hofmusikant' (court musician) in the *Ursprung*. This was at the minor Weimar court, that of Duke Johann Ernst, younger brother of the Duke Wilhelm Ernst whom Bach served from 1708 to 1717. Possibly the Duke of Weissenfels, having refused to accept Bach at Sangerhausen, found work for him at Weimar; another possibility is that Bach owed his appointment to a distant relation of his, David Hoffmann, another lackey-musician.

Of the musicians with whom Bach now became associated, three are worth mentioning. G.C. Strattner (*c*1644–1704), a tenor, became vice-Kapellmeister in 1695, and composed in a post-Schütz style. J.P. von Westhoff (1656–1705) was a fine violinist and had travelled widely, apparently as a diplomat, and is said to have been the first to compose a suite for unaccompanied violin (1683). Johann Effler (*c*1640–1711) was the court organist: he had held posts at Gehren and Erfurt (where Pachelbel was his successor) before coming in 1678 to Weimar, where about 1690 he moved to the court. He may have been willing to hand over some of his duties to Bach, and probably did something of the kind, for a document of 13 July 1703 at Arnstadt, where Bach next moved, describes Bach as court organist at Weimar – a post that was not officially his until 1708.

3. Arnstadt. The Bonifaciuskirche at Arnstadt had burnt down in 1581, and was subsequently rebuilt in 1676–83; it then became known as the Neue Kirche, and so remained until 1935, when it was renamed after Bach. In 1699 J.F. Wender contracted to build an organ, which by the end of 1701 had become usable; on 1 January 1702 Andreas Börner was formally appointed organist. The organ was complete by June 1703, and was examined before 3 July; there were more examiners than one, but only Bach was named and paid, and it was he who 'played the organ for the first time'. The result was that on 9 August Bach was offered the post over Börner's head; at the same time, 'to prevent any such "collisions" as are to be feared', Börner was given other work. Bach accepted the post 'by handshake' on 14 August 1703. The exact date of his removal to Arnstadt is not known, nor is his address. As his last board and lodging allowance was paid to Feldhaus, he probably spent at least that year in either the Golden Crown or the Steinhaus, both of which belonged to Feldhaus. Considering his age, and local standards, he was well paid; and his duties, as specified in his contract, were light. Normally, he was required at the church only for two hours on Sunday morning, for a service on Monday, and for two hours on Thursday morning; and he had only to accompany hymns. He thus had plenty of time for composition and organ playing, and he took as his models Bruhns, Reincken, Buxtehude (all northerners) and certain good French organists. There is no evidence as to whether he took part in the theatrical and musical entertainments of the court or the town.

Bach was in no position to put on elaborate music at Arnstadt. The Neue Kirche, like the other churches, drew performers from two groups of schoolboys and senior students. Only one of these groups was capable of singing cantatas; it was supposed to go to the Neue Kirche monthly in the summer, but there does not appear to have been a duty roster. The performers naturally tended to go to the churches that had an established tradition and friendly organists; and Bach had no authority to prevent this, for he was not a schoolmaster and was younger than many of the students. Further, he never had much patience with the semi-competent, and was apt to alienate them by making offensive remarks. One result was his scuffle with J.H. Geyersbach (*b* 1682). On 4 August 1705 he and his cousin Barbara, elder sister (aged 26) to his future wife, fell in with six students who had been to a christening feast; one of these was Geyersbach, who asked why Bach had insulted him (or his bassoon), and struck him in the face with a stick. Bach drew his sword, but another student separated them. Bach complained to the consistory that it would be unsafe for him to go about the streets if Geyersbach were not punished, and an inquiry was held. The consistory told Bach that he ought not to have insulted Geyersbach and should try to live peaceably with the students; further, he was not (as he claimed) responsible only for the chorales but was expected to help with all kinds of music. Bach replied that if a musical director were appointed, he would be willing enough.

Bach, unimpressed, asked for four weeks' leave, and set off for Lübeck – 'what is more, on foot', says the obituary, adding that he had an overwhelming desire to hear Buxtehude. Dates and distance cast some doubts on his straightforwardness. He left Arnstadt about 18 October, and was therefore due to be back, or well on his way back, by about 15 November; he would thus have been unable to hear even the first of Buxtehude's special services, which were given on various dates from 15 November to 20 December. Perhaps, like Mattheson and Handel before him, he went primarily to see if there was any chance of succeeding Buxtehude, and was put off by the prospect of marrying Buxtehude's daughter, aged 30; in any case, by 1705 there was a rival in the field. However

that may be, he stayed almost three months at Lübeck, and was absent altogether for about 16 weeks, not returning to Arnstadt until shortly before 7 February 1706, when he communicated.

On 21 February the consistory asked Bach why he had been away for so long; his replies were unsatisfactory and barely civil. They next complained that his accompaniments to chorales were too elaborate for congregational singing, and that he still refused to collaborate with the students in producing cantatas; further, they could not provide a Kapellmeister for him, and if he continued to refuse they would have to find someone more amenable. Bach repeated his demand for a musical director, and was ordered to apologize within eight days. From the next case that the consistory heard that day it seems that there had been actual 'disordres' in the church between Bach and the students. There is no evidence that Bach apologized, and the consistory dropped the matter for eight months. They brought it up again on 11 November, and Bach undertook to answer them in writing. They also accused him of inviting a 'stranger maiden' to make music in the church, but for this he had obtained the parson's permission. The girl in question cannot have been his cousin and future wife, for she had long been resident in Arnstadt and therefore would be unlikely to be described as a stranger.

Neither Bach nor the consistory took further action; no doubt they saw that the problem would soon solve itself. Probably Bach had come back from Lübeck with exalted ideas about church music, requiring facilities that Arnstadt could not provide. His ability was becoming known; on 28 November he helped to examine an organ at Langewiesen. Forkel said that various posts were offered to him; and with the death of J.G. Ahle, on 2 December, a sufficiently attractive vacancy seemed to have arisen.

4. MÜHLHAUSEN. Ahle had been a city councillor of Mühlhausen, organist of St Blasius and a composer of minor rank. Musical standards had fallen during his tenure of office, but the post was a respectable one and various candidates gave trial performances. One was to have been J.G. Walther, the future lexicographer; he sent in two compositions for 27 February 1707 (Sexagesima), but withdrew after being told privately that he had no hope. Bach played at Easter (24 April) and may have performed Cantata no.4. At the city council meeting on 24 May no other name was considered, and on 14 June Bach was interviewed. He asked for the same salary that he was receiving at Arnstadt (some 20 gulden more than Ahle's); the councillors agreed, and an agreement was signed on 15 June. At Arnstadt his success became known; his cousin Johann Ernst (*25*) and his predecessor Börner applied for the Neue Kirche on 22 and 23 June. He resigned formally on 29 June, and presumably moved to Mühlhausen within a few days. It was perhaps in July that he wrote Cantata no.131; this was clearly intended for a penitential service, perhaps connected with a disastrous fire of 30 May. It was not Bach's own Pastor Frohne who commissioned this cantata, but Pastor Eilmar of the Marienkirche – a fact whose possible significance will be seen later. Bach's responsibilities in Mühlhausen included also the convent of Augustinian nuns where there was an organ by Wender without pedals; his principal duty there was to play for special services.

On 10 August 1707 Tobias Lämmerhirt, Bach's maternal uncle, died at Erfurt. He left Bach 50 gulden, more than half his salary, and thus facilitated his marriage to Maria Barbara (*b* 20 Oct 1684), daughter of (3) Johann Michael Bach (*14*) and Catharina Wedemann. The wedding took place on 17 October at Dornheim, a village near Arnstadt; the pastor, J.L. Stauber (1660–1723), was a friend of the family and himself married Regina Wedemann on 5 June 1708. Pupils began to come to Bach at about this time, or perhaps even earlier. J.M. Schubart (1690–1721) is said to have been with him from 1707 to 1717, and J.C. Vogler (1696–1763) to have arrived at the age of ten (at Arnstadt), to have left for a time, and to have returned from about 1710 until 1715. These two were his immediate successors at Weimar; from their time onwards he was never without pupils.

On 4 February 1708 the annual change of council took place, and Cantata no.71 was performed. It must have made an impression, for the council printed not only the libretto, as was usual, but also the music. Bach next drew up a plan for repairing and enlarging the St Blasius organ; the council considered this on 21 February, and decided to act on it. Cantata no.196 may have been written for Stauber's wedding on 5 June. At about this time Bach played before the reigning Duke of Weimar, Wilhelm Ernst, who offered him a post at his court. On 25 June Bach wrote to the council asking them to accept his resignation.

No doubt the larger salary at Weimar was an attraction, particularly as Bach's wife was pregnant. But it is clear, even from his tactful letter to these councillors who had treated him well, that there were other reasons for leaving. He said that he had encouraged 'well-regulated church music' not only in his own church, but also in the surrounding villages, where the harmony was often 'better than that cultivated here' (Spitta found a fragment, BWV223, at nearby Langula). He had also gone to some expense to collect 'the choicest sacred music'. But in all this members of his own congregation had opposed him, and were not likely to stop. Some people no doubt disliked the type of music that he was trying to introduce. Further, Pastor Frohne may have distrusted his organist; an active Pietist, he was at daggers drawn with the orthodox Pastor Eilmar of the Marienkirche – Bach had begun his Mühlhausen career by working with Eilmar, and they had become intimate enough for Eilmar and his daughter to be godparents to Bach's first two children.

The council considered his letter on 26 June and reluctantly let him go, asking him only to supervise the organ building at St Blasius. However badly Bach may have got on with his congregation, he was evidently on good terms with the council. They paid him to come and perform a cantata at the council service in 1709, and possibly also in 1710 (all trace of these works is lost). In 1735 he negotiated on friendly terms with the new council on behalf of his son Johann Gottfried Bernhard (*47*). He is not known to have been paid for supervising or opening the St Blasius organ, but he may have done so.

5. WEIMAR. When he announced his resignation from Mühlhausen, Bach said that he had been appointed to the Duke of Weimar's 'Capelle und Kammermusik', and it was long thought that he did not become organist at once. In fact, Weimar documents show that on 14 July 1708, when his 'reception money' was paid over, he was called 'the newly appointed court organist', and that he was almost always so called until March 1714, when he became Konzertmeister as well. Effler, it seems, was

pensioned off on full salary (130 florins); on 24 December 1709 he received a small gift as 'an old sick servant', and he died at Jena on 4 April 1711.

It is said that Bach wrote most of his organ works at Weimar, and that the duke took pleasure in his playing. His salary was from the outset larger than Effler's (150 florins, plus some allowances); it was increased to 200 from Michaelmas 1711, 215 from June 1713, and 250 on his promotion in 1714. On 20 March 1715 it was ordered that his share of casual fees was to be the same as the Kapellmeister's. Moreover, he seems to have had a fair amount of spare time, in which, for instance, to cultivate the acquaintance of Telemann while the latter was at Eisenach (1708–12). Together with the violinist Pisendel he copied a concerto in G of Telemann's (*D-Dl*), probably during Pisendel's visit to Weimar in 1709.

Six of Bach's children were born at Weimar: Catharina (bap. 29 Dec 1708; *d* 14 Jan 1774); (8) Wilhelm Friedemann (*45*) (*b* 22 Nov 1710); twins (*b* 23 Feb 1713; both died in a few days); (9) Carl Philipp Emanuel (*46*) (*b* 8 March 1714); and Johann Gottfried Bernhard (*47*) (*b* 11 May 1715). The various godparents show that Bach and his wife kept in touch with relations and friends from Ohrdruf, Arnstadt and Mühlhausen, besides making fresh contacts at Weimar; it is noteworthy that Telemann was godfather to Emanuel.

On 13 March 1709 Bach, his wife, and one of her sisters (probably the eldest, Friedelena, who died at Leipzig in 1729) were living with Adam Immanuel Weldig, a falsettist and Master of the Pages. They probably stayed there until August 1713, when Weldig gave up his house, having secured a similar post at Weissenfels. Weldig was godfather to Emanuel; Bach (by proxy) to a son of Weldig's in 1714. Weldig's house was destroyed in 1944; where Bach lived before and after the given dates is not known.

Since 29 July 1707, J.G. Walther (the lexicographer) had been organist of the Stadtkirche; he was related to Bach through his mother, a Lämmerhirt, and the two became friendly. On 27 September 1712 Bach stood godfather to Walther's son. Forkel told a story of how Walther played a trick on Bach, to cure him of boasting that there was nothing he could not read at sight. Their relations did not deteriorate, as Spitta supposed; in 1735 Bach negotiated on Walther's behalf with the Leipzig publisher J.G. Krügner, and Walther's references to Bach in his letters to Bokemeyer carry no suggestion of any coolness. From one such letter it seems that during his nine years at Weimar Bach gave Walther some 200 pieces of music, some by Buxtehude, others compositions of his own.

Of Bach's pupils, Schubart and Vogler have already been mentioned. The pupil for whom Bach was paid by Ernst August's account in 1711–12 was not Duke Ernst August himself but a page called Jagemann. J.G. Ziegler (1688–1747) matriculated at the University of Halle on 12 October 1712, but before that he had studied with Bach for a year or so, and had been taught to play chorales 'not just superficially, but according to the sense of the words'; Bach's wife stood godmother to his daughter in 1718, and in 1727 Bach employed him as agent, in Halle, for Partitas nos.2 and 3. P.D. Krauter of Augsburg (1690–1741) set out for Weimar in March 1712, and stayed until about September 1713. Johann Lorenz Bach (*38*) probably arrived in autumn 1713; he may have left Weimar by July 1717. Johann Tobias Krebs (1690–1762) studied with Walther from 1710, with Bach from about 1714 until 1717. Johann Bernhard Bach (*41*) worked with his uncle from about 1715 until March 1719, alongside Samuel Gmelin (1695–1752), who appears to have left in 1717. C.H. Dretzel of Nuremberg (1697–1775) may have been briefly with Bach. In 1731, when applying for a post, T.C. Gerlach (1694–1768) implied that Bach had been teaching him by correspondence for 14 years, but his confused phraseology should not be taken literally.

The specification of the organ in the castle chapel, published in 1737, has not always been reprinted correctly; in any case, it does not represent the organ that Bach left in 1717. Extensive alterations were made in 1719–30. Still less does the specification represent the organ that Bach was faced with in 1708, for he himself made even more extensive alterations in 1713–14. The organ is said to have been built by Compenius in 1657–8. It was overhauled in 1707–8, and a Sub-Bass added, by J.C. Weishaupt, who carried out further maintenance work in 1712. A contract for alterations had however been signed on 29 June 1712 with H.N. Trebs (1678–1748), who had moved from Mühlhausen to Weimar in 1709. Bach and he had worked together on a new organ at Taubach in 1709–10, opened by Bach on 26 October 1710; in 1711 he gave Trebs a handsome testimonial, and in 1713 he and Walther became godfathers to Trebs's son. Bach and Trebs collaborated again about 1742, over an organ at Bad Berka. Trebs's new organ was usable during 1714; he had done 14 days' tuning by 19 May, and was paid off on 15 September. Of this rebuild nothing is known, except that either Bach or the duke was determined that the instrument include a Glockenspiel; great trouble was taken over obtaining bells from dealers in Nuremberg and Leipzig, and it seems that the original set of 29 (a number hard to account for) had to be replaced because of difficulties over blend and pitch. In 1737 the organ had a Glockenspiel on the *Oberwerk*, but alterations had been made in 1719–20 and it does not follow that the Glockenspiel of 1714 was on a manual.

In December 1709 and February 1710 Bach was paid for repairing harpsichords in the household of the junior duke, Ernst August and Prince Johann Ernst. On 17 January 1711 he was godfather to a daughter of J.C. Becker, a local burgher. In February 1711 Prince Johann Ernst went to the University of Utrecht. From 21 February 1713 Bach was lodged in the castle at Weissenfels. Duke Christian's birthday fell on 23 February, and it is now known that Cantata no.208 was performed in this year, not in 1716. The earlier date is stylistically suitable; moreover, it is compatible both with the watermark of the autograph score and with the fact that in this score Bach contradicted sharps by flats rather than by naturals – an old-fashioned habit that he gave up progressively during 1714.

About May 1713 the young prince returned from Utrecht, apparently with a good deal of music, for in the year from 1 June there were bills for binding, copying and shelving (some of the music came from Halle). In February 1713 he had been in Amsterdam, and may have met the blind organist J.J. de Graff who was in the habit of playing recent Italian concertos as keyboard solos. This may have given rise to the numerous concerto arrangements made by Walther and Bach.

On 7 September 1713 Bach was probably at Ohrdruf, standing godfather to a nephew; and on 6 November he took part in the dedication of the new Jakobskirche at Weimar (there is no evidence that he composed any of the music). On 27 November he was at Weimar, as godfather to Trebs's son. At about this time he seems to have gone to Halle, perhaps to buy music, and to have become accidentally involved with the authorities of the Liebfrauenkirche. The organist there (Zachow, Handel's teacher) had died in 1712, and the organ was being enlarged to a three-manual of 65 stops. The story has to be pieced together from hints in an incomplete correspondence; but it looks as if the pastor, J.M. Heineccius, pressed Bach to apply for the vacant post. Bach may have been involved in planning the enlargement of the organ, when Zachow became incapacitated; at all events, he stayed in Halle from 28 November to 15 December at the church authorities' expense. He also composed and performed a cantata (lost), attended a meeting on 13 December 1713, was offered the post, and let the committee suppose that he had accepted it, although he had not had time to find out what his casual fees would amount to. On 14 December they sent him a formal contract. Bach replied on 14 January 1714, saying cautiously that he had not been released from Weimar, was uneasy about his salary and duties, and would write again within the week. Whether he did so is not known; but on February the committee resolved to tell him that his salary was not likely to be increased. Thus at Halle he could expect a slightly smaller salary than he was already getting; the attraction was the organ, more than twice as large. Bach must then have approached the duke, for on 2 March, 'at his most humble request', he became Konzertmeister (ranking after the vice-Kapellmeister), with a basic salary of 250 florins from 25 February. In finally refusing the Halle post, he probably mentioned that figure, for the committee accused him of having used their offer as a lever to extract more money from the duke. This he denied on 19 March, in a letter so reasonable and so obviously honest that he remained on good terms with Halle and was employed there as an organ examiner in 1716. Gottfried Kirchhoff had meanwhile been appointed organist on 30 July 1714.

Few cantatas (apart from the secular no.208) can be ascribed to these early Weimar years. Nos.18, 54 and 199 appear to date from 1713 and clearly have no specific connection with the cantatas composed with an eye to the church calendar from March 1714 onwards. The work performed at Halle in December 1713 was formerly thought to be no.21 (see F. Chrysander: *G.F. Händel* (Leipzig, 1858–67/*R*)). The idea that it was no.63 no longer stands up, although the forces required for that work make it extremely unlikely that it was written for the Weimar court; a performance in Halle at Christmas 1715 is conceivable.

On 23 March 1714 it was ordered that cantatas should in future be rehearsed in the chapel, not at home or in lodgings; and on Palm Sunday, 25 March, Bach performed no.182. This was the fourth Sunday after his appointment as Konzertmeister, when he had become responsible for writing a cantata every four weeks. As he evidently hoped to complete an annual cycle in four years, he did not keep strictly to this rule; having written a cantata for Advent Sunday in 1714, he wrote for the last Sunday after Trinity in 1715, and for the second Sunday in Advent in 1716 (in 1717 he was in prison). Apart from such intentional irregularities, there are gaps in the series, and the strange thing is that these gaps became suddenly more numerous after the end of 1715. One of the gaps is accounted for by the death at Frankfurt on 1 August 1715 of the musically gifted Prince Johann Ernst, plunging the duchy into mourning from 11 August to 9 November 1715, when not a note of music might be played. From 1717 there are no cantatas at all. A tentative explanation will be suggested for this; but it is hard to see why Bach's usual allowance of paper was paid for on 16 May 1716 when he is not known to have performed any church cantatas between 19 January and 6 December.

On 4 April 1716 Bach, like the librettist Salomo Franck and 'the book-printer', was paid for 'Carmina', bound in green taffeta, that had been 'presented' on some unspecified occasion – perhaps on 24 January when Duke Ernst August had married Eleonore, sister of the Prince of Cöthen. Ernst's birthday was celebrated in April; two horn players from Weissenfels came to Weimar, possibly brought over for a repeat performance of Cantata no.208. Meanwhile, the new organ at Halle had been making progress, and on 17 April the council resolved that Bach, Kuhnau of Leipzig and Rolle of Quedlinburg should be invited to examine it on 29 April. They all accepted; each was to receive 16 thaler, plus food and travelling expenses. The examination began at 7 a.m., and lasted three days – until some time on 1 May, when the experts wrote their report, a sermon was preached and fine music was performed. On 2 May the organist and the three examiners met the builder to discuss details. The council, who behaved liberally, gave a tremendous banquet, whose date is usually given as 3 May (1 May seems more likely).

On 31 July 1716 Bach and an Arnstadt organ builder signed a testimonial for J.G. Schröter, who had built an organ at Erfurt. In 1717 Bach was mentioned in print for the first time: in the preface to Mattheson's *Das beschützte Orchestre*, dated 21 February, Mattheson referred to Bach as 'the famous Weimar organist' saying that his works, both for the church and for keyboard, led one to rate him highly, and asked for biographical information.

It is against this background that Bach's departure from Weimar has to be considered. In 1703 he had been employed by Duke Johann Ernst; since his return in 1708, by Duke Wilhelm, Johann's elder brother. The brothers had been on bad terms, and when Johann Ernst died in 1707 and his son Ernst came of age in 1709, things became no better. For some time the ducal disagreements do not seem to have affected Bach; perhaps they were kept within bounds by Superintendent Lairitz, and Ernst's younger half-brother (Johann, the composer) may have had some influence. But the latter died in 1715, Lairitz on 4 April 1716, and the new superintendent certainly failed to cope with the 'court difficulties'; like the rest of Wilhelm's household, he was forbidden to associate with Ernst. The musicians, though paid by both households, were threatened with fines of 10 thaler if they served Ernst in any way.

No extant Bach cantata can be securely dated between 19 January and 6 December 1716; it may seem unlikely that this long, continuous gap was due to casual losses. It is tempting to suppose that Bach found his position embarrassing (owing to his early connection with the junior court) and expressed disapproval of Duke Wilhelm's behaviour by evading his own responsibilities. In

fact, Bach does not seem to have disapproved of the duke's behaviour until he discovered that a new Kapellmeister was being sought elsewhere. Drese senior died on 1 December 1716; his son, the vice-Kapellmeister, was by all accounts a nonentity. Bach produced Cantatas nos.70*a*, 186*a* and 147*a* for 6, 13 and 20 December (three successive weeks, not months), but there were no more, as far as is known. By Christmas, Bach may have found out that the duke was angling for Telemann. Negotiations with Telemann came to nothing; but apparently Bach now set about looking for a post as Kapellmeister. He was offered one by Prince Leopold of Cöthen, brother-in-law to Duke Ernst (Bach and the prince had probably met at Ernst's wedding in January 1716) and the appointment was confirmed on 5 August 1717. No doubt Bach then asked Duke Wilhelm's permission to leave, and no doubt he was refused – the duke being annoyed because his nephew had obviously had a hand in finding Bach a job that carried more prestige and, at 400 thaler, was better paid.

The duke and Bach must nevertheless have remained on speaking terms for the time being, for at some date hardly earlier than the end of September Bach was in Dresden and free to challenge the French keyboard virtuoso Louis Marchand. Versions of this affair differ, but according to Birnbaum (who wrote in 1739, probably under Bach's supervision), Bach 'found himself' at Dresden, and was not sent for by 'special coach'. Once there, some court official persuaded him to challenge Marchand to a contest at the harpsichord; the idea that they were to compete at the organ seems to have crept in later. Whatever may be the truth about these and other details, it is universally agreed that Marchand ran away.

On his birthday, 30 October 1717, Duke Wilhelm set up an endowment for his court musicians; and the second centenary of the Reformation was celebrated from 31 October to 2 November. Presumably Bach took part in these ceremonies, though there is no evidence that he set any of the librettos that Franck had provided. Emboldened, perhaps, by the Marchand affair, he then demanded his release in such terms that the duke had him imprisoned from 6 November until his dismissal in disgrace on 2 December. The Cöthen court had paid Bach 50 thaler on 7 August. Some have supposed that this was for travelling expenses, and that Bach had his wife and family moved to Cöthen soon after; but it seems unlikely that the duke would have allowed them to move until he had agreed to let Bach go. The younger Drese became Kapellmeister in his father's place and Bach's pupil J.M. Schubart became court organist. The post of Konzertmeister disappeared.

6. CÖTHEN. Except during the few last months of his Weimar period, Bach had been on good terms with Duke Wilhelm; but his relations with that martinet must always have been official. At Cöthen, until the end of 1721, things were different; Prince Leopold was a young man who, as Bach himself said, loved and understood music. He was born in 1694, of a Calvinist father and a Lutheran mother. The father died in 1704, the mother ruled until Leopold came of age on 10 December 1715. There was no court orchestra until October 1707, when Leopold persuaded his mother to take on three musicians. While studying in Berlin in 1708, he met A.R. Stricker; from the end of 1710 to 1713 he was on the usual grand tour, during which he studied with J.D. Heinichen at Rome. He returned capable of singing bass, and of playing the violin, viola da gamba and harpsichord. The Berlin court orchestra had broken up in 1713, and from July 1714 he employed Stricker as Kapellmeister and his wife as soprano and lutenist; by 1716 he had 18 musicians. In August 1717 Stricker and his wife seem to have resigned, leaving the prince free to appoint Bach.

At Cöthen the St Jakob organ was in poor condition. The court chapel was Calvinist; it had an organist, but no elaborate music was performed there, and the two-manual organ had only 13 or 14 stops, though it may have had a complete chromatic compass to pedal *e′* and manual *e‴*. The Lutheran St Agnus had a two-manual organ of 27 stops, again with an exceptional pedal compass. There is not the slightest reason to suppose that Bach wrote any particular work to exploit these pedal compasses, but no doubt he used one or both of the organs for teaching and private practice. He communicated at St Agnus, and took part in the baptisms at the court chapel, but had no official duties in either. He may, however, have been involved in the affair of May 1719, when a cantata was put on for the dedication festival of St Agnus, and 150 copies of (presumably) the libretto were printed. The printer's bill for one thaler and eight groschen was endorsed by the pastor: 'The churchwardens can give him 16 groschen; if he wants more, he must go to those who gave the order'.

Bach's basic salary, 400 thaler, was twice Stricker's, and extra allowances made it up to about 450. Only one court official was paid more, and there is other evidence that Bach was held in high esteem. On 17 November 1718 the last of his children by his first wife (a short-lived son) was named after the prince, who himself was a godfather. Bach's residence in Cöthen is not definitely known, but it seems likely that he began as a tenant in Stiftstrasse 11; in 1721, when that house was bought by the prince's mother for the use of the Lutheran pastor, he moved to Holzmarkt 10. The orchestra needed a room for their weekly rehearsals; the prince supplied it by paying rent to Bach (12 thaler a year from 10 December 1717 to 1722). Presumably there was a suitable room in Bach's first house. Whether he continued to use that room after his move in 1721, and why he was not paid rent after 1722, is not clear.

The date of the first rent payment suggests that Bach and his household moved to Cöthen a day or two after he was released from prison (2 December); and that, after hasty rehearsals, he helped to celebrate the prince's birthday on 10 December. That would normally have been his duty. The court accounts suggest that something connected with the birthday was either printed or bound in 1717, as also in 1719 and 1720 (Anh.7); Bach certainly wrote a cantata in 1722, and Cantatas nos.66*a* and Anh.5 in 1718. In 1721 there may have been no birthday celebrations, for the prince was married, at Bernburg, the next day. Cantata no.173*a* was undoubtedly a birthday work, but Bach probably wrote it after he had left Cöthen; 36*a*, an arrangement of 36*c* (1725), was performed at Cöthen on 30 November 1726, for the birthday of the prince's second wife.

New Year cantatas also were expected. No.134*a* dates from 1719, Anh.6 from 1720, Anh.8 from 1723. There is no evidence for 1718, 1721 or 1722; printers' and binders' bills paid on 5 January 1722 may have been for music performed in December 1721. Bach may well have been unable to put on a wedding cantata, but there seems no

reason why he should not have offered something for the prince's birthday. Nos.184 and 194 (Leipzig, 1724, and Störmthal, 1723) seem to be arrangements of Cöthen works, and so perhaps are parts of no.120. Whether or not Bach performed a cantata at Cöthen on 10 December 1717, he was at Leipzig on 16 December examining the organ at the university church (the Paulinerkirche). The work had been done by Johann Scheibe, with whose son Bach was later in dispute. Bach is not known to have done any other work of this kind while at Cöthen.

On 9 May 1718 the prince went to drink the waters at Carlsbad for about five weeks, taking with him his harpsichord, Bach and five other musicians. Early in 1719 Bach was in Berlin, negotiating for a new harpsichord. About this time he seems to have been busy composing or buying music, for between July 1719 and May 1720 some 26 thaler were spent on binding. During 1719 Handel visited his mother at Halle, only some 30 km away; it is said that Bach tried, but failed, to make contact with him. Bach also disregarded a renewed request from Mattheson for biographical material.

W.F. Bach was nine in 1719; the title-page of his *Clavier-Büchlein* is dated 22 January 1720. In May Bach again went to Carlsbad with the prince. The date of their return does not seem to have been recorded; but apparently it was after 7 July, for that was the date of Maria Barbara's funeral, and there is no reason to doubt Emanuel's story that his father returned to find her dead and already buried. His wife had been nearly 36. Her death may well have unsettled Bach, and even led him to think of returning to the service of the church; but there was a more practical reason for his taking an interest in St Jacobi at Hamburg. The organist there, Heinrich Friese, died on 12 September 1720; Bach had known Hamburg in his youth, and must have been attracted by the organ, a four-manual Schnitger with 60 stops. There is no evidence that Bach was actually invited to apply for the post; but he may well have made inquiries of his own.

At all events, his name was one of eight being considered on 21 November, and he was in Hamburg at about that time. A competition was arranged for 28 November, but Bach had had to leave for Cöthen five days before. Three candidates did not appear, and the judges were not satisfied with the other four. An approach was made to Bach, and the committee met on 12 December; as Bach's reply had not arrived, they met again a week later, when they found that Bach had refused. Perhaps he was unable, or unwilling, to contribute 4000 marks to the church funds, as the successful candidate actually did.

From the way in which the committee kept the post open for Bach, one may suppose that they had heard his recital at St Katharinen. Exactly how this performance was arranged, no-one knows; but in the obituary Emanuel stated that Bach played before the aged Reincken, the magistracy and other notables; that he played for more than two hours in all; and that he extemporized in different styles on the chorale *An Wasserflüssen Babylon* for almost half an hour, just as the better Hamburg organists had been accustomed to doing at Saturday Vespers. As a fantasia on this chorale was one of Reincken's major works, this may seem a tactless choice; but the obituary makes it clear that the chorale was chosen by 'those present' and not by Bach himself. Reincken is reported to have said, 'I thought this art was dead, but I see it still lives in you', and showed Bach much courtesy. A later remark of Mattheson's has been taken to imply that Bach also played the G minor Fugue BWV542, but there are good reasons to doubt it.

During 1720 Bach made fair copies of the works for unaccompanied violin, and must have been preparing the Brandenburg Concertos, whose autograph full score was dedicated on 24 March 1721 to the Margrave Christian Ludwig, before whom Bach had played in Berlin while negotiating for the new Cöthen harpsichord, between June 1718 and March 1719. What he played is not known; but he was invited to send in some compositions. As he himself said, he took 'a couple of years' over this commission, and then submitted six works written to exploit the resources of Cöthen. Such resources do not seem to have been available to the Margrave of Brandenburg, and it is not really surprising that he did not thank Bach, send a fee or use the score.

One of Bach's friends at Cöthen was the goldsmith C.H. Bähr; Bach stood godfather to one of Bähr's sons in 1721, and deputized for a godfather to another in 1723. About the beginning of August 1721 he gave a performance of some unspecified kind for Count Heinrich XI Reuss of Schleiz; this may have been arranged by J.S. Koch, the Kantor there, who had held a post at Mühlhausen, though possibly not in Bach's time there. On 15 June 1721 Bach was the 65th communicant at St Agnus; one 'Mar. Magd. Wilken' was the 14th. This may well have been Bach's future wife – the mistake in the first name is an easy one – but Anna Magdalena makes no formal appearance until 25 September, when Bach and she were the first two among the five godparents of a child called Hahn. This baptism is recorded in three registers. In two of them Anna is described as 'court singer', in the third, simply as 'chamber musician' (*Musicantin*). In September Anna was again a godmother, to a child called Palmarius; again the registers differ in describing her occupation. Her name does not appear in court accounts until summer 1722, when she is referred to as the Kapellmeister's wife; her salary (half Bach's) is noted as paid for May and June 1722.

Practically nothing is known of her early years. She was born on 22 September 1701 at Zeitz. Her father, Johann Caspar Wilcke, was a court trumpeter; he worked at Zeitz until about February 1718, when he moved to Weissenfels where he died on 30 November 1731. The surname was variously spelt. Anna's mother (Margaretha Elisabeth Liebe, *d* 7 March 1746) was daughter of an organist and sister of J.S. Liebe who, besides being a trumpeter, was organist of two churches at Zeitz from 1694 until his death in 1742. As a trumpeter's daughter, Anna may well have met the Bachs socially. The stories that she was a public figure, having sung at Cöthen and the other local courts since the age of 15, have been discredited; they are said to have arisen through confusion with her elder brother, a trumpeter. However, she was paid for singing, with her father, in the chapel at Zerbst on some occasion between Easter and midsummer 1721. By September 1721, aged just 20, she was at Cöthen, well acquainted with Bach (aged 36), and ready to marry him on 3 December. The prince saved Bach 10 thaler by giving him permission to be married in his own lodgings. At about this time Bach paid two visits to the city cellars, where he bought first one firkin of Rhine wine, and later two firkins, all at a cut price, 27 instead of 32 groschen per gallon.

2. *Autograph MS of Bach's organ chorale 'Der Tag, der ist so freudenreich'* BWV605 *(completed in new German organ tablature) from the 'Orgel-Büchlein', composed mostly c1713–15 (D-Bsb Mus.ms.Bach P 283, f.9r)*

On 11 December 1721 the prince married his cousin Friderica, Princess of Anhalt-Bernburg. The marriage was followed by five weeks of illuminations and other entertainments at Cöthen. This was not however an auspicious event for Bach: he was to leave Cöthen partly because the princess was 'eine Amusa' (someone not interested in the Muses) and broke up the happy relationship between Bach and her husband. Perhaps her unfortunate influence had made itself felt even before she was married.

A legacy from Tobias Lämmerhirt (Bach's maternal uncle) had facilitated Bach's first marriage; Tobias's widow was buried at Erfurt on 12 September 1721, and Bach received something under her will too, though not in time for his second marriage. On 24 January 1722 Bach's sister Maria, together with one of the Lämmerhirts, challenged the will, saying that Bach and his brothers Jacob (in Sweden) and Christoph (at Ohrdruf) agreed with them (Christoph had died in 1721). Bach heard of this only by accident; and on 15 March he wrote to the Erfurt council on behalf of Jacob as well as himself. He objected to his sister's action, and said that he and his absent brother desired no more than was due to them under the will. On 16 April Jacob died; and the matter seems to have been settled on these lines towards the end of the year. Bach's legacy must have amounted to rather more than a year's pay.

In summer 1722 there was no Kapellmeister at the court of Anhalt-Zerbst, and Bach was commissioned to write a birthday cantata for the prince; for this he was paid 10 thaler in April and May. The birthday was in August, and payments made during that month presumably refer to the performance. If so, the work, which seems to have disappeared, was scored for two oboes d'amore and 'other instruments'.

Several didactic works for keyboard belong to the Cöthen period. One is the *Clavierbüchlein* for Anna Magdalena Bach. 25 leaves are extant, about a third of the original manuscript; there is a kind of title-page, on which Anna Magdalena (probably) wrote the title and the date and Bach (certainly) noted the titles of three theological books. Despite the sceptics, it remains reasonable to suppose that Bach gave the book to his wife early in 1722. It seems to have been filled by 1725. The autograph of *Das wohltemperirte Clavier* (book 1 of the '48') is dated 1722 on the title-page but 1732 at the end. The writing is uniform in style, and for various reasons it is incredible that he did not finish the manuscript until 1732. This handsome fair copy was preceded by drafts, like those in W.F. Bach's *Clavier-Büchlein* (begun in 1720); and some of the movements look earlier than that. Presumably Bach brought them together for convenience, partly to serve as the last step in his keyboard course, partly to exhibit the advantages of equal temperament. As in book 2, no doubt Bach transposed some of the pieces to fill gaps in his key scheme; the odd pairing of the prelude in six flats with the fugue in six sharps suggests that the former was originally in E minor, the latter in D minor.

The title-page was almost certainly the only part of the *Orgel-Büchlein* that Bach wrote while at Cöthen, but as another educational work it is best mentioned here. It was meant to be a collection of chorale preludes, not only for the ordinary church seasons but also for occasions when such subjects as the Lord's Prayer, or Penitence, were being emphasized. The paper is of a kind that Bach used, as far as is known, only in 1714. A few items date from about 1740; in the rest, the writing resembles that of the cantatas of 1715–16. Of the 164 preludes Bach allowed for, he completed fewer than 50. Last in this group of works come the Inventions and Sinfonias, whose autograph fair copy is dated 'Cöthen, 1723'. Its contents had already appeared, in earlier versions and under different titles, in W.F. Bach's *Clavier-Büchlein* of 1720.

The story of Bach's move to Leipzig begins with the death of Kuhnau, Kantor of the Thomasschule there, on 5 June 1722. Six men applied for the post, among them Telemann, who was still remembered for the good work he had done at Leipzig 20 years before. He had been doing a similar job at Hamburg for about a year, and was probably the most famous of German musicians actually living in Germany. One of the Kantor's duties was to teach Latin. Telemann refused to do that; nevertheless, he was appointed on 13 August. But the Hamburg authorities would not release him, and offered to increase his pay; in November he declined the Leipzig post. At a meeting on 23 November Councillor Platz said that Telemann was no loss; what they needed was a Kantor to teach other subjects besides music. Of the remaining five candidates, three were invited to give trial performances; two dropped out, one because he would not teach Latin. By 21 December two Kapellmeisters had applied, Bach and Graupner. The other candidates were Kauffmann of Merseburg, Schott of the Leipzig Neukirche, and Rolle of Magdeburg. Of the five candidates, Graupner was preferred; he was a reputable musician, and had studied at the Thomasschule. He successfully performed his test (two cantatas) on 17 January 1723. But on 23 March he too withdrew, having been offered more pay at Darmstadt. Meanwhile, Bach had performed his test pieces (Cantatas nos.22 and 23) on 7 February 1723. Rolle and Schott had also been heard, and possibly Kauffmann too. The Princess of Cöthen died on 4 April, too late to affect Bach's decision. On 9 April the council considered Bach, Kauffmann and Schott. Like Telemann, none of them wished to teach Latin. Councillor Platz said that as the best men could not be got, they must make do with the mediocre. The council evidently resolved to approach Bach, for on 13 April he obtained written permission to leave Cöthen. On 19 April he signed a curious document that reads as if he were not yet free from Cöthen, but could be free within a month; he also said he was willing to pay a deputy to teach Latin. On 22 April the council agreed on Bach, one of them hoping that his music would not be theatrical. On 5 May he came in person to sign an agreement; on 8 and 13 May he was interviewed and sworn in by the ecclesiastical authority; on 15 May the first instalment of his salary was paid; and on 16 May he 'took up his duties' at the university church, possibly with Cantata no.59. With family and furniture, he moved in on 22 May, and performed Cantata no.75 at the Nikolaikirche on 30 May. On 1 June, at 8.30 a.m., he was formally presented to the school.

This story has been told in some detail, because it throws light on the circumstances in which Bach worked at Leipzig. To him, the Kantorate was a step downwards in the social scale, and he had little respect for his employers. To the council, Bach was a third-rater, a mediocrity, who would not do what they expected a Kantor to do – teach Latin, as well as organize the city church music. The stage was set for trouble, and in due course trouble came. Councillor Platz on Telemann is curiously echoed by Councillor Stieglitz, ten days after Bach's death: 'The school needs a Kantor, not a Kapellmeister; though certainly he ought to understand music'.

7. Leipzig, 1723–9. The position of Kantor at the Thomasschule, held conjointly with that of civic director of music, had been associated with a wealth of tradition since the 16th century. It was one of the most notable positions in German musical life both in this and in the esteem it commanded; and there can be little doubt that the general attractiveness of the position in itself played a part – very likely the decisive part – in Bach's decision to move from Cöthen to Leipzig. His subsequent remark about the social step down from Kapellmeister to Kantor must be seen in the context of his later disagreements with the Leipzig authorities, as indeed the letter in question (to Erdmann, a friend of his youth, on 28 October 1730) makes unequivocally clear. In any event, Bach was not the only Kapellmeister to apply for the post. The duties were incomparably more varied and demanding than those in Cöthen or Weimar (to say nothing of Mühlhausen or Arnstadt) and more or less corresponded to those undertaken by Telemann in Hamburg. It cannot have been mere chance that Bach wanted to tackle a range of duties comparable with those of his friend. Above all he must have preferred the greater economic and political stability of a commercial metropolis governed democratically to the uncertainties of the court of an absolute prince, where personal whim often held sway. The university – the foremost in the German-speaking world at the time – must have been another special attraction in the eyes of a father of growing-up sons.

The 'Cantor zu St. Thomae et Director Musices Lipsiensis' was the most important musician in the town; as such, he was primarily responsible for the music of the four principal Leipzig churches – the Thomaskirche, the Nikolaikirche, the Matthäeikirche (or Neukirche) and the Petrikirche – as well as for any other aspects of the town's musical life controlled by the town council. In carrying out his tasks he could call above all on the pupils of the Thomasschule, the boarding-school attached to the Thomaskirche, whose musical training was his responsibility, as well as the town's professional musicians. Normally the pupils, about 50 to 60 in number, were split up into four choir classes (Kantoreien) for the four churches. The requirements would vary from class to class: polyphonic music was required for the Thomaskirche, Nikolaikirche (the civic church) and Matthäeikirche, with figural music only in the first two; at the Petrikirche only monodic chants were sung. The first choir class, with the best 12 to 16 singers, was directed by the Kantor himself, and sang alternately in the two principal churches, the Nikolaikirche and Thomaskirche; the other classes were in the charge of prefects, appointed by Bach, who would be older and therefore more experienced pupils of the Thomasschule.

Musical aptitude was a decisive factor in the selection of pupils for the Thomasschule, and it was the Kantor's responsibility to assess and train them. This was furthered by the daily singing lessons, mostly given by the Kantor. There was also instrumental instruction for the ablest pupils, which Bach had to provide free of charge but was thus enabled to make good any shortage of instrumentalists for his performances. Indeed, the number of professional musicians employed by the town (four Stadtpfeifer, three fiddlers and one apprentice) was held throughout his period of office at the same level as had obtained during the 17th century. For further instrumentalists Bach drew on the university students. In general the age of the Thomasschule pupils ranged between 12 and 23. Remembering that voices then broke at the age of 17 or 18, it is clear that Bach could count on solo trebles and altos who

already had some ten years' practical experience – an ideal situation, impossible in boys' choirs today.

As far as church music was concerned, Bach's duties centred on the principal services on Sundays and church feasts, as well as some of the more important subsidiary services, especially Vespers. In addition, he could be asked for music for weddings and funerals, for which he would receive a special fee. Such additional income was important to Bach, as his salary as Kantor of the Thomaskirche and director of music came to only 87 thaler and 12 groschen (besides allowances for wood and candles, and payments in kind, such as corn and wine). In fact, including payments from endowments and bequests as well as additional income, Bach received annually more than 700 thaler. Further, he had the use of a spacious official residence in the south wing of the Thomasschule, which had been renovated at a cost of more than 100 thaler before he moved in in 1723. Inside the Kantor's residence was the so-called 'Komponirstube' ('composing room'), his professional office containing his personal music library and the school's. The buildings of the old Thomasschule were, scandalously, demolished in 1903 to make room for what is now the senior minister's quarters; it was also then that the west façade of the Thomaskirche was rebuilt in the neo-Gothic style.

During his early Leipzig years, Bach involved himself in church music with particular thoroughness and extreme energy. This activity centred on the 'Hauptmusic' composed for Sundays and church feasts. The performance of a polyphonic cantata, with a text related as a rule to the Gospel for the day, was a tradition inherited from previous Kantors. Even so, Bach engaged on a musical enterprise without parallel in Leipzig's musical history: in a relatively short time he composed five complete (or nearly complete) cycles of cantatas for the Church year, with about 60 cantatas in each, making a repertory of roughly 300 sacred cantatas. The first two cycles were prepared immediately, for 1723–4 and 1724–5; the third took rather longer, being composed between 1725 and 1727. The fourth, to texts by Picander, appears to date from 1728–9, while the fifth once again must have occupied a longer period, possibly extending into the 1740s. The established chronology of Bach's vocal works makes it clear that the main body of the cantatas was in existence by 1729, and that Bach's development of the cantata was effectively complete by 1735. The existence of the fourth and fifth cycles has been questioned, because of their fragmentary survival compared with the almost complete survival of the first, second and third; but until a positive argument for their non-existence can be put forward the number of five cycles, laid down in the obituary of 1754, must stand. Compared with the high proportion of Bach's works of other kinds that are lost (orchestral and chamber music, for instance), the disappearance of about 100 cantatas would not be exceptional. (The preservation of Bach's works is discussed below, §11; see §15 for the correspondence of excess chorales in the Breitkopf collection of 1784–7 to the number of lost cantatas.)

The first cycle begins on the first Sunday after Trinity 1723 with Cantata no.75, which was performed 'mit gutem applausu' at the Nikolaikirche, followed by no.76, for the second Sunday after Trinity, performed at the Thomaskirche. The two largest churches in Leipzig are both Gothic in style, and in Bach's time they contained stone and wooden galleries. The choir lofts were on the west wall of the nave above the council gallery. The organs too were in the choir lofts (the 'Schüler-Chor'): the Nikolaikirche and the Thomaskirche each had a three-manual organ with 36 and 35 stops respectively (*Oberwerk*, *Brustwerk*, *Rückpositiv*, *Pedal*). The Thomaskirche had a second organ, fitted to the east wall as a 'swallow's nest', with 21 stops (*Oberwerk*, *Brustwerk*, *Rückpositiv*, *Pedal*); this fell into dilapidation and was demolished in 1740. The organs were always played before cantata performances, during which they would provide continuo accompaniment; they were played by the respective organists at each church; during Bach's term of office these were Christian Heinrich Gräbner (at the Thomaskirche until 1729), J.G. Görner (at the Nikolaikirche until 1729, then at the Thomaskirche) and Johann Schneider (at the Nikolaikirche from 1729). Bach himself, who had not held a regular appointment as an organist since his time in Weimar, directed the choir and the orchestra, and would not normally be playing the organ. However, he frequently must have directed his church ensemble from the harpsichord, as is documented for the performance of BWV198 in 1727. At any rate, the harpsichord was often, if not regularly, employed as a continuo instrument in addition to the organ.

The cantata was an integral part of the Leipzig Lutheran liturgy. It followed immediately on the reading from the Gospel, preceding the Creed and the sermon (the second part of a two-part cantata would follow the sermon, 'sub communione'). Apart from organ playing and the congregational singing of hymns, selected by the Kantor, the other musical constituent of the liturgy was the introit motet, which would be taken from the *Florilegium Portense* (1618) by Erhard Bodenschatz, a collection mainly drawn from the 16th century (Lassus, Handl etc.), and was performed *a cappella* with harpsichord continuo. Services began at 7 a.m. and lasted three hours; this allowed a mere half-hour for the cantata, and Bach rarely overstepped this duration. The normal performing forces consisted of some 16 singers and 18 instrumentalists; the precise number varied according to the work, but it was rare for the total number of singers and players to fall below 25 or to exceed 40 (the figure required on exceptional occasions, like the *St Matthew Passion*, which demanded two Kantoreien and double the normal number of instrumentalists). Ordinarily the performing forces consisted of four groups: pupils from the Thomasschule (the first Kantorei); the eight salaried town musicians, until 1734 headed by J.G. Reiche and thereafter by J.C. Gentzmer; University students (principally Bach's private pupils); and additional assistants (probably regularly including one or two paid soloists) and guests.

Bach took up his additional duties as musical director to the university, a post traditionally held by the Thomaskantor, in summer 1723, perhaps as early as 16 May, with the performance of Cantata no.59 in the university church, the Paulinerkirche, but in any event by 9 August, when he performed the Latin Ode BWV Anh.20 (now lost) at the university's festivities marking the birthday of Duke Friedrich II of Saxe-Gotha. The major part of his duties for the university comprised the musical provisions for the so-called quarter-day orations and the 'old' services in the Paulinerkirche, employing pupils from the Thomasschule and town musicians on the four major festivals of Christmas Day, Easter Day, Whit Sunday and

Reformation Day; Bach was paid 2 thaler and 6 groschen on each occasion. He carried out the most important of his civic duties for the first time on 30 August 1723, when he introduced Cantata no.119 as part of the annual celebration of the change of town council. The enormous scope of Bach's new responsibilities, as well as his vast workload, may be gauged from the fact that the day before (14th Sunday after Trinity) Cantata no.25 was heard for the first time, and the first performance of no.138 (for the 15th Sunday) was soon to follow.

September 1723 saw the start of Bach's protracted wrangle with the university. In a written request for payment, he laid claim to the traditional right of the Thomaskantor to be responsible for the 'old' services and the quarter-day orations. The university, however, wanted to combine these duties with responsibility for the 'new' services (normal Sundays and holy days), which it had in April 1723 entrusted to J.G. Görner, organist of the Nikolaikirche, together with the title of 'Musikdirektor'. On 28 September Bach's request was turned down, and he was paid only half the fee. He would not give in, and turned to the Elector of Saxony in Dresden with three petitions. Following the intervention of the Dresden court, the university decided to put Görner in charge of the 'new' services only, and awarded Bach his traditional rights with payment as before. Thereafter, as the regular fee payments prove, Bach retained responsibility for the 'old' services and quarter-day orations until 1750.

About 2 November 1723 Bach inaugurated a new organ (which he had previously appraised) in Störmthal, outside Leipzig, with Cantata no.194. Then, from the second Sunday in Advent to the fourth, came his first break in the weekly routine of composing and performing cantatas; in Leipzig, unlike Weimar, this period was a 'tempus clausum', as was Lent up to and including Palm Sunday. On Christmas Day figural music returned, in a particularly splendid manner, with Cantata no.63 and the D major Sanctus BWV238 at the main service and the *Magnificat* BWV243*a* at Vespers; these were Bach's first large-scale compositions on Latin texts such as were customary in Leipzig on major feast days. At this point in the calendar his duties were unimaginably heavy, yet he carried them out with incomparable creative vigour, producing Cantatas nos.40 and 64 for the feasts of St Stephen and St John the Evangelist, no.190 for New Year, no.153 for the Sunday after New Year (2 January 1724), no.65 for Epiphany (6 January) and no.154 for the following Sunday (9 January); after that, normal weekly services were resumed.

During the next 'tempus clausum' Bach composed his first large-scale choral work for Leipzig, the *St John Passion*, first performed at Vespers in the Nikolaikirche on Good Friday (7 April). This Vespers service had been introduced specially for the performance of a Passion only in 1721; in that year Kuhnau's *St Mark Passion* (now lost) had been performed. Performances alternated annually between the Thomaskirche and the Nikolaikirche, an arrangement to which Bach strictly adhered. There is no documentary evidence of a Passion performance under Bach's direction on Good Friday 1723, from which the older dating of the *St John Passion* derives. The work had several further performances, each time in a greatly altered version (see §14): on 30 March 1725 (in a second version adapted to the annual cycle of cantatas), probably on 11 April 1732 (in a third version) and on 4 April 1749 (fourth version); in about 1739 Bach undertook a revision of the work which remained unfinished.

With the first Sunday after Trinity 1724 (11 June) Bach began his second cycle; these were chorale cantatas. Not least because it included works composed at Weimar, the first cycle had been thoroughly heterogeneous in character, both musically and textually, but Bach gave the new cycle a unifying concept, with all the works based on texts, and their melodies, from the hymnbook. Unfortunately this series of chorale cantatas, beginning with no.20, *O Ewigkeit, du Donnerwort*, and its programmatic overture, was interrupted early in 1725 and Bach did not complete the cycle. On 25 June he was in Gera for the dedication of the organ at the Salvatorkirche. In July he went to Cöthen with Anna Magdalena for a guest appearance as a performer; he had retained the title of Court Kapellmeister there, and it lapsed only on the death of Prince Leopold in 1728. There is evidence of further visits to Cöthen, with Bach performing alongside his wife (who sang as a soprano), in December 1725 and January 1728. During 1725 Bach started to prepare a second *Clavierbüchlein* for Anna Magdalena. On 23 February 1725 he performed Cantata no.249*a* at the Weissenfels court for the birthday of Duke Christian; this was the original version of the *Easter Oratorio* BWV249, first given at Leipzig the following 1 April. No.249*a* represents the beginning of a long-standing collaboration with the fluent Leipzig poet Christian Friedrich Henrici (Picander), the chief supplier of texts for Bach's later Leipzig vocal works.

Bach produced congratulatory cantatas for two Leipzig University professors in May and August (nos.36*c* and 205). On 19–20 September he played on the Silbermann organ at the Dresden Sophienkirche before the local court musicians, thus continuing his practice of giving virtuoso organ performances on concert tours – and undoubtedly in Leipzig, too, although he no longer held a post as organist. His favourite instrument in Leipzig was evidently the great organ of the Paulinerkirche built by Johann Scheibe in 1716, with 53 stops, three manuals (*Hauptwerk*, *Seitenwerk* and *Brustwerk*) and pedals; Bach had been one of its examiners in 1717. Early in 1726 – during the third cycle, which had started in June 1725 – there was an interruption of Bach's production of cantatas, for reasons that remain obscure: between February and September 1726 he performed 18 cantatas by his cousin (6) Johann Ludwig Bach (*3/72*). In particular, between Purification and the fourth Sunday after Easter, he performed none of his own music at the main Sunday services; even on Good Friday he used a work by another composer, Reinhard Keiser's *St Mark Passion*, which he had performed once before, in Weimar. Difficulties with performers may have been partly responsible; the instrumental forces required in J.L. Bach's cantatas are more modest than those Bach himself normally used. Even apart from this, however, the pattern of Bach's cantata production – as far as can be judged from the available material – changed during the third cycle; there are considerable gaps as early as the period after Trinity Sunday 1725, and it seems that the third cycle, unlike the first two, extended over two years. In the gaps, cantatas by other composers and further performances of Bach's own works were given.

Michaelmas 1726 saw the appearance in print of Partita no.1, under the general title of *Clavier-Übung*: with this

Bach began his activity, later to increase in scope, as a publisher of keyboard music. Partita no.1, published singly, was followed by nos.2 and 3 (1727), no.4 (1728), no.5 (1730) and no.6 (1730 or 1731; no copy is known). Evidently the series was originally planned to comprise seven partitas. There are early versions of nos.3 and 6 in the second book for Anna Magdalena of 1725. Bach sent no.1, with a dedicatory poem, to the Cöthen court as a form of congratulation on the birth of an heir, Prince Emanuel Ludwig (born 12 September 1726). In December 1726, on the installation of Dr Gottlieb Kortte as university professor, Bach produced a more sizable occasional work, the *dramma per musica*, Cantata no.207.

In 1727 Bach composed two extremely important works. The *St Matthew Passion*, for double choir to a libretto by Picander, was performed on Good Friday (11 April; there is evidence that it was repeated in the Thomaskirche in 1729, 1736 and 1742; see §14). The other work was the *Trauer Ode* (Cantata no.198), performed in October at a memorial ceremony, planned by the university, on the death of the Electress Christiane Eberhardine, who had remained a Protestant when her husband, August the Strong of Saxony, converted to Roman Catholicism. For this Bach was commissioned to set a text by the Leipzig professor of poetry, Johann Christoph Gottsched. This became a somewhat controversial affair, as the university director of music, Görner, felt he had been slighted. Bach however retained the commission and performed the two parts of his work, 'composed in the Italian manner', directing it from the harpsichord, in the university church, on 17 October. Between 7 September 1727 and 6 January 1728 there was a period of national mourning, with no other musical performances.

In September 1728 a brief dispute with the church authorities flared up. The sub-deacon, Gaudlitz, demanded that he himself should choose the hymns to be sung before and after the sermon at Vespers; as it was usual for the Kantor to select these hymns, Bach felt that his rights had been encroached upon. The dispute was settled in the sub-deacon's favour. Bach must have seen this as a setback, for once again his grievances had not been met; but his relations with the ecclesiastical authorities were on the whole good throughout his time at Leipzig. His relations with the town council and the head teachers of the Thomasschule went less smoothly, and were to become even more difficult in the 1730s. Documents dealing with the various disputes show Bach to have been a stubborn defender of the prerogatives of his office who frequently reacted with excessive violence and was often to blame if there was a negative outcome. It would be wrong, however, to draw hasty inferences about Bach's personality and his relations with the world about him. It is unfortunate that about a half of Bach's surviving correspondence is concerned with generally trivial but often protracted disputes over rights. This material is extant in public archives, while utterances of kinds not appropriate to archival preservation, which might have complemented this rather austere view of his personality, have survived in only small quantity. From Bach's behaviour during these disputes it can be seen that, under pressure, he would defy bureaucratic regulations in order to preserve his independence and to clear himself an artistic breathing-space. His taking over of the collegium musicum in 1729, to be directed under his own management, must be seen in this context, as it represents something more than an incidental biographical fact.

Early in 1729 Bach spent some time at the Weissenfels court in connection with the birthday celebrations in February of Duke Christian, with whom he had long been associated. On this occasion the title of court Kapellmeister of Saxe-Weissenfels was conferred on him (his Cöthen title had lately expired); he retained the title until 1736. At the end of March he went to Cöthen to perform the funeral music for his former employer; only the text survives of this large-scale work in four parts (BWV244*a*), but much of its music can be reconstructed as it consists of parodies of BWV198 and 244. On 15 April (Good Friday) the *St Matthew Passion* was performed again at the Thomaskirche. On the second day of Whit week (6 June), what was probably the last cantata of the Picander cycle was performed, no.174. The manuscript, uniquely for Bach, is dated ('1729'); perhaps this represents some sort of final gesture after a heavy, six-year involvement in cantata composition.

Beside the production of cantatas, Passions and other vocal occasional works, both sacred and secular, instrumental music retreated to the background during Bach's first years in Leipzig. Apart from some keyboard and chamber works (including the sonatas for harpsichord and violin BWV1014–19) there appear to have been only a relatively small number of organ works (preludes and fugues, trio sonatas) which are hard to date individually but will have been primarily connected with Bach's activities as a recitalist.

In June 1729 an invitation to visit Leipzig was delivered to Handel, then in Halle, by Wilhelm Friedemann, in place of his father who was ill at the time; but nothing came of it. Thus Bach's second and last attempt to establish contact with his highly esteemed London colleague met with failure. Significantly, in both cases the initiative was taken by Bach.

8. LEIPZIG, 1729–39. On his appointment as director of the collegium musicum, decisive changes came about in Bach's activities in Leipzig; and at the same time new possibilities were opened up. The collegium had been founded by Telemann in 1702 and had most recently been directed by G.B. Schott (who left to become Kantor at Gotha in March 1729); it was a voluntary association of professional musicians and university students that gave regular weekly (and during the fair season even more frequent) public concerts. Such societies played an important part in the flowering of bourgeois musical culture in the 18th century, and with his highly reputed ensemble, in such an important commercial centre as Leipzig, Bach made his own contribution to this. He took over the direction before the third Sunday after Easter – in other words, by April 1729 – and retained it in the first place until 1737; he resumed it for a few more years in 1739. He must have had strong reasons for wanting to take on this fresh area of work in addition to his other duties. To some extent it is possible to guess those reasons. For six years he had immersed himself in the production of sacred music, and he had created a stock of works sufficient to supply the requirements of his remaining time in office. In his efforts to provide sacred music that was at once fastidious and comprehensive he had met with little appreciation from the authorities, and no additional facilities (for example, much needed professional instru-

mentalists) had been placed at his disposal: it would be understandable if he now felt resigned to the situation. Further, as a former Kapellmeister, he must have been attracted by the prospect of working with a good instrumental ensemble, and another important incentive must have been the thought that, as director of the collegium, he would be able to establish a wholly independent musical praxis, in accordance with his own ideas. It is not known whether the new position brought him some additional income.

Nothing, unfortunately, is known about the programmes of the 'ordinaire' weekly concerts. But the surviving performing parts for such works as the orchestral suites BWV1066–8, the violin concertos BWV1041–3 and the flute sonatas BWV1030 and 1039 demonstrate that Bach performed many of his Cöthen instrumental works (some in revised form) as well as new compositions. The seven harpsichord concertos BWV1052–8, collected together in a Leipzig manuscript, also belong in this context. Bach often performed works by other composers as well, including five orchestral suites by his cousin Johann Ludwig, secular cantatas by Handel and Porpora and the flute quartets that Telemann wrote for Paris. Further, Bach's many musical acquaintances from other places must have made frequent appearances, including his colleagues in the Dresden court orchestra (there is evidence of visits from J.A. Hasse, Georg Benda, S.L. Weiss, C.H. Graun and J.D. Zelenka). C.P.E. Bach's remark that 'it was seldom that a musical master passed through [Leipzig] without getting to know my father and playing for him' must refer to performances of the collegium musicum, which took place on Wednesdays between 4 and 6 p.m. in the coffee-garden 'before the Grimmisches Thor' in the summer and on Fridays between 8 and 10 p.m. in Zimmermann's coffee-house in the winter. In addition, there were 'extraordinaire' concerts, to mark special events; on these occasions, during the 1730s, Bach performed his large-scale secular cantatas. His activities with the collegium must have made heavy demands on him, and the reduction in his production of sacred music is easy to understand.

This does not, however, mean that his interest in sacred music was diminished (as Blume, G1963, claimed, with undue emphasis in the light of the revised dating of his works). Such a view is contradicted not only by the major ecclesiastical works written after 1730 but also by the simple fact that, throughout his period of office, Bach provided performances of his cantatas, a repertory largely completed before 1729, every Sunday at the two main Leipzig churches. His reference to the 'onus' of such undertakings, in connection with the performance of a Passion planned for 1739, might just as well have been made in the 1720s. Admittedly, his difficulties became particularly acute around 1730, as his important memorandum of 23 August 1730, dealing with the state of church music in Leipzig and outlining his remedies, testifies. His letter of 28 October that year, to his old friend Erdmann in Danzig, may be read in the same sense; sheer frustration that the memorandum had proved ineffectual drove him to consider leaving Leipzig. It would seem that his work with the collegium musicum had not yet brought about the intended equilibrium in his activities.

The situation had been aggravated by other, external factors. The old headmaster Johann Heinrich Ernesti had died in 1729 (Bach had performed a motet BWV226 at his funeral in October). During the subsequent interim in the Thomasschule's direction the organization of school life was disturbed. Problems of space appear to have arisen too. It was in this context that complaints were made about Bach's neglect of his school duties (the dropping of singing lessons, absence on journeys without leave); in August 1730 there was even a question of reducing his salary 'because the Kantor is incorrigible'. It would appear that things were put right by J.M. Gesner, who took over the headship of the school in the summer, and who seems soon to have established friendly and familiar relations with Bach.

On Good Friday 1730 Bach apparently performed a *St Luke Passion*, not of his own composition. From 25 to 27 June the bicentenary of the Augsburg Confession was celebrated across Lutheran Germany, and Bach wrote three cantatas for the event (nos.190*a*, 120*b*, Anh.4*a*: all were parody cantatas). They are not untypical of his church compositions of this period, most of which were put together as parodies; and that is true also of the major vocal works like the *St Mark Passion*, the B minor Mass, the small masses and the *Christmas Oratorio*. The only sacred cantatas that Bach composed as entirely new works after 1729 are nos.117 (1728–31), 192 (1730), 112 and 140 (1731), 177 (1732), 97 (1734), 9 and 100 (1732–5) and 14 (1735).

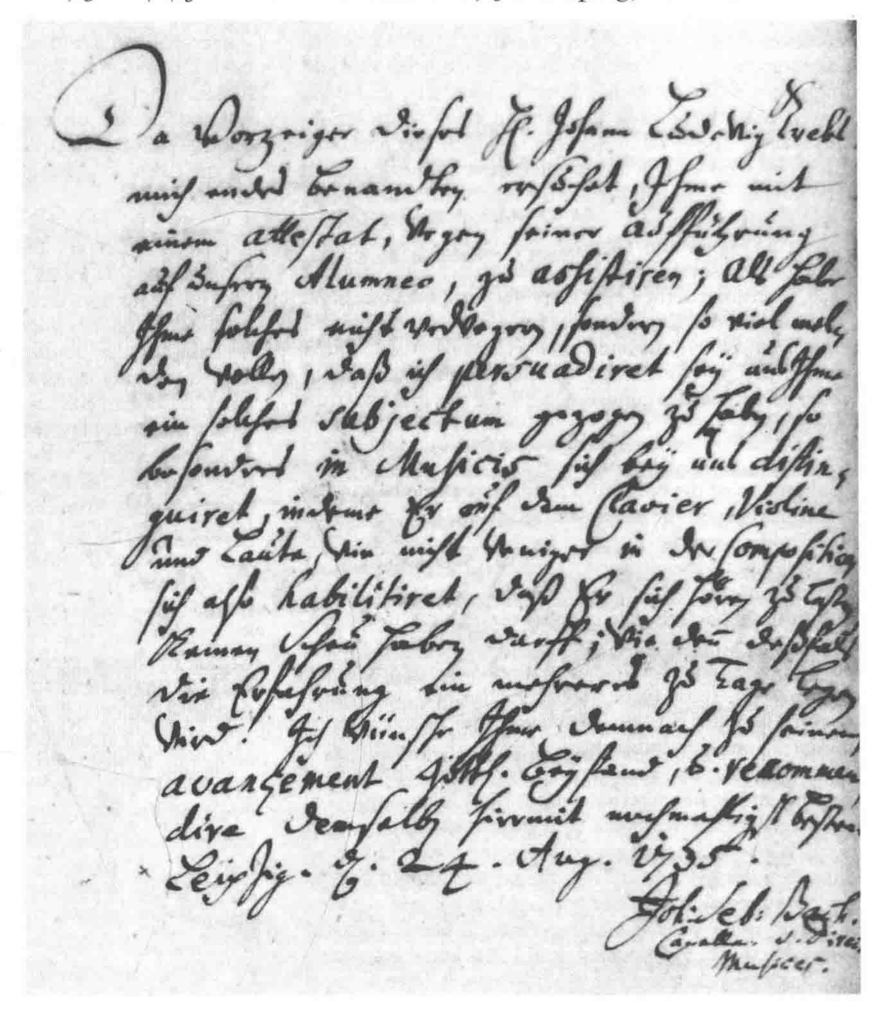
In 1731 a collected edition of the six partitas appeared as op.1, under the title *I.Teil der Clavier-Übung*. From this form of words it is clear that Bach planned further 'parts' in a series of 'keyboard exercises', and these he now proceeded to produce. His new and continuing interest in publishing his own compositions is a clear sign of a new determination with regard to independent and freely creative activity. The first performance of the *St Mark Passion*, predominantly a parody work, took place on Good Friday of that year. At the end of June 1731 Bach and his family had to move to temporary quarters while rebuilding and extension work were being carried out on the Thomasschule. His residence must have become increasingly cramped, for his family was growing. In the early years in Leipzig Anna Magdalena had borne a child almost every year, but few of them survived infancy:

Christiana Sophia Henrietta (*b* spring 1723; *d* 29 June 1726)
Gottfried Heinrich (*48*)
Christian Gottlieb (bap. 14 April 1725; *d* 21 Sept 1728)
Elisabeth Juliane Friederica (bap. 5 April 1726; *d* Leipzig, 24 Aug 1781)
Ernestus Andreas (bap. 30 Oct 1727; *d* 1 Nov 1727)
Regina Johanna (bap. 10 Oct 1728; *d* 25 April 1733)
Christiana Benedicta (bap. 1 Jan 1730; *d* 4 Jan 1730)
Christiana Dorothea (bap. 18 March 1731; *d* 31 Aug 1732)
Johann Christoph Friedrich (*49*)
Johann August Abraham (bap. 5 Nov 1733; *d* 6 Nov 1733)
Johann Christian (*50*)
Johanna Carolina (bap. 30 Oct 1737; *d* Leipzig, 18 Aug 1781)
Regina Susanna (bap. 22 Feb 1742; *d* Leipzig, 14 Dec 1809)

Joy and sorrow were everyday matters. But Bach's family life must have been harmonious in more than one sense; in 1730 he reported, as a proud paterfamilias, that with his family he could form a vocal and instrumental concert ensemble. The family moved back into their refurbished apartment the next April. The school was reconsecrated on 5 June 1732 with a cantata, BWVAnh.18. In September 1731 Bach had been to Dresden for the first performance of Hasse's opera *Cleofide* and to give concerts at the Sophienkirche and at court (there were

enthusiastic reports in the newspapers). In September 1732 he went with his wife to Kassel for the examination and inauguration of the organ of the Martinskirche, where he probably played the 'Dorian' Toccata and Fugue in D minor BWV538.

With the death of Elector Friedrich August I of Saxony on 1 February 1733 a five-month period of national mourning began. However, the collegium musicum obtained permission to restart its performances in the middle of June, when a new harpsichord was introduced (possibly in the harpsichord concertos BWV1052–8). During the mourning period Bach composed the D major version of the *Magnificat* BWV243, which was probably first heard in Leipzig when the mourning was ended on 2 July (Visitation). Above all he worked on the Kyrie and the Gloria of the B minor Mass, which, in the hope of obtaining a title at the court Kapelle, he presented to the new Elector Friedrich August II in Dresden, with a note dated 27 July 1733, as a *Missa* in a set of parts. There is evidence to suggest that the *Missa* was performed at this time, perhaps at the Sophienkirche in Dresden, where W.F. Bach had been working as an organist since June 1733. Not until November 1736, however, was the title 'Hofkomponist' conferred on Bach, and even then only through the intervention of his patron Count Keyserlingk after a further letter of application. As a gesture of thanks, Bach paid his respects to the Dresden royal household and an enthusiastic public with a two-hour organ recital on the new Silbermann instrument at the Frauenkirche on 1 December 1736.



After the dedication of the *Missa* in July 1733, Bach kept the Saxon royal family's interests in mind with his 'extraordinaire' concerts of the collegium musicum. On 3 August, the name day of the new elector, Bach began his remarkable series of secular cantatas of congratulation and homage with BWV Anh.12 (music lost), followed by Cantata no.213 (5 September, for the heir to the electorate), no.214 (8 December, for the electress), no.205*a* (19 February 1734, for the coronation of the elector as King of Poland; music lost), an unknown work (3 August, again for the elector), and no.215 (5 October, also for the elector, who was at the performance). Much of the festive music was performed in the open air with splendid illuminations, and according to newspaper reports the music benefited from a resounding echo. (On the day after the performance of no.215 Bach's virtuoso trumpeter and the leader of the Leipzig Stadtpfeifer, Gottfried Reiche, died as a result of the exertions of his office.) During the following Christmas season Bach gave the people of Leipzig a chance to hear much of the music from his secular festive cantatas in modified form, as the *Christmas Oratorio*, which was heard in six sections between Christmas Day 1734 and Epiphany 1735 (and consisted predominantly of parodies of Cantatas nos.213–15).

On 21 November 1734 the new headmaster of the Thomasschule, Johann August Ernesti, was greeted with a cantata, BWV Anh.19 (Gesner had moved to the newly founded University of Göttingen as its first dean). Bach's dealings with the directors of the school had been untroubled for four years, thanks to his friendly relations with Gesner; but with Ernesti he experienced the most violent controversies of his entire period as Thomaskantor. A dispute flared up in August 1736 over the authority to nominate the choral prefect, in which the interests of the Kantor and the headmaster were diametrically opposed. With his neo-humanist educational ideals, which placed priority on high academic standards, Ernesti showed little appreciation of the musical traditions. The tendency at the Thomasschule, at least from the start of Bach's period of office, had been to restrict musical activities, or at any rate to reduce their proportions; Bach, on the other hand, demanded the best-qualified pupils to assist him, and certainly he must often have overburdened them (with music copying, rehearsals and so on). Against what were to some extent unfair arguments on the headmaster's part, his struggles were doomed to failure. The grievances arising from the nomination of the choir prefect were taken before the courts in Dresden; the affair, which led to Bach's having disciplinary difficulties with his pupils, was settled early in 1738 (the precise outcome is not recorded). The prefect in question, Johann Gottlob Krause, whom Bach refused to acknowledge, had already left the Thomasschule in 1737.

Among the more important events of 1735 was the appearance of the second part of the *Clavier-Übung* at Easter. In the context of Bach's activities as a publisher it should also be mentioned that by 1729 he was also involved in the distribution of musical publications by other authors and kept a stock, including Heinichen's book on figured bass, Walther's *Lexicon* and keyboard works by Hurlebusch, Krebs and his own sons. On 19 May the *Ascension Oratorio* (Cantata no.11) was first performed; probably the *Easter Oratorio* (a revision of Cantata no.249*a*) was heard on the preceding Easter Sunday. In June he travelled to Mühlhausen, where he had spent part of his early career, to appraise the rebuilt organ in the Marienkirche, where his son Johann Gottfried Bernhard (47) had just been appointed organist. During Advent 1735, when no music was performed, and Lent 1736 Bach was probably engaged on the revision of the *St Matthew Passion* and in making a carefully laid-out fair copy of the new version. In this form, characterized by its writing for double chorus (with two continuo parts), the work was performed in the Thomaskirche on 30 March 1736, with the cantus firmus parts in the opening and closing choruses of part 1 played on the 'swallow's nest' organ. Also at Easter the Schemelli Hymnbook, on whose tunes and figured basses Bach had collaborated, was published.

In summer 1737 Bach temporarily resigned the direction of the collegium musicum. For the last 'extraordinaire' concert on 7 October 1736 he had written the congratulatory Cantata no.206 on the birthday of the elector. Only two further works of homage are known from 1737–8 (BWV30*a* and Anh.13), which indicates that Bach was occupied primarily with the other things for which he had time after his release from the work associated with the collegium. He now turned to keyboard music, working on the second part of *Das wohltemperirte Clavier*, and on the third part of the *Clavier-Übung*, the largest of his keyboard works. This collection of organ pieces, some freely composed, some based on chorales, with large-scale works for a church organ and small-scale ones for a domestic instrument, appeared at Michaelmas 1739.

Bach obviously also devoted himself more than previously to private teaching in the late 1730s. Between 1738 and 1741, for example, J.P. Kirnberger and J.F. Agricola were studying with him in Leipzig – probably the most

Da Vorzeiger dieses Hr. Johann Ludwig Krebs
mich Endes benandten ersuchet, Ihme mit
einem attestat, wegen seiner Aufführung
auf unserm Alumneo, zu assistiren; Als habe

3. Bach's autograph letter of recommendation for his pupil Johann Ludwig Krebs, 24 August 1735 (D-Zsa III Z.40.7, f.36r)

important and influential of all his pupils except for his own sons. Over the years Bach had something like 80 private pupils; among them were C.F. Abel (*c*1743), J.C. Altnickol (1744–8), J.F. Doles (1739–44), G.F. Einicke (1732–7), H.N. Gerber (1724–7), J.C.G. Gerlach (1723–9), J.G. Goldberg (*c*1740), G.A. Homilius (1735–42), J.C. Kittel (1748–50), J.G. Müthel (1750), J.C. Nichelmann (1730–33), J.G. Schübler (after 1740), G.G. Wagner (1723–6) and C.G. Wecker (1723–8).

In October 1737 Bach's nephew Johann Elias (*39*) came to live with the family, as private secretary and tutor for the younger children; he remained until 1742. The surviving drafts of letters he prepared give a lively picture of Bach's correspondence in these few years – and cause for regret that no other period is similarly documented. At this period Bach gave especially close attention to the study of works by other composers. He was a subscriber to Telemann's Parisian flute quartets of May 1738; but more typical is his preoccupation with Latin polyphonic liturgical compositions. The *stile antico* tradition seems to have held a particular fascination for him. In the first place he owed his knowledge of this repertory, to which he marginally contributed by making transcriptions (works by Palestrina, Caldara, Bassani and others), to his connections at Dresden. His knowledge of Pergolesi's *Stabat mater* of 1736, which he reworked during the 1740s as a setting of Psalm li, *Tilge, Höchster, meine Sünden* BWV1083 is also surprising; the earliest trace of Pergolesi's work north of the Alps thus leads to Bach – a sign of the latter's remarkable knowledge of the repertory. His interest in Latin liturgical music also relates closely to the composition of the short masses (Kyrie and Gloria) BWV233–6. These may have been written for the Protestant court services in Dresden, but that would not exclude performances in Leipzig.

On 14 May 1737 J.A. Scheibe, in his journal *Der critische Musikus*, published a weighty criticism of Bach's manner of composition. This seems to have come as a severe blow to Bach. Evidently at his urging, the Leipzig lecturer in rhetoric Johann Abraham Birnbaum responded with a defence, printed in January 1738, which Bach distributed among his friends and acquaintances. The affair developed into a public controversy, the literary conduct of which, at least, was suspended only in 1739 after further polemical writings by Scheibe and Birnbaum. Scheibe acknowledged Bach's extraordinary skill as a performer on the organ and the harpsichord, but sharply criticized his compositions, claiming that Bach 'by his bombastic and intricate procedures deprived them of naturalness and obscured their beauty by an excess of art'. Birnbaum's not particularly skilful replies fail to recognize the true problem, which lies in a clash of irreconcilable stylistic ideals. Nevertheless, his discussion of naturalness and artificiality in Bach's style, and his

definition of harmony as an accumulation of counterpoint, make some important statements about the premisses and unique character of Bach's compositional art, and Bach himself must have been involved in their formulation. This is clear above all in the way in which 'the nature of music' is represented, with references to biographical details (such as the challenge to Marchand) and express mention of composers and works in Bach's library (Palestrina, Lotti and Grigny). The controversy smouldered on for several more years. Mizler, too, shook a lance, pointing to 'the latest taste' in Bach's cantata style ('so well does our Kapellmeister know how to suit himself to his listeners'). In the end Scheibe climbed down, with a conciliatory review (1745) of the Italian Concerto in which he apologized handsomely ('I did this great man an injustice').

9. Leipzig, 1739–50. In October 1739 Bach resumed the direction of the collegium musicum, which had in the meantime been in the charge of C.G. Gerlach (organist at the Neukirche and a pupil of Bach). A composition for the birthday of the elector (7 October; the music is lost) dates from this time, but it would seem that Bach's ambitions and activities in connection with the 'ordinaire' and 'extraordinaire' concerts were considerably diminished. There were few performances of congratulatory cantatas, and these were probably all repeats of earlier works. There are no signs, however, that Bach's interest in instrumental ensemble music slackened; if anything, it underwent a certain revival and he continued to produce chamber music steadily throughout the 1730s.

Bach withdrew from the collegium musicum again in 1741. With the death of the coffee-house owner Gottfried Zimmermann (30 May 1741) the collegium had lost its landlord and organizer, and without him it could not long continue, at least as it had been run hitherto. Signs of reduced activity can be traced until 1744, and it is possible that Bach still presided over performances from time to time until that year. The collegium had made an important contribution to musical life in Leipzig for 40 years, both with and without Bach's leadership, and even its demise was not without consequences for the future. In both its function and its membership it served to prepare the ground for a new focal point in civic musical life, the Grosses Concert, founded in 1743 on the lines of the Parisian Concert Spirituel and destined to be the immediate predecessor of the Gewandhaus concerts.

In August 1741 Bach went to Berlin, probably to visit Carl Philipp Emanuel who in 1738 had been appointed court harpsichord player to Crown Prince Frederick of Prussia (later Frederick the Great). In the two previous years Bach had made brief journeys to Halle (early 1740) and Altenburg (September 1739; he gave a recital on the new Trost organ in the castle church). In November 1741 there was a further journey, this time to Dresden, where he visited Count von Keyserlingk. In the same year, probably in the autumn, the 'Aria with 30 Variations', the so-called Goldberg Variations, appeared in print. Bach's visit to Dresden may lie behind the anecdote related by Forkel, according to which the variations were commissioned by the count as a means of ameliorating sleepless nights, but the lack of any formal dedication in the original edition suggests that the work was not composed to a commission. It is conceivable, on the other hand, that after publication the count received a copy of the work for the use of his young resident harpsichord player Johann Gottlieb Goldberg, who was a pupil of both J.S. and W.F. Bach. In his own copy (which came to light only in 1975) Bach added a series of 14 enigmatically notated canons on the bass of the Aria (BWV1087) in about 1747–8. They place a special and individual accent on the canonic writing that occupied him so intensively at that period.

On 30 August 1742, on the Kleinzschocher estate near Leipzig, a 'Cantata burlesque' (known as the Peasant Cantata, no.212) was performed in homage to the new lord of the manor, Carl Heinrich von Dieskau; this work is unique in Bach's output for its folklike manner (except perhaps for the quodlibet in the Goldberg Variations). The thoroughly up-to-date characteristics of parts of the work show that Bach was not only intimately acquainted with the musical fashions of the times but also knew how to adapt elements of the younger generation's style for his own purposes (as he also did in the third movement of the trio sonata from the *Musical Offering*).

Alongside this work, apparently his last secular cantata, Bach's only vocal compositions of the 1740s were isolated sacred works (including Cantatas nos.118, 195, 197 and 200), some new, some refashioned. There is evidence, on the other hand, that he gave numerous performances of works by other composers, some newly arranged or revised. These included a German parody of Pergolesi's *Stabat mater* (*Tilge, Höchster, meine Sünden* BWV1083, *c*1745–7), a Latin parody after the Sanctus and 'Osanna' from J.C. Kerll's *Missa superba* (Sanctus in D BWV241, *c*1747–8), Handel's *Brockes Passion* (*c*1746–7 and 1748–9) and a pasticcio Passion after C.H. Graun (with inserted movements BWV1088 and 'Der Gerechte kömmt um' BCC 8). Bach also often repeated his own earlier sacred works. Evidence does not exist to form a complete picture, but they included revised versions of the *St Matthew* and *St John Passions*; the latter was performed for the last time during Bach's lifetime on Good Friday 1749.

The only new vocal composition of any size was the Credo and following sections of the Mass, which, when added to the *Missa* of 1773 (BWV232[I]), produced the B minor Mass – a continuation of Bach's preoccupation with Latin figural music during the late 1730s. No specific reason for the composition of the B minor Mass, and no evidence of a projected or actual performance, has so far come to light. One of the most plausible hypotheses is that the composition of the work (which is described in C.P.E. Bach's *Nachlass* as 'the large Catholic Mass') was connected with the consecration of the Catholic Hofkirche in Dresden, planned for the late 1740s and then postponed (building started in 1739). All that is known for certain is that the expansion of the 1733 *Missa* by the addition of a Credo, a Sanctus (1724) and the movements from 'Osanna' to 'Dona nobis pacem' and the fusing of the various sections to create a unified score (see also §14) were done in the last years of Bach's life – more precisely, between August 1748 and October 1749.

Instrumental music, however, once again came to the fore during the 1740s. Bach had begun to sift through his older organ chorales about 1739–42, probably following completion of *Clavier-Übung III*. Some of the Weimar pieces were extensively reworked and gathered into a new manuscript collection (the '18', BWV651–68). These revisions may have been undertaken with a view to the subsequent appearance of the chorales in print, as

happened with the six chorales on movements from cantatas (the 'Schübler Chorales') about 1748. Apparently Bach was still engaged in work on the chorales in the last months of his life. The copying from dictation of the chorale *Vor deinen Thron* BWV668, later the subject of legend, was in fact probably confined to an improvement of an existing work (the chorale BWV641 from the Weimar *Orgel-Büchlein*).

Bach retained his interest in organ building to the last. In 1746 alone there were two important examinations and inaugurations of organs: on 7 August in Zschortau and on 26–9 September in Naumburg. Bach's appraisal of the large Hildebrandt organ in the Wenzelskirche, Naumburg, was one of his most important. He customarily subjected instruments to the most searching examinations, both of their technical reliability and of their tone quality. He had also taken a critical interest in the pianos that Gottfried Silbermann was building during the 1730s, proposing alterations in the mechanism which Silbermann evidently adopted. At all events, Bach praised Silbermann's later pianos and promoted their sale (a receipt for one sold to Poland, dated 6 May 1749, survives). On his visit to Potsdam in 1747 he played on a range of Silbermann pianos of the newer type which had been purchased by the Prussian court.

The visit to the court of Frederick the Great in May 1747 is one of the most notable biographical events in Bach's otherwise unspectacular life. The invitation probably came about through Count Keyserlingk, who was then in Berlin. Bach's encounter with Frederick began on 7 May at the palace of Potsdam during the chamber music which was a feature of every evening of court life there. Bach's execution on the piano of a remarkable improvisation on a theme supplied by the king met with general applause. The next day Bach gave an organ recital in the Heiliggeistkirche in Potsdam, and during chamber music that evening he improvised a six-part fugue on a theme of his own. He also visited the new Berlin opera house, and possibly went to look at organs in Potsdam and Berlin. On his return to Leipzig, probably in the middle of May, he worked industriously on an 'elaboration of the King of Prussia's fugue theme', beginning with writing down the fugue he had improvised (a three-part ricercare), which, while in Potsdam, he had announced that he would print. But he now decided on a larger project and under the title *Musikalisches Opfer* ('Musical Offering') he prepared a work in several movements dedicated to Frederick the Great; this work was printed in its entirety by the end of September (Michaelmas) 1747. The royal theme serves as the basis for all the movements (two ricercares, in three and six parts, for keyboard; a trio sonata for flute, violin and continuo; and various canons for flute, violin and continuo with harpsichord obbligato).

In June 1747, after some hesitation, Bach joined the Correspondirende Societät der Musicalischen Wissenschaften founded by Lorenz Mizler. It was probably in 1747 that he submitted, as a 'scientific' piece of work, his canonic composition on *Vom Himmel hoch* BWV769. At the same time he sent the members an offprint of the six-part canon from the series on the bass of the Goldberg Variations. He seems, however, to have taken no further interest in the society's affairs as (according to C.P.E. Bach) he thought nothing of the 'dry, mathematical stuff' that Mizler wanted to discuss. Besides his long acquaintance with his pupil Mizler, Bach's most likely reason for joining the society was that prominent colleagues such as Telemann and Graun were fellow members.

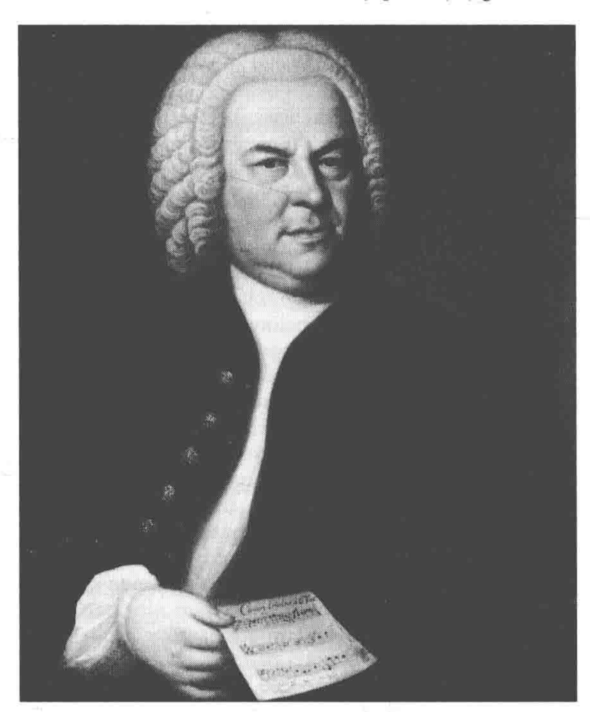
The beginnings of his work on *Die Kunst der Fuge* ('The Art of Fugue') seem to date from around 1740, or before. It is impossible to give an exact date as the original composing score is now lost. However, what must be a first version survives in an autograph fair copy containing 14 movements (12 fugues and two canons) and dating from 1742 at the latest. Thereafter Bach expanded and revised the work in readiness for printing. He himself supervised the printing to a large extent, and the process was probably largely complete by about the end of 1749 (in other words, before his son Johann Christoph Friedrich, who had helped to correct the proofs, left to join the court at Bückeburg in January 1750). But Bach was not to see the entire work (eventually comprising 14 fugues and four canons) in print; his sons, probably C.P.E. in particular, took charge of the publication and the work appeared posthumously in spring 1751. Bach had been unable to complete the fair copy of the last movement, a quadruple fugue, and so the fugal cycle ends with an unfinished movement. The editors decided to mitigate the effect of that by adding the organ chorale BWV668, *Vor deinen Thron tret ich hiermit*, at the end; the revision of this had been the last piece of work to occupy Bach.

In his final years Bach suffered from increasingly severe trouble with his eyes, seriously restricting his ability to work and leading eventually to total blindness. He probably composed nothing after autumn 1749. The last known examples of his handwriting, which give an impression of increasing irregularity, clumsiness and cramping, go up to October 1749 (parts of the score of the B minor Mass). Other documents to which he put his signature date from as late as spring 1750. The cause of the eye disease seems to have lain in untreated (and untreatable) diabetes, which may also have caused neuropathy and degenerative brain disease, evidence of which is found in the dramatic change in his handwriting in manuscripts of 1748–9. He gave a performance of the *St John Passion* on Good Friday 1749 without completing the revision of the work begun in about 1740. His health must have been very poor by spring 1749 at the latest; otherwise the Leipzig town council would surely not have been so tactless as to submit J.G. Harrer, a protégé of the Dresden prime minister Count Brühl, to examination for the post of Kantor on 8 June 1749. Out of consideration for Bach the cantata performance was in a concert hall rather than one of the churches. The town chronicle reported that the authorities expected Bach's death. When his grandson Johann Sebastian Altnickol (his pupil Johann Christoph Altnickol had married Elisabeth Juliane Friederica Bach) was baptized on 6 October 1749 in Naumburg Bach was unable to make the short journey to stand godfather in person.

Bach's state of health and ability to work must have fluctuated during his last year. He appointed Johann Nathanael Bammler, a former choir prefect at the Thomasschule for whom he provided two excellent references in 1749, to deputize for him as occasion warranted. But in spite of everything Bach was not entirely inactive. In spring 1749 he is known to have corresponded with Count Johann Adam vom Questenberg, apparently about a commission or some other project. Although no details are known, this reaffirms Bach's obviously well-established connections with some major noble patrons

from the area of Bohemia (Count Sporck of Lissa and Kukus), Moravia (Count Questenberg of Jaroměřice) and Silesia (the Haugwitz family). From May 1749 to June 1750 he was engaged in a controversial correspondence about the Freiberg headmaster Biedermann. In May 1749 Biedermann had violently attacked the cultivation of music schools; Bach immediately felt himself called into battle, and among other things he gave a repeat performance of the satirical cantata about the controversy between Phoebus and Pan, no.201. His involvement is understandable, for he must have seen parallels with the state of affairs at the Thomasschule, where the same tendency fuelled Ernesti's reforms. Bach solicited a rejoinder on the part of C.G. Schröter, a member of Mizler's society, and even Mattheson joined in, from Hamburg. Once again, the affair throws light on the situation in German schools during the early Enlightenment and Bach's last years as Thomaskantor. The integration of academic and musical traditions, which had been an institution for centuries, was in the process of turning into an irreconcilable confrontation.

At the end of March Bach underwent an eye operation, performed by the English eye specialist John Taylor (who was later to perform a similar operation on Handel). It was only partly successful, however, and had to be repeated during the second week of April. The second operation too was ultimately unsuccessful, and indeed Bach's physique was considerably weakened. Yet as late as the beginning of May 1750 Johann Gottfried Müthel could go to Leipzig, stay at Bach's house and become his last pupil. To what extent regular instruction was possible under these circumstances remains uncertain. In the next two months Bach's health had so deteriorated that, on 22 July, he had to take his last Communion at home. He died only six days later, on the evening of 28 July, after a stroke. He was buried two or three days later at the cemetery of the Johanniskirche. It is not known what form the funeral ceremony took or what music was performed.



Bach's wife, Anna Magdalena, who in addition to her domestic tasks was a loyal and industrious collaborator, participating in performances and copying out music, survived him by ten years. She died in abject poverty in 1760. On his death Bach had left a modest estate consisting of securities, cash, silver vessels, instruments – including eight harpsichords, two lute-harpsichords, ten string instruments (among them a valuable Stainer violin), a lute and spinet – and other goods, officially valued at 1122 thaler and 22 groschen; this had to be divided between the widow and the nine surviving children of both marriages. Bach himself had evidently given instructions for the disposition of his musical *Nachlass*, which is ignored in the official valuation. According to Forkel, the eldest son Wilhelm Friedemann 'got most of it' (see §11).

10. Iconography. The oak coffin containing Bach's remains was exhumed in 1894: the detailed anatomical investigation by Professor Wilhelm His confirmed their identity and showed that Bach was of medium build. From a skull impression Carl Seffner, in 1898, modelled a bust, which shows an undoubted similarity with the only likeness of Bach that can be guaranteed as authentic, that of the Leipzig portraitist Elias Gottlob Haussmann. That portrait exists in two versions, one dating from 1746 (Museum für Geschichte der Stadt Leipzig; property of the Thomasschule) and one of 1748 (William H. Scheide Library, Princeton; see below, fig.4). The earlier, signed 'E.G. Haussmann pinxit 1746', was presented to the Thomasschule in 1809 by the then Thomaskantor, August Eberhard Müller. It is not known whence Müller had obtained the painting, but is quite probable that it had remained in the possession of one of Bach's direct descendants until then. Of these the most likely is Wilhelm Friedemann (unless he had another replica of Haussmann's painting) or Regina Susanna, who lived in Leipzig until her death in 1809. It is often supposed that the Thomasschule portrait is one that members of Mizler's society were required by statute to donate to that institution, but that is highly unlikely: Bach probably did not present a portrait, at least in the form of a painting, to the society. With the passage of time the Thomasschule picture was severely damaged and repeatedly painted over. Thorough restoration in 1912–13 returned it more or less to its original condition, but it remains inferior to the excellently preserved replica of 1748. This has a reasonably secure provenance, out of C.P.E. Bach's estate; it was owned privately for many years by the Jenke family in Silesia and then in England, before being exhibited in public by Hans Raupach in 1950.

The authenticity of an unsigned pastel portrait, probably painted after 1750, allegedly by either Gottlieb Friedrich or Johann Philipp Bach, and handed down in the Meiningen branch of the family, is not altogether certain, and neither is that of a group portrait of musicians, executed around 1733 by Johann Balthasar Denner (now in the Internationale Bachakademie, Stuttgart; a replica, in better condition, is in a private collection in the UK), which shows what may well be Johann Sebastian (with violoncello piccolo) and three of his sons.

Doubt hangs over the authenticity of all the other better-known and much reproduced portraits. The oil by Johann Jacob Ihle, dating from about 1720 and purporting to show Bach as Kapellmeister in Cöthen, comes from the palace at Bayreuth and was identified as a 'picture of Bach' only in 1897. But there is no concrete support for that identification, and the portrait's earlier provenance is obscure; it now hangs in the Bachhaus in Eisenach. The portrait by Johann Ernst Rentsch the elder (now in the Städtisches Museum, Erfurt), allegedly representing Bach at the age of about 30, came to light only in 1907 and has no credible documentation. Many other apocryphal portraits, including the 'portrait in old age' discovered by Fritz Volbach in Mainz in 1903 (now in a private collection in Fort Worth), are of the 'old man with a wig' type and have nothing to do with Bach.

According to *GerberL*, probably authentic portraits that no longer survive were once owned by J.C. Kittel (from the estate of the Countess of Weissenfels) and by J.N. Forkel. A pastel from C.P.E. Bach's collection (not the one referred to above) has not survived. During the 18th and 19th centuries many copies were made of the Haussmann portrait, both in oils and in various types of print; an engraving (1794) by Samuel Gottlieb Kütner, an art student at the Zeichenakademie, Leipzig, along with C.P.E. Bach's son Johann Sebastian (1748–78), was said by Emanuel himself to be 'a fair likeness'. The nearest we can nowadays get to his true physiognomy is probably in the 1748 version of Haussmann's portrait, wherein, as a man in his early 60s, Bach is represented as a learned musician, with a copy of the enigmatic six-part canon BWV1076 in his hand to demonstrate his status (fig.4).

4. Johann Sebastian Bach: portrait by Elias Gottlob Haussmann, 1748, after an original of 1746 (William H. Scheide Library, Princeton, NJ); the composer holds a copy of his six-part canon BWV*1076*

11. SOURCES, REPERTORY. The earliest catalogue of Bach's compositions – admittedly a very rough one – was included in the obituary that C.P.E. Bach and J.F. Agricola wrote immediately after Bach's death but did not publish until 1754. It scarcely provides an adequate idea of the extent of Bach's works, but it shows that nearly everything printed during Bach's lifetime has survived to the present day: Cantata no.71, composed for the Mühlhausen town council election in 1708 (but not its counterpart of 1709); the four parts of the *Clavier-Übung*; the Schemelli Hymnbook; the *Musical Offering*; the Canonic Variations BWV769; the Schübler chorales; the *Art of Fugue*; and the canons BWV1074 and 1076. The great majority of Bach's compositions remained unprinted, and most of those survived. The most serious losses occurred among the cantatas: perhaps more than 100, certainly two cycles of church cantatas and several secular occasional works. The funeral music for Prince Leopold of Cöthen (1729) and the *St Mark Passion* (1731) are among large-scale vocal works of which only the texts survive. A greater proportion of the music for organ and other keyboard instruments has probably survived than that in any other category. Losses among the orchestral and chamber works are almost impossible to estimate, but may be regarded (on the evidence of existing transcriptions, for example) as substantial.

On the assumption that Bach managed to keep his music together as far as possible during his lifetime, it seems that major losses occurred only on the division of his legacy in 1750, when the manuscripts, especially of the vocal works, were divided between the eldest sons and Bach's widow. Most of them went to Wilhelm Friedemann, but he, unfortunately, was the least succussful at managing his inheritance; he was compelled for financial reasons to sell them off item by item, and the material is not simply scattered but for the most part lost. Only a few of the items inherited by Johann Christoph Friedrich and Johann Christian, including a printed copy of the *Musical Offering* and the autograph of the organ Prelude and Fugue in B minor BWV544 (signed with Johann Christian's nickname 'Christel'), can be traced. C.P.E. Bach's and Anna Magdalena's shares were better preserved. Bach's widow gave her portion (the parts of the cycle of chorale cantatas) to the Thomasschule while most of C.P.E. Bach's estate passed through Georg Poelchau's collection into the Berlin Königliche Bibliothek (later the Preussische Staatsbibliothek and now the Staatsbibliothek zu Berlin). This collection forms the basis of the most important collection of Bach archives. During the 19th century this library acquired further, smaller Bach collections, notably those from the Singakademie and the estates of Forkel, Franz Hauser and Count Voss-Buch (in some of which fragments from W.F. Bach's inheritance appear).

Besides the original manuscripts – the autograph scores, and parts prepared for performances under Bach's direction – which, in their essentials, Bach kept by him, many copies were made in the circle of his pupils, particularly of organ and harpsichord music. As many autographs of the keyboard works are lost, this strand is specially significant for the preservation of Bach's works. In particular, important copies have come down through members of Bach's family (including the Möllersche Handschrift and the Andreas-Bach-Buch, both compiled by Sebastian's brother Johann Christoph), through J.G. Walther and through Bach's pupils Krebs and Kittel. After Bach's death Breitkopf in Leipzig became a centre for the dissemination of his music (again, primarily the keyboard music). In Berlin a notable Bach collection was made for Princess Anna Amalia of Prussia, under the direction of Kirnberger, in which all facets of Bach's creative output were represented (now *D-Bsb* Amalien-Bibliothek). These secondary sources have to serve when autograph material is not available – relatively often with the instrumental works (e.g. a large percentage of the organ pieces; the English and French Suites, toccatas, fantasias and fugues for harpsichord; duo and trio sonatas; concertos and orchestral works), more rarely with the vocal ones (e.g. Cantatas nos.106 and 159; motets BWV227–30; and the masses BWV233 and 235).

Research into source materials, notably in conjunction with the Neue Bach-Ausgabe, has proved fruitful. The use of diplomatic research methods has allowed most of the copyists who worked for Bach – and all the important ones – to be identified: 'Hauptkopist A' was J. Andreas Kuhnau (*b* 1703); 'Hauptkopist B' was C.G. Meissner (1707–60); 'Hauptkopist C' was J. Heinrich Bach (1707–83); 'Hauptkopist D' was S.G. Heder (*b* 1713); 'Hauptkopist E' was J.G. Haupt (*b* 1714); 'Hauptkopist F' was J.L. Dietel (1715–73); 'Hauptkopist G' was Rudolph Straube (*b* 1717); and 'Hauptkopist H' was J.N. Bammler (1722–84). Papers, inks and binding have been evaluated for the purposes of identification and dating; but above all Bach's own handwriting, in its various stages of development, has served as the criterion for dating. A far-reaching revision of the chronology of Bach's works (only some 40 of the originals are dated) has been made possible, leading to a substantial revision of previous conceptions, which were based for the most part on

Spitta's work. The new chronology was established in its important details by Dürr and Dadelsen during the 1950s. Since then it has been variously added to, modified and confirmed. For the vocal works it is now essentially complete; sometimes it is precise to the actual day. With the instrumental works the situation is more complicated, because the original manuscripts are often lost; in consequence, results have been less precise since the history of the secondary sources permits of only vague conclusions about composition dates (for example, copies originating from the circle around Krebs and J.G. Walther point to a date in the Weimar period); this makes it unlikely that any complete and exact chronology will be established for the instrumental works, though a relative one is now largely achieved.

Investigations of source material have also led to the solution of crucial questions of authenticity, particularly in connection with the early works but also affecting some of the later ones. For example, Cantata no.15, hitherto regarded as Bach's earliest cantata, has now been identified as by Johann Ludwig Bach; similarly, Cantatas nos.53, 189 and 142 have been excised from the list of his works. Some instrumental works, such as BWV835–8, 969–70, 1024 and 1036–7, have been assigned to other composers. On the other hand, an important early organ work, BWV739, has now been authenticated and its manuscript ranks as probably Bach's earliest extant musical autograph. Completely new finds have been made (BWV1081–120 and Anh.205) and numerous copies by Bach of other composers' works have come to light; these provide additional information about his repertory and its context.

12. BACKGROUND, STYLE, INFLUENCES. Bach's output, unparalleled in its encyclopedic character, embraces practically every musical form of his time except opera. The accepted genres were significantly added to by Bach (notably with the harpsichord concerto and chamber music with obbligato keyboard); further, he opened up new dimensions in virtually every department of creative work to which he turned, in format, density and musical quality, and also in technical demands (works such as the *St Matthew Passion* and the B minor Mass were to remain unique in the history of music for a long time to come). At the same time Bach's creative production was inextricably bound up with the external factors of his places of work and his employers, as was normal in his time. The composition dates of the various repertories thus reflect Bach's priorities in his various professional appointments; for instance, most of the organ works were composed while he was active as an organist at Arnstadt, Mühlhausen and Weimar, whereas most of the vocal works belong to the period of his Kantorate at Leipzig. But Bach's production was by no means wholly dependent on the duties attaching to his office at the time. Thus during his Leipzig period he found time to produce a body of keyboard and chamber music to meet his requirements for concerts, for advertisement, for teaching and other purposes. And his career may be seen as a steady and logical process of development: from organist to Konzertmeister, then to Kapellmeister, and finally to Kantor and director of music – a continual expansion of the scope of his work and responsibilities. This is no matter of chance. Bach chose his appointments, and chose the moment to make each move. If he was unable to accomplish what he required (as was often the case in Leipzig), he was capable of turning his attention elsewhere in pursuit of his creative aims. Bach was a surprisingly emancipated and self-confident artist for his time.

The uncertainty about the dating of Bach's early works, with so little help in the form of source materials, makes it difficult to reconstruct and assess the beginnings of his work as a composer. It is to be supposed that he started to compose while under the tutelage of his elder brother in Ohrdruf, but although he took no formal lessons with an established composer, as Handel did with Zachow, it would be mistaken to call him self-taught as a composer, for the significance of his belonging to a long-standing family of professional musicians should not be underestimated. Composing was probably overshadowed by instrumental playing in Ambrosius Bach's family; this must to some extent have applied to the young Johann Sebastian, and probably he devoted more attention to developing his skills as an instrumentalist, especially as an organist, than to composition studies. But the art of improvisation – in those days inseparably bound up with practice on the instrument – would at the very least prepare the ground for his work as a composer. This reciprocity between performing and composing is reflected in the unruly virtuoso and improvisatory elements in Bach's early works.

As composers who influenced the young Bach, C.P.E. Bach cited (in 1775, in letters to Forkel) Froberger, Kerll, Pachelbel, Frescobaldi, Fischer, Strungk, certain French composers, Bruhns, Buxtehude, Reincken and Böhm – almost exclusively keyboard composers; C.P.E. Bach also said that Bach formed his style through his own efforts and developed his fugal technique basically through private study and reflection. In his letter of resignation from Mühlhausen Bach himself wrote of having procured a good supply of the very best vocal compositions, suggesting that in vocal music too he was decisively stimulated by the study of other composers' music. Bach came into personal contact with the last three of the composers named by C.P.E.; there was no question of any teacher–pupil relationship. No record survives of what works he collected at Mühlhausen, but they might have included Keiser's *St Mark Passion*, a six-part mass by Peranda and an italianate chamber concerto by Biffi, for his early autograph copies of all these survive, demonstrating the breadth of his knowledge of the repertory. As later influences, C.P.E. Bach named Fux, Caldara, Handel, Keiser, Hasse, the two Grauns, Telemann, Zelenka and Benda. This list, though certainly less representative than the earlier one, suggests that Bach's main interests still lay in his great contemporaries, whose music he not only heard but also studied in transcripts. With them he abandoned his one-sided attention to the organists among older composers, but his interest in the retrospective style represented by Fux and Caldara, complemented by his enthusiasm (mentioned by Birnbaum, 1737) for Palestrina and Lotti, is notable, and is borne out by tendencies in his music from the mid-1730s. Clearly he also became interested in, and ready to follow, more recent stylistic trends, particularly in respect of the music of Hasse, the Graun brothers and Benda (for example in the 'Christe eleison' of what was to become the B minor Mass) and in such works as the Peasant Cantata, the Goldberg Variations and the *Musical Offering*). Mizler, in an article of 1739 on Bach's cantata style, referring to the Scheibe–Birnbaum controversy, mentioned a work (BWV

Anh.13, lost) composed 'perfectly in accordance with the newest taste' ('vollkommen nach dem neuesten Geschmack eingerichtet').

Curiously, C.P.E. Bach's list of the masters his father had 'loved and studied' contains no mention of Vivaldi and the two Marcellos, or of Corelli, Torelli and other late Baroque Italian composers. Forkel compensated for this by his emphasis on the importance of Vivaldi's concertos, without citing any particular source to support his claim. Indeed, it was Vivaldi who exercised what was probably the most lasting and distinctive influence on Bach from about 1712–13, when a wide range of the Italian repertory became available to the Weimar court orchestra. Bach drew from Vivaldi his clear melodic contours, the sharp outlines of his outer parts, his motoric and rhythmic conciseness, his unified motivic treatment and his clearly articulated modulation schemes. His confrontation with Vivaldi's music in 1713–14 provoked what was certainly the strongest single development towards his own personal style. In Forkel's words, Vivaldi 'taught him to think musically'; his musical language acquired its enduring quality and unmistakable identity through his coupling of italianisms with complex counterpoint, marked by busy interweavings of the inner voices as well as harmonic refinement. It is impossible to describe Bach's personal style by means of simple formulae; but the process of adaptation and mutation that can be felt throughout his output seems to have taken a particularly characteristic turn at that point in 1713–14 whose principal landmarks are the *Orgel-Büchlein* and the first Weimar series of cantatas. His adaptation and integration of various contemporary and retrospective styles represent his systematic attempt at shaping and perfecting his personal musical language ('unlike that of any other composer', according to C.P.E. Bach) and expanding its structural possibilities and its expressive powers.

An essential component of Bach's style can be seen in his combination of solid compositional craftsmanship with instrumental and vocal virtuosity. The technical demands made by his music reflect his own prowess as an instrumentalist. Bach's own versatility – his early involvement in singing (it is not known whether he was later active as a singer), and his experience as a keyboard player, violinist and viola player – was partly responsible for the fact that demanding technical standards became the norm for every type of composition he wrote. This led to Scheibe's famous criticism: 'Since he judges according to his own fingers, his pieces are extremely difficult to play; for he demands that singers and instrumentalists should be able to do with their throats and instruments whatever he can play on the keyboard. But this is impossible'. It makes no essential difference at what level these demands are made (for instance between the Inventions and the Goldberg Variations, the four-part chorale and the choral fugue); everywhere Bach's requirements are the antithesis of conventional simplicity. Yet technical virtuosity never predominates; it becomes a functional element within the composition as a whole. Bach's impulse towards integration is also manifested in the typically instrumental idiom in which he cast his vocal parts. He thus produced in his music for voices and instruments a homogeneous language of considerable density. Even so, he differentiated between instrumentally and (less often) vocally dominated types of writing; but even in such vocally dominated pieces as the Credo of the B minor Mass he maintained both the density and the uncompromising, yet appropriate technical standard. It is of course significant, as regards both matters of technique and the quality of his music in general, that, as far as we know, he wrote almost exclusively for himself, his own ensembles and his own pupils, and never for a broader public (let alone a non-professional one). This partly explains why his music – unlike, say, Telemann's or Handel's – was disseminated within unusually narrow confines.

13. Cantatas. About two-fifths of Bach's sacred cantatas must be considered lost; of the secular cantatas, more are lost than survive. Thus it is difficult to draw firm conclusions about the evolution of the cantata in Bach's hands, even though the surviving repertory is considerable and roughly proportional to the number of cantatas composed at each place where he worked.

The earliest surviving cantatas, and probably Bach's first, date from the Mühlhausen and perhaps even the Arnstadt period; they include – as the earliest of all – nos.150, 131, 106 and 196 (*c*1707). The best, in both form and content, are nos.106 and 71. The latter is especially sumptuous, and its appearance in print bore the young composer's reputation far beyond the boundaries of Mühlhausen. The early vocal works belong almost without exception to the category of 'organist's music', that is they are pieces composed for particular occasions, not regular cantatas for the Sundays and feast days in the church calendar. Nor do they conform to the type established as modern by Neumeister in 1701, but they rely closely on central German tradition. Their texts are mostly taken from the Bible or the chorale repertory; freely conceived poetry is rare (found only in nos.71, 106 and 150). Musically they consist of a succession of different formal types – concerto, motet, (strophic) aria and chorale – adapted and combined to suit the composer's purpose. Bach did not call them cantatas: as a rule he reserved that term for the solo cantata of the Italian type (like nos.211 and 212), calling his sacred cantatas 'Concerto', and in earlier works 'Motetto', sometimes 'Dialogus' (depending on the text) or simply 'Music'.

Bach's early cantatas are distinguished from their central German precursors, which must have been familiar to him from his upbringing, by his tendency to give each movement a unified structure and his development of a broad formal scheme. He found the means to unify movements that for the most part do not function as closed numbers by reducing motivic material (in the solo movements). Reacting against haphazard sequential form, with its danger of formal dissolution, he began to use strictly symmetrical sequences of movements to underpin the overall cyclic structure: for example, chorus–solos–chorus–solos–chorus (no. 106).

During Bach's early Weimar years, organ music must have dominated his output; on the other hand, the letters written in 1712–13 by his pupil at Weimar, Johann Philipp Kräuter, show that Bach encouraged him to write cantatas. 1713 is the date, too, of what seems to be Bach's first secular cantata, the *Jagd-Kantate* no.208, written to a commission from the Weissenfels court (where it had a repeat performance before 1717). The piece shows Bach, obviously newly acquainted with the Italian style, taking up the recitative and the modern kind of aria (for preference the da capo aria), a step which had a decisive effect on the next sacred cantatas, nos.199, 21 and 63

(nos.21 and 63 were probably written in connection with his application to succeed Zachow in Halle in December 1713). With his nomination as court Konzertmeister on 2 March 1714, he started to produce cantatas on the whole regularly from the end of March onwards, in accordance with an agreement 'to perform a piece of his own composition under his own direction, in the chapel of the royal castle, on every fourth Sunday at all seasons'. This was Bach's first opportunity to compose a whole cantata cycle, albeit over a fairly long time-span; however, as things turned out, the number he wrote in Weimar amounted to little more than 20. The principle of the annual cycle is closely bound up with the history of the cantata from Neumeister on; the texts were mostly published in cycles, one for each Sunday and feast day in the church year. Bach, admittedly, never adhered strictly to a single poet (except in the lost Picander cycle of 1728–9), preferring to pick and choose. In Weimar he turned for the first time to librettos by Neumeister (nos.18 and 61) and used texts by G.C. Lehms (1684–1717; nos.199 and 54), but evidently preferred texts by the Weimar court poet Salomo Franck (1659–1725), the author of extremely original and profoundly felt sacred and secular poetic texts, among the best Bach set. Nos.21, 63 and 199 are among cantatas dating from before 1714; regular production began with Cantata no.182 on 25 March 1714. There followed, usually at four-week intervals, in 1714 nos.12, 172, 61, 152; in 1715 nos.18, 54, 31, 165, 185, 163, 132; in 1716 nos.155, 80*a*, 161, 162, 70*a*, 186*a* and 147*a*. Repeat performances of nos.21, 199, 31, 165 and 185 were slotted into the cycle. Gaps are accounted for by the loss of certain cantatas and in one case by the period of mourning from 11 August to 9 November 1715.

Musically the works are of particular importance for the development they show in Bach's personal style of writing for voices and instruments. The recitatives contain extensive arioso sections to begin with, but these gradually disappear (although the combinatorial element was to remain typical of Bach throughout his life); the arias become longer, in free or (more usually) strict da capo form and occasionally using more complex structures. The choruses embrace a multiplicity of formal principles, among them fugue and canon (no.182), passacaglia (12), concerto (172), motet (21) and French overture (61). Also notable are the overlapping of instrumental and vocal formal schemes (the use of Chor- and VOKALEINBAU) and instrumental quotations of chorale melodies. The extraordinarily colourful instrumentation is especially characteristic: within the smallest of performing ensembles Bach tried out a great variety of combinations, for example recorder, oboe, viola d'amore and viola da gamba in Cantata no.152. Following the Italian ideal, his orchestral writing moved away from the French practice of five-part writing, with two violas, which predominates in the early cantatas towards a more flexible four-part style. Instead of the harmonic weight of the middle voices in five-part writing Bach provided a rhythmically and melodically active viola part that is particularly characteristic.

In Cöthen, corresponding to Bach's official responsibilities, only secular cantatas were composed (with the single exception of BWVAnh.5) and those were mostly written for New Year celebrations or the prince's birthday. Bach's librettist was C.F. Hunold ('Menantes', 1681–1721). Among the Cöthen cantatas, many survive only as verbal texts (Anh.6–8) or are lost altogether; a substantial part of the music survives only for nos.66*a*, 134*a*, 173*a*, 184*a* and 194*a*. These pieces mostly exemplify the 'serenata' type of work, with succinct operatic treatment in dialogues between allegorical figures. It is not surprising that they reflect Bach's study of the instrumental concerto of the period (in part in the solo–tutti differentiation) or that dance characteristics appear, notably in the solo movements. Bach used transverse flutes in Cantata no.173*a*, evidently for the first time.

At Leipzig the performance of sacred cantatas on Sundays and feast days (some 60 a year) was one of Bach's chief tasks, and he produced a large number of new works. His vast workload meant that within the first cycle, beginning on the first Sunday after Trinity (30 May), he not only had to rely on repeat performances of earlier sacred cantatas but also had to resort to parodies of secular cantatas written at Cöthen. Nevertheless, his first cycle (1723–4) contains the following new compositions: nos.75, 76, 24, 167, 136, 105, 46, 179, 69*a*, 77, 25, 119, 138, 95, 148, 48, 109, 89, 60, 90, 40, 64, 190, 153, 65, 154, 155, 73, 81, 83, 144, 181, 67, 104, 166, 86, 37 and 44; to these must be added his test works (nos.22 and 23, for Quinquagesima 1723) and no.194, composed for the consecration of the new organ in Störmthal. Apart from no.24 (Neumeister) and nos.64, 69*a* and 77, the poet or poets of this first cycle remain for the most part unknown. The use of Knauer's Gotha cycle of 1720, which provides two texts for each Sunday and feast day, together with the fact that cantatas in two parts, or two separate cantatas, were sometimes performed (before and after the sermon) – such as nos.75, 76, 21, 24+185, 147, 186, 179+199, 70, 181+18, 31+4, 172+59, 194+165 and 22+23 – indicates that Bach designed his first Leipzig cycle, in part at least, as a double cycle.

Thus in his first year at Leipzig Bach furnished himself with an astonishingly concentrated repertory, and his emphasis on the cantata genre also gave him mastery over an incomparable variety of forms, free from any schematicism. Three favourite groundplans are: biblical text–recitative–aria–recitative–aria–chorale (nos.46, 105, 136 etc.); biblical text–recitative–chorale–aria–recitative–aria–chorale (nos.40, 48, 64 etc.); biblical text–aria–chorale–recitative–aria–chorale (nos.86, 144, 166 etc.). A constant feature, characteristic of the Leipzig cantatas as a whole, is the framework, comprising an introductory choral movement in the grand style (solo pieces appear rarely at the start) and closing four-part chorale, simple but expressive. Compared with the Weimar cantatas, the orchestral forces are larger. From no.75 onwards the brass (mainly trumpets and horns) are more strongly deployed, the flute is brought into play increasingly after 1724, and the oboe d'amore (from no.75) and oboe da caccia (from no.167) are introduced as new instruments, as are the violino piccolo and violoncello piccolo at a later date. Instrumental virtuosity is heightened, and the melismatic quality of the vocal writing is further developed. The 'prelude and fugue' type of movement is frequently used for the introductory chorus (as in no.46).

The second cycle, dating from 1724–5, consists mainly of a series of freshly composed chorale cantatas (i.e. cantatas of which both text and music are based on hymns): nos.20, 2, 7, 135, 10, 93, 107, 178, 94, 101, 113, 33, 78, 99, 8, 130, 114, 96, 5, 180, 38, 115, 139,

5. Autograph MS of Bach's Serenata 'Durchlauchtster Leopold' BWV173a, composed c1722, with the text of the sacred cantata 'Erhöhtes Fleisch und Blut' BWV173 added 1724 (D-Bsb Mus.ms.Bach P 42, f.1r)

26, 116, 62, 91, 121, 133, 122, 41, 123, 3, 111, 92, 125, 126, 127 and 1. From Easter 1725 this series was continued at first with cantatas of the traditional kind, that is with texts related to the prescribed scriptural readings for the day (nos.249, 6, 42 and 85), and then with nine cantatas to texts by Mariane von Ziegler (1695–1760): 103, 108, 87, 128, 183, 74, 68, 175 and 176, in all of which there is a tendency to use forms closer to those of the first cycle. 1724–5 was not only the most productive year for cantatas, as far as is known from the surviving works at least; it also, with the chorale cantata, saw the beginnings of a type that perhaps represents Bach's most important contribution to the history of the genre. What is particularly striking is his endeavour to lay out the introductory movements as large-scale cantus firmus compositions, each adhering to a different structural principle. Cantata no.20, and with it the second cycle, opens with a chorale movement for chorus in the form of a French overture which it is possible to regard as a kind of programmatic statement, whereas the opening chorus of no.2 takes the retrospective form of a chorale motet. By this means Bach marked out a broad framework, in terms of both musical style and compositional technique, to indicate the conceptual range of the cycle he was starting. Cohesion between the movements within each cantata is guaranteed, at least from the textual point of view, by their relationship to the fundamental chorale (with chorale paraphrases for the solo pieces, as opposed to the procedure in no.4); often it is further emphasized by references to the cantus firmus and by the use of various ways of intermingling cantus firmus and free material. The author of the texts for the chorale cantatas is not known – Pastor Christian Weiss of the Thomaskirche, who used to preach chorale sermons, is a possibility.

With the third cycle, from 1725–7, the continuous, weekly production of cantatas ends, or so the sources indicate. It appears, however, from a surviving printed textbook of 1725 covering the third to the sixth Sunday after Trinity, that this cycle must have suffered substantial losses. When his production was actually interrupted

Bach usually filled the gaps with works by other composers, including no fewer than 18 cantatas by his cousin Johann Ludwig Bach of Meiningen. The cantatas of the third cycle offer no major innovations in the way of musical structure, but they notably include solo (nos.52, 84, 35 etc.) and dialogue cantatas (58, 32, 49 etc.), as well as large-scale works in two parts. There is an absence of overall formal integrity in the planning of this cycle, but Bach reveals a wide variety of ambitions and intentions, among them completing the cycle of chorale cantatas with further works of that type (no.137), reverting to older texts by Neumeister (28), Franck (72), Lehms (110, 57, 151, 16, 32, 13, 170 and 35) or from a Rudolstadt textbook (17, 39, 43, 45, 88, 102 and 187) and experimenting with the use of complementary texts from the Old and New Testaments (the former in the opening movement, the latter in a central one: Rudolstadt texts). One remarkable trait of the cycle is the frequent introduction of older instrumental movements, pre-eminently as sinfonias but sometimes also with choral participation (the reconstruction of the first movement of the Orchestral Suite BWV1069 to open Cantata no.110 is an example of this). A remarkable innovation in summer 1727 was the appearance of obbligato organ parts (nos.34, 146, 169, 49 and 188), found in both sinfonias (recycling instrumental concertos) and arias.

The third cycle was followed by the 1728–9 cycle on texts by Picander, which has disappeared but for a few remnants (1728: nos.149, 188, 197*a*; 1729: nos.171, 156, 159, Anh.190, 145 and 174). That Bach really did set the whole of Picander's *Cantaten auf die Sonn- und Fest-Tage durch das gantze Jahr* (Leipzig, 1728) as his fourth cycle cannot be accepted without reservation. At the same time, the poet must have been expressing something more than a pious hope when he wrote in the preface 'that any lack of poetic charm may perhaps be compensated for by the gracefulness of the incomparable Herr Kapellmeister Bach and these songs [Lieder] may be performed in the principal churches of prayerful Leipzig'. One of the characteristics of Picander texts is the frequent interpolation of chorale verses in the free poetry, creating attractive opportunities for mingling choruses and arias, which were not wasted on Bach (see nos.156 and 159, or the first movement of the *St Matthew Passion*). The cantatas written after 1729 offer nothing essentially new in formal terms, as far as can be determined from those that survive, but they show signs of a late style beginning to develop, manifested (in no.195 for example) above all in a more refined shaping of the accompanied recitative and a more integral, polyphonic treatment of the final chorale (entailing some modification of the cantus firmus). Some of the later cantatas (nos.117, 192, 112, 177, 97 and 100) show an interesting modification of the chorale type: they relinquish freely composed texts but (unlike the older *per omnes versus* type represented by Cantata no.4) set the central movements as recitatives and arias.

It is impossible to reconstruct a fifth cycle worthy of the name from the surviving works (not even given the large number of unattributed four-part chorales: see §15), but it would have had to be composed over a rather longer period of time, mainly in the 1730s. The mention in the obituary of 'five cycles of church pieces, for every Sunday and holy day' is just a tantalizing hint of how much has been lost.

Besides the cantatas composed in connection with the church year, Bach also wrote sacred cantatas for other occasions, like changes of town council, weddings, funerals, the bicentenary of the Augsburg Confession (1730) and inaugurations of organs; in style these are essentially indistinguishable from the other works. The body of cantatas, for all its variety, has an unusually self-contained character, maintained above all by its consistently high musical quality and its unfailing expressive profundity. The distinctive expressive power of Bach's musical language did not merely evolve in the cantatas, in many essential respects, but also finds its most characteristic representation in them. His expressive urge, as seen in individual arias and choruses, was not confined to single words as the primary bearers of expression, but was geared to movements and formal sections as a whole, in keeping with Baroque formal models (like the *ABA* of the da capo aria). Only within the context of a movement's structural and expressive unity did he regard the special treatment of single words as possible or meaningful. Among the tools of Bach's craft the traditions of *musica poetica* and musical rhetoric (the theory of musical figures) must certainly be reckoned. They were deeply rooted in him. Yet to reduce Bach's intentions to their rhetorical and figural components, or even to emphasize those components, would be to diminish their true breadth. Over and above this objective of expressive unity, Bach was always primarily concerned with the contrapuntal organization of melodic-rhythmic and harmonic textures to establish coherence. That is a principal reason why his cantata movements lend themselves so readily to parody. The technical prerequisites for producing a parody work – which Bach did so often – are metrical similarity and expressive affinity; the most essential requirement, however, is self-sufficiency of the musical substance, and its flexibility leaves considerable scope for the musical interpretation of a new text.

During his early Leipzig years Bach wrote only isolated secular cantatas, but these became more frequent as time passed. They were produced for various occasions: university ceremonies (nos.36*b*, 198, 205, 207), celebrations at the Thomasschule (BWV Anh.18, Anh.19, 36*c*), festivities in the houses of noblemen and prominent citizens (202, 216, 210, 249*b*, 30*a*, 210*a*, 212) and commissions from court (249*a*, 36*a*). Most of his large-scale congratulatory and homage cantatas written for the electoral house of Saxony were produced at the collegium musicum. A favourite format was the operatic *dramma per musica*, with a simple plot suited to the specific nature of the occasion being celebrated (nos.213, 206, 214, 207*a*, 215). The more lyrical cantatas such as no.204, or the two Italian works, nos.203 and 209, would certainly have been performed at the collegium musicum. The Coffee and Peasant Cantatas (nos.211 and 212), to some extent tinged with folk style, are distinguished by their lifelike and humorous characterization. The librettist of most of the works of 1725–42 was the versatile Picander, the only other important poet for Bach's cantatas during this period being J.C. Gottsched (1700–66), the influential Leipzig professor of rhetoric (BWV198, Anh.13, Anh.196). There is concrete evidence of just under 40 secular cantatas composed during the Leipzig years, but in most cases only the texts survive. Their occasional nature is the main reason why so many have been lost: few could have been given a second performance, and then only after

alterations to the text. Bach was of course aware that their best chance of survival lay in parody, and he took such opportunities as occurred to save the music, as in the case of the *Christmas Oratorio* (see §14).

14. ORATORIOS, PASSIONS, LATIN WORKS. The three works that Bach called 'oratorios' fall within a very short period: the *Christmas Oratorio* of 1734–5, the *Easter Oratorio* and *Ascension Oratorio* of 1735. The librettists are not known for certain. The place for Bach's oratorios in the Lutheran liturgy was the same as that for the cantata; the only difference between the oratorio and cantata texts is that the former have a self-contained 'plot' or take the form of narration with dialogue. This conforms with the history of the genre, although Bach held the tendency to formal expansiveness firmly in check, in comparison with standard Italian practice. In the *Christmas Oratorio*, especially, the normal character of a single self-contained work is contradicted by its being split into sections for six different services between Christmas Day and Epiphany, and this is further emphasized by Bach in his use of different performing forces for the sections (although these are based on an underlying general scheme, and are grouped round six scenes from the Bible, with certain divergences from the allocation of lessons to be read at the various services). The unusual conception of an oratorio performed over several days is reminiscent of the Lübeck Abendmusiken, and the *Christmas Oratorio* obviously belongs to the oratorio tradition established by Buxtehude. All three of Bach's oratorios are essentially based on parodies of secular cantatas whose music, initially associated with a particular occasion, could reasonably be re-used in this way (the *Christmas Oratorio* from nos.213, 214 and 215 among other works; the *Easter Oratorio* by a reworking of parts of BWV249*a*; the *Ascension Oratorio* above all from BWV Anh.18). However, there is so much that is new and individual in the *Christmas Oratorio*, especially in the biblical choruses and the chorales, and in the *Ascension Oratorio*, that the works are in no sense subordinate to their originals. The pervasive use of texts from the Gospels, moreover, gives the works a special status, linking them to the Protestant *historia* and thus ultimately to the Passion.

Of the five Passions mentioned in the necrology two survive (*St Matthew* and *St John*), for one the text survives (*St Mark*) and the other two are lost. Judging from the source it seems probable that the anonymous *St Luke Passion* – which is certainly not by Bach – was included among his works in error because the score, dating from about 1730, was copied in his hand and contained additions by him. This means that only one Passion remains to be accounted for. Recent research has shown that various movements in the second version of the *St John Passion* (1725) were taken from a Passion composed for Weimar, most notably the chorus 'O Mensch bewein' and the three arias 'Himmel, reisse', 'Zerschmettert mich' and 'Ach windet euch nicht so'. Curiously enough, Hilgenfeldt (1850) mentioned a Passion by Bach dating from 1717, giving no indication of the source of his information, and Bach gave a guest recital at the Gotha court during the Passion period in 1717, making it conceivable that he put on a Passion performance while the post of Kapellmeister was vacant. Also, he performed Keiser's *St Mark Passion* in Weimar in about 1713, so his interest in the genre is established for the period. The missing fifth Passion must almost certainly, therefore, be a lost Weimar work, but the traces are too few to allow any conclusions to be drawn about it.

The three known works represent the same type of oratorio Passion, in the tradition of the *historia*, in which the biblical text is retained as a whole (with 'parts' for soloists – Evangelist, Jesus, Pilate etc. – and the turba choruses for disciples, high priests etc.), and is interrupted by contemplative, so-called 'madrigal' pieces set to freely composed verse, as well as by chorales. A special feature of Bach's Passions is the unusual frequency of the chorales, which are set in simple yet extremely expressive four-part writing. The text of the *St John Passion* of 1724, Bach's first large-scale vocal work for Leipzig, is not a unified piece of work. The freely composed parts rely heavily on the famous Passion poem by B.H. Brockes (*Der für die Sünde der Welt gemarterte und sterbende Jesus*, 1712) and on texts by C.H. Postel (*c*1700) and Christian Weise (1675); besides this, the Evangelist's part contains interpolations from St Matthew's Gospel. Unlike any other of Bach's large-scale works, the *St John Passion* underwent substantial changes of every kind in the course of its various performances. For the second performance, in 1725, Bach produced a much altered version adapted conceptually to the cycle of chorale cantatas (see §13) by the incorporation of movements based on a cantus firmus. In a third version (probably of 1732) the interpolations from St Matthew were cut and a new aria and sinfonia added (both lost). Finally a fourth version of 1749 saw the work restored to something much closer to its original form; besides some changes to the text, for his last performance of a Passion in Leipzig Bach greatly enlarged the performing forces (by a part for bassono grosso among other things). It seems that Bach began a thoroughgoing revision of the work in 1739, but for some reason abandoned the process halfway through movement 10 and did not resume it; furthermore the alterations he made at that time were not adopted in the 1749 performance. For all the modifications made over the 25-year period, the setting of the biblical Passion text remained the work's constant centre, around which the madrigalian movements in particular were fitted in various ways like different settings for a gemstone. Bach skilfully exploited the network of internal textual correspondences which is unique to St John's Gospel, and convincingly translated it into an 'architectural' structure.

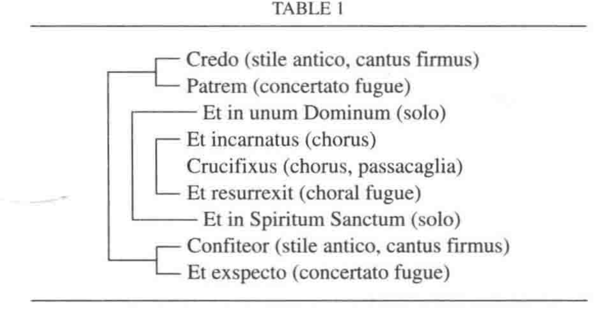
The history of the *St Matthew Passion*, with its double chorus, is less complicated, though not entirely straightforward. In this case the date of the first performance seems now to be established (the Thomaskirche, Good Friday 1727), but some details of that occasion remain unclear because of lacunae in the source material (version BWV244*b*). Furthermore, some ten movements from the *St Matthew Passion* were incorporated into the Cöthen funeral music of 1729 (BWV244*a*), and the consequences of that for the repeat of the Passion in the same year are not known. On the whole the *St Matthew Passion* is a considerably more unified piece than the *St John*, for which the primary reason is its use of Picander's text. Its greater textual and musical scale allows more space for the arias and 'madrigal' pieces in which the coupling of arioso with aria is an especially characteristic feature. Another special feature is the way the strings provide an accompanying halo in Jesus's recitatives. The pervading cyclical formation of the work (from the interrelating of the chorales, tonal organization and paired movements)

is in some respects even more pronounced than in the *St John Passion*, while it lacks the earlier work's 'architectural' centre. After 1729 the *St Matthew Passion* had at least two more performances under Bach's direction. In 1736 he made some important changes, chief among them emphasizing the separation of the two choruses and instrumental ensembles by division of the continuo, exchanging the simple chorale at the end of part i for 'O Mensch bewein' and replacing the lute in 'Komm süsses Kreuz' with bass viol. The additional alterations of about 1742 were mainly a matter of meeting practical performing conditions.

In its main sections, that is in the 'madrigal' pieces, the *St Mark Passion* of 1731 was a parody work whose main sources are the *Trauer Ode* (Cantata no.198) and the Cöthen funeral music (BWV244*a*). While only the text survives, the musical design can in part be deduced from these models, although they scarcely permit it to be reconstructed satisfactorily. The Bach literature includes discussion of parody relationships which go further than this, but they seem to raise more questions than they answer. The most plausible suggestion, made by Smend (1940–48), is that some of the exceptionally large number of chorales in the *St Mark Passion* may have survived in the collections of Bach's four-part chorales.

In Bach's time Latin polyphonic music was still often used in ordinary Lutheran Sunday worship, particularly, in Leipzig, at important church feasts. Further, the concerted *Magnificat* continued to hold its place in Vespers. Bach had been interested in Latin polyphonic music at least since his Weimar period, as his copies of pieces by other composers demonstrate (Peranda, Durante, Pez, Wilderer, Bassani, Caldara, Lotti, Palestrina etc.; catalogue in Wolff, 1968). He also wrote insertions in this style for other composers' works, and made some arrangements (Sanctus BWV241; Credo intonation for a mass by Bassani; 'Suscepit Israel' for a *Magnificat* by Caldara). His earliest surviving work of this type is probably the Kyrie BWV233*a* on the cantus firmus 'Christe, du Lamm Gottes'. Then in his first year at Leipzig came the five-part *Magnificat*, first the E♭ version with four inserted Christmas pieces (BWV243*a*), revised in D major in 1733, without the Christmas pieces, for use on any major feast day (BWV243). Among the various Sanctus settings attributed to Bach, apart from BWV232^{III}, probably only BWV237 and 238 (both 1723) are original compositions. The four short masses (BWV233–6), mostly parody works based on cantata movements, date from about 1738. In the careful selection of models and the subsequent reworking of the musical material, these works, together with the B minor Mass, amount to a valuable anthology of Bach's vocal writing in music of outstandingly high quality. The transposition of German cantata movements into mass settings did more than replace German words, contingent on the time and occasion of their writing, with the timelessness of the Latin (and Greek) texts; it also removed the limitations imposed on the cantatas by their place in the annual church cycle and gave them a more general validity. The longer-term outcome of this was seen soon after 1750, when specifically the Latin sacred music was hailed by connoisseurs like Marpurg, Kirnberger, Hiller and even the south German Prince-Abbot Gerbert as a particularly important sector of Bach's music.

Bach's masterpiece in this genre is of course the work known – though not conceived as a unity – as the B minor Mass. Its genesis stretched over more than two decades. Bach's aim seems originally to have been to bring together a collection of exemplary large-scale mass movements rather than to create a single, cyclical work on an unprecedented scale. In assembling the whole score in 1748–9, however, the composer undoubtedly had the intention of making it a comprehensive work of consistent quality. The oldest section is the Sanctus of 1724. The Kyrie and Gloria come from the 1733 *Missa* dedicated to the Dresden court, while the Credo or 'Symbolum Nicenum' was composed only during Bach's last years. In many respects these two main sections represent Bach's ideals not of Latin polyphonic music alone but of vocal music altogether: in their stylistic multiplicity (the contrast of deliberately archaic and modern styles; the experimentation with the widest variety of instrumental and vocal techniques); their abandonment of the da capo aria and the recitative; and in their formal perfection. The 1733 *Missa* (reminiscent of the *Magnificat* in its five-part writing) emerges as a completely integrated, unified whole, typified by the inner logic of the tonal organization (B minor–D–F♯ minor–D–A–D–G–B minor–D) and the disposition of the vocal and instrumental solos. The Credo is a particularly good example of Bach's many-layered and symmetrical layout (Table 1). The *Missa* and the Credo have a series of parody originals (including movements from Cantatas nos.29, 46, 171, 12 and 120); in the latter the 'Credo', 'Et incarnatus' and 'Confiteor' seem to be the only original compositions.



An earlier version of 'Credo in unum Deum' exists, dating from the early 1740s, while 'Et incarnatus' may be the last vocal composition that Bach completed. However, Bach's reworking of earlier material went much further than usual. In 'Agnus Dei', in particular, nearly half the movement was completely revised, using new thematic material. When the entire work was nearly finished Bach revised it once more, probably in 1749, adding 'Et incarnatus' (the words of which he had originally set as part of the aria 'Et in unum Dominum'). The music of the new 'Et incarnatus' is reminiscent of a movement in Pergolesi's *Stabat mater*, and in its combination of unorthodox polyphony and musically expressive gesture points the way forward to a new stylistic sensibility. It is all the more astonishing that Bach successfully followed it with the earliest music in the mass, the 'Crucifixus' (from the second movement of Cantata no.12) – though he did bring this up to date with a more *empfindsam* style of continuo and more subtle instrumentation of the upper parts.

It was obviously not by chance that Bach turned in his old age to the mass genre. With its centuries-old tradition, by comparison with such modern genres as the cantata and oratorio, the setting of the mass had a natural affinity to the historical and theoretical dimensions of Bach's musical thinking, which also bore fruit in the monothematic instrumental works of his last years.

15. MOTETS, CHORALES, SONGS. In Bach's time motets were sung as introits for services and on certain special occasions. The tradition established at Leipzig was to select introit motets from the *Florilegium Portense* (1603), a classical repertory from the 16th century compiled by Erhard Bodenschatz. For this reason, Bach wrote motets only for special occasions, probably only for burial

services, although in only one case, *Der Geist hilft* (for the funeral of the Thomasschule headmaster Ernesti in 1729), is there documentary evidence of this. Bach's motet texts, following the tradition, are based on biblical quotations and chorales; freely composed poetry is used in only one case, and even this is hymnbook poetry (*Komm, Jesu, komm*, Paul Thymich). On the occasions for which the motets were composed, Bach normally had more than the school choristers at his disposal; he was thus able to use between five- and eight-part writing, as he did in six pieces (BWV225–9 and Anh.159). In line with normal central German practice since the 17th century, it was a rule in the performance of motets at Leipzig, including those from *Florilegium Portense*, that a continuo part should be included – to be precise, organ, harpsichord (in Leipzig the so-called motet harpsichord), lute, with violone, cello, bassoon. In this way the bass of a vocal (choral or polychoral) movement was supported by a larger or smaller continuo depending on the circumstances, in the manner of a *basso seguente*. *Colla parte* accompaniment was required only occasionally. The performing parts that have survived for *Der Geist hilft*, with strings (first chorus) and reed instruments (second chorus) doubling the voices, must be connected with the exceptional nature of the occasion and cannot necessarily

TABLE 1

Credo (stile antico, cantus firmus)
Patrem (concertato fugue)
Et in unum Dominum (solo)
Et incarnatus (chorus)
Crucifixus (chorus, passacaglia)
Et resurrexit (choral fugue)
Et in Spiritum Sanctum (solo)
Confiteor (stile antico, cantus firmus)
Et exspecto (concertato fugue)

6. *Autograph MS of the Sinfonia (arranged from the Prelude of the Partita for violin* BWV1006*) from Bach's cantata 'Wir danken dir, Gott'* BWV29*, 1731 (D-Bsb Mus.ms.Bach P 166, f.1r)*

be taken as applicable to the other motets; similar special cases, with partly obbligato instruments, are BWV118, *O Jesu Christ* (both versions) and *Der Gerechte kömmt um* (not in BWV: BC C 8).

Bach's use of double chorus and his exposition of forms of chorale treatment link the motets with the central German tradition in which he had grown up. That it was part of his direct family inheritance is illustrated by the fact, which can scarcely be coincidental, that motets are particularly well represented in the Alt-Bachisches Archiv. Bach's earliest motet, *Ich lasse dich nicht* BWV Anh.159, long attributed to Johann Christoph Bach of Eisenach, adheres extremely closely to Thuringian models. Composed by 1712 at the latest, the work's foundations in the tradition are typified by the highlighting of upper parts and the largely homophonic conception of the first section, and by the interweaving of a chorale tune in large note values in the second; by contrast, the harmonic intensity of the work (in F minor) and the unified, almost rondo-like, thematic construction of its first section are innovatory. Among later works, Bach's debt to the tradition is best illustrated by the closing section of *Fürchte dich nicht*, in its combination of cantus firmus ('Warum sollt ich mich denn grämen') and freely imitative writing, and the opening section of *Komm, Jesu, komm*, with its chordal writing for double chorus. As a whole, the style of BWV118 too is retrospective, with its archaic instrumentation and its homophonic choral writing.

By contrast, most movements in the motets have a markedly polyphonic vocal manner, dominated by instrumental style and showing unifying motivic work. Another characteristic is the clear formal articulation, with multi-movement works demonstrating different kinds of treatment. Thus *Jesu, meine Freude*, the longest work of this kind, in 11 movements, is the most strictly (that is, symmetrically) conceived: the opening and closing movements are identical, the second to fifth correspond to the seventh and eighth, and the central sixth movement is a fugue. *Der Geist hilft* begins with a concerto-like movement, followed by a double fugue and a simple chorale setting. The form of the instrumental concerto (fast–slow–fast) is used in *Singet dem Herrn*. Precise dating is possible only in the case of *Der Geist hilft* (24 October 1729). *Jesu meine Freude* seems to date from a pre-Leipzig period, although there is no tangible evidence for this; it is possible that an earlier motet, with a text from Romans viii, was expanded into a chorale motet by the addition of stanzas from the hymn *Jesu meine Freude*. The other motets appear to date from the Leipzig years. This is certain in the case of *O Jesu Christ* (*c*1737): its instrumentation was revised for a repeat performance in the 1740s, with strings, oboes, bassoons and horns; the original had only two *litui*, cornets and three trombones. The authenticity of *Lobet den Herrn* has been questioned, probably groundlessly, but the paucity of material that would permit comparisons weakens the arguments on either side. Bach's arrangement of Pergolesi's *Stabat mater* with the psalm text 'Tilge, Höchster, meine Sünden', dating from 1741–6, should be counted among the motets.

Bach's composition of chorales is most closely associated with his production of cantatas. Four-part chorale style, or *stylus simplex*, was normal for his closing movements, particularly in the Leipzig cantatas; it also often occurred at the ends of subsections in the Passions and oratorios. Bach's chorale writing is characterized by the 'speaking' quality of the part-writing and the harmonies – meaning that they aim to be a direct interpretation of the text. In its pervasive counterpoint and its expressiveness, Bach's harmonic style stands out from that of his contemporaries, who preferred plain homophonic textures in their chorales. This simpler approach, found in the chorales of such as Graupner or Telemann, with movement mostly in minims, was well suited to congregational singing, but Bach took no account of that in his chorales, which are deliberately more artistic, rhythmically often more lively (written in crotchets) and frequently bolder in their harmonies. The first four-part chorale settings are in the Weimar cantatas (the last movement of no.12, performed on 22 April 1714, is among the earliest examples), and Bach's stylistic development in this type of composition reached a final stage 30 years later in the chorales of the *Christmas Oratorio*, with their elegantly mobile bass lines and their polyphonic refinement of the inner voices. His training as an organist probably contributed to the personal stamp of his style; organ settings such as BWV706 display similar stylistic traits. Chorales such as BWV371, conceived with orchestral forces in mind, act furthermore as reminders that chorales were Bach's favourite medium of instruction. C.P.E. Bach wrote in 1775: 'His pupils had to begin by learning four-part thoroughbass. After that he went on with them to chorales; first he used to write the bass himself, then they had to invent the alto and tenor for themselves ... this way of leading up to chorales is indisputably the best way of learning composition, including harmony'.

The posthumously published collections (Birnstiel, 2 vols., 1765, 1769; Breitkopf, 4 vols., 1784–7) contain almost all the chorales known from Bach's vocal works, some under different titles. The Breitkopf edition, prepared by C.P.E. Bach and Kirnberger, contains 371 chorales, among them more than 100 not found in the extant vocal works. This provides an important pointer to the lost vocal music, and though extremely difficult to follow up it has borne some fruits, as in the reconstruction of the *St Mark Passion* or the Picander cycle. It is worth remarking that the number of excess chorales, that is those that cannot be assigned to extant works, more or less corresponds to the number thought to exist in the lost cantatas and Passions.

Under the generic heading of 'sacred songs' come the 69 melodies with figured bass in G.C. Schemelli's *Musicalisches Gesang-Buch* (1736). According to the foreword, Bach edited the figured bass for some of the melodies, while others were entirely new compositions by him. Three are demonstrably his (BWV452, 500 and 505); of the rest at least seven pieces for two voices and ten 'improved' continuo parts can be associated with him. He seems to have been only peripherally occupied with the composition of songs and strophic arias, for which he took texts from religious poetry of the 17th and 18th centuries: that, at least, is the inference to be drawn from the limited surviving repertory, for which the only source is the second *Clavierbüchlein* for Anna Magdalena Bach (1725) containing BWV511–14 and 516 – works which probably have a direct association with the Schemelli *Gesangbuch*. Comparison of BWV512 with 315, and of BWV452 with 299, draws attention to the conceptual association between the composition of chorales for two and for four voices. The collection of four-part chorales

which Bach's pupil J.L. Dietel extracted from his teacher's works (Leipzig, *c*1735), like the Schemelli *Gesangbuch* (1736), indicates that Bach was working on chorales rather intensively and systematically at the time, perhaps with a view to a more compendious publication.

Only exceptionally did Bach compose secular songs. A quodlibet for four voices and continuo (BWV542), surviving only in fragmentary form, is unique among his vocal works. It was probably composed for a wedding in Erfurt, at the latest by mid-1708. With its admixture of various melodies and humorous words, the piece forms a link with the musical games played, so tradition relates, when the Bach family got together (see §1 above). Other rarities, from a later period when he was settled in the university town of Leipzig, are the song addressing a pipe of tobacco (BWV515) and the 'Murky' (BWVAnh.40).

16. Organ music. The obituary written immediately after Bach's death and published in 1754 contains the following statement: 'For as long as there is nought to confute us other than the mere possibility of the existence of better organists and keyboard players, we cannot be reproached if we are bold enough to persist in the claim that our Bach was the most prodigious organist and keyboard player that there has ever been. It may be that this or that famous man has accomplished much in polyphony on these instruments but was he for that reason as expert – with hands and feet together – as Bach was? Whosoever had the pleasure of hearing him and others, being not otherwise disposed by prejudice, will agree that this doubt is not unfounded. And whosoever looks at Bach's pieces for the organ and the keyboard, which he himself, as is universally known, performed with the greatest perfection, will likewise have nothing to say in contradiction of the above statement.' The claim illustrates the well-nigh legendary reputation that Bach enjoyed in his lifetime. His fame had already spread beyond the confines of central Germany by 1717, when he challenged the French virtuoso Louis Marchand to a competition at the court of Dresden and won by default when the Frenchman took flight. 'It would be wrong to conclude from this defeat of Marchand in Dresden that he must have been a poor musician. Did not as great a one as Handel avoid every opportunity of confronting the late Bach ... or of getting involved with him?' (Marpurg).

Keyboard music as a whole occupies a crucial position in Bach's life in many respects, but this is even more true of the works for harpsichord than of those for organ. No other genre occupied Bach so consistently and intensively from the beginning of his career to the end. His life as a professional musician began with learning to play on a keyboard, above all in Ohrdruf in 1695–1700 under the tuition of his elder brother Johann Christoph, and his study of keyboard music by the best composers of the 17th century laid the most important foundations of his training as a composer. The compositions for harpsichord, in particular, provide the opportunity to assess Bach's development at each stage of his creative life.

Bach was bolder than any of his contemporaries: from the first he set no limits to his keyboard skills, and accepted no restrictions to his horizons – from the breadth of the foundations of his style to the comprehensive range of genres in which he composed. The stylistic basis was laid in his youth, and it was undoubtedly important that growing up in the central German environment of his time gave him the opportunity to learn about different stylistic tendencies side by side, without any bias towards one rather than another. As a result his models came from a highly diverse repertory. The north German school, including such masters as Buxtehude, Reincken, Bruhns, Lübeck and Böhm, were ranged alongside central German composers such as Pachelbel's circle and older pupils (J.H. Buttstedt, for example, or A.N. Vetter) and Witt, Krieger, Kuhnau and Zachow, as well as their southern German colleagues J.J. Froberger, J.C. Kerll and J.C.F. Fischer. Italians such as Frescobaldi and Battiferri confronted Frenchmen such as Lully, Marais, Grigny and Raison. Many of these names are to be found in the large manuscript collections (the so-called Andreas-Bach-Buch and Möllersche Handschrift) copied by the Ohrdruf Bach, Johann Christoph. They give a clear picture of the repertory that the younger brother grew up with, and which showed him – like the young Handel, learning his craft in a similar environment – 'the manifold ways of writing and composing of various races, together with each single composer's strengths and weaknesses'. No comparable sphere of influence served to challenge this broadly based group of musicians and exemplars later in Bach's life. There were, of course, individuals who had an effect on him, such as Vivaldi after 1710, or probably Couperin, or his exact contemporary Handel, but no group of musicians of a comparable range or variety.

Bach's dedication to every keyboard genre and form appears equally boundless. The range remains constant throughout his career, from the earliest to the last compositions. All the major types are represented: the freely improvisatory (prelude, toccata, fantasia), the imitative and strict (fugue, fantasia, ricercar, canzona, capriccio, invention), the combinatory (multi-part preludes, prelude and fugue) and multi-movement forms (sonata, suite or partita, overture or sinfonia, chaconne or passacaglia, pastorale, concerto and variations); and then there are the various types and forms of chorale arrangement.

Unlike the vocal music and the chamber and orchestral works, Bach's keyboard output covers his entire creative life. There are quite lengthy periods of heightened activity – organ music before 1717, harpsichord music after that date. As a whole, however, Bach seems to have cultivated the two genres alongside each other. It is thus the more surprising that, right from the beginning, consistently and in defiance of inherited 17th-century tradition, he abandoned the conventional community of repertory between organ and harpsichord, choosing to write specifically for the one or the other. The uncompromising use of obbligato pedals, in particular, is a distinguishing mark of Bach's organ style. Only exceptionally (for example in the chorale partitas and the small chorale arrangements from the third part of the *Clavier-Übung*) do the performing possibilities coincide so that organ and harpsichord become truly interchangeable.

Since most of Bach's keyboard works from the pre-Leipzig years survive in copies (generally made in the circle of Bach's pupils) rather than in autograph scores, it is not possible to establish a precise chronology. Even a relative one is possible only in general terms, with considerations of style and authenticity holding the balance. In the earliest works the influence of Bach's models is pronounced. Pachelbel had taught Johann Christoph Bach, and the master's influence extended to the younger brother, most visibly and prevalently in the

earliest of his extant compositions. Besides the little organ chorales which survive individually (BWV749, 750 and 756), regarded by Spitta as Bach's first musical essays, the chorales in the Neumeister collection, which came to light only recently (BWV1090–1120, and BWV714, 719, 737, 742 and 756), are now taken to be among his earliest works. Although the Neumeister manuscript represents neither an integrated body of work nor a unified collection, in its dazzling variety it embodies some contradictory and simultaneously essential traits of Bach's early organ music: imperfect technique alongside daring innovation; reliance on models such as Pachelbel, Johann Michael and Johann Christoph Bach and masters from north, south and central Germany, together with a determination to surpass and dispense with such models; and an entirely unorthodox mixture of free composition and strict polyphony, unconventional harmony and pronounced virtuosity.

A subsequent stage in Bach's development is found in the chorale partitas BWV766–8, mostly wrought in the manner of Böhm (BWV768 was revised and expanded during Bach's Weimar period). The Canzona BWV588, the *Allabreve* BWV589 and the Pastorale BWV590 show south German and Italian characteristics, while the Fantasia in G BWV572 looks to the French style. With their sectional layout, the preludes in E and G minor, BWV566 and *535a*, must have been written under Buxtehude's immediate influence.

The extraordinary harmonic boldness and the richness of fermata embellishment in the pieces BWV715, 722 and 732, intended to accompany chorales, imply that they belong to the Arnstadt period when Bach's treatment of chorales caused confusion among the congregation. The fugues after Legrenzi and Corelli, BWV574 and 579, should probably be placed among the early works. Admittedly, the scarcity of autographs, combined with the complicated situation surrounding the other sources, makes it difficult to establish a reliable chronology. It is scarcely possible even to draw definite conclusions about which of the early keyboard works belong within the period of Bach's youth, if that is set at about 1700–07.

The models recede in importance from the Mühlhausen period, at the latest, and Bach's individuality begins to pervade every note of his compositions. This applies particularly to the many extended organ chorale settings probably dating from between 1709 and 1712–13 and already so much in accordance with Bach's later ideals that he found this group of 18 chorales (BWV651–8) worthy of revising in and after about 1740. In his freely composed organ works (toccatas, preludes, fantasias and fugues) Bach tightened up the formal scheme, preparing the way for the two-movement prelude and fugue through an intermediate type in which the fugue was a long, self-contained complex but the prelude was not yet a unified section (such as the first movement of BWV532). Here is an early manifestation of one of the peculiarities of Bach's working methods, encountered later in the '48': fugues attain their final form almost instantaneously, preludes often go through several stages of development. Probably the most important work of these years is the Passacaglia in C minor BWV582.

In about 1713–14 a decisive stylistic change came about, stimulated by Vivaldi's concerto form. Bach's encounter with Vivaldi's music found immediate expression in the concertos after Vivaldi's opp.3 and 7 (BWV593 etc.). Features adapted from Vivaldi include the unifying use of motivic work, the motoric rhythmic character, the modulation schemes and the principle of solo–tutti contrast as means of formal articulation; the influence may be seen in the Toccatas in F and C BWV540 and 564. Apparently Bach experimented for a short while with a free, concerto-like organ form in three movements (fast–slow–fast: cf BWV545 + 529/2 and BWV541 + 528/3) but finally turned to the two-movement form, as in BWV534 and 536. Of comparable importance to the introduction of the concerto element is his tendency towards condensed motivic work, as in the *Orgel-Büchlein*. Bach's conception of this new type of miniature organ chorale, combining rhetorical and expressive musical language with refined counterpoint, probably dates back to a relatively early point, possibly the beginning of the Weimar period, but he cannot have started to collect them systematically in the autograph before 1713–14. Among the earliest entered in the manuscript are, among new compositions, BWV608, 627 and 630, and around 1715–16 Bach added BWV615, 623, 640 and 644 (to cite some typical examples). Some of the pieces, such as BWV601 and 639, are of earlier date. By the end of the Weimar period the *Orgel-Büchlein* was complete in all essentials, although a few isolated pieces were added later, such as BWV620 and 631 (*c*1730), the fragment O *Traurigkeit* and BWV613 (*c*1740). The final total of 45 pieces falls considerably short of the 164 originally projected, but Bach had already ceased to work consistently at this major undertaking as early as 1716. The reason for this is unknown; when he took it up again in Leipzig it was only sporadically and apparently in connection with teaching, or so a copy made about 1727–30 suggests.

Bach composed few organ pieces at Cöthen, but among them is undoubtedly the C major Fantasia BWV573 which he added to Anna Magdalena Bach's *Clavier-Büchlein* (1722). In Leipzig, in about 1727, he composed the trio sonatas, a new genre for the organ, which he wrote, according to Forkel, for his eldest son Wilhelm Friedemann. It was probably in conjunction with renewed activity as a recitalist – he is known to have performed in Dresden (1725, 1731 and 1736), Kassel (1732), Altenburg (1739) and Potsdam (1747) – that he returned to the prelude and fugue genre. Now, surely as a consequence of the '48', he always wrote them in two sections, with the preludes as important as the fugues. There was a final flourish of virtuosity (especially in the writing for obbligato pedal) in works such as BWV544 and 548 (both *c*1730), but always in the context of a clearcut structure (there is a da capo fugue in BWV548).

In 1739, as the third part of the *Clavier-Übung*, Bach published a comprehensive and varied group of organ works. Framed by a Prelude and Fugue in E♭ (BWV552), there are nine chorale arrangements for Mass and 12 for the catechism, followed by four duets. Bach's encyclopedic intentions can be seen in the form of the work – that of a collection of specimen organ pieces for large church instruments and smaller domestic ones (including the harpsichord), symbolized in his invariable coupling of a large piece with a small; they can equally be seen in the variety of his contrapuntal methods, whereby he constantly produced fresh kinds of cantus firmus treatment. At the very end of Bach's output for the organ are such disparate works as the C minor Fantasia and Fugue

BWV562 (1747–8), the 'Schübler' chorales (arrangements after solo movements from cantatas) and the canonic variations on *Vom Himmel hoch* BWV769. The variations, written for Mizler's society in 1747, survive in two original versions, printed and autograph, whose different sequence of movements shows Bach experimenting with symmetrical form and the placing of climaxes.

17. MUSIC FOR HARPSICHORD, LUTE ETC. Just as Bach learnt most about the craft of composition from keyboard music, so too did he use it for preference in teaching others. He was obviously already a sought-after teacher when still in Weimar, but the move to Leipzig brought a decisive expansion of his teaching activities. H.N. Gerber, who studied with him in the early Leipzig years, left an account of Bach's method of introducing the widest variety of composition by gradual stages, along with the technical premisses of their performance. According to Gerber he used to begin with the Inventions and the French and English suites, and conclude the course with the '48'. This canon of characteristic works from the decade 1715–25 constitutes, so to speak, the stylistic core of Bach's music for keyboard and for that reason served later as the yardstick by which to settle questions of authenticity. Nowadays, however, the yardstick's usefulness has become somewhat problematic, since it does not take fully into account either the stylistic breadth of Bach's early output or the unorthodox musical language of the late works.

One of the essential elements of Bach's art as a keyboard composer is the attention he gave, from the first, to the idiomatic qualities of the individual instruments, respecting not only the differences between organ and harpsichord but also those within the family of string keyboard instruments, of which he used at least four types: harpsichord, clavichord, lute-harpsichord and fortepiano. He is specific about the main kinds of harpsichord in the *Clavier-Übung* (the first part is for one-manual harpsichord, the second and fourth for a two-manual instrument). One of the earliest manuscript sources refers to the suitability of the E minor suite BWV996 for the lute-harpsichord ('aufs Lauten Werk'). Bach took an active interest in J.G. Silbermann's experiments in developing the fortepiano during the 1730s and 40s. There is reliable testimony that he improvised on several new Silbermann fortepianos of different types in the presence of Frederick the Great in Potsdam in 1747, which makes it possible to regard the three-part ricercar of the *Musical Offering* as conceived primarily for this new kind of keyboard instrument.

There is an obvious association between Bach's renown as a keyboard virtuoso, together with his work as a teacher, and the fact that his keyboard music is among the most accessible of his entire output, and also that it was the most widely available. Its dissemination shows a marked rising curve during the 18th century, internationally as well as within Germany. Bach's harpsichord works were available in Italy, France, Austria and England by 1750, and in view of this it is not surprising that the young Beethoven was schooled in the '48'. The growing recognition of the significance of this part of his output was reflected in the first complete edition of the works for harpsichord (begun in Leipzig in 1800 by Hoffmeister & Kühnel and continued by C.F. Peters) in which Forkel, among others, was involved.

Bach's early harpsichord compositions are in a similar situation to the early organ works as regards dating and evaluation. None of the very earliest can be dated precisely. The Capriccio BWV992 has been assigned to 1704; there are no biographical data to support this (it is extremely doubtful that it was written for Bach's brother Johann Jakob), but it certainly belongs to the period immediately after 1700. Before 1712–13 there were countless individual pieces like toccatas, preludes and fugues (these last mainly using a 'repercussive' thematic technique like the early organ fugues); variation form is represented by the *Aria variata* BWV989. In the toccatas (BWV910 etc.) Italian, north German and French influences conjoin in equal importance (BWV912 is an interesting counterpart to the organ work BWV532); Bach's penchant for the French style is evident in his abundant use of the *style brisé*. After 1712 the particular influence of concertos by Vivaldi, Marcello and others can be seen in Bach's numerous concerto arrangements (BWV972 etc.).

To the last years in Weimar and the early years in Cöthen belong works such as the so-called English Suites and the Chromatic Fantasia and Fugue BWV903, and also the *Clavier-Büchlein* for Wilhelm Friedemann of 1720, which is predominantly didactic in layout. It is however less important for its instruction in playing technique (the *Applicatio* BWV994 gives fingering and tables of ornaments after D'Anglebert) than as a book of instruction in composition. For Bach himself, the two could not be dissociated: the *Clavier-Büchlein* contains the beginnings of the '48' as well as early versions of the Inventions and Sinfonias, under such titles as 'preambulum' and 'fantasia'. To some extent the 1722 *Clavierbüchlein* for Anna Magdalena is a companion work, though differently laid out.

Then followed, also in 1722, *Das wohltemperirte Clavier* (book 1 of the '48'), with its 24 preludes and fugues in all the major and minor keys, surpassing, in logic, in format and in musical quality, all earlier endeavours of the same kind by other masters, such as J.C.F. Fischer's *Ariadne musica*. The work shows a perfectly balanced contrast between free and strict styles, each represented by several different types of prelude and fugue. Bach's writing in book 1 of the '48' in the most varied fugues – from two- to five-part, in a wide range of styles – represents the culmination of a 20-year process of maturation and stands unparalleled in the history of music. The final version of the two- and three-part Inventions and Sinfonias, also arranged by key but representing a different method of composition whose object (according to Bach's foreword) was 'to teach clear playing in two and three obbligato parts, good inventions [i.e. compositional ideas] and a cantabile manner of playing', dates from 1723.

The first traces of the subsequent great works of the Leipzig period are to be found in the 1725 *Clavierbüchlein* for Anna Magdalena, which in fact anticipates the so-called French Suites BWV812–17 and the Partitas BWV825–30. The Partitas in particular (appearing in print singly from 1726) represent a further culmination in Bach's keyboard output; whereas the '48' shows the prelude and fugue type developed to its most consummate maturity, these present similarly matured specimens of the most popular harpsichord genre of the time, the partita, comprising a suite of dance movements and 'galanteries'. These – the burlesca, capriccio and the like – do not

appear in the English or French Suites; as in the English Suites, each partita begins with a large-scale movement, each differently titled and each in a different style. Later, with the collected publication of all six in 1731, Bach inaugurated his series of published works under the general title *Clavier-Übung* (the title was borrowed from a publication by Kuhnau, his predecessor in office). In 1735 appeared the second part, whose contents were intended to be representative of the most prominent and fashionable styles: the Concerto in the Italian Style BWV971 embodies the ultimate stage in the process of transcribing instrumental concertos for keyboard, and stands in contrast to an Overture in the French Manner BWV831 which, more markedly than the partitas, represents what was specifically French in harmony, rhythm, ornamentation and melodic invention. 1741–2 eventually saw the end of the *Clavier-Übung* series with the aria and 30 variations known as the Goldberg Variations. Apparently Bach had not cultivated the variation form since his youth, so that the contrast between the Goldberg Variations and the early works (chorale partitas and the *Aria variata*) is the more marked. This work outshines all others as far as performing technique is concerned (Domenico Scarlatti's influence is unmistakable in places). The large-scale cyclical layout (based on a sequence of 10 x 3 movements, incorporating a series of nine canons, one at every third variation, arranged in order of ascending intervals to move towards a climax, with a final quodlibet) is without precedent. The basis of the composition is a ground bass of 32 bars, developed from the Ruggiero and related bass patterns, first presented in the aria and then subjected to free and canonic elaboration in a wide variety of ways. In their monothematic and emphatically contrapuntal conception, the Goldberg Variations set the scene for Bach's last keyboard works – the *Musical Offering* and *Art of Fugue*.

Besides the harpsichord works published in the 1730s, the only other major work is the second part of *Das wohltemperirte Clavier* (not so titled – the complete autograph does not survive). This companion-piece is less unified than book 1 and was partly assembled from existing preludes and fugues, some of them transposed. The freshly composed pieces probably date chiefly from the late 1730s; the work was complete by 1744 at the latest. Apart from this one major undertaking, Bach appears to have composed very few keyboard works at this period: perhaps the Fantasia 'sur un rondeau' BWV918, certainly the Fantasia in C minor with fragmentary fugue BWV906.

The dates of composition of the seven surviving works for lute – apparently almost his total output for the instrument – cover at least 30 years. The earliest work is the Suite in E minor BWV996, which dates from the Weimar period; it already shows a surprisingly balanced construction. The Prelude in C minor BWV999 shows an affinity with the '48', and may thus belong to the Cöthen or early Leipzig period. All the other lute works were composed in Leipzig, starting with the Fugue in G minor BWV1000, an expanded polyphonic development from the violin fugue (in BWV1001), which (like BWV997) is in a tablature copied by Bach's friend, the Leipzig lawyer and lutenist Christian Weyrauch. The Suite in G minor BWV995 (after 1011, for cello) dates from the period 1727–31 and is dedicated in Bach's autograph to an unidentifiable 'Monsieur Schouster'. The Suite in E (BWV1006*a*, after 1006 for violin) also survives in autograph form and is a much less demanding arrangement of its model as compared with BWV1000 and 995; it dates from the second half of the 1730s. Bach must have composed the Suite in C minor BWV997 before 1741; this is an original lute composition and is laid out in a similar virtuoso fashion to the Prelude, Fugue and Allegro in E♭ BWV998 which can be ascribed to the early 1740s. The late works may have been written for the Dresden lutenists S.L. Weiss and Johann Kropffgans, and in any case were probably played by them. There is evidence that Weiss and Kropffgans performed at Bach's house at least once, in 1739. Bach's arrangement for violin and harpsichord of Weiss's lute suite in A major (BWV1025) may have been made in connection with this occasion. His contributions to the repertory of the lute, long past its heyday but enjoying a final flowering in the German-speaking countries, represent, along with the works of Weiss, the culmination of the instrument's 18th-century repertory. They require an instrument with 10 to 14 strings, but in Bach's day were at least occasionally played on the lute-harpsichord, an instrument in whose construction Bach had assisted. The indistinct line between lute and harpsichord music is illustrated by the autograph of BWV998, marked 'pour La Luth ò Cembal'.

18. ORCHESTRAL MUSIC. Many of Bach's orchestral compositions must be presumed lost. The surviving repertory can in any case give only an incomplete idea of his output for larger instrumental ensembles, for he must have written many further works during his years at Cöthen and while he was working with the collegium musicum in Leipzig. Traces of lost concerto movements may be found in numerous cantatas, such as no.42 (first movement), and other large-scale vocal works, such as the *Easter Oratorio* (first two movements); and various of the surviving harpsichord concertos, in particular, invite inferences about lost originals.

In the score bearing the dedication to Margrave Christian Ludwig of Brandenburg, the so-called Brandenburg Concertos are dated 24 March 1721. This is merely a *terminus ante quem*, for the concertos themselves must have been written over a considerable period before being assembled in 1721 as a collection of 'Concerts avec plusieurs instruments' (not as a single work in several parts). It cannot be proved that Bach composed instrumental music in his capacity as Konzertmeister in Weimar; but his position there and his preoccupation with the Italian concerto style during those years make it seem probable that he did. Of the Brandenburg Concertos, no.6 in particular points to the Weimar period, partly because of its indebtedness to the Italian type of concerto (above all in the middle movement) and also because of its unusual instrumentation (the particular combination of low strings is otherwise found only in Weimar cantatas). Other concertos (for instance the conjectural early version of no.1) may also belong to the Weimar period, but it is not possible to draw any firmer conclusion about a Weimar orchestral repertory.

The special significance of the Brandenburg Concertos resides in the fact that, like Vivaldi's, they abandon the standard type of concerto grosso and use a variety of solo combinations. The originality of Bach's ideas extends far beyond Vivaldi's, as do the density of the compositional texture and the level of professional virtuosity. The devising of concise head-motifs, particularly in the first

movements, shows a strong Italian influence. Most of Bach's instrumentations are unprecedented. They feature all kinds of combinations, from homogeneous string sound (nos.3 and 6) to the heterogeneous mixing of brass, woodwind, string and keyboard instruments. Just as unusual is Bach's conflation of the group concerto with the solo concerto in nos.2 and 5. No.5 probably represents the latest stage in composition of the set: it was written for the inauguration of the harpsichord he brought back from Berlin early in 1719 (an earlier version survives from about this date). At the same time it marks the beginnings of the keyboard concerto as a form.

For a long time Bach scholars assigned most of his chamber and ensemble music to the Cöthen years. Recent studies based on original sources and style criticism have led to a thorough revision of the chronology affecting this part of his output. It now seems that only the smaller part of the instrumental ensemble music (or at least of what survives of it) belongs to the Cöthen period, while the greater part was composed at Leipzig, and principally for the collegium musicum which Bach was associated with from 1723 and which he directed from 1729 to the early 1740s. Thus the four Orchestral Suites, with their leaning towards French style, were written in Leipzig: no.1 perhaps as early as 1725, nos.3 and 4 in about 1725 and after 1730 respectively and no.2 about 1739. The B minor Suite (no.2), with its hybrid mixture of concerto elements and suite form and the extraordinary virtuosity of its flute writing, is probably Bach's very last orchestral work. The only solo concertos to survive in their original form from this time are the violin concertos in A minor and in E and the two-violin concerto in D minor, which again obviously relate to the collegium musicum. Pointers to lost works that may be supposed to have been composed in Cöthen can be obtained from Leipzig pieces showing clear signs of reworking, above all cantata sinfonias with obbligato organ and the harpsichord concertos. Among the putative originals discernible in later recensions are concertos for oboe d'amore (after BWV1053 and 1055), for violin (after BWV1052 and 1060) and for three violins (after BWV1064). The intended instrumentation of the original cannot always be conclusively determined from the later version, and allowance must also be made for substantial differences between the two versions, so that it is extremely rarely the case that reconstruction of a supposed but lost original is really possible. Bach never proceeded in a mechanical way; rather, he strove to give the arrangement an identity of its own by subjecting the model to further development and exhausting its potential. This often involved the addition of fresh contrapuntal parts, the alteration of detail and structural modification. Of special interest are Bach's adaptations of instrumental works into vocal ones, such as the derivation of the first chorus of Cantata no.110 from BWV1069; also of note is the wresting of the outer movements of an ensemble concerto (BWV1044) out of the Prelude and Fugue in A minor for harpsichord (BWV894).

The most noteworthy of the later concertos composed in the 1730s, with substantial changes to the originals on which they draw, are the Triple Concerto in A minor BWV1044 (sharing several features with Brandenburg Concerto no.5), the seven harpsichord concertos BWV1052–8 and the concertos for two or more harpsichords BWV1060–65, all but one of which were reworkings of earlier works by Bach himself (the exception is BWV1064, an arrangement of Vivaldi's Concerto in B minor for four violins, op.3 no.10). In fact, Bach's alterations and restructurings are sufficiently important – especially the deployment of the left hand of the harpsichord part and the invention of idiomatic harpsichord figuration – for works of this rank to be considered compositions in their own right. They owe their special historical importance to their occurrence at the beginning of the history of the keyboard concerto, a form which was to be taken up above all by Bach's sons so that in Germany, until about 1750, it remained the exclusive preserve of the Bach family. A stimulus for the composition of the harpsichord concertos may have been the new instrument introduced on 17 June 1733 ('a new harpsichord, the like of which no-one here has ever yet heard'), according to the announcement advertising the collegium musicum concert.

19. Chamber music. As with the orchestral music, a great many chamber compositions are thought to be lost. Once again the greatest losses affect the Cöthen period, but the Weimar years also suffer. When the summary worklist in the obituary mentions 'a quantity of other instrumental things, of every kind and for every kind of instrument', it probably refers first and foremost to works for various chamber ensembles.

The unusual flexibility with which Bach manipulated the conventional genres of sonata and suite is comparable to his orchestral output, as regards formal and compositional aspects as much as textures. Particularly important is his emancipation of the harpsichord from its role as continuo instrument and its deployment as a true partner in the sonatas for harpsichord with violin (BWV1014–19), flute (1030–33) and viola da gamba (1027–9). The cycle of six harpsichord and violin sonatas (*c*1725–6) were the first in a series of works with obbligato keyboard and paved the way for a new musical genre. The traditional trio sonata with continuo still cast its shadow (for example, in the opening movements of BWV1015 and 1019), but it yielded by stages to a more integrated three-part style (for example, the opening movements of BWV1014 and 1018). The only genuine trio sonatas to survive, apart from the one in the *Musical Offering*, are BWV1038 and 1039, dating from the 1730s. Bach's arrangement of the gamba sonata BWV1027, after BWV1039 for two flutes and continuo is an illustration of the development of the new type of trio writing from the trio sonata. A similar procedure stood behind his earlier development of the organ sonata. Most movements of the organ sonatas are based on instrumental trios, as the arrangement of the first movement of BWV528 from a trio sonata movement for oboe d'amore, viola da gamba and continuo in Cantata no.76 illustrates. This same movement preserves a trace of the many lost trio sonatas of the Cöthen years. Yet the trio sonatas of the Leipzig period, too, may represent only a small fraction of their original numbers, if the way the genre lingers on in the *Musical Offering* is any guide.

The list of surviving duo sonatas with continuo is also relatively short, and again dominated by works of the Leipzig period: the violin sonatas BWV1021 and 1023 and the flute sonatas BWV1034–5. The Fugue in G minor for violin and continuo BWV1026, from before 1712, is not only Bach's earliest surviving piece of ensemble music, it is also the only chamber-music piece of the pre-Cöthen years to have survived as an independent entity. The only

other sources we have for an idea of what kind of chamber music Bach wrote in his early years are the instrumental sonatas and sinfonias of the Weimar cantatas.

Bach's creative powers in the Cöthen years appear in a special light in the sonatas and partitas for solo violin, dating from 1720, and the suites for solo cello, which are probably earlier. The sonata for solo flute (BWV1013) is not likely to have been composed in Cöthen, for the playing technique is much more advanced than, for example, the writing for flute in Brandenburg Concerto no.5. Yet all the works *senza basso* not only demonstrate Bach's intimate knowledge of the typical idioms and performing techniques of each instrument, but also show his ability, even without an accompanying bass part, to bring into effective play dense counterpoint and refined harmony coupled with distinctive rhythms. The special importance of Bach's chamber music was recognized at a very early date. J.F. Reichardt wrote in 1805, reviewing the first edition of the solo violin music, that the pieces represent 'perhaps the greatest example in any art of the freedom and certainty with which a great master can move even when he is in chains'.

20. CANONS, 'MUSICAL OFFERING', 'ART OF FUGUE'. Bach's preoccupation with the canon as the strictest form of counterpoint can be traced back to the Weimar period. In his organ chorales and particularly in the *Orgel-Büchlein* the canonic principle plays a major role. Canonic elements are present also in several of the early vocal works. Here however it is a matter of canonic technique cropping up in a context of complex contrapuntal construction; as a genre in its own right, the canon, in Bach's day, would appear almost exclusively as a theoretical example in composition teaching. It was in this sense that it was often favoured – generally in the form of a circular canon – by musicians for entries in students' albums: such entries were normally notated in enigmatic fashion, setting the would-be solver an intellectual exercise. Bach wrote such canons in albums more than once; for the most part they are probably lost. Except for BWV1076–7, all the surviving individual canons (1072–5, 1078, 1086) were probably dedicatory works of this kind; 1077 was re-used for this purpose. What is probably the earliest of them is dated 2 August 1713 (BWV1073, dedicatee uncertain); the latest is dated 1 March 1749 (BWV1078; dedicatee Benjamin Faber).

A new kind of theoretical canon came into being in connection with the Goldberg Variations, in which the canonic principle played a special part. In his personal copy of the Goldberg Variations Bach wrote in 1747–8 a series of 14 perpetual canons on the first eight bass notes of the aria ground (BWV1087), exploring the most varied canonic possibilities of the subject, subsequently arranging the individual perpetual canons in a progressive order, organized according to their increasing contrapuntal complexity. The types included range from simple, double and triple canons, retrograde canons and stretto canons to a quadruple proportion canon by augmentation and diminution. Nos.11 and 13 of this series are identical with BWV1077 and 1076 (depicted on Haussmann's Bach portrait of 1746).

Closely related to these (and likewise probably dating from the later 1740s) are the *Vom Himmel hoch* variations, where Bach first used a strictly canonic scheme for a monothematic work in several movements of progressive difficulty. The *Musical Offering* (1747) is also plainly influenced by this mode of musical thinking. Here, for a theme incomparably more complex than that of BWV1087, he devised ten canons of differing structural types, notated as puzzle canons in the original printed edition of 1747. The series of canons on the 'royal theme' includes a canonic fugue, providing a bridge between the canons, which are primarily theoretical in conception though also intended for performance, and the two keyboard fugues or ricercares in three and six parts. A further constituent part of the *Musical Offering* is a trio sonata for flute, violin and continuo, also based on the royal theme. In its second slow movement Bach introduced echoes of the fashionable style practised at the Prussian court. The *Musical Offering*, in effect a compendium in three sections, shows Bach elaborating on the theme supplied to him by Frederick the Great in every imaginable way for an ensemble of up to three instruments.

The *Art of Fugue* constitutes the final contribution to this group of monothematically conceived works intended as representative examples of a specific principle. As a didactic keyboard work, the *Art of Fugue* in some ways forms a counterpart to the two books of the '48', with the difference that here it is exclusively the fugue that is in question, and, what is more, the fugues are developed from a single theme. Bach's work on the *Art of Fugue* was accomplished in two stages – from about 1740 to about 1745, and then (in connection with preparing the work for publication) in about 1748–50. The extant autograph score represents the conclusion of the first stage, in which the conception of the work already appears clearly: beginning with simple fugues (Bach avoided this term, speaking of 'contrapunctus'), progressing through 'counter-fugues', double fugues and triple fugues, with interpolated canons, and culminating in a mirror fugue. For the printed version the number of movements was not only increased by four (two canons, a fourth simple fugue and most notably a closing quadruple fugue) but their order was rearranged so as to expound more logically the 'chapter of instruction on fugues'. When Bach died the work may have been more 'complete' than it is in the form in which it has survived. In particular the quadruple fugue had surely been completed in all essentials, since the composition of its combinatorial section must necessarily be an early stage in the composition of a quadruple fugue. Only the three opening sections of the exposition, however, are extant, and these – further abbreviated by the editors, give the *Art of Fugue* the appearance of being a mighty torso.

The *Musical Offering* and the *Art of Fugue* mark both the end and the culmination of Bach's activity as a keyboard composer in the broadest sense. While the two ricercars on the 'royal theme' of the *Musical Offering* represent different fugal styles (forward- and backward-looking) and different textures (three- and six-part polyphony), the *Art of Fugue* explores a notably more intensive monothematic conception. As a didactic keyboard composition in some sense it counterbalances the two parts of the '48', yet with the difference that it concerns itself with fugue alone, in a series of compositions developed out of a single 'principal composition' (theme) – and does so using a technique in which forward- and backward-looking styles operate alongside each other, synoptically as it were. It was probably unintentional, and yet it is hardly by chance, that the initial premiss and

the goal of Bach's keyboard art and his musical thinking come together in the *Art of Fugue*.

21. Methods of composition. Bach's methods of composition can be outlined only roughly: the sources, musical and literary, present no more than a fragmentary picture. 'Methods' here refers to Bach's general procedures of composition, as far as these can be described objectively (without venturing into conjecture about creative psychology) and can be related to certain essential impulses and particularly characteristic approaches.

Bach's vast knowledge of the musical repertory was a decisive factor behind his art. He had an intimate knowledge of the types and styles of composition of his time and in particular of the work of his most important contemporaries; moreover, he had a sound idea of the music of the past, extending back as far as Frescobaldi and Palestrina. The study of works by other masters went hand in hand with experimentation in his own. It is thus characteristic that his acquaintance with the works of Buxtehude and Böhm, with Vivaldi's concertos, with the Passions of Keiser and Handel and with the masses of Lotti and Palestrina should have left an immediate imprint on his compositions in the same genres. It was less a matter of imitation of a model than of an awareness of the possibilities, an expansion of his own manner of writing and a stimulation of his musical ideas. This is confirmed in a contemporary report by T.L. Pitschel on his manner of improvisation, according to which, before beginning his own fantasia, Bach as a rule played from music a work by another master (or perhaps one of his own) which would ignite his imagination. Further, C.P.E. Bach wrote that, in accompanying a trio, his father liked to extemporize a fourth part. This tendency to take compositions by others as a starting-point is paralleled in his late adaptations: in his arrangement of Pergolesi's *Stabat mater* an obbligato viola part is added, replacing the one following the continuo in the original; and his version of the 'Suscepit Israel' from Caldara's *Magnificat* in C expands it from a five-part into a seven-part piece. An important aspect of Bach's procedure of composition is its systematic and encyclopedic nature. He habitually wrote works of one particular type within a relatively limited period: for example the *Orgel-Büchlein*, the '48', the solo violin sonatas and partitas, the canons, the chorale cantatas etc. He was concerned to try out, to develop and to exhaust specific principles of composition. There are practically no completely isolated compositions. Relationships, correspondences and connections with other works can constantly be found. This approach to the procedure of composition is at once deep and yet of great natural simplicity; and it never results in mere repetition. Certainly there is repetition, of a kind, in the case of parodies or transcriptions of existing works. Yet even here it is inappropriate to speak of repetition, since in the process of parodying and transcribing, Bach always modified so that the end-product represents a fresh stage in the development of the original composition.

C.P.E. Bach related that his father did not actually compose at the keyboard – apart from some keyboard works whose material originated in improvisations – but that he often tried out his music on the keyboard afterwards. This procedure may be seen in the few instrumental works of which Bach's autograph draft survives, for example the early versions of the Inventions in the *Clavier-Büchlein* for Wilhelm Friedemann, where an abundance of inserted corrections are to be found. In the vocal music, where a wealth of source material is available, the main stages of composition can often be reconstructed. In thematically and motivically self-contained movements, like arias and choruses, Bach normally began with the development and formulation of a motif, a phrase or a theme, which would be guided by the prosody of the text; he then added the contrapuntal voices, and continued in the same way, sometimes using 'continuation sketches' to plan the music's progress in advance (see the critical edition of the sketches, Marshall, 1972). In choral fugues he usually began by outlining the thematic entries, and wrote in the accompanying parts afterwards.

The decisive step was the embarkation on the writing of a movement, for progress was in its essentials determined by established models (harmonic-tonal groundplan, modulation patterns, aria schemes) and governed by the principle of unified continuation ('style d'une teneur' and 'Affekteinheitlichkeit' – ensured by a unified motivic organization and interchange, permutation and transposition of component sections). The invention of the central idea was for Bach the critical moment in the process of composition, as the title-page of the Inventions specifies: 'gute inventiones zu bekommen' ('how to achieve good inventions'); and this is borne out by C.P.E. Bach's report that his first requirement of his composition pupils was the invention of ideas. With this the die was cast, down to a work's emotional content. Outlines and sketches relating to this operation can sometimes be found in the original manuscripts; typically, however, Bach hardly required more than one or two attempts before arriving at the definitive form of his principal idea. The further elaboration of the idea – the *dispositio*, *elaboratio* and *decoratio* – required mastery of his craft rather than inspiration.

In composing multi-movement vocal works Bach, understandably, began as a rule with the self-contained movements and only afterwards worked at the recitatives and chorales. In the recitatives he normally first wrote out the text and then added the melody and bass, section by section. In the chorales the bass was added to the melody and the middle parts were inserted later. Then all the movements were revised in detail, and sometimes corrections were made. The appearance of Bach's working drafts is thus unusually clear and neat as a whole, although it is mainly in his fair copies that the particular quality of his handwriting, a quality comparable to that of his music, is expressed. The physical state of the fair copy had to reflect the degree of artistic perfection to which the composer aspired, and the pains taken to achieve neatness and clarity in the copy are not evidence of pedantry. Rather, Bach was aware of the dichotomy between the perfection of the musical idea and that of its representation in performance. For this reason and no other he made the following statement in 1738, through the mouth of his spokesman J.A. Birnbaum: 'One does not judge a composition first and foremost by the impression of its performance. Yet if such judgment, which can be deceptive, is not to be taken into consideration, then I see no other way of forming an opinion about it except by looking at the work as it is set down in notation.'

Ultimately, for Bach, the process of composition was an unending one. Dynamic markings and indications of

articulation would be inserted as he looked through the parts; he would revise and improve a work when he was copying it out, and when giving further performances would make fresh alterations and improvements. He also inserted corrections in works already in print. Throughout his life Bach was his own severest critic. Even in works which went through two or three different versions, like the chorale prelude *An Wasserflüssen Babylon* BWV653, the 'final' version does not represent a definitive one but merely a further stage in the search for perfection – the central and ultimate concern of Bach's method of composition.

WORKS

Bach did not always define instruments unambiguously; 'corno' could mean the normal horn of his time, the need for a brass player but not necessarily a trumpeter, or possibly the most suitable brass instrument (horn, cornett, slide-trumpet [tromba da tirarsi] etc.); parts for 'three oboes' at Leipzig may indicate any combination of oboes, oboes d'amore, tailles (tenor oboes in F, with no solo material) or oboes da caccia (a specific local tenor type, designed for obbligato work); four trombones indicate SATB and three ATB (usually below a cornett)

Dates of later copies or performances are given only if modifications are involved

312	F 66.2	Es woll' uns Gott genädig sein
327	F 105.2	Für deinen Thron tret' ich hiermit
313	F 68.1	Für Freuden lasst uns springen
314	F 69.1	Gelobet seist du, Jesu Christ
315	F 70.1	Gib dich zufrieden und sei stille
316	F 71.1	Gott, der du selber bist das Licht
317	F 72.1	Gott, der Vater, wohn' uns bei
318	F 143.1	Gottes Sohn ist kommen
319	F 74.1	Gott hat das Evangelium
320	F 75.1	Gott lebet noch

BWV	BC	
321	F 77.1	Gottlob, es geht nunmehr zu Ende
322	F 76.1	Gott sei gelobet und gebenedeiet
323	F 140.1	Gott sei uns gnädig
325	F 79.1	Heilig, heilig
326	F 105.1	Herr Gott, dich loben alle wir
328	F 83.1	Herr Gott, dich loben wir
329	F 134.1	Herr, ich denk' an jene Zeit
330	F 84.1	Herr, ich habe missgehandelt
331	F 84.2	Herr, ich habe missgehandelt
332	F 85.1	Herr Jesu Christ, dich zu uns wend'
333	F 86.1	Herr Jesu Christ, du hast bereit't
334	F 202.1	Herr Jesu Christ, du höchstes Gut
335	F 170.1	Herr Jesu Christ, mein's Lebens Licht
336	F 88.1	Herr Jesu Christ, wah'r Mensch und Gott
337	F 89.1	Herr, nun lass in Friede
338	F 90.1	Herr, straf mich nicht in deinem Zorn
339	F 23.1	Herr, wie du willst, so schick's mit mir
340	F 91.1	Herzlich lieb hab ich dich, o Herr
341	F 94.1A	Heut' ist, o Mensch, ein grosser Trauertag
342	F 95.1	Heut' triumphieret Gottes Sohn
343	F 96.1	Hilf, Gott, lass mir's gelinge
344	F 97.1	Hilf, Herr Jesu, lass gelingen
345	F 99.1	Ich bin ja, Herr, in deiner Macht
346	F 100.1	Ich dank' dir, Gott für all' Wohltat
347	F 101.1	Ich dank' dir, lieber Herre
348	F 101.2	Ich dank' dir, lieber Herre
349	F 4.1	Ich dank' dir schon durch deinen Sohn
350	F 139.1	Ich danke dir, o Gott, in deinem Throne
351	F 102.1	Ich hab' mein' Sach' Gott heimgestellt
366	F 104.1	Ihr Gestirn', ihr hohlen Lüfte
367	F 107.1	In allen meinen Taten
368	F 110.1	In dulci jubilo
352	F 187.1	Jesu, der du meine Seele
353	F 187.2	Jesu, der du meine Seele
354	F 187.3	Jesu, der du meine Seele
355	F 112.1	Jesu, der du selbsten wohl
356	F 113.1	Jesu, du mein liebstes Leben
357	F 114.1	Jesu, Jesu, du bist mein
358	F 116.1	Jesu, meine Freude
359	F 206.1	Jesu meiner Seelen Wonne
360	F 206.2	Jesu meiner Seelen Wonne
361	F 117.1	Jesu, meines Herzens Freud'
362	F 118.1	Jesu, nun sei gepreiset
363	F 121.1	Jesus Christus, unser Heiland
364	F 120.1	Jesus Christus, unser Heiland
365	F 123.1	Jesus, meine Zuversicht
369	F 124.1	Keinen hat Gott verlassen
370	F 125.1	Komm, Gott Schöpfer, heiliger Geist
371	F 129.1	Kyrie, Gott Vater in Ewigkeit
372	F 82.1	Lass, o Herr, dein Ohr sich neigen
373	F 133.1	Liebster Jesu, wir sind hier
374	F 135.1	Lobet den Herren, denn er ist freundlich
375	F 127.1	Lobt Gott, ihr Christen, allzugleich
376	F 128.1	Lobt Gott, ihr Christen, allzugleich
377	F 137.1	Mach's mit mir, Gott, nach deiner Güt'
378	F 138.1	Meine Augen schliess' ich jetzt
379	F 122.1	Meinen Jesum lass' ich nicht, Jesus
380	F 141.1	Meinen Jesum lass' ich nicht, weil
324	F 140.1	Meine Seele erhebet den Herrn
381	F 142.1	Meines Lebens letzte Zeit

BWV	BC	
382	F 144.1	Mit Fried' und Freud' ich fahr' dahin
383	F 145.1	Mitten wir im Leben sind
384	F 146.1	Nicht so traurig, nicht so sehr
385	F 147.1	Nun bitten wir den heiligen Geist
386	F 148.1	Nun danket alle Gott
387	F 106.1	Nun freut euch, Gottes Kinder all'
388	F 149.1	Nun freut euch, lieben Christen g'mein
389	F 153.1	Nun lob', mein' Seel', den Herren
390	F 153.2	Nun lob', mein' Seel', den Herren
391	F 154.1	Nun preiset alle Gottes Barmherzigkeit
392	F 166.1	Nun ruhen alle Wälder
396	F 155.1	Nun sich der Tag geendet hat
397	F 156.1	O Ewigkeit, du Donnerwort
398	F 45.2*b*	O Gott, du frommer Gott
399	F 157.1	O Gott, du frommer Gott
400	F 160.1	O Herzensangst, o Bangigkeit und Zagen!
401	F 162.1	O Lamm Gottes, unschuldig
402	F 61.1	O Mensch, bewein' dein' Sünde gross
403	F 163.1	O Mensch, schau Jesum Christum an
404	F 165.1	O Traurigkeit, o Herzeleid!
393	F 166.2	O Welt, sieh hier dein Leben
394	F 166.5	O Welt, sieh hier dein Leben
395	F 166.9	O Welt, sieh hier dein Leben
405	F 167.1	O wie selig seid ihr doch, ihr Frommen
406	F 7.1	O wie selig seid ihr doch, ihr Frommen
407	F 168.1	O wir armen Sünder
408	F 94.1B	Schaut, ihr Sünder!
409	F 173.1	Seelen-Bräutigam
410	F 174.1	Sei gegrüsset, Jesu gütig
411	F 175.1	Singet dem Herrn ein neues Lied
412	F 177.1	So gibst du nun, mein Jesu, gute Nacht
413	F 130.1	Sollt' ich meinem Gott nicht singen
414	F 35.2	Uns ist ein Kindlein heut' gebor'n
415	F 18.1	Valet will ich dir geben
416	F 181.4*a*	Vater unser im Himmelreich
417	F 185.1	Von Gott will ich nicht lassen
418	F 185.2	Von Gott will ich nicht lassen
419	F 185.3	Von Gott will ich nicht lassen
257	F 212.2	Wär Gott nicht mit uns diese Zeit
420	F 189.1	Warum betrübst du dich, mein Herz
421	F 189.2	Warum betrübst du dich, mein Herz
422	F 190.1	Warum sollt' ich mich denn grämen
423	F 191.1	Was betrübst du dich, mein Herze
424	F 192.1	Was bist du doch, o Seele, so betrübet
425	F 195.1	Was willst du dich, o meine Seele
426	F 197.1	Weltlich Ehr' und zeitlich Gut
427	F 200.1	Wenn ich in Angst und Not
428	F 201.1	Wenn mein Stündlein vorhanden ist
429	F 201.2	Wenn mein Stündlein vorhanden ist
430	F 201.3	Wenn mein Stündlein vorhanden ist
431	F 203.1	Wenn wir in höchsten Nöten sein
432	F 203.2	Wenn wir in höchsten Nöten sein
433	F 204.1	Wer Gott vertraut, hat wohl gebaut
434	F 205.1	Wer nur den lieben Gott lässt walten
435	F 207.1	Wie bist du, Seele, in mir so gar betrübt
436	F 109.1	Wie schön leuchtet der Morgenstern

BWV	BC	
437	F 211.1	Wir glauben all' an einen Gott
258	F 212.3	Wo Gott der Herr nicht bei uns hält
438	F 213.1	Wo Gott zum Haus nicht gibt sein' Gunst
		Sacred songs, 1v, bc, in G.C. Schemelli: Musicalisches Gesang-Buch (Leipzig, 1736) [Bach was involved in the production of Schemelli's hymnal, but research has discredited the methods by which these items were attrib. him; only bc ? by Bach unless otherwise stated]; BG xxxix, 279; NBA III/ii.1, 104
439	F 274	Ach, dass nicht die letzte Stunde
440	F 229	Auf, auf! die rechte Zeit ist hier [? melody by Bach]
441	F 245	Auf, auf! mein Herz, mit Freuden
442	F 257	Beglückter Stand getreuer Seelen
443	F 265	Beschränkt, ihr Weisen dieser Welt [? melody by Bach]
444	F 242	Brich entzwei, mein armes Herze
445	F 247	Brunnquell aller Güter
446	F 220	Der lieben Sonnen Licht und Pracht
447	F 221	Der Tag ist hin, die Sonne gehet nieder
448	F 222	Der Tag mit seinem Lichte
449	F 249	Dich bet'ich an, mein höchster Gott [? melody by Bach]
450	F 235	Die bittre Leidenszeit beginnet abermal
451	F 219	Die goldne Sonne, voll Freud' und Wonne
452	F 250	Dir, dir Jehovah, will ich singen [melody by Bach]
453	F 225	Eins ist Noth! ach Herr, diess Eine [? melody by Bach]
454	F 230	Ermuntre dich, mein schwacher Geist
455	F 261	Erwürgtes Lamm, das die verwahrten Siegel
456	F 258	Es glänzet der Christen
457	F 275	Es ist nun aus mit meinem Leben
458	F 243	Es ist vollbracht! vergiss ja nicht
459	F 256	Es kostet viel, ein Christ zu sein
460	F 263	Gieb dich zufrieden und sei stille
461	F 255	Gott lebet noch; Seele, was verzagst du doch?
462	F 248	Gott, wie gross ist deine Güte [? melody by Bach]
463	F 223	Herr, nicht schicke deine Rache
464	F 276	Ich bin ja, Herr, in deiner Macht
465	F 231	Ich freue mich in dir
466	F 264	Ich halte treulich still und liebe [? melody by Bach]
467	F 269	Ich lass' dich nicht
468	F 270	Ich liebe Jesum alle Stund' [? melody by Bach]
469	F 232	Ich steh' an deiner Krippen hier [? melody by Bach]
476	F 233	Ihr Gestirn', ihr hohen Lüfte
471	F 228	Jesu, deine Liebeswunden [? melody by Bach]
470	F 271	Jesu, Jesu, du bist mein [? melody by Bach]
472	F 226	Jesu, meines Glaubens Zier
473	F 266	Jesu, meines Herzens Freud'
474	F 251	Jesus ist das schönste Licht
475	F 246	Jesus unser Trost und Leben
477	F 278	Kein Stündlein geht dahin
478	F 277	Komm, süsser Tod, komm, sel'ge Ruh'! [? melody by Bach]
479	F 285	Kommt, Seelen, dieser Tag [? melody by Bach]

BWV	BC	
480	F 286	Kommt wieder aus der finstern Gruft [? melody by Bach]
481	F 236	Lasset uns mit Jesu ziehen
482	F 252	Liebes Herz, bedenke doch
483	F 279	Liebster Gott, wann werd' ich sterben?
484	F 280	Liebster Herr Jesu! wo bleibest du so lange? [? melody by Bach]
485	F 272	Liebster Immanuel, Herzog der Frommen
488	F 281	Meines Lebens letzte Zeit
486	F 227	Mein Jesu, dem die Seraphinen
487	F 237	Mein Jesu! was für Seelenweh [? melody by Bach]
489	F 259	Nicht so traurig, nicht so sehr
490	F 267	Nur mein Jesus ist mein Leben
491	F 238	O du Liebe meine Liebe
492	F 282	O finstre Nacht [? melody by Bach]
493	F 234	O Jesulein süss, o Jesulein mild
494	F 260	O liebe Seele, zieh' die Sinnen [? melody by Bach]
495	F 283	O wie selig seid ihr doch, ihr Frommen
496	F 253	Seelen-Bräutigam, Jesu, Gottes Lamm!
497	F 268	Seelenweide, meine Freude
499	F 240	Sei gegrüsset, Jesu gütig
498	F 239	Selig, wer an Jesum denkt [? melody by Bach]
500	F 241	So gehst du nun, mein Jesu, hin [? melody by Bach]
501	F 244	So giebst du nun, mein Jesu, gute Nacht
502	F 284	So wünsch' ich mir zu guter Letzt
503	F 287	Steh' ich bei meinem Gott
504	F 254	Vergiss mein nicht, dass ich dein nicht
505	F 262	Vergiss mein nicht, vergiss mein nicht [melody by Bach]
506	F 273	Was bist du doch, o Seele, so betrübet
507		Wo ist mein Schäflein, das ich liebe
		Pieces in Clavierbüchlein, ii, for Anna Magdalena Bach; BG xxxix, 289; NBA V/iv, 91:
511	F 214*a*	Gib dich zufrieden, chorale, g
512	F 214*b*	Gib dich zufrieden, chorale, e (arr. of 511)
513	F 218	O Ewigkeit, du Donnerwort, chorale [from 397]
514	F 216	Schaffs mit mir, Gott, chorale
516	F 215	Warum betrübst du dich, aria
524	H 1	Quodlibet, SATB, bc, frag., for wedding, Mühlhausen, by mid-1708
A40		Murky: Ihr Schönen, höret an, S, bc, before 1736

Doubtful

BWV	BC	
		Pieces in Clavierbüchlein, ii, for Anna Magdalena Bach; BG xxxix, 309; NBA V/iv, 102:
508		Bist du bei mir, aria (by G.H. Stölzel)
509		Gedenke doch, mein Geist, aria (anon.)
510		Gib dich zufrieden, chorale, F (anon. bass added)
†515	H 2	So oft ich meine Tobackspfeife, aria (anon., ? by Gottfried Heinrich Bach, ? arr. J.S. Bach)
517		Wie wohl ist mir, o Freund der Seelen (anon.)

BWV	BC	
		Sacred songs, 5 for 1v, bc (probably spurious); NBA [III/iii]:
519		Hier lieg' ich nun
520		Das walt' mein Gott
521		Gott mein Herz dir Dank zusendet
522		Meine Seele, lass es gehen
523		Ich gnüge mich an meinem Stande

(8) **Wilhelm Friedemann Bach** (*45*) (*b* Weimar, 22 Nov 1710; *d* Berlin, 1 July 1784). Composer and organist, eldest son of (7) Johann Sebastian (*24*) and Maria Barbara Bach. Trained by his father and endowed with brilliant gifts, he expressed himself in the genres of his time in a sensitive and highly cultivated musical language.

1. Leipzig, Dresden, 1710–46. 2. Halle, Brunswick, Berlin, 1746–84. 3. Works, reception.

1. Leipzig, Dresden, 1710–46. He was baptized on 24 November 1710; his godparents were the Weimar chamberlain Wilhelm Ferdinand von Lynker, Anna Dorothea Hagedorn and Friedemann Meckbach, the last two acquaintances of J.S. Bach from Mühlhausen. Friedemann attended the Lutheran Lateinschule in Cöthen (1717–23), and from 14 June 1723 he was a day-boy at the Thomasschule in Leipzig. On 5 March 1729 he matriculated at Leipzig University, where his father had already registered him as a *depositus* on 22 December 1723; he attended lectures on law, philosophy, mathematics and other subjects. His early musical education, provided by his father, is documented in the *Clavier-Büchlein vor W.F. Bach*, begun on 22 January 1720 and containing entries (mainly in the hands of J.S. and W.F. Bach) up to about 1725–6. It is unlikely that this keyboard book reflects his very first systematic music lessons, since even the earliest entries are technically demanding. More plausibly it may be regarded as instruction in composition. Its repertory consists of works (inventions, sinfonias and preludes) that J.S. Bach probably wrote specifically for educational purposes, as well as several pieces by other authors (Telemann, G.H. Stölzel, J.C. Richter). It also contains fingering instructions, a table of ornaments after D'Anglebert, and Friedemann's own first attempts at composition, written with paternal guidance around 1720 and 1725–6 (two allemandes BWV836–7 and four preludes BWV924*a*, 925, 932 and 931). From Christmas 1724 until August or September 1726 (i.e. while he was a pupil at the Thomasschule) W.F. Bach is known to have copied performing parts for his father, and around 1726 he took violin lessons from J.G. Graun in Merseburg 'to enable him to compose according to the nature of that instrument' (Marpurg).

At this period Friedemann accompanied his father several times to Dresden and thus became familiar with the city where he was later to live and work. He also visited Halle in 1729, when he delivered an invitation from his father to Handel, and on 29 March that year he performed in J.S. Bach's funeral music for Prince Leopold in Cöthen. In December 1732 he stood godfather, in Udestedt, to Dorothea Wilhelmine, the youngest daughter of his cousin Tobias Friedrich Bach (*40*). Little is known about his musical development during his last few years in the parental home. Copies in his hand of organ works by his father (the C major concerto arranged from Vivaldi, BWV594, and the sonatas BWV525–8) suggest that he took a particular interest in organ playing at this period. By about 1730 he must already have acquired a considerable reputation as a virtuoso organist and harpsichordist, since he took over the teaching of Christoph Nichelmann that year, perhaps to lighten his father's workload. Except for the attempts in the *Clavier-Büchlein* mentioned above, there is no certain evidence of any compositions written in Leipzig.

After failing in a competition for a post at Halberstadt in March 1731, Friedemann applied for the post of organist at the Dresden Sophienkirche which had fallen vacant on the death of Christian Petzold; his father wrote the letter of application and signed it in his name. He probably played J.S. Bach's Prelude and Fugue in G BWV541 in the competition for this post. Christoph Schaffrath and Johann Christian Stoy were the other two short-listed candidates. Documents pertaining to the competition state that the deputy Kapellmeister Pantaleon Hebenstreit, who had been invited to adjudicate, praised 'the skill of the younger Bach . . . adding that he was the best of these three well-qualified candidates'. Bach took up his duties on 1 August 1733; he was required only to play the organ for divine service and for the figural music performed on feast days, for which he was paid a modest salary of about 80 reichsthaler. However, the appointment gave him time to pursue other interests. He cultivated the acquaintance of Dresden court musicians such as J.G. Pisendel and S.L. Weiss, and presumably took an active part in the musical life of the court. A glimpse of his activities is provided by his mention of musical evenings at the house of the Electress Maria Antonia Walpurgis of Saxony, recalled in his dedication to her (in 1767) of his Harpsichord Concerto in E minor BRC 12. It seems certain that he made close contacts with music-loving aristocrats, including the Russian ambassador Count von Keyserlingk,

to whom Bach dedicated a harpsichord sonata from Halle in 1763, and the *directeur des plaisirs* C.H. von Dieskau, whose wife was godmother to Bach's first son, Wilhelm Adolf, in 1752. At the same time Bach was teaching J.G. Goldberg, and continuing the study of mathematics he had begun in Leipzig under Johann Gottlieb Waltz (later court mathematician and Kommissionsrat). Bach is known to have been in Leipzig for four weeks in summer 1739, accompanied by the lutenists S.L. Weiss and Johann Kropfgans.

In Dresden Bach was also increasingly active as a composer. About 1735 he wrote the harpsichord concertos in A minor and D major (BRC 14 and 9), several sinfonias (BRC 1–6) and trio sonatas (BRB 13–15) and a number of harpsichord sonatas and smaller keyboard works. The compositions of the later part of his Dresden period (*c*1740–46) include such works as the Concerto for two harpsichords in F major BRA 12, the Harpsichord Concerto in F major BRC 13 and the Sinfonia in D minor BRC 7. The Harpsichord Sonata in D major BRA 4 was Friedemann's first work to be printed; it was published in spring 1745 and sold by his father in Leipzig and his brother Emanuel in Berlin. The intention of following it with another five sonatas was abandoned because of poor sales.

2. HALLE, BRUNSWICK, BERLIN, 1746–84. On 16 April 1746, the day that he signed the certificate of his appointment as organist to the Liebfrauenkirche in Halle, W.F. Bach also submitted a letter of resignation to the Dresden city council. He suggested that his father's pupil J.C. Altnickol should replace him in Dresden, but Altnickol was not in fact chosen. For Bach, the move to Halle meant exchanging a city dominated by court life for a middle-class town, and a subordinate position for one of the most important organist posts in central Germany. In Halle he also held the title of *director musices*, and as well as playing the organ his duties included performing figural music on a regular basis, that is on all feast days, but only on every third ordinary Sunday. In his own compositions, Bach therefore concentrated on cantatas for special occasions, since these works could be re-used annually. With the increase in his official duties Bach's income also improved, and indeed was more than doubled, for he now received an annual salary of some 180 reichsthaler. When he officially took up his post on Whit Sunday, 29 May 1746, he performed the cantata *Wer mich liebet* (BRF 13). With its large-scale opening chorus and a virtuoso aria with organ obbligato, it is obviously intended for a grand occasion; the paper used for the autograph manuscript shows that he composed it while still in Dresden.

During his early years in Halle, Friedemann seems to have been in close contact with his father in Leipzig. He accompanied J.S. Bach to Berlin in 1747 on his visit to Frederick the Great, and in 1749–50 he and his father together supported the appointment of the organ builder Heinrich Andreas Contius to Frankfurt an der Oder. Friedemann seems also to have borrowed compositions of his father's for performance in Halle (e.g. BWV31, 34 and 51). He made extensive use of his father's compositions, especially after inheriting many of his cantatas in 1750. According to an (unverifiable) anecdote told by Marpurg, he was suspected of plagiarism on the occasion of a university ceremony in 1749, when he performed parody arias from one of his father's Passions under his own name. Also in 1749, a performance was given in Leipzig of his Advent cantata *Lasset uns ablegen* (BRF 1), perhaps with the purpose of influencing the choice of a successor to J.S. Bach there, a matter under early discussion by the Leipzig city council. Johann Friedrich Wilhelm Sonnenkalb, a pupil at the Thomasschule, mentioned performances by W.F. Bach, both at private concerts in his father's house and publicly in the Grosse Concert.

Bach was embroiled in several conflicts over issues of responsibility and charges of exceeding his authority, including a dispute in 1749 with his Kantor, Johann Gottfried Mittag, who had misappropriated money due to Bach. In 1750 he was reprimanded for overstaying a leave of absence after his father's death; he had gone to Leipzig to settle the estate, and had then escorted his half-brother Johann Christian to the care of Emanuel in Berlin, where he himself stayed for several months. It is difficult to establish the veracity of the many other anecdotes about Bach's neglect of his official duties.

On 25 February 1751 Bach married Dorothea Elisabeth Georgi (1725–91), eldest daughter of the tax collector Johann Gotthilf Georgi. The marriage produced three children, two sons who died in infancy and a daughter, Friederica Sophia (*b* 27 Feb 1757). Bach seems to have had numerous pupils in Halle. As well as his distant relative Johann Christian Bach (77, the so-called 'Halle Clavier-Bach'), who acquired important original sources from Friedemann, and F.W. Rust, whose estate contained invaluable copies of some of Friedemann's keyboard works, they included Daniel Christoph Vahlkamp, J.S. Petri, Samuel Friedrich Brede, Christian Leberecht Zimmermann and Johann Carl Angerstein, who gave an account of W.F. Bach's style of chorale accompaniment in his treatise *Theoretisch-practische Anweisung, Choralgesänge nicht nur richtig sondern auch schön spielen zu lernen* (Stendal, 1800). Bach was also in contact with the Halle printer J.J. Gebauer, who owned a collection of his keyboard works, and with Marpurg, the second part of whose *Abhandlung von der Fuge* (Berlin, 1754), containing 13 canons by Friedemann, is dedicated to the brothers W.F. and C.P.E. Bach. Godparental ties also connected him with the family of the organ builder H.A. Contius, and he seems to have maintained a connection with the court at Cöthen, since the princely couple were godparents to his daughter and Friedemann composed a set of pieces for a grandfather clock mechanism at the castle there (BRA 63–80, previously ascribed to J.S. Bach as BWV Anh.133–50).

Bach's increasing dissatisfaction with his Halle post is evident in his repeated, but unsuccessful, attempts to leave. In 1753 he applied for the post of organist at the Johanniskirche in Zittau, in competition with his brother Emanuel and his father's pupils J.C. Altnickol, J.L. Krebs and Johann Trier; in 1758 and 1759 he applied for the position of Kapellmeister in Frankfurt, with a letter of recommendation from Telemann; and in 1762 he was involved in negotiations with the Landgrave of Hesse for the post of Hofkapellmeister in Darmstadt, which had fallen vacant on the death of Christoph Graupner. He seems to have drawn these negotiations out at some length intentionally, and to have broken them off in the end for unexplained reasons; however, in the dedication of the Harpsichord Concerto in E minor BRC 12 to the Electress of Saxony in 1767 he credits himself with the title of

Hofkapellmeister at Darmstadt, so it seems that the title had at some point been granted to him. After 1756 Bach's attempts to leave Halle may well have been reinforced by the hardships of the Seven Years War, which bore down with particular severity on the city and its inhabitants. The authorities placed Bach in a high tax bracket because of his wife's landed property, so that the taxes regularly levied on account of the war weighed heavily on him, and in about 1759 he was obliged to sell some of the music he had inherited from his father to Johann Georg Nacke, Kantor at Oelsnitz. The tension in Halle led to Bach's leaving his post in May 1764, a decision he took without the security of any other prospective employment. In a letter written at the end of June 1764 he mentioned plans for leaving the city, perhaps in the hope of a position in Fulda. However, he stayed in Halle until at least October 1770, and seems to have supported himself chiefly by private lessons, though his financial situation was obviously deteriorating so drastically in these years that in February 1768 he re-applied (unsuccessfully) for his old post, which had become vacant again after the death of Johann Christoph Rühlmann.

While discharging his duties as organist and music director of the Liebfrauenkirche, Bach also resumed the publication of his keyboard works: in 1748 his Sonata in E flat major BRA 7 appeared with a dedication to Privy Councillor Wilhelm von Happe, and the same piece was published again in November 1763 (not 1739 or 1768, as has variously been claimed), with a dedication to Count von Keyserlingk. In about 1765 Friedemann announced the publication of his 12 polonaises BRA 27–38 and in October 1767 that of the Harpsichord Concerto in E minor BRC 12, but nothing came of these plans. In manuscript both works were dedicated to noble patrons: the first half of the cycle of polonaises to the then director of the Petersburg Academy of Sciences, Vladimir Grigoryevich von Orlov, and the concerto to Maria Antonia Walpurgis, Electress of Saxony. The dedications of BRA 7, 27–38 and C 12 are obviously connected with Bach's search for employment outside Halle. A now lost *Abhandlung vom harmonischen Dreyklang*, mentioned by Marpurg in 1758 and announced by Friedemann himself in several advertisements in the same year, also remained unpublished. The content and purpose of this treatise is unknown, but it may have dealt with mathematical and philosophical issues.

The rest of Bach's life was a tale of steadily deteriorating circumstances and unsuccessful attempts to obtain permanent employment. In 1770 his wife had to sell part of her property. The family left Halle and moved first to Brunswick, where they lived from about 1771 to the beginning of 1774. In summer 1773 Bach visited J.N. Forkel in Göttingen and in April 1774 he moved to Berlin, where he lived until his death. He applied for posts as organist at the Stadtkirche, Wolfenbüttel, and St Katharina, Brunswick, in 1771, and at the Marienkirche, Berlin, in 1779; documents relating to the Wolfenbüttel and Berlin posts reveal that the reason for his lack of success was his difficult character and unsteady way of life. In 1778 it seems that his efforts to find a permanent post even led him to try ousting J.P. Kirnberger as musician to Princess Anna Amalia of Prussia, whereupon the princess withdrew the financial support she had previously been granting Bach. This intrigue is known to us only from Kirnberger's account of it; his rival Marpurg, in whose house Bach was living during these years, seems to have been involved as well.

In his later years Bach performed in public as an organ virtuoso on many occasions: in Göttingen in summer 1773, Brunswick (22 August 1773) and Berlin (4 May 1774 in the Garnisonkirche, 15 May 1774 in the Nikolaikirche and the Marienkirche, 9 June 1774 in the Marienkirche, and 10 October and 3 December 1776 in the Dreifaltigkeitskirche). These recitals contributed substantially to his reputation as the greatest living organ virtuoso and improviser, but this increase in improvising seems to have gone hand in hand with a decline in his ambitions as a composer. He apparently wrote only a few works in the last years of his life; they include the viola duets BRB 7–9 (in part revisions of earlier works) and two of the six flute duets BRB 1–6, the eight fugues dedicated to Princess Anna Amalia BRA 81–8 (dedicatory copy dated 1778), the harpsichord sonatas in D and G BRA 5, 14 and probably most of the fantasies. In 1778–9 Friedemann was working on an opera, *Lausus und Lydie* (a later libretto gives the title as *Laurus und Lydie*), but it was never completed and is now lost. The only pupil he is known for certain to have had in Berlin was Sara Levy, née Itzig, Felix Mendelssohn's great-aunt.

Financial circumstances eventually forced Bach into the piecemeal sale of his music library and those of his father's works he had inherited, as well as compositions of his own. On leaving Brunswick he entrusted the sale by auction of some of his music to J.J. Eschenburg, but whether the auction actually took place is not known; Bach himself did not make inquiries about the proceeds until four years later. It was presumably at this time, and in connection with the sale of manuscripts, that he manipulated the attribution of certain works. For instance, he gave the Vivaldi arrangement BWV596 the misleading inscription, 'di W.F. Bach manu mei patris descriptum', while he conversely ascribed works of his own to his father (e.g. *Dienet dem Herrn*, BRF 25). During his last years Bach suffered from poor health and became increasingly resigned to retirement from public musical life, but he seems still to have been widely known at the time of his death, as the obituary in Cramer's *Magazin der Musik* (1784) makes clear: 'In him Germany has lost its foremost organist, and the musical world in general has lost a man who cannot be replaced'. Bach left his wife and daughter in great poverty; a benefit performance of Handel's *Messiah* was given for them the following year.

3. WORKS, RECEPTION. Little is known about the extent and location of Bach's musical estate. Part of it was acquired second-hand in Berlin at the beginning of the 19th century by Carl Philipp Heinrich Pistor (1778–1847). Other items found their way into the library of the Berlin Singakademie through Sara Levy and C.F. Zelter, and some music evidently remained in the hands of Bach's daughter and was taken by her descendants to the USA, where it was accidentally destroyed in recent years. The provenance of Georg Poelchau's autograph manuscripts (now in *D-Bsb*) is still largely unexplained; some seem to have come from the organist Johann Nikolaus Julius Kötschau, others may have been acquired in Berlin in the early 19th century. The early dispersal of his works makes it difficult to assess W.F. Bach's creative achievement satisfactorily. Extensive losses had probably occurred as early as 1800. Evaluations of Bach's work have often

been based on pieces incorrectly attributed (for instance the keyboard pieces in *D-Bsb* Mus.ms.Bach P 883–4).

In Leipzig Bach clearly concentrated more on virtuoso performance than on his career as a composer, perhaps in the depressing realization that he could never attain his father's perfection in all musical genres. His creative energies were therefore expressed more readily in free improvisation, and particularly in his late years the improvisation of fantasies on the organ and harpsichord was very important to him. Only when he became relatively independent from his father in Dresden did Friedemann develop more fully as a composer, especially of keyboard music. Some of his early works (the *Bourlesca* BRA 51, the Clavierstück BRA 54) appear to derive from ideas that came to him while improvising. From the first, his compositions were marked by distinctly virtuoso tendencies; pieces like the harpsichord concertos in A minor and D major (BRC 14, 9) and the Sonata in D major BRA 4 are among the most difficult harpsichord works of their time. The last-named work is unique in its fusion of different stylistic and formal models; only the 'Württemberg' sonatas of C.P.E. Bach can to some extent compare with it. The Dresden compositions in particular employ many technical and stylistic features of J.S. Bach's *Clavier-Übung I*, but even in these early works Friedemann's individual and original style is strongly marked, above all in its characteristic melodic phrasings and a tendency to contrapuntal or imitative development. The capricious style of his ensemble music is obviously modelled on J.D. Zelenka.

In his cantatas, which were all probably written while he was in Halle, Bach employed melodic idioms of the Dresden operatic style, but in many details he followed his father's style of vocal writing. In a series of cantatas probably composed about 1755, for instance, he included instrumental introductory movements, and his large-scale choral movements contain a number of complex fugues. Apart from this, his vocal style must have been strongly influenced by Telemann's cantatas, which formed part of his performance repertory in Halle. Bach's cantata *Ach Gott, vom Himmel sieh darein* (BRF 19) is obviously modelled on Telemann's setting of the same text (TVWV I:14). Bach's vocal works illustrate the great demands he made on the technical abilities of singers and instrumentalists. He was rather conservative in his choice of texts, his favourite sources being Johann Jacob Rambach's *Geistliche Poesien* (Halle, 1720) and Johann Friedrich Möhring's *Gott geheiligtes Beth- und Lob-Opffer der Christen* (Zerbst, 1723).

The late keyboard works follow new stylistic ideals. There is a noticeable tendency towards formal, technical and melodic clarity in the sonatas, while some of the virtuoso fantasias anticipate 19th-century keyboard techniques. At the same time Bach obviously had a predilection for older forms such as the toccata and fugue.

The judgment of posterity on Friedemann Bach was chiefly influenced in the 19th century by the many anecdotes about his personal life that were spread after his death, particularly by Marpurg, J.F. Reichardt and J.F. Rochlitz – an image maintained to this day in A.E. Brachvogel's popular pseudo-biographical novel. Scholarly study of W.F. Bach began with the works by Friedrich Chrysander and C.H. Bitter, although the work of the latter in particular suffers from prejudice, especially in discussion of the works. Martin Falck's dissertation, published in 1913, is the first comprehensive monograph on the composer's life and work, although many details are in need of revision. Falck's work has been complemented by a series of specialist studies (including those of Braun, Miesner and Schulze) and individual groups of works have been more thoroughly discussed in studies of their genres (by Kelletat, Müller-Blattau and Schleuning).

Only a few of Bach's works were at all widely known in his lifetime, among them the two printed harpsichord sonatas BRA 4 and 7. Even better known were the 12 polonaises BRA 27–38 (*c*1765) and the collection of eight fugues BRA 81–8 (before 1778); more than 20 contemporary manuscript copies of the first collection, and almost 30 copies of the second, are known to have been in circulation. The polonaises were so popular, even at the beginning of the 19th century, that Friedrich Konrad Griepenkerl published them in 1819. Adverse circumstances prevented publication by Hoffmeister & Kühnel of Forkel's planned edition of selected works. Bach's sonatas and fantasies are now available in reliable editions, and a critical edition of the complete works was inaugurated by Carus-Verlag, Stuttgart, in 2000.

Although Friedemann Bach's work is more limited in both quantity and stylistic variety than the music of his brother Emanuel, he must be ranked beside C.P.E. Bach as one of the major composers representing the period between Baroque and Classical composition.

(9) Carl Philipp Emanuel Bach (*46*) (*b* Weimar, 8 March 1714; *d* Hamburg, 14 Dec 1788). Composer and church musician, second surviving son of (7) Johann Sebastian Bach (*24*) and his first wife, Maria Barbara. He was the most important composer in Protestant Germany during the second half of the 18th century, and enjoyed unqualified admiration and recognition particularly as a teacher and keyboard composer.

1. Early years. 2. Berlin. 3. Hamburg. 4. Character and temperament. 5. Works: general. 6. Keyboard music. 7. The *Essay*. 8. Chamber music. 9. Orchestral works. 10 Vocal music. 11. Reception.

1. Early years. He was baptized on 10 March 1714, with Telemann as one of his godfathers. In 1717 he moved with the family to Cöthen, where his father had been appointed Kapellmeister. His mother died in 1720, and in spring 1723 the family moved to Leipzig, where Emanuel began attending the Thomasschule as a day-boy on 14 June 1723. J.S. Bach said later that one of his reasons for accepting the post of Kantor at the Thomasschule was that his sons' intellectual development suggested that they would benefit from a university education. Emanuel Bach received his musical training from his father, who gave him keyboard and organ lessons. There may once have been some kind of *Clavierbüchlein für Carl Philipp Emanuel Bach* containing early compositions by Wilhelm Friedemann and works by the young C.P.E. Bach himself, as well as educational pieces by his father. J.F. Reichardt's reference to the difficulty of playing the string parts in Bach's orchestral works may be taken to indicate that he also learnt the violin or viola, but the argument that the difficulties result from his having held the violin incorrectly because he was left-handed is not convincing. From the age of about 15 he took part in his father's musical performances in church and in the collegium musicum. He appears relatively seldom as a copyist, no doubt because, as an able musician himself, he was usually excused such duties. The one large-scale work of sacred music in Leipzig mainly copied by him is the anonymous *St Luke Passion* BWV246, obviously arranged by J.S. Bach to an urgent deadline for Good Friday 1730. On 1 October 1731 Emanuel matriculated at Leipzig University. Following his godfather's example, he studied law, although he was obviously destined for a musical career. His first compositions were probably written about 1730. They consisted mainly of keyboard pieces and chamber music as it was understood in the 18th century (i.e. solos with continuo, concertos and trios).

At the age of 19 Emanuel applied unsuccessfully for the position of organist at St Wenzel in Naumburg (the letter of application, dated 19 August 1733, refers incorrectly to the cathedral of St Peter und Paul). In September 1734 he moved to the university in Frankfurt an der Oder, where he was prominent in musical activities; the Musikalische Akademie mentioned in his autobiography would have been a student collegium musicum. Besides his own compositions, he performed works by his father in Frankfurt, including the Ouverture in D major BWV1068, the Coffee Cantata and the Concerto in D minor BWV1052 in what was probably his own arrangement (BWV1052*a*). He also wrote occasional pieces for university events and for weddings. The genealogy of the Bach family compiled by J.S. Bach about 1735 makes it clear that C.P.E. Bach was also teaching the keyboard in Frankfurt. In about 1738 he was offered the opportunity to go on an educational tour abroad as companion to Heinrich Christian von Keyserlingk, a son of Reichsgraf Hermann Carl von Keyserlingk, a patron of J.S. and W.F. Bach. However, his appointment to the service of Crown Prince Frederick of Prussia prevented him from accepting.

2. Berlin. The background to Bach's entry into the service of the Prussian court is not clear. He says in his autobiography that his appointment became official only after the prince succeeded to the throne (as Frederick II) on 31 May 1740, but he then had the honour of accompanying the 'first flute solo' played by the new king 'alone at the harpsichord'. The first mention of Bach in the court budget is as one of 'those who joined the Kapelle in 1741', so he must initially have been paid from the prince's privy purse. The orchestra consisted of some 40 musicians and was one of the largest in Germany. It had grown out of the crown prince's Kapelle in Ruppin and Rheinsberg, which was regarded as an outstanding ensemble, with Carl Heinrich Graun as Kapellmeister and his brother Johann Gottlieb as leader. Frederick, who took flute lessons from J.J. Quantz and studied composition with J.S. Bach's pupil J.F. Agricola, usually played in the concerts himself. He was an enthusiastic advocate of the new italianate style of the time, and was also interested in Italian opera, which he promoted in the opera house inaugurated on 7 December 1742. As an absolute, though enlightened, monarch, Frederick dictated large areas of the musical life of Berlin and exerted considerable influence on the lively development of music in the city between about 1740 and 1755, but from the beginning of the Seven Years War at the latest his taste ceased to develop, and he eventually contributed to the stultification of musical life at court. The belief that Bach was poorly paid for his services is unfounded. His salary was 300 thalers a year from the time he took up his duties, as much as was paid to any of the other musicians engaged at the same time. Only those above him in the hierarchy – the Kapell- and Konzertmeister and the singers at the opera – were paid a distinctly higher salary.

Unless they were busy with chamber music, which was initially played to Frederick the Great daily, the court musicians took part in the performances of the Berlin Hofoper. Bach's duties were considerably reduced from 1742 at the latest, when Christian Friedrich Schale was appointed second harpsichordist (succeeded by Christoph Nichelmann in 1745); the harpsichordists alternated monthly, and each drew a full salary. This meant that Bach could pursue other activities as a keyboard teacher and composer. His teaching in Berlin inspired the writing of his *Versuch über die wahre Art das Clavier zu spielen* (*Essay on the True Art of Playing Keyboard Instruments*; see §7 below), the most important 18th-century German-language treatise on the subject. However, Bach never won recognition at court as a composer and virtuoso: Frederick would allow only Hasse, the Graun brothers, Quantz and Agricola that status. Even the dedication to him of Bach's first published work, the Prussian Sonatas H24–9 (W48) made no lasting impression on the king.

As early as 1743 an attack of the gout that was to trouble Bach all his life obliged him to visit the Bohemian spa of Teplitz for treatment. Early in 1744 he married Johanna Maria Dannemann, the daughter of a Berlin wine merchant. Of the three children of the marriage who lived to adulthood – Johann Adam (1745–89), Anna Carolina Philippina (1747–1804) and Johann Sebastian, also known as Johann Samuel (1748–78) – only the youngest showed any artistic inclinations. He became a painter, but died at the age of 30 in Rome. On 7 May 1747 the famous meeting between Johann Sebastian Bach and Frederick II, to which we owe the *Musical Offering* BWV1079, took place in Potsdam. However, it brought no improvement in Emanuel Bach's position at court, and his efforts to leave Berlin can be traced from that time.

7. *'Frederick the Great's Flute Concert in Sans Souci': painting by Adolph Menzel, 1852 (Alte Nationalgalerie, Berlin); Frederick plays the flute, Carl Philipp Emanuel Bach is at the keyboard, and Quantz stands on the extreme right*

On 25 August he completed an impressive and ornate vocal work, his *Magnificat* H772 (W215), which was intended to pave his way to a post as a church musician and was evidently performed in Leipzig during his father's lifetime, but his applications for the position of Thomaskantor in Leipzig in 1750 and 1755 failed, even though he had Telemann's support, and so did an application for the post of organist at the Johanniskirche in Zittau in 1753. A journey in early summer 1751 took him to Bückeburg, where his younger half-brother Johann Christoph Friedrich had been a court musician since early 1750. The occasion for the visit was the award of the Order of the Great Eagle by Frederick II to his childhood friend Count Wilhelm Friedrich Ernst zu Schaumburg-Lippe, and Bach dedicated his two trios H578–9 (W161) to the art-loving count. He travelled home by way of Halberstadt, Brunswick and Hamburg, where he visited Johann Mattheson on 15 June, and no doubt he also took the opportunity of visiting his godfather Telemann, with whom he regularly corresponded. Three years later, on 21 June 1754, he stood godfather to his cousin Johann Ernst Bach's son Johann Carl Philipp in Eisenach; he combined this private reason for travelling with his professional interests, and gave concerts in Gotha and Kassel.

C.P.E. Bach took part in the première of Graun's *Tod Jesu* on 26 March 1755, playing continuo. Tensions at the Berlin court came to a head that year. In his treatise *Die Melodie, nach ihrem Wesen sowohl, als nach ihren Eigenschaften* (Danzig, 1755) Christoph Nichelmann had criticized Emanuel Bach's style for its affectation; Bach commissioned a polemical riposte by 'Caspar Dünkelfeind' – in all probability the organist Christoph Gottlieb Schröter of Nordhausen, a friend of the Bach family – and this in turn unleashed a further onslaught from Nichelmann. Early in May 1755, in a memorandum which survives only in extracts, Bach complained to the king about what he regarded as Nichelmann's unwarrantedly preferential financial treatment, and threatened to give notice. Although the details are not known, this dispute finally led to Nichelmann's leaving the service of the court, while Bach's salary was raised by 200 thalers. On 1 February 1756 the young C.F.C. Fasch was appointed second harpsichordist at the standard salary of 300 thalers.

As a result of these quarrels Bach evidently distanced himself still further from court life. He mingled more in the private musical circles of Berlin, although again not many details are known. Some conclusions about the people who were Bach's friends may be drawn from the character pieces in H79–82, 89–98 etc. (W117), most of them portraying prominent characters in the cultural life of the city, and from certain secular occasional compositions such as the aria *La Sophie* H125 (W117.40) and the song *L'Ernestine* H24 (W117.38). Bach was a member of the so-called first Berlin lied school, founded by Christian Gottfried Krause, and played a prominent, but not central, part in it. His songwriting brought him into close touch with F.W. Marpurg, the leading Berlin music critic at the time. Bach assisted Marpurg by providing music examples for his treatises (e.g. the fugues H76 and 99 (W119.1 and 2) and two Allegros H338 (W116.16 and 17)), and he also

wrote a short essay on double counterpoint printed in Marpurg's *Historisch-kritische Beyträge*, iii (Berlin, 1757/*R*). His merits were appreciated at this period in the circle around Princess Anna Amalia and Kirnberger. He composed most of the organ sonatas for the princess, and possibly the two organ concertos H444 and 446 (W34 and 35) as well. The importance of these private musical circles increased after 1756, for the outbreak of the Seven Years War meant that Frederick II visited Berlin only occasionally, and on the whole there was no court life. The war brought with it conditions of great austerity for the people of Berlin. Salaries were paid in paper money which had only a fifth of its supposed purchasing power. In view of the military threat, Bach joined the militia, but when Berlin was occupied by the Russian army in 1758 he moved to Zerbst to stay with Carl Fasch's family. He made a brief visit to the court of Mecklenburg in Strelitz in 1762.

The close relationship of the character pieces to the sonatinas for one or two harpsichords and orchestra, written between 1762 and 1764, suggests that they were intended for domestic performance, like some of the keyboard and chamber music works, for example H143 and 507 (W65.33 and W74). Bach composed most of his symphonies at the same time, and probably for the same kind of milieu. He made his name throughout Germany with a quantity of publications in almost all musical genres apart from vocal compositions with orchestral accompaniment. Typically, it was he rather than his brother Wilhelm Friedemann, director of church music in Halle, who was commissioned to write a festive work for trumpets and drums to celebrate in that city the Peace of Hubertusburg in 1763 (the piece is now lost, unless it is identical with the march H621 (W188), which bears the still unexplained epithet 'für die Arche'. After Telemann's death on 25 June 1767 Bach applied to succeed him as music director of the principal churches of Hamburg. His competitors for the post were H.F. Raupach, J.H. Rolle (music director at Magdeburg), and his own half-brother Johann Christoph Friedrich Bach; he narrowly defeated Rolle in the second and deciding ballot. There is no evidence to support the statement in his autobiography of 1773 that he had previously turned down several other offers. Although he was appointed to Hamburg on 6 November 1767, he did not arrive there until March 1768: at first Frederick II refused to release him, and then a particularly hard winter made it impossible for him to leave Berlin any earlier. Meanwhile Georg Michael Telemann, the composer's grandson, acted as interim director of church music in Hamburg. By appointing Bach her honorary Kapellmeister Princess Amalia brought a note of conciliation to the close of his period in Berlin. Johann Christian Schramm (*c*1711–96) from Dresden was appointed his successor in the royal Kapelle.

3. HAMBURG. Bach took over as director of sacred music in Hamburg on Easter Saturday (2 April) 1768, but he was not officially inaugurated in his new post until 19 April. A festive work written for the occasion by G.M. Telemann exists (in *D-Bsb* Mus.ms.21729), but Bach's inaugural address, *De nobilissimo artis musicae fine*, is lost. His duties in Hamburg were much like his father's in Leipzig. He was on the staff of the Hamburg Lateinschule (still in existence today as the Johanneum) and was responsible for the teaching of music there. However, he claimed one of Telemann's privileges, that of engaging a deputy at his own expense to teach at the school. His main task was the organization of the music in Hamburg's five principal churches, the Michaeliskirche, Jakobikirche, St Katharinen, Nikolaikirche and Petrikirche. According to a report made after Bach's death, the number of musical performances was almost 200 a year – a difficult task for a small choral establishment consisting of pupils from the Johanneum and a few professional singers.

Telemann's 40 years and more in Hamburg and his extraordinary creative powers, which remained with him into old age, had aroused expectations which Bach certainly could not satisfy. He worked relatively slowly, and consequently tried to avoid the pressure of deadlines by planning well ahead. For instance, the Passion music for 1768 was evidently written for the most part while Bach was still in Berlin (and its performance was postponed until 1769 because of his delayed move to Hamburg), and in subsequent years he usually completed his Easter preparations by the previous Christmas. A plan to compose two cantata cycles for the church year, mentioned to G.M. Telemann in 1771, was never realized. Instead, much of the music he performed was by other composers (in particular Georg Benda, G.A. Homilius and G.P. Telemann), which Bach adapted, as was usual at the time, by changing the instrumentation, composing additional movements and, in particular, revising recitatives. Only for the 'Quartalsmusiken' – performed in turn in all the principal churches at the main festivals of Easter, Michaelmas and Christmas – did he write works of his own in appreciable numbers. In line with a tradition dating from the 17th century, Bach annually compiled Passions based on the accounts from the four Gospels in strict rotation, and these were performed in several smaller churches as well as in the principal churches of Hamburg. The official sacred music of the city thus consisted to a great extent of works by other composers and pasticcios, laying Bach open at first to accusations of performing his duties only vicariously. On the other hand, he took great pains with works commissioned for special occasions, such as the inauguration of clerical or administrative officials or mayoral funerals. Twice, in 1780 and 1783, he composed music for the celebrations of the 'Bürgerkapitäne', and in 1770 an Italian festive chorus for a visit by the Crown Prince of Sweden, later King Gustav III. He turned his attention in particular to oratorio, which was performed as often in churches as in concert halls, although obviously not within regular church services, since female singers took part (including Elisabeth Winthem, Klopstock's wife). All three of Bach's sacred oratorios – *Die Israeliten in der Wüste*, *Die Auferstehung und Himmelfahrt Jesu* and the cantata H776 (W233), derived from the first Passion music Bach composed for Hamburg – were performed beyond Hamburg itself; they are among the most important Protestant vocal works of the second half of the 18th century.

Bach's circle of friends during his early years in Hamburg included Gotthold Ephraim Lessing, whom he had known in Berlin, and the syndics Hans Jacob Faber and Jacob Schuback; later, his friends included theologians such as Christoph Christian Strum, the professor of mathematics Johann Georg Büsch, who with Christoph Daniel Ebeling was head of the Handlungsakademie, and the physicians Friedrich Ludwig Christian Cropp, Johann Albert Heinrich Reimarus and Johann August Unzer.

Bach was also a close friend of F.G. Klopstock, living in retirement, and he took care to maintain friendships outside Hamburg: with J.N. Forkel in Göttingen, J.J. Eschenburg in Brunswick, J.G.I. Breitkopf in Leipzig, Johann Friedrich Hering in Berlin, Ewald von Grotthus in Gieddatz (Curland) and Johann Jacob Heinrich Westphal in Schwerin. Bach was regarded as the undisputed leading figure in the musical society of Hamburg, and many musicians, men of letters and other artists visiting the city sought him out. The accounts relating to his early years in Hamburg by Matthias Claudius, Charles Burney and J.F. Reichardt are particularly informative. At this time Bach was much involved in teaching, and his pupils included professional musicians such as J.D. Holland, C.F.G. Schwencke and Nils Schiørring, and the future mayor of Altona, Casper Siegfried Gähler.

Besides performing his official duties as director of church music – a post that (except during a severe illness from February to April 1772) he filled conscientiously until his last years while (unlike Telemann and Schwencke) remaining on good terms with the contentious Hamburg clergy – Bach assumed from the beginning a leading position in the city's concert life. In winter 1768–9 he announced a series of 20 subscription concerts; the following winter there were at least six concerts, and 12 Wednesday concerts were advertised for winter 1771–2. Over the next few years there were considerably fewer concerts in which Bach featured as a keyboard player; as far as is known, he stopped giving public concerts when he was 65. As well as his own oratorios he performed a number of other composers' works in Hamburg, including Graun's *Tod Jesu* and Telemann's *Seliges Erwägen* and the *Donnerode*. Bach brought his public appearances (outside his official duties) to a close with a 'historical' concert on 9 April 1786, consisting of one of his own orchestral symphonies, isolated movements from works by J.S. Bach (the Credo from the Mass in B minor with a newly composed introduction) and Handel's 'I know that my Redeemer liveth' from *Messiah* and his own two most powerful compositions, the *Magnificat* and the *Heilig* for double choir H778 (W217). Bach remained actively creative until the last year of his life, although he was in poor health after summer 1788. The double concerto for keyboard, piano and orchestra W47 (probably commissioned for Sara Levy in Berlin), the three quartets for harpsichord, flute and viola H537–9 (W93–5), preparations for a collection of songs, H700–60 (W200), published by Donatius in Lübeck in 1789, and a pasticcio Passion for 1789 were all written in Bach's last year. He died on 14 December 1788 of a 'chest ailment', and was buried on 19 December in the crypt of the Michaeliskirche (the location of his grave was identified only in 1925). After his death Johanna Maria Bach temporarily administered the office of music director. Proposals for a reorganization of church music in Hamburg meant that a successor to her husband was not appointed until autumn 1789, and it was only in December that year that she handed the post over to C.F.G. Schwencke, who had been elected on 1 October in preference to J.A. Hiller and Bach's own protégé J.N. Forkel.

4. Character and temperament. Among his contemporaries Emanuel Bach had the reputation of being a pleasant, sociable man with a gift for wordplay, who was not afraid of making critical remarks even to persons of high rank. He seldom took sides in musical controversies, but when he did he expressed himself vigorously; some light is shed on his own views by his comment, printed in the *Hamburgischer Unpartheyischer Correspondent* of 20 September 1785, on an English newspaper report claiming that there was tension between him and Haydn: 'It is my belief that every master has his own true worth. Praise and blame can do nothing to alter it. The work alone allots praise or blame to the master, and I therefore take everyone as I find him'. He reacted angrily to criticism of his father and to the publication of unauthorized editions, vehemently attacking Birnstiel's edition of J.S. Bach's chorales and Rellstab's reprints of his own works issued when Rellstab took over the publishing firm of Emanuel's friend G.L. Winter. Nor did he conceal his dislike of the modern Italian music of the time, in particular of such excesses as the intrusion into sacred music of stylistic elements from comic opera. He also had a low opinion of the style developed by Johann Schobert and by his own half-brother Johann Christian.

Bach was a good businessman. Most of his publications were commercially successful, and indeed he preferred not to publish a work if he thought it unlikely to sell, as in the case of his *Auferstehung und Himmelfahrt Jesu* in 1784. His business acumen was sometimes interpreted as avarice, but he was extremely generous to his friends and family, and would give them copies of his printed works and autograph manuscripts that he no longer needed, or let them have copies at cost price to himself. He took his half-brother Johann Christian into his family after their father's death and later did the same for his nephew Wilhelm Friedrich Ernst on the latter's return from England; he also provided regular financial support for his widowed half-sister Elisabeth Juliana Friederica. He was particularly close to his half-brother Johann Christoph Friedrich, exchanging sheet music with him on a regular basis.

Bach would often play for hours to visitors, his favourite instrument being a clavichord built by Gottfried Silbermann which he passed on to his pupil and friend Ewald von Grotthuss in 1781, together with the rondo *Abschied von meinem Silbermannischen Claviere* H272 (W66); Grotthuss responded with thanks in the form of a rondo composed by himself. Writing about rhetoric in his *Essay on the True Art of Playing Keyboard Instruments*, Bach emphasized that the musician must be able to place himself in the same emotional state as he wishes to arouse in his hearers, and warned against mannerisms and exaggerations. When improvising he seemed quite enraptured; his playing as a whole was notable for its clarity and cantabile style, and left a lasting impression on his audience.

Like many other musicians and music lovers of the time, Bach owned a large collection of portraits of musicians, which he was always seeking to extend through purchase and exchange. He even toyed with the idea of publishing a catalogue of his collection, but that project was realized only after his death.

5. Works: general. In a composing career of almost 60 years Emanuel Bach wrote over 1000 separate works, ranging from songs to oratorios and from keyboard dance movements to orchestral symphonies. He must have begun compiling a catalogue of his own works at an early date, and it served as the basis for the *Nachlass-Verzeichnis*, or catalogue of his musical estate, printed in Hamburg in 1790. By about 1770 at the latest Bach had

lists available enabling him to choose works for customers outside Hamburg who gave him details of the compositions they wanted and those they already owned. The *Nachlass-Verzeichnis* lists his works systematically classified into groups, with dates and places of composition. It gives information about published editions, while unpublished works are identified by their titles and the first words of the text where applicable, or by the opening bars in the case of instrumental works. The *Nachlass-Verzeichnis* is probably the earliest catalogue of the works of a single composer that can still satisfy the requirements of scholars today. Its publication served as both a record of Bach's creative activity and part of the provision he made in old age for his wife and children, since it was intended to facilitate the purchase of compositions by interested parties outside Hamburg. The relatively large number of extant copies made in Hamburg around 1790 shows that the opportunity was taken up.

The *Nachlass-Verzeichnis* is our major source for the precise details of Bach's output, and in many cases it gives more information about dates and places of composition than the autograph manuscripts. However, it is reliable only on the works of Bach's prime. In the course of a systematic survey of his music collection made in 1786, he destroyed a number of juvenilia, sketches and rejected versions (the precise details cannot now be determined), as we learn from a letter he wrote to Eschenburg on 21 January 1786. Moreover, certain occasional works, such as the cantatas of his Frankfurt period, may no longer have been available to him at this date.

Bach's musical estate remained intact until about 1797, apart from a few items auctioned in 1789. After Johanna Maria Bach's death, however, the composer's daughter Anna Carolina Philippina began disposing of some items, particularly works by other composers and portraits. After her death what remained of the estate was sold at auction. Much of it came into the hands of such collectors as Casper Siegfried Gähler in Altona and Georg Poelchau in Hamburg, and passed from their collections to Berlin before the great fire of 1842 in Hamburg. At the beginning of the 20th century, consequently, almost all the works were still extant in Bach's autograph or in copies made under his supervision, and were available for modern scholarly evaluation. However, considerable losses, particularly of the occasional works written in Hamburg, were sustained during World War II when sources in the Berlin Singakademie and the library of Königsberg University were removed or destroyed. Those from the Berlin Singakademie were, however, recovered in Kiev in 1999. The next most important collection after Poelchau's was made by the Schwerin organist Johann Jacob Heinrich Westphal (1756–1825). It comprised almost all the instrumental works in original prints and manuscript copies, as well as many vocal compositions. Most of it is now in the library of the Brussels Conservatory, which also acquired original manuscripts of symphonies and chamber works from the Guido Richard Wagener collection; a smaller portion passed with the Fétis collection to the Bibliothèque Royale Albert Ier, also in Brussels. There are also particularly valuable collections in the Library of Congress, Washington (purchased mainly in the Berlin antiquarian market around 1900), the Bibliothèque Nationale, Paris (including autographs from the Charles Malherbe and Auguste Vincent collections), and the Gesellschaft der Musikfreunde, Vienna (domestic copies and autographs from Brahms's estate and gifts from Anthony van Hoboken). In spite of losses the source material is good, and scholars face few problems of authenticity or chronology.

We have no information about Bach's methods of composing. However, the few extant sketches (most of which survive only because he wrote them on blank spaces in manuscripts of other works destined to be kept) suggest that after the 1740s he sketched his compositions extensively before polishing them. Interim sketches of vocal works are usually set out on two systems (voice and bass), with only minimal indication of the text. Instrumental works are usually notated on one system only, though with indications of harmony or important subsidiary parts. Final versions often diverge only slightly from the sketches; however, some sketches do not fit any of the extant works, and we may surmise that the composer quite often noted down ideas which he never developed. There is support for this theory in a comment Bach made, on the composition of keyboard fantasias, in a letter to Forkel of 10 February 1775, saying that he had 'a great many *collectanea* for that purpose', and in the existence of a manuscript entitled *Miscellanea musica* H867 (W121, unfortunately extant only in a copy), only part of which coincides with the *collectanea* mentioned in the letter.

Bach's ornamentation, arrangements and revisions pose considerable musicological problems because of the complex relations between the sources, Bach's own mingling of procedures and the terminological inconsistency that still persists. His ornamentation entailed the writing down of procedures adopted in performance, as he remarked in a letter of 28 April 1784 to Johann Heinrich Grave in Greifswald, accompanying a copy of the Concerto in C minor H441 (W31) of 1753: 'The concerto in C minor used to be one of my showpieces. The recitative is written out very much as I played it'. Prominent among his ornamental devices are the 'varied repeats', probably used for the first time in the third movement of the *Probestück* H74 (W63.5) in the *Essay* and developed further in the six sonatas H126, 136–40 (W50: 1760) dedicated to Princess Anna Amalia of Prussia. In his preface to the collection he described its aesthetic background, commenting that 'variation in repeats is indispensable today'. It is expected to such a degree in performance, he adds, that the clumsiest of variations receive more applause than a faithful note-by-note rendering of the music as set down by the composer. He believed, he said, that ornamentation must suit the emotional affect of the piece, taking harmonic requirements into account, and must have some claim to be at least as good as the original. Here Bach was entering the debate on the variations of musical ideas expressed, for instance, in a series of articles signed 'T.S.' and published in the *Berlinischer Magazin* (reprinted in J.A. Hiller's *Wöchentliche Nachrichten*) and in a contribution by F.W. Riedt to Marpurg's *Historisch-kritische Beyträge* (ii, 1756). G.S. Löhlein's op.2 sonatas (1768) are in direct line of descent from Bach. Except in the 'Short and Easy Keyboard Pieces' H193–203, 228–38 (W113, 1766;W114, 1766), Bach himself continued the practice of varied repeats only occasionally, for instance in the sonatas H240, 83 and 135 (W62.24, 65.29 and 65.32). However, a number of other sonatas and slow movements from concertos were varied and ornamented at dates that cannot now be determined; the Sonata in C major H150

(w51.1) even exists in two different ornamented versions, H157 and 174 (w65.36, 37). It is clear from the section 'Variations and ornaments to certain sonatas and concertos for students' in the *Nachlass-Verzeichnis* (p.53 no.11) that these ornaments were written down for teaching purposes. The original versions remained concurrent with, or were even preferred to, the ornamented versions and circulated in prints and authorized copies to which the ornamented versions represent alternatives. Ornamentation in the wider sense includes the cadenzas H264 (w120), numbering over 70. A striking feature is that several concerto movements are allotted more than one cadenza; a few bear general descriptions such as 'cadenza for the Adagio' and cannot be assigned to any of the surviving works.

Bach's arrangements involve alterations in the scoring of a work. In the simplest cases they are merely alternative versions. Many of the Berlin trio sonatas exist in versions for two melody instruments and continuo or for one melody instrument and obbligato harpsichord; the Sonata in C H515 (w87), a special case, exists also in a version for two harpsichords. The composer's arrangements here are chiefly limited to octave transpositions to suit the chosen instruments. There are variant settings among the concertos too: the Concerto in A minor of 1750 exists in authentic versions for cello (H432; w170), flute (H431; w166) and harpsichord (H430; w26); in all three versions the accompanying parts are the same except for some slight changes to the continuo. It is not always possible to be sure which is the original version. Other arrangements entail the rescoring of works for larger forces, particularly frequent in Bach's symphonies. He also rearranged several songs with keyboard accompaniment for chorus; but it is debatable whether the term 'arrangement' is adequate for such processes of revision as occur in the reworking of *Bitten*, a strophic song with keyboard (H686.9; w194.9), as a four-part through-composed song motet (H826.3; w208.3).

Revision proper differs from the procedures described above in that the composer made substantial changes to the actual musical material and intended the second version to supersede the first. Revisions include newly composed or substitute movements (for example the new version of 'Et misericordia' in the *Magnificat* and that of 'O Petrus, folge nicht' in the Passion cantata), but above all reworkings of existing compositions, chiefly instrumental pieces from the Leipzig and Frankfurt periods, some of which Bach himself marked as 'rewritten' in the *Nachlass-Verzeichnis*. Judging from what can be traced in the sources, Bach cut some passages and extended others, eliminated whole movements, and now and then rewrote older works to adapt them to new compositional styles while retaining their form and thematic substance. Many of his early works, for instance the March BWVAnh.127, exist in three or more different versions. A number of major revisions are not noted in the *Nachlass-Verzeichnis*, including that of H211 (w65.44) the original central movement of which was incorporated in a revised form into the Sonata in B♭ H282 (w59.3) in 1748 and replaced by a few transitional chords in H211 (w65.44), and that of *Auferstehung und Himmelfahrt Jesu* between 1774 and 1778, when Bach added a slow introduction and replaced the *dramatis personae* in the recitatives with a neutral *testo*. Although Emanuel Bach, like his father and his elder brother Wilhelm Friedemann, continued working on his compositions all his life, adapting them to changing conditions of performance and to different aesthetic requirements, various main phases of revision can be distinguished. Between 1743 and 1747 he revised works written before 1740; in the context of his publishing activities around 1760 he revised many earlier works, for example H171–2, 216 (w116.1, 2, 5) and H77 (w62.14); and during his Hamburg period he added wind parts to many of the orchestral works. A final phase of revision around 1786 was no doubt carried out so as to leave his musical estate in good order for his heirs; it included the systematic replacement of the slow movements in the sonatinas H7–12 (w64) in order to remove their outmoded tonal unity with a view to publication. There is no suitable term for Bach's transfer of thematic material to a different musical genre, as occurred with some of the character pieces.

6. KEYBOARD MUSIC. The keyboard music that Bach composed almost without interruption from about 1730 to the last years of his life lies at the heart of his creative work. The sources suggest that he began by composing separate dance movements, marches, minuets and polonaises. Some of these were entered in his own hand (*c*1732) in the *Clavierbüchlein* for Anna Magdalena Bach. Models were to hand in the first part of J.S. Bach's *Clavier-Übung*; the Partita in G major BWV829 seems to have made the greatest impression on him, as can be seen from the minuet with hand-crossing, H1·5 (w111), and the G major suite (*D-Bsb* Mus.ms.Bach P 368), which is anonymous but can be shown to be at least partly by C.P.E. Bach. Dance movements could then be put together into cycles, preserving tonal unity; examples may be found in a manuscript volume (*D-Hs* ND VI 3191), thought until 1991 to have been lost, which contains sources going back to Bach's years in Frankfurt. The composition of suites seems to have been considerably more important to Bach's early creative period than the catalogue in the *Nachlass-Verzeichnis* might suggest. It is noticeable that the young Bach adopted the standard movements of his father's suites only in exceptional cases; only the allemande and gigue are prominent, and feature in some of the keyboard 'sonatas' of the 1730s and 40s. Otherwise the composer showed an early preference for fantasia-like movements, which for all their technical deficiencies display harmonic boldness and a high degree of originality. J.S. Bach's two- and three-part Inventions also provided an important stimulus (as they did later to Emanuel's half-brother Johann Christoph Friedrich), for example in the first movement of H3 (w65.1); three-part invention style occurs chiefly in slow movements, including those of the sonatas H26 (w48.3) and H34 (w49.5).

Two collections of six keyboard sonatas, H24–9 (w48; the 'Prussian' sonatas, printed in 1742) and H30–34, 36 (w49; the 'Württemberg' sonatas, intended for Bach's pupil Carl Eugen of Württemberg and printed in 1744), form a landmark in the history of keyboard music. They indirectly bear out Mattheson's polemical statement in *Der vollkommene Capellmeister* (Hamburg, 1739/*R*): 'For some years now composers have been writing sonatas for keyboard to great acclaim, but they do not yet have the right form, wishing to be moved rather than to move; that is to say, they aim more at the touch of the fingers than to touch the heart'. J.F. Reichardt claimed with justice in his *Musikalischer Almanach* of 1796 that 'no instrumental music had previously appeared in which as

rich and yet well-ordered a harmony was united with such noble song, so much beauty and order with such originality, as in Bach's first two sonata collections engraved in Nuremberg'. In these collections Bach systematically, and for the first time, showed how it was possible to write affecting keyboard music freed from the suite tradition, and he was able to develop his ideas over the following decades; the experimental instrumental recitative that serves as the central movement of the first Prussian sonata, for example, impressively illustrates a style of utterance to be found in the newest instrumental music. Unity of affect is evident in the dense thematic working of the opening movements of H24 (W48.1) and H30 (W49.1). Fantasia-like elements occur more particularly in the sonatas in E minor and B minor, H33, 36 (W49.3, 6), while the closing movement of H29 (W48.6) is particularly full of surprises. The unusual importance ascribed to these collections even by Bach's contemporaries is evident from the fact that the Württemberg sonatas were still being reprinted in Vienna and Pest around 1800. Bach established quite early a basic three-movement sonata pattern in these collections, with fast opening and closing movements and a slow central movement in a related key. Later he also experimented with the use of different keys for all three movements, with transitional passages between movements and – particularly in the last years of his life – very short central movements. Like his father, Emanuel Bach regarded his printed collections as models, and made them as different as possible with a view to their usefulness in teaching.

Nowhere in Bach's work is the distinction so clearly drawn between professional and amateur music-making, and between works written to commission and those for personal development, as in his keyboard compositions. The published works are principally for amateurs, particularly the collections published during the 1760s: the six 'Easy Sonatas' H162–3, 180–83 (W53; Leipzig 1766) and the six sonatas 'à l'usage des dames' H184–5, 204–7 (W54) eschew the daring of the early works. The Württemberg sonatas, with their greater technical and musical demands, constitute an exception among Bach's printed works; unusually for Bach, they present public evidence that the composer was undergoing a personal mental crisis (most of the sonatas were written in Teplitz, where he was taking the waters in 1743, when an acute attack of gout at the age of only 30 seemed to endanger his career as a keyboard virtuoso). Most of the other experimental sonatas of this period were distributed by Bach to his friends only in manuscript copies or were published many years later; this group includes the sonatas H46–7 and 51 (W65.16–17 and 65.20) and the Sonata in F sharp minor H37 (W52.4).

Bach's composition and publication of keyboard works temporarily moved into the background to some extent after 1770. He rounded off his keyboard writing with the six collections of keyboard sonatas 'für Kenner und Liebhaber'; by public demand he included rondos in the second collection and rondos and fantasias in the third and subsequent collections. While the first collection, published in 1779, was a compilation of older compositions (H130 (W55.2) dates from as early as the 1750s), new compositions predominate in the later volumes, which employ a less astringent tonal language than the early keyboard sonatas and earned respect as individual creations fit to stand beside the works of Haydn and Mozart. The rondos were particularly popular, and for a while Bach considered publishing a separate collection of them. The number of subscribers began to fall, however, not necessarily because of any slackening of interest in Bach's works but perhaps because of the competition provided by the soaring number of published keyboard sonatas by composers from north and central Germany and Vienna after about 1780; there was also a change in market conditions, with series sold in bookshops superseding individual subscriptions. From Bach's letters to Breitkopf in May 1788, offering all remaining copies of the *Clavier-Sonaten für Kenner und Liebhaber* at a fixed price (obviously to spare his family the trouble of selling his works after his death), it is clear that at this point over half the entire edition of 6300 copies had been sold, bringing Bach a considerable profit of over 3000 thalers, or 10,000 marks (several times his annual salary).

7. THE 'ESSAY'. Bach's keyboard music cannot be assessed in isolation from his didactic writing. Around the middle of the 18th century amateur music-making assumed proportions scarcely imaginable previously. As a result, there was a growing demand for instruction books and performance manuals, particularly in Berlin, where music-making had been encouraged to an extraordinary degree by the example of the flute-playing King Frederick II. In 1750 Marpurg had published a short manual entitled *Die Kunst das Clavier zu spielen*, which proved so successful that it was reprinted the following year. With his *Essay on the True Art of Playing Keyboard Instruments* Emanuel Bach provided what was to be the leading keyboard tutor for a long period. Together with Quantz's flute tutor of 1752, Leopold Mozart's violin tutor of 1756, and J.F. Agricola's singing manual of 1757 (after P.F. Tosi), it was the most important work of practical musical instruction of the second half of the 18th century.

The first (self-contained) part, which appeared in 1753, sets out the basics of keyboard performance in three sections, tacitly giving precedence to the elements of harmony. The first section deals with fingering, for, says Bach, 'more is lost by incorrect fingering than can be compensated for by all the art and good taste in the world'. Bach encouraged the use of the thumb but recommended avoiding it on black keys, and restricted the crossing of fingers still quite common at the time. Naturally, all his examples show the fingering. The second section deals with ornaments, distinguishing between those indicated by signs (Quantz's 'essential ornaments') and those written out in full ('optional ornaments'). The third section deals with 'good performance', comprising both practical and aesthetic criteria. Bach saw the absence of practical examples in the existing keyboard tutors of the time as a great drawback, and accordingly added 18 *Probestücke* ('sample pieces') as an integral part of the *Essay*, in different keys and in ascending order of difficulty; put together, they form the six three-movement sonatas H70–75 (W63). These pieces could be used either as studies or for performance; the sonata in F minor in particular, with hand-crossing, circulated widely in manuscript copies.

The *Essay* was complemented in 1762 by a second part containing mainly instruction in continuo playing and correct accompaniment. It clearly reflects Bach's own activity at court. In it he moves systematically from simple intervals and their description to 'refinements' and 'necessary precautions' in accompaniment. Together with

Quantz's *Versuch einer Anweisung die Flöte traversiere zu spielen*, Bach's *Essay* is our most important source of information about performing practices and issues of taste prevalent in Berlin in the mid-18th century. Bach's introduction is also of particular interest today, dealing as it does with the choice of instruments and basic questions of accompaniment, and so too is the final chapter on improvisation (with the Fantasia in D H160 (W117.14) as a practical illustration), which was unique in its time. The *Essay* held an undisputed position in the 18th century, and its influence was not confined to north Germany; Haydn bought and studied it as a young man and Christian Gottlieb Neefe introduced Beethoven to it. Both composers continued into the 19th century to use the *Essay* in their own teaching.

The first part was reprinted in 1759, and a revised edition (1787) contained six new single-movement sonatinas that Bach hoped would make up for the excessively rapid increase in difficulty of the *Probestücke*. A new edition of the second part, also with corrections and additions by the author, did not appear until 1797. The two collections of piano pieces with varied repeats, H193–203 (W113) and H228–38 (W114), were also very popular; H193–7 (W113.1–5) were reprinted in rival editions in Berlin, Vienna and Linz until 1800. Bach's immense influence as a keyboard teacher made the 'Bach manner' accepted as a general term for an elegant style of performance throughout the second half of the 18th century.

8. CHAMBER MUSIC. Next to keyboard writing, chamber music was the most important experimental medium for Bach, particularly that with obbligato keyboard. His compositions in the genre from the 1730s onwards are notable for their originality and variety, and, like the keyboard compositions, they employ the whole spectrum of keys: the compositions for keyboard and violin, for instance, range from A♭ to A major and from C to B minor. The trio in all its forms lies at the heart of his chamber music; solos (sonatas) featured less prominently after the 1740s, and in the last years of his life Bach turned to the quartet.

The early solos have continuo accompaniment, except for the flute solo in A minor H562 (W132), presumably composed for Frederick II. They correspond to the basic three-movement type described by J.A. Scheibe in the *Critische Musikus* (Leipzig, 2/1745, pp.681–3), and are succinctly written. All three movements are in the tonic key. The first is usually the slowest, and is followed by an Allegro (rarely, as in H554 (W127), in fugal style), followed in its turn by either a dance (usually a minuet with variations) or another Allegro. Locatelli's flute sonatas op.2 (Amsterdam, 1732) may be regarded as the model.

Both numerically and in its importance for the history of the genre, the trio takes pre-eminence among Bach's chamber compositions. The term 'trio' refers to the number of obbligato parts, not the number of participants. Trios with obbligato keyboard and those with continuo accompaniment are roughly equal in number; many survive in variant scorings, most of which may be regarded as authentic. While the solos aim at idiomatic treatment of the leading instrument, the upper parts of the trios, with the exception of some works with obbligato keyboard, are treated almost identically. There are contrapuntal trios, such as H567 and 569 (W143 and 145), in which the bass shares in the thematic material, and homophonic works in the Italian style, such as H578 (W161.2), in which the bass serves only as a harmonic foundation. The programmatic trio 'Sanguineus und Melancholicus' H579 (W161.1), published in 1751, made a great sensation.

Trios are found among Bach's earliest compositions; they include a work (now lost) for violin, viola and bass, which according to the *Nachlass-Verzeichnis* (p.65, no.1) was 'prepared together with Johann Sebastian Bach'. These works were revised while Bach was in Berlin; only in the case of H569 (W145) has the original version survived (as BWV1036). Comparison of the two versions shows Bach's outstanding early talent and the tremendous progress he made by the time he produced the later version: the introductory fantasia and closing movement were cut, the two other movements thoroughly revised and a new opening movement added. In the 1740s, then, Bach entirely abandoned the basic four-movement form of the trio, which was initially at least as important to him as the three-movement form.

After the early 1760s figured bass played a less important role in Bach's chamber music. During the process of composing the central movement of the Trio in C minor H514 (W78; 1763) he decided to write out the keyboard accompaniment instead of merely figuring the bass; the Trio in C major H515 (W87; 1766) has a fully written-out keyboard part. The pre-eminence of the keyboard is most in evidence in the three printed collections of keyboard trios, H522–34 (W89–91); the title-page of the English first edition of H525–30 (W89) fails even to mention the accompanying violin and cello parts. The type of rondo used by Bach in his trios and further developed later in his solo keyboard music, with the theme reappearing in different keys and varied, was noticed as a pointer to the future by Forkel (*Musikalisch-kiritische Bibliothek*, ii, 1778, pp.275–300) and was copied in England in particular (by Muzio Clementi and by A.F.C. Kollmann in his *Essay on Practical Musical Composition*, 1799). In his last year Bach composed three quartets (i.e. works with four obbligato parts) for keyboard, flute and viola, H537–9 (W93–5). Publication of these particularly attractive works was abandoned because of the composer's death. During his Hamburg period he also wrote several smaller works for wind instruments; the occasion for their composition is not known. He wrote no chamber music for string instruments without continuo, a genre central to the development of the Classical style.

9. ORCHESTRAL WORKS. All the known orchestral works by Bach belong to the 'modern' genres of symphony and concerto. A special part was also occupied in the early 1760s by a genre evidently of his own invention, the sonatina for one or two harpsichords and orchestra, which no other composer imitated; Bach's sonatinas differ from the Viennese divertimento for keyboard and strings, which they outwardly resemble and which may have influenced the composer, in the enormous technical demands made on the soloists.

The symphonies of the Berlin period are all in three movements and most of them were conceived as string symphonies; in many cases wind parts were added only during Bach's Hamburg period. The absence of repeat signs in the opening movements is noticeable; slow movements are often not separated from the others, and

8. Autograph MS of the opening of C.P.E. Bach's 'Clavier-Fantasie mit Begleitung einer Violine, C.P.E. Bachs Empfindungen' in F♯ minor, composed 1787 (D-Bsb Mus.ms.Bach P 36i)

in many cases serve as a transition. The famous four-part string symphonies H657–62 (W182) owe their existence to a commission from Baron Gottfried van Swieten, and the composer was subject to no restrictions. J.F. Reichardt wrote an account of the rehearsals of these daring works, admiring their 'great variety and novelty of form and modulation'. Their importance was also recognized by music dealers; manuscript copies made for van Swieten's private use were sold, against Bach's will, by Johann Traeg in Vienna, C.G. Thomas in Leipzig and J.C. Westphal in Hamburg. There must have been similar interest in the four orchestral symphonies H663–6 (W183), which Bach had published in 1780 with a dedication to Crown Prince Friedrich Wilhelm of Prussia; they show an advanced handling of the wind instruments.

The keyboard concertos, numbering over 50, represent an early peak in the genre, the importance of which has not been fully appreciated. The first ones, like W.F. Bach's early concertos, were written just after 1730. Their relationship to the concertos of J.S. Bach has yet to be

studied, but it must be remembered that most of J.S. Bach's harpsichord concertos did not take the shape in which they are familiar today until about 1738–9. C.P.E. Bach remained faithful to the ritornello form, and did not adopt dance, variation or rondo structures. Concertos such as H403, 409, 414, 420–22 and 442 (W1, 6, 11, 17–19 and 32) were widely distributed in their time. The orchestra here has equal importance with the soloist. The opening ritornello is usually on a broad scale, setting disparate musical ideas side by side, and these ideas recur in varying order in subsequent ritornellos. In the solo sections the orchestra continues to share in the thematic development. The uniformity of their overall structure, their consistent thematic development and their wide emotional range made the concertos of Bach's early and middle Berlin period a model for other composers (e.g. J.F. Reichardt, J.W. Hertel and J.G. Müthel) and for the teaching of composition (H.C. Koch). The concertos of his later Berlin years and of his Hamburg period, written in the 1760s, contain more experimental features and are sometimes almost reminiscent of chamber music. With the exception of the six 'easy' concertos H471–6 (W43; Hamburg 1772) Bach prevented their dissemination during his lifetime.

10. VOCAL MUSIC. Emanuel Bach was a member of the first Berlin lied school, although he did not play a leading role in it and took no part in the controversies about the particular merits of French, Italian and German music. He was particularly fond of humorous texts such as those by Lessing and Gleim, and did not set odes (as Karl Wilhelm Ramler and Moses Mendelssohn understood the term) or foreign-language texts. It was also only at the beginning that Bach contributed to the joint publications of the Berlin lied school. In 1762 he published a collection of his own which was reprinted soon after with a new title-page and reissued in 1774. Contemporary song composition distinguished between *Sing-Oden* and *Spiel-Oden*; Bach's songs fall predominantly into the latter category, with keyboard accompaniment an integral component. This does not mean that the keyboard part is entirely obbligato – the songs are notated on two, not three staves – but that its melodic phrases and harmony contribute to the emotional effect. The melodies are not therefore primarily intended to be catchy, and Bach only occasionally composed songs 'in the folk style' (e.g. the drinking-song *Der Wirt und die Gäste*, to a text by Gleim). The vocal compass is large by the criteria of the time and does not exclude extreme registers, particularly in the holding of high notes.

The collection of 54 sacred songs and odes by C.F. Gellert, which Bach set to music immediately after publication of the texts in 1757, was of particular historical importance. By 1784 it had been issued five times in all and influenced many other composers (right up to the time of Beethoven and his Gellert songs op.48). Many of the songs were included in hymnals. During his Hamburg period Bach followed the success of the Gellert settings with a collection of psalm settings (H733; W196) in the translation by the Copenhagen superintendent Johann Andreas Cramer and two collections of sacred songs to texts by his friend the principal pastor of Hamburg, Christian Carl Sturm. Bach's compositions of this type cover the entire contemporary spectrum: the Cramer psalms, for instance, include chorale melodies with bass, songs with continuo and some with a fully

9. Carl Philipp Emanuel Bach (centre), Christian Carl Sturm (right) and the artist: drawing by Andreas Stöttrup, pen and ink with wash, 1784 (Kunsthalle, Hamburg)

composed keyboard accompaniment (e.g. the setting of Psalm viii, 'Wer ist so würdig als du', which Bach later arranged as a chorus). In Hamburg he frequently adapted solo songs for choral performance, often giving the separate verses individual form and making song motets of them.

Bach had a hand in the compilation of the Danish psalter of 1778, edited by his pupil N. Schiørring, the Schleswig-Holstein hymnal (Altona 1780 and 1783) and the Hamburg hymnal which in 1787 superseded Telemann's of 1730. His secular songs were much sought after by the editors of the *Musenalmanach* volumes which became fashionable in the 1770s. They met with a good deal of criticism, however, for by comparison with typical *Musenalmanach* works by F.W. Weis, C.G. Neefe, J.F. Reichardt and others Bach's songs seemed sometimes rather contrived and stiff. C.F. Cramer's plan to publish in his *Polyhymnia* the secular songs previously printed elsewhere could not immediately be realized. Bach supervised the preparation of an incomplete edition of his unpublished songs (H700–60 passim; W200) which appeared in Lübeck in 1789.

With the exception of the *Magnificat* of 1749 and the Easter cantata *Gott hat den Herrn auferweckt* (1756; the text, by the Berlin court preacher Leonhard Cochius, was set at the same time by Telemann, TWV1:615), Bach's sacred vocal works date from his Hamburg period. Most of them were composed for particular functions; Bach did not expect them to be widely distributed and in general he restricted his efforts on their preparation to what was essential. The Passions provide an illuminating example: according to Miesner, the six *St Matthew Passions* (most of which perished in World War II) all employed the same biblical framework. Bach composed the recitatives himself, but he usually used the turba choruses from his father's *St Matthew Passion*.

This framework was repeated unchanged every four years, with new arias, choruses and chorales for which Bach again often resorted to works by other composers. Similarly, the *St John Passions* are based on Telemann's printed Passion music for 1745 (*Ein Lämmlein geht und trägt die Schuld*, TWV5:30) and the *St Mark Passions* on a work by G.A. Homilius. The model for the *St Luke Passions* is not known. The Passions are thus pasticcios made up of a biblical framework, Bach's own inserted movements (particularly arias and choruses, and in the 1770s and 80s hymns) and music by other composers. In this way he satisfied the constant demand for new Passion music without having to compose a new work himself each year.

Most of Bach's occasional works are, however, original creations, particularly those for inaugurations of the clergy and the oratorios and serenatas he wrote for the 'civic captains' of Hamburg in 1780 and 1783 (the commission for 1788 came too late for him to meet it). His prime models were G.A. Homilius and Georg Benda. A certain development of the repertory in the inaugural music can be traced: the 1780s saw many repeat performances of older works and on occasion, at the request of the pastors, Bach even resorted to works in his library by Telemann. He distinguished meticulously between the price for composing a piece and that for simply performing or arranging one.

The paucity of contrapuntal movements in Bach's Hamburg church music is striking. An exception is the *Heilig* for double choir (composed in 1776), with its magnificent double fugue, 'Herr, es ist dir keiner gleich', which became an established part of the Michaelmas music and other festive music performed in Hamburg, and came to be regarded as one of the most important sacred vocal works of its time after its publication in 1779.

Bach ascribed particular importance to his oratorios. The score of *Die Israeliten in der Wüste*, composed for the consecration of the Lazarethkirche in 1769, was printed in 1775. *Die Auferstehung und Himmelfahrt Jesu*, probably written in 1774 and revised 1778 at the latest, was offered for subscription in 1784 but did not appear in print until 1787. The third oratorio, the Passion cantata H776 (W233) derived from the composer's first *St Matthew Passion*, was not printed but was nevertheless widely distributed: performances were given during the 18th century in Copenhagen, Berlin, Göttingen, Schwerin and Breslau, as well as in smaller places such as Halberstadt and Colditz. Bach himself owned two copies of the score, one of which he would lend to friends so that they could copy it. Because of the nature of the text, the distribution of the Passion cantata remained limited to Protestant Germany, but *Die Auferstehung* and *Die Israeliten* also reached Catholic parts of southern Germany and were occasionally even performed outside the German-language area (in England and Italy). *Die Israeliten* in particular maintained its place in the repertory as a concert oratorio until well into the 19th century.

11. Reception. Between 1740 and 1775 Bach's many publications ensured a wide distribution for his works, which substantially influenced the development of instrumental music in Germany. With Gluck and later Haydn, he was regarded by his contemporaries as the leading representative of a specifically German musical taste, as is evident from J.K.F. Triest's description of him after his death as 'a Klopstock using notes instead of words'. His sphere of influence was not confined to northern Germany, where J.C.F. and J.E. Bach, J.F. Reichardt, J.A.P. Schulz, J.W. Hässler and others were directly subject to it; soon after 1760 it spread to south German and Austrian areas as well, particularly through the *Essay* and the printed collections of keyboard works. Although accounts of the esteem in which he was held by Haydn, Mozart and Beethoven are partly anecdotal and cannot be verified in detail, they are a strong indication that the north German master also influenced the Classical Viennese style, not so much formally as in matters of thematic development and the idiomatic treatment of instruments. However, the late keyboard works, the double concerto H479 (W47) and the quartets H537–9 (W93–5) make it clear that C.P.E. Bach should by no means be regarded merely as a precursor of Viennese Classicism, but as a composer who wrote in his own independent style throughout his life. The posthumous publication of his compositions between 1790 and about 1802 in Berlin, Leipzig and Vienna bears witness to his enduring fame.

Developments during the 19th century made Vienna the musical capital of the German-speaking part of Europe, even superseding Leipzig as the centre of the music-publishing industry, and to the extent that J.S. Bach was rediscovered as the 'father' of German keyboard music, so Emanuel Bach's reputation began to fade.

(10) Johann Ernst Bach (*34*) (*b* Eisenach, 28 Jan 1722; *d* Eisenach, 1 Sept 1777). Composer and organist, son of (5) Johann Bernhard Bach (*18*). On 16 January 1737 he entered the Thomasschule in Leipzig and became a pupil of his uncle (7) Johann Sebastian (*24*). After studying law at Leipzig University he returned to Eisenach in 1741 and deputized, without pay, for his ailing father. Plans to go to Frankfurt, Hamburg or Berlin, mentioned in a letter written by his cousin Johann Elias Bach (*39*), were never realized. In 1748 he became his father's official assistant and the next year his successor. He continued to practise as a lawyer as well, and in addition he was appointed Kapellmeister at the Weimar court in 1756 'in view of his well-known skill and musical knowledge'. This entailed regular journeys to Weimar, and during his frequent absences from Eisenach he was permitted to hire a substitute for his organist's duties. When the Hofkapelle was dissolved after the death of Duke Ernst August Constantin in 1758, Johann Ernst returned permanently to Eisenach but retained his Kapellmeister title and salary, for which he had to fulfil certain administrative duties. He wrote the foreword to Adlung's *Anleitung zu der musikalischen Gelahrtheit* (Erfurt, 1758), in which he criticized the current decay of church music and demanded that this be countered by 'artistic and regular manners of composing'; as models of sacred cantatas he praised the 'admirable masterpieces' of J.S. Bach, Telemann and Stölzel. J.E. Bach was apparently in close contact with his cousin (9) Carl Philipp Emanuel (*46*), serving as agent for the first part of the *Versuch* (1753) and the harpsichord concertos w43 (1772). He contributed to the anthology *Musicalisches Vielerley* published by C.P.E. Bach in 1770.

As a composer Johann Ernst was abreast of the stylistic innovations of his time although, like Johann Sebastian's sons, he did not exclude contrapuntal writing. Characteristic of his personal style is the extended use of chromaticism and syncopated rhythms. His vocal works are often highly dramatic and full of effects. In his time he was particularly known for his 'beautiful chorale settings' (*Musicalische Realzeitung*, ii (1789), 179); these represent an important contribution to the genre of the sacred cantata as they form a link between J.S. Bach's chorale cantatas and the chorale settings of the generation of

Doles and Hiller. His songs depend on the older tradition of Görner, Gräfe and Mizler; he wrote *galant* melodies full of expressive word-painting with lively basses and often elaborate accompaniments. His Passion oratorio is influenced by C.H. Graun's well-known *Der Tod Jesu*.

WORKS

VOCAL

O Seele, deren Sehnen (Passion oratorio), 1764, *D-GOa*, ed. in DDT, xlviii (1914); 2 Passions, lost, cited in *GerberNL*

Church cantatas: Ach Herr, strafe mich nicht (Ps vi), *D-DS*, *US-CA*; Auf und säumt euch nicht, ihr Frommen (Dank-Kantate), *AAu*; Der Herr ist nahe bei denen, for funeral of Duke Ernst August Constantin, 1758, *D-Bsb*, *US-AAu*; Die Liebe Gottes ist ausgegossen, *D-Bsb*, ed. in SBA; Ein feste Burg ist unser Gott, 1762, *LEb*; Herzlich lieb hab ich dich (Ps xviii), *Bsb*, *Hs*; Kein Stündlein geht dahin, *Bsb*, *Bhm*, *Hs*; Kommt herzu, lasset uns fröhlocken (Ps xcv), *LEb*; Lobe den Herrn, meine Seele, lost, cited in Breitkopf catalogue, 1770; Mein Odem ist schwach (= BWV 222), *Bsb*, *Hs*, *GB-Lbl*, choral movts also as motet, Unser Wandel ist im Himmel (= BWV Anh. 165); Meine Seele erhebet den Herren (i), *D-Bsb*, ed. in SBA; Meine Seele erhebet den Herren (ii), *MLHb*; Meine Seele erhebet den Herrn (iii), *F-Pn*; Nach dir, Herr, verlanget mich (Ps xxv), private collection; Sei willkommen, mächtiger Herrscher, *D-CR*, doubtful, probably by J.E. Bach; Singet dem Herrn ein neues Lied (Ps cxlix), *BNu*, *WFmk* (erroneously attrib. C.P.E. Bach); So gehst du nun, mein Jesu, hin, *US-AAu*; Straf mich nicht in deinem Zorn, *D-BNu*, *GOa*; Wenn Donnerwolken über dir sich türmen (Das Vertrauen der Christen auf Gott), *Bsb* (inc.), *GOa*; Wie der Hirsch schreiet (Ps xlii), lost, cited in Breitkopf catalogue, 1764; Wünschet Jerusalem Glück, *NTRE*; others (?incl. annual cycle, 1766), lost

Mass [Ky–Gl] on Es woll uns Gott gnädig sein, SATB, bc, *D-Bsb*

Motets, SATB: Aus der Tiefen, *GB-Lbl*; Mein Odem ist schwach, in G.P. Weimar: Versuch von kleinen leichten Motetten und Arien (Leipzig, 1785); Unser Wandel ist im Himmel (= BWV Anh. 165), *D-DS*; 11 others, *ARk*, doubtful

Secular cantatas: Gesegneten Auftritt, for birthday of Duke Friedrich of Saxe-Gotha, 1756, lost, mentioned in H. Kretschmar, Preface to DDT, xlii (1910); Wer sagt mir doch, was für Entzücken, lost

Sammlung auserlesener Fabeln, i (Nuremberg, 1749) [pt ii ?unpubd]; ed. in DDT, xlii (1910)

Lächerliche Mammonshüter (An die Geizigen), in C.P.E. Bach: Musicalisches Vielerley (Hamburg, 1770)

INSTRUMENTAL

Sinfonia, B♭, *US-BETm*; other sinfonias mentioned in *GerberNL*

3 Sonaten, kbd, vn, pt i (Eisenach, 1770); no.1 ed. in NM, ii (1927)

3 Sonaten, kbd, vn, pt ii (Eisenach, 1772)

Sonata, A, fl, vn, bc, *D-Bsb*

Sonatas, kbd: G, F, in J.U. Haffner: Oeuvres mêlées, v, vi (Nuremberg, 1759); A, *Bsb*

Org: Fantasia and fugue, d, *Bsb*; Fantasia and fugue, a, *Bsb*, ed. in Mw, xlii (1972); Fantasia and fugue, F, in C.P.E. Bach: Musicalisches Vielerley (Hamburg, 1770), ed. in D. Hellmann: Orgelmusik der Familie Bach (Leipzig, 1985); Chorale, Valet will ich dir geben, *Bsb*, ed. in D. Hellmann: Orgelmusik der Familie Bach (Leipzig, 1985)

(11) Johann Christoph Friedrich Bach (*49*) (*b* Leipzig, 21 June 1732; *d* Bückeburg, 26 Jan 1795). Composer, son of (7) Johann Sebastian Bach (*24*) and Anna Magdalena Bach. He is known as the 'Bückeburg Bach'.

1. LIFE. He received his musical education from his father. After leaving the Thomasschule, Leipzig, he is thought to have studied law briefly, but there is no record of his matriculation at Leipzig University. At the express wish of Count Wilhelm of Schaumburg-Lippe he was appointed harpsichordist to the court in Bückeburg, where he may at first have been subordinate to the court organist Ludolf Münchhausen. In June 1751 his brother Carl Philipp Emanuel visited him in the retinue of Frederick the Great when the king awarded the Order of the Great Eagle to Count Wilhelm. At this time the musical life of the court in Bückeburg was dominated by the Konzertmeister Angelo Colonna and the court composer Giovanni Battista Serini; they left Bückeburg in the middle of 1756 for reasons which remain obscure. On 8 January 1755 Bach had married Münchhausen's daughter Lucia Elisabeth, who was trained as a singer by Serini and held a position at court, probably as an alto, with an annual salary of 100 thaler. The Seven Years War imposed considerable restrictions on the court of Bückeburg. Bückeburg itself was occupied by French troops in 1757 and Count Wilhelm, with a few trusted courtiers including Bach, withdrew to his estate of Niensteden on the Elbe, near Pinneberg, from October 1757 to April 1758. Bach took this opportunity to apply, successfully, for the vacant post of organist at the German church in Altona, then under Danish rule, but for unknown reasons he never took it up. On 18 February 1759 he was appointed Konzertmeister of the Bückeburg Hofkapelle, with a rise in his annual salary to 400 thaler (later, temporarily, to 416 thaler), and he also received the usual allowances in kind. However, court life did not return to normal until after the Peace of Hubertusburg, for which Bach wrote a thanksgiving cantata performed on Ascension Day 1763, and the return of Count Wilhelm from his military missions in Portugal in November 1764. The Hofkapelle usually gave concerts twice a week; the ensemble consisted of about 15 musicians, with assistance when necessary from outside performers and military bandsmen. Bach was responsible for the composition or procurement of the works played at these concerts and for rehearsing them, and he adjusted his choices to the taste of Count Wilhelm, who liked secular Italian vocal music and played keyboard instruments and perhaps the flute himself. In the period up to 1770 Bach wrote symphonies, trio sonatas, a number of Italian arias and cantatas (mainly to texts by Metastasio) and perhaps his most important work of this time, the large-scale cantata *Cassandra*. After Count Wilhelm's marriage to Marie Barbara Eleonore zur Lippe-Biesterfeld on 12 November 1765, Protestant sacred music was performed at the Bückeburg court. Perhaps encouraged by his successful application to Altona, Bach applied on 24 June 1767 to succeed the late G.P. Telemann in Hamburg. He was, in fact, one of the short-listed candidates, but his half-brother Carl Philipp Emanuel gained the appointment. Between 1765 and 1773 Johann Christoph Friedrich set the best-known Protestant oratorio texts of his time, *Der Tod Jesu*, *Die Hirten bei der Krippe Jesu* and *Die Auferstehung und Himmelfahrt Jesu*, all by C.W. Ramler, and *Die Pilgrime auf Golgatha* by F.W. Zachariä. The tendency towards sacred vocal composition increased with the arrival in Bückeburg of J.G. Herder, who was court preacher and superintendent there from 1771 to 1776. His oratorio texts, highly regarded by Countess Marie Barbara, had a lasting effect on the music of the court. In these years Herder and Bach, who later regarded this as the happiest

time of his life, collaborated on the cantata *Michaels Sieg, oder Der Kampf des Guten und des Bösen in der Welt* (1771, not 1775), the 'biblical painting' *Die Kindheit Jesu* (1772, for the birth of Countess Emilie Eleonore Wilhelmine in June 1771), *Die Auferweckung Lazarus* (1773, on the occasion of the death of Countess Marie Barbara's twin brother Ferdinand Benjamin on 23 April 1772) and *Der Fremdling auf Golgatha* (1776), as well as the secular 'scenes with song', *Brutus* and *Philoktetes*, which have not survived.

The death of Countess Marie Barbara in 1776, Herder's appointment to Weimar in the same year and the death of Count Wilhelm in 1777 marked a watershed in the intellectual life of the Bückeburg court. Count Philipp Ernst zu Schaumburg-Lippe-Allverdissen (1723–87) took over the government, holding court partly in Münster and partly in Bückeburg. In spring 1778 Bach asked for three months' leave to visit his brother Johann Christian in London. He took his son Wilhelm Friedrich Ernst on this journey, which began some time between 16 March and 23 May 1778 and ended at the latest in November of the same year; the son was left with Johann Christian for further musical training. A series of string quartets and a set of six keyboard concertos, printed in London with dedications to members of the house of Schaumburg-Lippe, show how rapidly J.C.F. Bach adapted his music to English tastes. He also brought back an English piano from his travels, so his keyboard compositions after 1778 were not necessarily for the harpsichord. In 1780 Count Philipp Ernst took as his second wife Princess Juliane zu Hessen-Philippsthal (1761–99), who was particularly fond of the fine arts. At the Princess's wish, attendance at court concerts was now open to the citizens of Bückeburg and to visitors. Forkel (*Musikalischer Almanach*, 1782) regarded the little Kapelle as one of the finest in Germany. Juliane took lessons in foreign languages and drawing, and studied the keyboard with J.C.F. Bach. Among the better known of his pupils (in addition to his son Wilhelm Friedrich Ernst and C.F. Geyer, later Kantor of Bückeburg) were the future Thomaskantor A.E. Müller and perhaps Adolf, Baron von Knigge. For teaching purposes Bach wrote a number of pedagogically valuable keyboard works, including the *Sechs leichte Clavier-Sonaten* (printed in 1784 with a dedication to Princess Juliane), variations (including a set on 'Ah, vous dirai-je maman'), concertos and sonatas for four hands.

Bach also increased his efforts to get his compositions published. He could not muster enough subscribers for the edition of the large-scale sacred works he had been planning since about 1773, but he did publish the collection *Musikalische Nebenstunden*, containing mainly works by himself but also some songs by W.F.E. Bach and by noble dilettantes from Bückeburg and Minden. A comment in a letter to Breitkopf of 1 October 1788, in which Bach sought subscribers for a collection of three easy keyboard sonatas ('These sonatas are easy, written in the latest style and composed in London, where they were much to the liking of Her Majesty the Queen') may suggest that he paid a second visit to England, though further evidence of this is so far lacking.

The arrival in Bückeburg about 1793 of the brilliant Bohemian musician Franz Neubauer presented Bach with unaccustomed competition in the last years of his life. It inspired him to write new works (including a dozen large-scale symphonies and several double concertos) but it also intensified the latent depression from which he had been suffering since the death of his half-brother Carl Philipp Emanuel and which may have hastened the course of the chest ailment that brought about his death on 26 January 1795. In his obituary his friend Karl Gottlieb Horstig, superintendent at Bückeburg from 1793, described him as an industrious composer, always ready to be of service, and praised his upright character and 'kindness of heart'.

2. Works. With his predisposition towards the use of existing models, his extensive revisions and his liking for experimentation, Bach showed in his compositions several apparently contradictory tendencies. His father had given him a thorough grounding in keyboard and organ playing and in the rudiments of composition, but when he moved to Bückeburg he found himself in an entirely different world. As a result he was obliged to adapt to new stylistic principles, studying them on his own with concrete models. His first works in almost all genres, therefore, are stylistic copies: the early piano sonatas are based on models by C.P.E. Bach, the aria 'Luci amate, ah, non piangete' (*c*1760) is an arrangement of a work by Matteo Capranica, and *Der Tod Jesu* (1769) is influenced by C.H. Graun's setting of the same text (1755). However, Bach usually managed to move on rapidly, leaving his models behind, and to find new forms of expression. His secular cantatas from the period around 1773 are particularly noteworthy. They include *Die Amerikanerin* (after H.W. von Gerstenberg's *Lied eines Mohren*) and *Ino* (text by Ramler), which during Bach's lifetime brought him a reputation as one of the major cantata composers in Germany. The oratorios and cantatas written in collaboration with Herder may merit similar interest; they remained unpublished but were circulated and appreciated in aristocratic circles in Rheda, Detmold and Wernigerode. Although Bach preferred a lyrical tone, he had a special feeling for dramatic development, particularly evident in accompagnato scenas. The style of his vocal compositions is close to that of C.H. Graun, Telemann, and (particularly in choral movements) his brother Carl Philipp Emanuel, whom he even surpassed in his solidly constructed but fluent fugues. His keyboard compositions cover a wide range, from simple practice pieces in the style of J.S. Bach's two-part Inventions (in the *Musikalische Nebenstunden*), through dance pieces and 'easy keyboard sonatas' to extremely demanding works written for his own use or for patrons outside Bückeburg. They felicitously unite the modern stylistic features of J.C. Bach with the sound musical construction of Carl Philipp Emanuel. The *Drei leichte Sonaten fürs Klavier oder Piano Forte* (Rinteln, 1789), as well as many of the works surviving only in manuscript, are among the best keyboard compositions of their time.

Bach's compositions after the death of Count Wilhelm are notable for a willingness to experiment, encouraged by the attitude of Princess Juliane, who was always open to innovations, and by his continuing to work with an excellent Kapelle. He was turning to new genres even in the last years of his life, for example in the sonatas for two pianos of 1791, the wind septet of 1794 and two concertos for keyboard and another instrument dating from about 1791. In accordance with Bach's conception of his duties, compositions written for the court and other patrons were exclusively for the use of those who had commissioned them, with the result that most of his music could not be widely disseminated. His reputation was

therefore founded mainly on the compositions published during his lifetime. The music collection of the Bückeburg Hofkapelle, left by Prince Adolf in 1917 to the Fürstliches Institut für Musikforschung in Bückeburg which he had founded (in 1935 it became the Staatliches Institut für Musikforschung, Berlin), was destroyed in World War II, apart from a few fragments, making it difficult to evaluate Bach's work as a whole. Almost without exception, the innovative compositions of his last years in particular were extant only in this collection.

(12) Bach, Johann [**John**] **Christian** (*50*) (*b* Leipzig, 5 Sept 1735; *d* London, 1 Jan 1782). Composer, youngest son of (7) Johann Sebastian Bach. As a composer he was the most versatile of J.S. Bach's sons and the only one to write Italian operas. He was an important influence on Mozart and, with C.F. Abel, did much to establish regular public concerts in London.

1. Germany and Italy. 2. London, 1762–72. 3. Mannheim and London, 1772–82. 4. Style and reputation. 5. Church music and oratorio. 6. Operas. 7. Symphonies and concertos. 8. Keyboard and chamber music.

1. GERMANY AND ITALY. It is likely that J.C. Bach's early musical education was supervised by his father, though some instruction may have been given by Johann Elias Bach (*39*), who lived in the Leipzig household between 1738 and 1743 and acted as secretary to the elder Bach. Johann Christian himself assumed some secretarial duties in 1749–50, preparing music manuscripts and receipts on his father's behalf. Christian, evidently a favourite child of Sebastian, inherited three of his father's harpsichords. J.S. Bach's keyboard music played an important role in his son's development: the second book of *Das wohltemperirte Clavier* was completed in the early 1740s and probably served as a teaching manual for Christian, as had the first book for his half-brother Wilhelm Friedemann in the 1720s; it is known that J.C. Bach owned a manuscript of the English Suites; a knowledge of the B♭ keyboard Partita must be inferred from Christian's use of a modified version of the opening in his accompanied sonata op.10 no.1; and the earliest datable music manuscript in J.C. Bach's hand, a *Stammbuch* entry dated 23 October 1748, is a keyboard version in D minor of the Polonaise from J.S. Bach's Second Orchestral Suite. None of J.C. Bach's own compositions can be assigned to his Leipzig years except for a march in the second *Clavierbüchlein* of Anna Magdalena Bach (BWV Anh.131) and, possibly, a handful of keyboard dances.

After his father's death in 1750 Christian moved to Berlin, where he studied composition and harpsichord with his half-brother Carl Philipp Emanuel. According to Gerber, the young Bach performed his own works on the harpsichord in Berlin 'with great applause' and composed

his first large-scale compositions. Of the '5 harpsichord concertos, 1 cello concerto, 2 trios and 3 arias' listed as Johann Christian's in Emanuel's *Nachlass* (1790), only the harpsichord concertos – large-scale works in the manner of C.P.E. Bach – are known to survive. The authenticity of the first publication attributed to J.C. Bach, the ode *An Aeglen* in a collection of 1755, has been disputed by Warburton (*Thematic Catalogue*, 1999). A similar song, *Mezendore*, printed in a similar collection the following year, is probably by Bach, though J.C.F. Bach's authorship cannot be ruled out. A third song, *Der Weise auf dem Lande*, may be confidently attributed to J.C. Bach's Berlin period; the autograph entry in a *Stammbuch* is dated 16 April 1755.

In late spring or summer 1755 Bach took his first steps towards abandoning the Protestant, Kapellmeister tradition which had nourished the Bach family for two centuries: he left for Italy, possibly in the company of an Italian lady singer, and took up residence in Milan. Little is known about his first months there: three arias attributed to him were evidently inserted in Cocchi's *Emira*, performed in Milan in January 1756. Evidently he was installed in the house of his Milanese patron, Count Agostino Litta, by that time and began having lessons in counterpoint with Padre Martini in Bologna. The main biographical sources for Bach's Italian years are his letters to Martini, beginning in January 1757 and continuing sporadically after Bach settled in London in 1762. These reveal Bach's expanding reputation as a composer, first in Italy and later north of the Alps. His first music written in Italy was mostly liturgical, some of it in the antique contrapuntal style associated with Martini, and performed in churches in Milan and elsewhere. In June 1760 Bach was appointed second organist at Milan Cathedral, and it is probable that he embraced the Roman Catholic faith at this time. Increasingly, the opera house provided a stronger lure for him. After composing arias for pasticcios in Milan and elsewhere, he was commissioned to write an *opera seria* for the Teatro Regio, Turin; *Artaserse* was given its première there on 26 December 1760. In the following year Bach, neglecting his organist's duties in Milan and thereby attracting Litta's displeasure, travelled extensively in Italy, composing his next and most popular early opera, *Catone in Utica*, for the S Carlo, Naples, and *Alessandro nell'Indie* for the same theatre (performed on 20 January 1762; a cantata by Bach for the birthday of Charles III of Spain was performed on the same day). *Catone* was revived in Milan in 1762, performed in Pavia, Perugia and Parma in 1763 and again in Naples in 1764 and was heard as late as 1768 in Brunswick. Wider European recognition was achieved with the publication of the overture to *Artaserse* by Venier in Paris in 1761. Bach himself had signalled this recognition in an important letter to Martini dated 14 February 1761: 'for some time past I have almost had to put my studies aside, being every day called upon to write something for concerts – a symphony, concerto, cantata and so forth for Germany or Paris'. The success of his operas attracted the attention of the management of the King's Theatre, London, who commissioned two operas for the 1762–3 season; by accepting he gave up the opportunity of composing a third opera for Naples and one for Venice. Bach sought leave of absence for a year from the Milan Cathedral authorities, and although the post was kept open for him, he never returned. In late June or early July 1762 he made his way to London for the final and decisive stage of his career.

2. London, 1762–72. During Bach's 20 years in London he lived comfortably at various addresses in Soho, Mayfair and later Richmond and Paddington. He found fame, success and, at least until the late 1770s, financial stability. He enjoyed the acquaintance of the royal family, the patronage of the aristocracy and the friendship of musicians and artists, including Abel, the painter Gainsborough and Charles Burney, and soon established a preeminent position in the concert and operatic life of the city. If, as Burney stated, Bach was initially disappointed by the mediocre operatic standards in the city, his future in London was assured by the triumph of his first complete stage work, *Orione* (February 1763; the première was attended by King George III and Queen Charlotte), followed by the less successful *Zanaida* (May 1763), and by his appointment as music master to the queen. It was now unnecessary for him to return to the claustrophobic and restrictive atmosphere of Milan. Bach's court duties involved giving music lessons to the queen and her children, organizing chamber concerts, directing the queen's band and accompanying the flute-playing of the king. Links with the royal family were strengthened with the publication of the keyboard concertos op.1, advertised in March 1763 and dedicated to Queen Charlotte. The finale of the sixth concerto, a set of variations on *God Save the King*, became one of Bach's most popular and oft-published works.

Bach's earliest years in London were those of his most vigorous activity in the opera house. His relationship with the King's Theatre was not without setbacks. The violinist Felice Giardini took over the management for the 1763–4 season, and although he and Bach were later to collaborate professionally there were tensions in their relationship; no operatic work by Bach was staged during Giardini's tenure. Bach was invited to return to Naples, but he evidently preferred to remain north of the Alps. He travelled to Paris in July 1763, establishing an important connection with the city, and was immediately granted a privilege for the publication of his works there; a similar privilege was granted in London on 15 December that year.

In the 1764–5 season Bach returned to the King's Theatre, contributing to two pasticcios and composing *Adriano in Siria*, given on 26 January 1765. The opera received seven performances and met with Burney's disapproval: 'Every one seemed to come out of the theatre disappointed'. Apart from a few arias contributed to pasticcios, Bach had little further to do with the King's Theatre until *Carattaco*, performed on 14 February 1767. Like *Orione*, it is on a grand scale with choruses, but although praised by Burney and others it was never revived. The singer Cecilia Grassi, later Bach's wife, was to have sung in it, but she was indisposed. Bach also contributed arias for the English stage, including music for the pasticcios *The Maid of the Mill* (1765), *The Summer's Tale* (1765) and *Tom Jones* (1769). In addition, he supplied songs, occasionally arranged from operatic arias, for performance at Vauxhall Gardens; four sets of Vauxhall songs were published between 1766 and 1779.

From his earliest days in London Bach took advantage of the flourishing music trade, publishing a whole series of works and establishing a relationship with the printer and publisher Peter Welcker, and later with his son John.

Bach's practice for the most part in the 1760s was to publish a work under his own auspices; Welcker would usually reissue it shortly afterwards under his own imprint. This relationship began about 1765 with the reissue of the concertos op.1 (first published in 1763) and continued with the accompanied sonatas op.2, the first set of symphonies op.3 and the first set of canzonets op.4, all dating from 1765. Most of Bach's works were published a few months later in Paris by Huberty (and later Sieber) and by Hummel in Amsterdam. There is reason to believe that Bach had some arrangement with the continental firms, especially Sieber, who published the first edition of the piano sonatas op.17 (as op.12) in Paris in 1773 or 1774. Bach evidently took great care to protect his interests, and in 1773 he took Longman, Lukey & Co. to court for the unauthorized publication of several pieces.

From early 1764 Bach shared lodgings with Carl Friedrich Abel, the composer and viol da gamba player who had lived in London since 1759 and whose father had served at Cöthen with J.S. Bach. Carl Friedrich himself had studied with Sebastian in Leipzig and therefore may have known Johann Christian as a boy. Their collaboration in the series of concerts later dubbed the Bach-Abel concerts was to have a major impact on London concert life. The first one took place at the Great Room in Spring Gardens on 29 February 1764. In the following year they participated in the subscription series organized by Teresa Cornelys at Carlisle House, Soho Square, giving ten concerts in all that year and increasing to 15 from 1766. Bach and Abel took over the management of the concerts from 1768 when they moved to Almack's Assembly Rooms in King Street, St James's, where they remained until 1774. The concerts were directed alternately by Bach and Abel. Although few details are known, the programmes included the latest symphonies, concertos, chamber and vocal works of Bach, Abel and other fashionable composers. The performers were the best in London, and often of German origin; they included the oboist J.C. Fischer, the violinist Wilhelm Cramer (father of John, the pianist) and later the pianist J.S. Schroeter, one of Bach's pupils.

In April 1764 Leopold Mozart arrived in London with his family. Although there is no evidence that Wolfgang Amadeus appeared at the Bach-Abel concerts, he did perform at court and became a great admirer of J.C. Bach. They are known to have performed duets on the harpsichord together. Mozart had a high regard for the man and his music: in the early 1770s he arranged three of Bach's piano sonatas from op.5 as keyboard concertos, and the symphonies and sonatas from the time of his 15 months in London bear the stamp of both Bach's and Abel's music. The Mozarts evidently left London in 1765 with an autograph manuscript of a piano sonata by Bach (later published in modified form as op.17 no.3) which was kept in Leopold Mozart's library in Salzburg.

Bach's keyboard sonatas op.5, published in 1766, are a landmark in that they are the first published in London to bear the option of the piano on the title-page. Bach's central role in the development of the piano in London is defined by Burney: 'After the arrival of John Chr. Bach in this country, and the establishment of his concert[s] . . . all the harpsichord makers tried their mechanical powers at piano-fortes'. Bach is credited with performing the first solo in public on the piano in 1768 and had dealings with many of the major instrument makers of the day. He is known to have sent pianos to France, to the pianist Madame Brillon and also to the daughter of the Encyclopedist Diderot. A square piano, apparently by Zumpe, survives in a British private collection, bearing Bach's signature on the soundboard.

At the end of the 1760s Bach was well established as the leading composer and musician in London, and as an international figure much in demand as a composer, performer and teacher. He evidently charged high fees as a teacher according to Charles Wesley writing in the late 1770s. Works such as the symphonies opp.3, 6 and 9 and piano concertos op.7 were performed in all (and published in many) of the major music centres of Europe. In the early 1770s this fame was consolidated in London and on the Continent. In 1770 he wrote his last major religious work, the two-act *Gioas re di Giuda*, performed at the King's Theatre and revived the following year. R.J.S. Stevens reports that Bach, persuaded to perform an organ concerto between the acts, was hissed at by the audience and laughed at by the choristers for his style of playing – the first reference, perhaps, to Bach's deteriorating keyboard abilities. In 1770, also for the King's Theatre, Bach and Pietro Guglielmi adapted Gluck's *Orfeo ed Euridice*, adding choruses and supplementary music to bring it to 'a necessary length for an evening's entertainment'. Although it blunted the reform elements in Gluck's opera, this version was a success; it was revived with modifications in 1771 and 1773 and was also given at the Teatro S Carlo in Naples in 1774.

3. Mannheim and London, 1772–82. Apart from the two-act serenata *Endimione* (1772), no new work by Bach was performed at the King's Theatre until 1778. In the meantime he fulfilled operatic commissions abroad. In about 1770 he had befriended Johann Baptist Wendling, first flautist in the electoral orchestra at Mannheim and husband of the singer Dorothea (both were later friends of Mozart). It was perhaps due to Wendling, who had lodged with him during his time in London, that Bach was commissioned to write *Temistocle*, to a libretto adapted from Metastasio by the Mannheim court poet Verazi, for the nameday festivities of the Elector Carl Theodor. The orchestra in the German city was unrivalled in quality, and Bach's sumptuous score exploits the capabilities of the Mannheim orchestra and soloists to the full. Bach was able to experience this at first hand when he travelled to Mannheim in August or September 1772 and remained there for the première on 5 November. The opera was extremely successful and was revived the following year. This elicited a further operatic commission, and the result, *Lucio Silla*, was performed on 5 November 1775. It is not known for certain whether Bach himself attended the performance, but given that he attended all his other operatic premières it is possible that he made the trip. *Lucio Silla* was evidently less successful, although it was valued by Mozart who examined the score in Mannheim in 1777. Mozart himself had set the same text, by Giovanni de Gamerra, for Milan in 1772. Other works by Bach performed at Mannheim include the cantatas *Amor vincitore* (first performed in London in 1774) and *La tempesta* (published in Mannheim in 1778). *Endimione* was revised for a performance there in 1774.

The early 1770s saw a number of new publications: the keyboard concertos op.7 (1770), the flute quartets op.8 (1772) perhaps written with Wendling in mind, three

symphonies op.9 (1773), the accompanied sonatas op.10 (1773) and the quintets op.11 (1774) dedicated to the Elector Carl Theodor. Many of these pieces would have been used in Bach's English concerts, which were not restricted to London. In 1773 he visited Blandford and Salisbury, performing there with Cecilia Grassi. Terry and others have suggested that they married later in 1773 or early in 1774, on the evidence that Bach moved to 80 Newman Street, while Abel moved elsewhere. But concert advertisements continued to refer to Cecilia as Signora (or Mrs) Grassi until at least 1776, and so the date of the wedding remains in conjecture.

In 1774 the Bach-Abel concerts moved back to Carlisle House, Soho, now vacated by the bankrupt Mrs Cornelys. But Bach and Abel had more ambitious plans: with Giovanni Andrea Gallini they acquired a property in Hanover Square, on the corner of Hanover Street, and in the garden built a new concert hall, the Hanover Square Rooms, a lavishly appointed building with paintings by Gainsborough. This was the final home of the Bach-Abel concerts, but it also marked the beginning of their decline. Bach's finances were depleted and receipts diminished, especially after 1778. The concerts remained Bach's main forum for new works, including the cantatas *Cefalo e Procri* (1776) and *Rinaldo ed Armida* (1778). It is likely that the final set of keyboard concertos, op.13 (1777), received an airing there, along with his last major set of symphonies (including three for double orchestra) op.18 and the last major chamber works, including a sextet for keyboard, oboe, strings and two horns and quintets and quartets for various combinations of strings, keyboard and woodwind. Probably these chamber works were also performed by the queen's band at Richmond Lodge. Bach had taken a house nearby as early as 1770, and Mrs Papendiek recalled performances there led by Bach and Abel.

In the mid-1770s Padre Martini requested Bach to send him his portrait. Although Gainsborough's celebrated painting (fig.10) was apparently completed by May 1776, Bach waited for over two years before despatching it to Italy. It survives in the Civico Museo Bibliografico Musicale, Bologna, and another version, formerly in the collection of the Earl of Hillingdon, is in the National Portrait Gallery, London.

Bach made a return to the King's Theatre with the revival of *Orione* in 1777 (in a revised version) and in the following year produced his last and finest stage work for London, the opera *La clemenza di Scipione* (4 April 1778). Bach took the trouble to have the full score published (omitting most of the recitatives), a practice almost unknown in London in the 1770s. In 1778 Bach's brother Johann Christoph Friedrich paid a visit to London with his son Wilhelm Friedrich Ernst, who stayed behind after his father had returned to Germany and remained in London until after Johann Christian's death in 1782.

Bach's last complete operatic venture, the *tragédie lyrique Amadis de Gaule* was performed in Paris in 1779. The composer had visited the French capital in August 1778 to audition singers, at the same time renewing his acquaintance with Mozart, who reported to his father his delight in meeting again his former mentor. *Amadis*, an unusual work, clearly written to accord with the current French taste, was a failure. It was withdrawn for revision after only three performances and returned to the stage in January 1780. A manuscript in the Bibliothèque de

10. Johann Christian Bach: portrait by Thomas Gainsborough, 1776 (Civico Museo Bibliografico Musicale, Bologna)

l'Opéra, Paris, presumably for the revised version, shows heavy cuts and alterations. In the printed score, which appeared shortly after Bach's death, these cuts are restored. The first issue contains a poignant preface by Bach's widow, in which she states that the published version is not as it was performed in Paris, but is the version preferred by the composer.

The last years of Bach's life show declining fortunes and health. The Bach-Abel concerts continued to lose money; Bach was apparently defrauded of more than £1000 by a servant and his bank account became overdrawn. His pre-eminence in the opera house was usurped by Sacchini and others, and in the concert hall by his pupil Johann Samuel Schroeter; as Mrs Papendiek remarked: 'Bach played occasionally, but Schroeder (*sic*) was the planet'. Ill-health supervened: Cecilia Grassi in the preface to *Amadis* reported on the 'long illness which led him to the tomb'; the last known example of his handwriting, a list of subscribers for a proposed (but unrealized) series of new chamber works, dating from 1780 or 1781, reveals a shakiness of hand far removed from the confident script of Bach's earlier years; and on 14 December 1781 the singer Angelo Morigi sent news to Martini that Bach was suffering from a chest illness. Bach died on 1 January 1782 and was buried in St Pancras churchyard on 6 January, leaving substantial debts which neither the last season of the Bach-Abel concerts, continued by Bach's widow, nor a benefit concert on 27 May 1782 managed to efface completely. Cecilia Bach returned to Italy via Paris in summer 1782 after some of her debts had been repaid with assistance from Queen Charlotte.

Bach's death elicited obituaries particularly in the German magazines. None is as eloquent as the few words

of Mozart who, in a letter to his father, described Bach's passing as 'a loss to the musical world'.

4. Style and reputation. J.C. Bach's music is more cosmopolitan and varied than that of any other of J.S. Bach's sons. Abandoning the restrictive Lutheran sensibility of his brothers, he turned his face towards the south, embracing Catholicism and Italian opera, and his musical style was transformed accordingly. Bach's German works (before mid-1755), notably the keyboard concertos written in Berlin, are strongly influenced by C.P.E. Bach, with their preponderance of minor keys, their severe character, and their solid, lumbering ideas with long melodic lines, wide leaps, sudden interruptions to the rhythmic and melodic flow and syncopations. After the move to Italy, this severe style all but vanished. It is still to be found from time to time, for example in the opening movement of the *Dies irae*, the keyboard Toccata in B♭ minor and the A♭ Sonata, though in a watered-down manner. The influence of Padre Martini is prominent in the first Italian works, notably in the strict counterpoint and antique pseudo-Palestrina style of the music for the Office of the Dead (1757) and also in the keyboard Sonata op.5 no.6 which, although not published until 1766, recalls Martini's sonatas of the 1730s in its serious prelude, double fugue and gavotte.

The main influence on Bach during his years in Milan was Italian *opera seria*, which he wholeheartedly embraced. It transformed his style, tipping the balance from severity to a lighter, more bland manner: the stiff, terse and long-winded ideas of the Berlin works are softened into smooth, clear, symmetrical phrases composed of short motivic ideas underpinned by simple harmonies, with none of the sudden dramatic surprises of the Berlin concertos and with a marked slowing-down of the harmonic rhythm. The slow movements are often imbued with a sensuality and quiet passion unknown in the earlier works. Most compositions of the Italian years (1755–62) – the three operas, at least one symphonie concertante, church works, accompanied sonatas and operatic overtures – are representative of this new *galant* manner.

It was this 'international' style that Bach brought to London. During his period in England his musical language developed: the short motivic phrases of his Italian works gradually expanded into a more wholeheartedly melodic style, in some cases influenced by British popular songs and folksong. Bach widened his tonal range and structures became more expansive and varied, the binary sonata forms of his earlier works becoming larger and more diverse, often embracing a full recapitulation in the tonic key. Burney remarked that

> Bach seems to have been the first composer who observed the law of contrast as a principle. Before his time, contrast there frequently was in the work of others, but it seems to have been accidental. Bach in his symphonies and other incidental pieces as well as in his songs, seldom failed, after a rapid and noisy passage, to introduce one that was slow and soothing.

Burney thus draws attention to Bach's habitual use of contrasting themes in the sonata structures of his London works, and these 'second subject' ideas are a consistent feature of his later style.

Bach's orchestration is often imaginative and felicitous, and occasionally calls for new or unusual instruments to achieve effects – for example clarinets in *Orione*, a pair of 'octave flutes' in the Vauxhall song 'Hither turn thy wand'ring eyes' and obbligato instruments such as the bassoon in the aria 'Non m'alletta' from *Temistocle*. Perhaps as a result of exposure to the orchestral manner of the Mannheimers, his orchestration became even more adept and imaginative, with greater freedom in the use of woodwind and pizzicato string effects and the use of two orchestras in three of the op.18 symphonies.

In London Bach broadened his range of musical subjects, embracing (in addition to operas and concertos) symphonies, chamber works, popular songs, canzonets, cantatas and various types of keyboard work, including duet sonatas. These are written in a Classical style with italianate thematic material, enlivened by contact with French and British melodies and ideas and allied to German strength and rigour. This synthesis of musical idiom resulted in an essentially popular style geared towards the large, music-loving aristocratic and middle-class audiences of London, which, as Haydn discovered in the 1790s, appreciated new and lavish effects and at the same time enjoyed familiar themes. Bach's use of national songs in concerto finales and his exploitation of the piano and other new instruments, such as the 'voce umana', in the Bach-Abel concerts can be regarded as catering to the taste of the new audience.

Bach's music had considerable influence on contemporary composers in London, namely Schroeter and Mazzinghi (his pupils), J.C. Fischer, W.F.E. Bach and, most notably, Mozart, whose symphonies and sonatas of the mid-1760s reveal the influence of both Bach and Abel. Although commentators have often noted several resemblances, such as that between 'Martern aller Arten' in Mozart's *Die Entführung aus dem Serail* and 'Infelice, in van m'affanno' in Bach's *La clemenza di Scipione*, Bach's influence on Mozart is probably more general and fundamental, notably in the sensual slow movements and in particular in Bach's highly developed sense of musical balance.

It is often stated that Bach's reputation was immediately eclipsed after his death, that his music was no longer performed and his influence died with him. This is not strictly true. Though his reputation continued to decline in the 1780s, an analysis of London concert programmes reveals that Bach's music continued to be performed in London at least until the mid-1790s, when his symphonies were still played alongside those of Haydn. His works, and arrangements of them, were posthumously printed in London and on the Continent, albeit sporadically, until the mid-1790s, and they continued to be available in manuscript until the end of the century and beyond, to judge by the vast number of late copies now in libraries in Italy and elsewhere. It was in the early 19th century that Bach's music virtually ceased to be performed and published. An exception was the extraordinarily late revival (in a thoroughly revised form) of *La clemenza di Scipione* at the King's Theatre in 1805, perhaps due to the advocacy of his pupil Mrs Billington; there were also isolated pockets where Bach's works continued to be played in the 19th century, such as the monastery of Einsiedeln, where his church music was still heard and where 'new' religious works were created by supplying contrafact Latin texts to Italian arias from his operas. The 19th century nevertheless proved to be the nadir of J.C. Bach's popularity. His self-deprecatory remark, 'My brother [C.P.E. Bach] lives to compose, I compose to live', provided the underlying text of much of the critical writing on the composer. It was only in the early years of

the 20th century, with the writings of Terry, Schökel and Tutenberg among others, that a more balanced view of J.C. Bach has been achieved and the composer has taken his place among the most gifted and influential musicians of the early Classical period.

5. Church music and oratorio. Bach's Latin church music comprises large-scale psalm and canticle settings, mass movements, music for the Office and Mass for the Dead (including three lessons, an invitatory, an introit, Kyrie and *Dies irae*), all scored for chorus, soloists and orchestra; and smaller works, such as motets for a single voice and orchestra, including settings of *Attendite mortales* and *Salve regina*. With only two exceptions, the oratorio *Gioas, re di Giuda* and *Let the solemn organs blow*, all the pieces are for Roman Catholic services; by contrast with his father and brothers, there are no Lutheran church works by J.C. Bach. Most of the religious works were composed during his Italian period (1755–62), and most date from 1757–9, that is, surprisingly, from the period before Bach took up his only church post as second organist at Milan Cathedral. The most important sacred composition of his later years is his only oratorio, *Gioas* (1770), to an Italian text by Metastasio.

The earliest church works, notably the introit and Kyrie from the *Messa de' morti*, are in a pseudo-Palestrina contrapuntal style influenced by Padre Martini. For example, the responsory sections of the invitatory *Regem cui omnia vivunt* employ cantus firmus technique in the upper parts. All these apprentice works were shown to Martini for his comments, and though several have the manner of elaborate contrapuntal exercises they were nevertheless performed in churches in Milan. The impressive *Dies irae*, two early *Magnificat* settings and a *Te Deum*, all dating from 1757–8, are similarly somewhat backward-looking in their use of two choirs, often treated antiphonally. In the later church works, with Martini's influence clearly waning, the style is more modern and the choral writing less contrapuntal, often with a simple chordal texture pitted against an active orchestral accompaniment, though the composition is frequently rounded off by a fugue, usually based on a brief, desultory subject treated in business-like fashion. Alongside the choruses, even those in archaic style, are arias and duets influenced by contemporary Italian opera, frequently of a virtuoso kind and sometimes with elaborate instrumental obbligatos (for organ, bassoon etc.). Perhaps the most ambitious of these is the aria 'Intellectus bonus' from *Confitebor*, which requires a chamber accompaniment of six solo instruments. As Bach matured, the number and importance of the arias increased, showing clearly where his true interests lay.

Arias dominate Bach's only oratorio, *Gioas, re di Giuda*, an opera in all but name and a setting of a text by Metastasio. The choral writing is nevertheless composed with English taste in mind and displays the strong influence of Handel.

6. Operas. Bach was no innovator in the world of *opera seria*. All ten works written for Italy, London or Mannheim use the Metastasian format of recitative punctuated by long arias. In the Italian works and those written for Mannheim, the da capo aria is frequently used; in the London operas there is more variety in aria forms and the da capo is used less and less (*La clemenza di Scipione* has none at all). The chorus is more prominent in the London operas, in accordance with British taste, notably in *Orione*, *Zanaida* and *Carattaco*. These three works also are not based on texts by Metastasio and in terms of subject differ from the statuesque classical dramas of the other operas, with their greater emphasis on spectacle and lavish effects.

Bach would have encountered Italian and italianate opera in Berlin. Indeed C.P.E. Bach's *Nachlass* documents '3 Arien' composed by Christian before he went to Italy in 1755. His arrival in Milan allowed him to encounter *opera seria* at source and he immersed himself in the music and style. Three arias attributed to Bach, evidently inserted in Cocchi's *Emira* in January 1756, survive in a contemporary manuscript of Italian provenance in the Bibliothèque Nationale, Paris. Bach contributed arias to other operas elsewhere in the late 1750s, but his first complete score, *Artaserse*, was not composed until 1760 for Turin. In it he severely curtailed the Metastasian recitative and used a variety of aria forms. The da capo principle returned in force in his two works for Naples, *Catone in Utica* (1761) and *Alessandro nell'Indie* (1762). Two arias, 'Confusa, smarrita' from the former and 'Non so d'onde viene' from the latter, achieved great popularity in Bach's lifetime, the second attracting the young Mozart's approbation. Bach made use of them again in pasticcios in London.

Of the five operas for London, only *Adriano in Siria* (1765) is without chorus and is as dominated by arias as Bach's works for Italy. Significantly, it was not a success. Perhaps the finest of the London operas is the last, *La clemenza di Scipione* (1778), in which, with da capo arias banished in favour of a variety of structures and with a more prominent use of the chorus, Bach achieved a greater sense of movement and dramatic flow. He also made an interesting attempt to integrate the overture into the opera: motifs from it appear in the final chorus in Act 3.

For the two operas for Mannheim, *Temistocle* (1772) and *Lucio Silla* (1775), Bach took advantage of the superb orchestral facilities of the electoral court orchestra and produced showpieces of vocal and instrumental virtuosity, with the woodwind in particular gaining especial prominence. Da capo arias predominate in *Temistocle*, but in *Lucio Silla* a greater variety of forms is used.

Bach's most ambitious operatic venture was his only *tragédie lyrique* written for Paris, *Amadis de Gaule* (1779). The libretto, a botched condensation into three acts of Quinault's five-act text written for Lully, is unlike anything Bach had previously set, with its vivid plot set in chivalric times – a tale of love, jealousy and attempted revenge with frequent interventions of the supernatural (ghosts, demons, etc.) and nature (thunder, lightning and enveloping clouds). The chorus, in various guises as prisoners or demons, is a protagonist, and ballets and divertissements are important elements. Bach rose to the challenge magnificently, taking advantage of the large Paris orchestra to create sumptuous and occasionally extraordinary effects. As in *La clemenza*, the overture is integrated into the opera: a dramatic crescendo and diminuendo on a diminished 7th chord scored for trombones, bassoon and woodwind is used again in Acts 2 and 3. The opera had the misfortune to receive its première at the time of the Gluck–Piccinni controversy and suffered accordingly; it was not revived until the 20th century.

7. Symphonies and concertos. It is probably to the symphony and the piano concerto that Bach made his most important contribution. For Bach the symphony was intimately connected with the three-movement (fast–slow–fast) Italian operatic overture and all his mature symphonies follow that plan; indeed Bach regarded the word 'overture' as synonymous with 'symphony'. C.P.E. Bach's *Nachlass* records that Johann Christian composed a symphony and an overture, both in six parts, before he left for Italy. These are almost certainly lost. His first opera overtures written for Turin and Naples appeared in print in Paris and in London in the early 1760s. The first symphonies for concert use, the set of six op.3, appeared in London in 1765. Their publication coincided with the early years of the Bach-Abel concerts and these works were almost certainly performed there. They are fine pieces, with sturdy, sonata-form first movements, contrasting second subjects and practically all-inclusive recapitulations in the tonic key. The opening of the Fifth Symphony is a particularly fine example, with its playful, quasi-Baroque running bass and attractive syncopated melodic material. The central slow movements mine that particular vein of sensual, nocturnal music that Bach made his own and the finales are in dance rhythms – minuets, gigues or bucolic dances as in the earthy horn-calls of the last movement of no.6.

Bach himself published no other set of symphonies in England until 1781. Three sets, opp.6, 8 (containing three works from op.6) and 9, were printed in the Netherlands between 1770 and 1775 and are again, with one exception, concert works. The most extraordinary piece in these collections is op.6 no.6 in G minor, Bach's only gesture in the direction of the 'Sturm und Drang' symphony and a work worthy to be mentioned alongside the early G minor symphonies of Haydn and Mozart. All three movements are, extraordinarily, in the minor key (the slow movement is in C minor) – a noteworthy feature for a composer normally reticent in his use of the minor mode – and they all seem to breathe the air of an earlier sensibility: the presence of C.P.E. Bach and the north German school is not far away. Given that J.C. Bach often recycled earlier material, there is reason to conjecture that much of the material here might have belonged to one of the lost works mentioned in C.P.E. Bach's *Nachlass*.

Bach's crowning achievements in the concert symphony are the three for double orchestra published in the op.18 set (1781). They are large, richly orchestrated works, making much interplay of the two orchestras treated antiphonally and combining different textures, for example violins in four parts. The woodwind instruments, now liberated from merely doubling and reinforcing the strings, are given solos and contrasting passages.

Most of Bach's concertos are for keyboard, although works survive for flute, oboe and bassoon and an early lost composition for cello is listed in his half-brother's *Nachlass*. Also listed there are the five keyboard concertos which survive in Bach's autograph in Berlin. A manuscript of a sixth in F minor also probably dates from those early years. The influence of C.P.E. Bach presides over these works, which adopt the ritornello/solo technique of the elder Bach's Berlin compositions. None of Bach's keyboard concertos can be firmly dated to his Italian period, though it is possible that several of the op.1 set (1763) may have been composed there. This set and opp.7 (1770) and 13 (1777), all first published in London, established Bach's new, more Classical concerto style, with fewer and pared down ritornellos and a simpler, sparer keyboard style. This became the model for the keyboard concerto in London in the late 18th century.

Most of Bach's mature keyboard concertos are in two movements, without a slow movement; two concertos from each of the three published collections are in three movements. In the later two sets Bach, in line with his maturing style, broadened the musical range, expanded the length of the movements and enriched the melodic content. In a recently discovered, partly autograph manuscript of the solo part of op.7 no.6, is revealed a much more extended version of the concerto, with longer ritornellos and a more technically difficult and extended keyboard part. Bach evidently reduced the scale of the work for publication.

Although no concertos can be ascribed with certainty to Bach's Italian years, he did experiment with the genre of the symphonie concertante. The existence of an autograph manuscript in Regensburg of a work in D major, in his early hand and written on Italian paper, suggests that Bach's earliest essays may date from the early 1760s. In all about 17 works in this or related genres are attributed to Bach. Solo instruments vary from two to nine players; most works are in three movements, though a number, including the earliest, are in two.

8. Keyboard and chamber music. As a keyboard performer and teacher Bach composed a large number of works for concert and didactic purposes, including two sets of solo sonatas, accompanied sonatas and chamber works with obbligato keyboard. The composition of keyboard works forms a constant thread throughout all three periods of his creative career. The only such works which can be dated from his German years are a march in the second *Clavierbüchlein* of Anna Magdalena a series of minuets and polonaises, which he may have composed even before he left Leipzig and also an early 'Solo' for keyboard in A minor, his first substantial German harpsichord work. These were followed by sonatas in B♭ and A♭ and an intriguing Toccata in B♭ minor which have been dated to his years in Italy and survive in manuscript in Padre Martini's library (and elsewhere). Bach's lighter, italianate style can be seen in the eight accompanied sonatas in manuscript in Milan. This style was carried over into his first London works in this genre, the accompanied sonatas op.2. As in his other London works, Bach expanded and refined his musical language and forms, and in general the later sets of accompanied sonatas opp.10 (1773), 15 (1778), 16 (1779) and 18 (1780/81) are more accomplished. Opp.15 and 18 also include duet sonatas for keyboard.

The two most important keyboard publications of Bach's London years are the sonatas opp.5 and 17. The earlier set was published in 1766 and was the first publication in London to mention the option of the piano on the title-page, preceding John Burton's *Lessons* by a few months. The six works here are in a variety of styles and one at least – no.6 in C minor, with its imposing prelude, double fugue and gavotte all in the tonic key – may date from Bach's Italian years. The grandiose D major sonata (no.2), with its orchestral sonorities and changes of dynamics, represents Bach's first published attempt at idiomatic piano writing. The second set, commonly known by its London opus number, 17 (1779), was in fact published by Sieber in Paris (*c*1774) as op.12.

Once again these works reveal a wide range of styles, from the vigorous gigue finales of the Second and Sixth Sonatas to the sensuous slow movement of the C minor, one of Bach's greatest achievements.

Outstanding among the many chamber works, trios, quartets and quintets for strings and wind in various combinations are the four late pieces: a sextet, two quintets and a quartet with obbligato keyboard, published posthumously. The Sextet, for the unusual combination of keyboard, oboe, violin, cello and two horns has often been attributed to J.C.F. Bach, but a set of parts in J.C.F. Bach's hand discovered in Kraców (*PL-Kj*) transmits the work, in a slightly different form from that of the published version (1783), with an attribution to 'J.C. Bach'. The Quintet in D for keyboard, flute, oboe, violin and cello is justly one of Bach's most popular compositions. Worthy of note is the highly attractive slow movement with its pathos-filled *minore* central section, as far away from the facile 19th-century view of a 'porcelain' composer as can be imagined.

(13) Johann Michael Bach (*b* Struth, nr Schmalkalden, 9 Nov 1745; *d* Elberfeld, 1820). Composer. He was descended from a Hessian line of Bachs that can be traced back to a Caspar Bach (*d* Struth, *c*1640) and already had many branches in the 17th century. It is probable, but cannot be proved, that this line was originally connected with the main Wechmar line of the Bach family. Johann Michael evidently went on his travels at an early date, and in about 1767 visited Holland, where he was in touch with the Amsterdam music publisher Hummel; he then went to England and America. On his return he studied law in 1779–80 at the University of Göttingen, where he met J.N. Forkel, and from 1781 at Leipzig University. He was practising as a lawyer in Güstrow, Mecklenburg, in 1790 but composed music at the same time, and in 1793 (or earlier) he was appointed Kantor and organist in Tann. He was then active as a music theorist and composer in Elberfeld, and when he died there he was employed as a music teacher at the Gymnasium.

As well as an early set of piano concertos (the finale of no.6 is a fugue on B–A–C–H), Johann Michael Bach published a treatise in 1780 which had a surprisingly wide distribution in its time. His musical style is reminiscent of that of Johann Christoph Friedrich Bach (49) and rather derivative. Two of his sons were also musicians, Johann Georg and Georg Friedrich (see §I above).

(14) Wilhelm Friedrich Ernst Bach (84) (*b* Bückeburg, 24 May 1759; *d* Berlin, 25 Dec 1845). Keyboard player and composer, son of (11) Johann Christoph Friedrich Bach. He was baptized on 27 May, with Count Wilhelm von Schaumburg-Lippe standing godfather. W.F.E. Bach was musically educated by his father and Christian Friedrich Geyer, Kantor of the Stadtkirche, Bückeburg. In 1778 he went with his father to London and remained there in the care of his uncle (12) J.C. Bach, making a name for himself as a pianist and keyboard teacher. He appeared at one of the Bach-Abel concerts in Hanover Square as early as 6 December 1778, playing a sonata of his own, and his first keyboard and chamber works were published by leading English firms. Some time after the death of his uncle on 1 January 1782, W.F.E. Bach returned to Germany. His route took him through Paris and the Netherlands, where he met the publisher J.J. Hummel in Amsterdam, and then to north Germany, where he gave concerts in Oldenburg and elsewhere. According to his own account, he stayed for some time with his uncle (9) C.P.E. Bach in Hamburg before settling in 1784 in Minden, near Bückeburg. He seems to have given himself the title of Musikdirektor, since there is no evidence that such a post actually existed. His position, however, allowed him to perform dramatic works and cantatas (probably including compositions by his father). He received particular encouragement from the Kammerpräsident Franz Wilhelm Traugott von Breitenbauch (1739–96), whose daughter Antoinette (*b* 1766) was probably his pupil. Cantatas in celebration of the royal

house of Prussia, performed in 1786 and 1788, secured for Bach a post in Berlin, where he arrived at the end of March or beginning of April 1789. There he succeeded Christian Kalkbrenner (1755–1806) as Kapellmeister to the widowed Queen Elisabeth Christine and he also taught keyboard to Queen Friederike. From 1798 at the latest he was employed as teacher 'to the reigning Queen [Luise] and all the brothers and sisters of the King [Friedrich Wilhelm III]', as he put it in a letter to W.C. Müller on 14 May 1830.

Bach's salary in Berlin was a modest one, and in a letter of 15 October 1809 to the privy councillor and Oberpräsident von Altenstein, now lost, he dwelt on his poverty-stricken situation. It was improved only by a pension of 300 thaler thought to have been granted by Prince Heinrich in 1811 after the death of Queen Luise. Thereupon Bach, who had previously played an active part in Berlin concerts as a keyboard virtuoso and violinist, retired from public life. In 1843 he was present at the ceremonial unveiling of the J.S. Bach monument in Leipzig. He was twice married and had four children. He was survived by his second wife and an unmarried daughter from each marriage, one of them a good soprano and the other an alto.

W.F.E. Bach was a stylish if not outstandingly talented composer. His extant works are varied and substantial, but too many have been lost for a true assessment to be made. Apart from the few that were printed, they remained confined to the courts of Berlin and Bückeburg, which he regularly supplied with compositions until the death of Princess Juliane in 1799. Contrary to previous assumptions, most of the surviving works date from his Berlin period. Those written in London show him as a typical representative of the early London pianoforte school in the tradition of J.C. Bach and Clementi, while of the occasional cantatas written in Minden, only one survives (in vocal score). In Berlin he composed, as well as orchestral works for Queen Christine Elisabeth's Kapelle, a great many pedagogical keyboard pieces for two, four or occasionally even six hands. The keyboard works are typical of early Romantic music, while the vocal compositions in particular are notable for a sense of humour and irony; they include, for instance, a *Concerto buffo*, probably composed for his royal pupils, which employs toy instruments and features a singing Kapellmeister, probably Bach himself. Some of the songs and keyboard pieces which circulated at the turn of the century, either singly or in collections, were very popular. From his Minden period onwards Bach was associated with freemasonry, and wrote several masonic songs. He apparently closed his career as a composer in 1822 with the publication of 12 *grandes variations* on the folksong 'Gestern Abend war Vetter Michel da', bearing in the autograph manuscript the title *Reminiscences, ou XII Grandes variations sur un air allemand populaire*, with a dedication to two of his former royal pupils. However, he is said to have written an overture of rejoicing for Prince Heinrich the year before his death.

The extant compositions do not support claims by Ledebur and others that Bach was an adherent of the strict style and despised modern music; there has probably been some confusion here with Wilhelm Friedemann Bach, who was almost certainly also the composer of the strongly contrapuntal Trio in G major for two flutes and viola, published as W.F.E. Bach's by Rudolf Ermeler. Bach's modest and unassuming nature was an obstacle to a wide distribution of his compositions, and he was soon forgotten after his retirement in 1811.

WORKS

KEYBOARD

4 Progressive Lessons and 2 Duets (London, 1782) [also attrib. J.C. Bach]
5 Sonatas and 1 Duett (London, *c*1785) [also attrib. J.C. Bach]
6 sonates (Berlin, ?1796)
16 pieces, in F.F. Franz, ed.: *Musikalisches Journal* (Berlin, 1799–1800)
Tempo di minuetto, with 7 variations, *S-Smf** (Berlin, ?*c*1800), print lost
2 pieces, in Apollo, v (Stockholm, 1805–6)
12 pieces, in Monatsfrüchte für Klavier (Berlin, n.d.)
XII grandes variations sur un air allemand populaire (Berlin, 1822)
Amusement [Sonata, Andante with variation, Sonatina, Walzer, Sonatina], *D-Bsb**; Das Dreyblatt, pf 6 hands, *GB-Lbl**; Divertimento, *Lbl**; Doppelsonate, by 1805, lost; Variations on God save Frederick our King, doubtful, *Lbl*; Grand Sonata, E♭, 1778, *Lbl**; Grand Walzer, D, *D-Bsb**; Le melancholique, *GB-Lbl**; Minuet, D, *CH-SObo*; Variations, C, *GB-Lbl**; 6 Waltzer, *D-Bsb**, 3 ed. K. Geiringer (Vienna, 1936)

CHAMBER

6 sonates, C, D, B♭, E♭, F, G, pf, vn (Berlin, *c*1781)
3 sonates, C, B, E♭, pf, vn (Berlin and Amsterdam, *c*1789)
6 Sonatas, C, D, F, B, E, A, pf, vn, vc (London, n.d.); nos.1, 2 ed. F. Goebels (Wolfenbüttel, 1986)
Divertimento, E♭, cl, 2 hn, vn, va, vc, *GB-Lbl**; Fantasia, E♭, fl, cl, 2 hn, 2 vn, va, vc, *D-Bsb*; Parthie, E♭, 2 fl, 2 ob, 2 cl, 2 bn, 2 hn, *GB-Lbl**; Sestetto, E♭, cl, 2 hn, vn, va, vc, *D-Bsb*, *GB-Lbl**, ed. K. Janetzky (Halle, 1951); Sinfonia, C, *D-Bsb**; Sinfonia, C, *GB-Lbl**
Lost, listed in Bückeburg inventory, 1799: Divertimento, E♭; Qt, ? pf, str

ORCHESTRAL

Ballet-pantomime (ov., 43 dance movts), *GB-Lbl**; Conc., E, 2 kbd, orch, *D-Bsb*; Overture, D, 1793, private collection, USA; Sinfonia, C, private collection, USA; 2 syms., C, G, *GB-Lbl**
Lost: 3 concs., G, E, E♭, kbd, orch, formerly *D-Bsb*; Jubel-Ouverture, 1844, mentioned in obituary; Sinfonia, C, listed in Bückeburg inventory, 1799; 2 intermezzos, C, D, listed in Bückeburg inventory, 1799; Largo, A, kbd, orch, doubtful, formerly *D-Bsb*; 2 ovs., B♭, E♭, doubtful, listed in *EitnerQ*

VOCAL

Stabat mater, ? by 1784, lost, mentioned in Meusel
Colma (Ossian), perf. Minden, 1 May 1785, music lost
Der edelsten Freude geweihet (S.F. Martini), cant. for birthday of Friedrich II of Prussia, perf. Minden, 24 Jan 1786, music lost
Liesst von unsrer Wang herab (Martini), cant. for birthday of Friedrich II of Prussia, perf. Minden, 10 Sept 1786, music lost
Kommt vor sein Angesicht mit Jauchzen (Martini), cant. for installation of Friedrich Wilhelm II of Prussia, perf. Minden, 28 Oct 1786, music lost
Triumph, Triumph, Westphalia (Martini), cant. for visit of Friedrich Wilhelm II, perf. Minden, 5 June 1788, *A-Wn**, vs (Rinteln, 1791)
Wer spricht es aus, was wir verloren haben (Martini), funeral cant. for Pastor Wesselmann, perf. Minden, 6 Feb 1789, music lost
Vater unser (S.A. Mahlmann), T, B. choir, orch, by 1799, *GB-Lbl**; ed. in Stuttgarter Bach-Ausgaben, ser.A, v, suppl. (Stuttgart, *c*1977)
Der Theaterprinzipal, by 1809, lost, mentioned in *AMZ*, xii (1809–10)
Auf muntere Zecher, T, B, pf, *D-Bsb*
Columbus, oder Die Entdeckung von Amerika (after F. Schiller), T, B, chorus, orch, *GB-Lbl**
Concerto buffo, B, pf, toy insts, **Lbl*
Der Schmerz, der Trost (Erinnerung an Schillers Sterbetag), 4vv, pf, *Lbl**
Der Wechselschlag, lost, listed in estate catalogue of W.H. Cummings (London, 1917)
Durchs Leben führt so mancher Pfad (Der Pfad des Lebens), T, T, B, pf, *D-Bsb*, *GB-Lbl**
L'amour est un bien suprême; Ninfe se liete: S, orch, *Lbl**
Schön o schön ist diese Welt (Die Ruhe des Lebens) – Sie lebt (Der Dichter und der Komponist), T, B, pf, **Lbl*
Wie sehr lieb ich mein Mädchen nicht (Der Vorsatz), 4vv, pf, *Lbl**

Lieder: Auswahl [7] deutscher und [2] französischer Lieder und Arietten (Berlin, *c*1798); Etwas lieben und entbehren (An Lauren), in Blumenkranz dem neuen Jahrhundert (Berlin, 1800); Berlinade, oder Lindenlied (F. Monti) (Berlin, n.d.); Freude, schöner Götterfunken, ode (F. Schiller) (Berlin, n.d.), lost; Rheinweinlied (C. Müchler) (Berlin, n.d.); Ruf zur Freude, *Lbl**; Seid gegrüsst, ihr grün bemooste Hügel (C.F.D. Schubart), in J.C.F. Bach, ed.: Musikalische Nebenstunden (Rinteln, 1787); 1 other in J.M. Böheim: Auswahl von Maurer-Gesängen, iii (Berlin, 1814)
Cavatines, ?S, orch, lost, listed in Bückeburg inventories, 1799, 1865
6 It. arias (Metastasio and others), S, orch, by ?1799, lost, listed in Bückeburg inventory, 1865, some listed in estate catalogue of J.F. Reichart (Berlin, 1815)
Oue des maux loin de toi, S, orch, by ?1799, lost, listed in Bückeburg inventory, 1865
3 romances, lost, listed in Bückeburg inventories, 1799, 1865
Doubtful: Als einst die Gottheit Völker zu beglücken (Martini), cant. for birthday of Queen Luise of Prussia, ? perf. Berlin/Minden, 10 March 1793/4, music lost; Er segnet Au, er segnet Felder, cant., *D-BO*; 3 Gedichte (Kahlert), T, pf (Leipzig, n.d.), ? by A.W. Bach; Lobsingt dem Gott der Ernte, cant., *BO*; song, in F.F. Hůrka, ed.: Auswahl maurerischer Gesänge (n.p., *c*1803)

B–A–C–H. In German nomenclature, the letters of Bach's name provide a motif (ex.1) which is frequently found as

a germinal idea in musical compositions. It was used by Bach himself in the unfinished Contrapunctus XIV of the *Art of Fugue* (1751), and its possibilities were earlier mentioned in Walther's *Musicalisches Lexikon* (1732/*R*). Probably because of the context in which Bach used it, later composers have mostly regarded this rather intractable motif as a challenge to their contrapuntal skill. Bach's son, Johann Christian, and his pupil, J.L. Krebs, both wrote organ fugues on it, but its wider popularity follows the 19th-century Bach revival and the development of a harmonic vocabulary which could more easily accommodate its tonal ambiguities. Schumann, whose interest in letter-pitch equations is well known, wrote six fugues on B–A–C–H (op.60) for organ or pedal piano, and Liszt, Reger and Busoni also used the motif to raise imposing contrapuntal monuments to its originator. Other 19th-century composers who have used it include Rimsky-Korsakov and d'Indy.

The B–A–C–H motif is easily incorporated into a totally chromatic idiom and has been widely used by members and disciples of the Second Viennese School, e.g. by Schoenberg as an incidental theme in his Variations op.31 for orchestra and Third String Quartet, by Webern as the basic set of his String Quartet, and by Humphrey Searle as a motto in his First Symphony. For a list of over 400 B–A–C–H-inspired works see Boyd. The name B–A–C–H has also been expressed as a single note (ex.2).

MALCOLM BOYD

Bach, August Wilhelm (*b* Berlin, 4/5 Oct 1796; *d* Berlin, 15 April 1869). German organist, teacher and composer. He was not a descendant of J.S. Bach. He received his earliest musical training from his father Gottfried Bach, organist at the Dreifaltigkeitskirche in Berlin, and accompanied services there while still a boy. After completing his secondary education he took a teaching position in a noble household outside Berlin. On his father's death in 1812 he returned to seek the post of organist at the Dreifaltigkeitskirche but did not succeed in obtaining the situation. He received instead an appointment in 1814 at the Gertraudenkirche, a less prominent position. During his two-year term there he studied counterpoint and fugue with Zelter and the piano with Ludwig Berger. He joined the Berlin Singakademie in 1815. He was appointed organist and music director at the important Marienkirche in 1816. In the following years he studied the violin with C.W. Henning and broadened his general education through travel and the study of languages. In 1819 Bach was one of the first members of Berger's 'jüngere Liedertafel'. The next year he became music director and teacher in Stettin. In 1822 he was engaged to teach the organ, harmony and chorale setting at Zelter's new Institut für die Ausbildung von Organisten und Musiklehren, and in 1826 he received a commission to oversee organ building in Prussia; this gave him not only a wide influence on organ building but also the opportunity of travelling throughout Europe. A brief organ textbook by him survives in several manuscript exemplars; it provides valuable information about organ builders and

instruments at the time. When Zelter died in 1832 Bach succeeded him as director of the institute. He was elected to the senate of the Royal Academy of the Arts in 1833 and taught theory and composition there. In 1845 he was awarded the medal of the Order of the Red Eagle and in 1858 was granted the title Royal Professor.

As organist Bach not only played for services but also gave important chamber and concert performances, becoming thereby a notable exponent of the works of J.S. Bach. Of his organ students Felix Mendelssohn is the most famous, though many others won local prominence in the mid-19th century. His organ method, *Der praktische Organist* (*c*1840), and his *Choralbuch für das Gesangbuch zum gottesdienstlichen Gebrauch für evangelische Gemeinden*, first published in 1830 and repeatedly revised for use until well after his death, established his reputation. His largest work is the oratorio *Bonifaz, der deutsche Apostel*, not inappropriately described by a contemporary critic as 'a hotchpotch of opera and church' (*NZM*, xiv, 1841, p.61). The style of his compositions, mostly sacred and keyboard music, shows his attempt to accommodate the academic tendencies inherent in his studies and his profession as a teacher to the lyricism and saccharine harmonies popular in his time.

DOUGLASS SEATON

Bach, Cecilia. *See* GRASSI, CECILIA.

Bach, Jan (Morris) (*b* Forrest, IL, 11 Dec 1937). American composer. He studied with Kenneth Gaburo and Robert Kelly (University of Illinois, BM 1959, DMA 1971), Donald Martino (Yale University, 1960), Aaron Copland and Roberto Gerhard (Tanglewood, 1961) and Thea Musgrave (Aldeburgh and London, 1974). The recipient of many honours, including a Koussevitzky Award (1961), he taught at the University of Tampa (Florida) (1965–6) before joining the music department at Northern Illinois University.

Bach's accessible style combines traditional and contemporary musical elements. A predominant aspect of his work is his charming and inexhaustible sense of humour. *Four Two-Bit Contraptions* (1964), for example, is a study in musical caricature cast in the form of rags, waltzes and other dances. Later works, such as *Rounds and Dances* (1980), are more eclectic in nature, employing playful and teasing thematic materials, but making more strenuous demands on the performer. His operatic works, the most frequently performed being *The Student from Salamanca*, exhibit an ingenious use of ensembles; contrapuntal textures are a primary feature. In all genres, Bach's works display both structural clarity and a subtle use of instrumental timbre.

JAMES P. CASSARO

Bach, Maria (*b* Vienna, 1 March 1896; *d* Vienna, 26 Feb 1978). Austrian pianist and composer. Her ancestors, Catholic members of the Bach dynasty, came to Austria during Luther's time. Brought up in an artistic milieu, she studied the violin (with Arnold Rosé) and the piano from an early age, presenting her first successful piano recital when she was ten. Although she decided to become a concert pianist, her *Flohtanz* for piano (1917) was so successful that she took up composition seriously, studying with Joseph Marx. In 1962 she received the first prize in the Buenos Aires International Composers' Competition. In her later years she took up painting and writing poetry, composing music for her own poems. Her large output, in the late Romantic tradition, includes much vocal music with orchestra and smaller forces. A full account of her life and works is given in G.M. Eiselmair: *Die männliche Gilde sehe sich vor! Die österreichische Komponistin Maria Bach* (Vienna, 1996).

ROSARIO MARCIANO/R

Bach, P.D.Q. *See under* SCHICKELE, PETER.

Bach, Vincent [Schrottenbach, Vinzenz] (*b* Baden, nr Vienna, 24 March 1890; *d* New York, 8 Jan 1976).

American brass instrument maker of Austrian birth. He played the violin as a child and studied the trumpet (cornet) with Josef Weiss and Georg Stellwagen. In 1910 he earned a degree in mechanical engineering at the Maschinenbauschule in Wiener Neustadt. After a year as an Austrian navy bandsman, he studied the solo cornet repertory with Fritz Werner in Wiesbaden (1911–12), then toured as a cornet virtuoso in Germany, Denmark, Sweden, Russia, Poland and England, arriving in New York in September 1914. While continuing his solo career in the USA, he played a season as assistant first trumpet with the Boston SO (1914–15) and a season as first trumpet with Dyaghilev's ballet orchestra at the Metropolitan Opera House (1915–16). In 1916–18 he was bandmaster of the 306th Field Artillery Regiment. He became an American citizen in 1925.

On 1 April 1919 Bach set up a shop at 204 East 85th Street in New York, mainly for the purpose of making mouthpieces for his own use. In 1922 he moved to 241 East 41st Street, where he had ten employees; the manufacture of cornets and trumpets was started there in 1924. From 1928 to 1952 he was at 621 East 216th Street, with 50 employees, and began the manufacture of tenor and bass trombones. In 1953 he built a factory in Mount Vernon, New York. He sold his business to the H. & A. Selmer Co. in September 1961; four years later the firm moved to Elkhart, Indiana.

In combining his musical proficiency with his engineering training, Bach succeeded in establishing the most exacting standards of brass instrument design and construction. His point of departure, as with Elden Benge (1904–60), was the French Besson B♭ trumpet; unlike Benge, however, who desired more flexible intonation, Bach strove to give his instruments a secure 'feel' for each note in the scale. Bach was also the first to set up a system for duplicating mouthpieces exactly. His instruments, especially trumpets, are employed more widely than any others. They are prized for their full and yet compact tone, with a solid core.

Bach-Abel Concerts. London concert series organized between 1765 and 1781 by J.C. Bach and C.F. Abel; *see* London, §V, 2.

Bacharach, Burt (F.) (*b* Kansas City, MO, 12 May 1928). American composer and pianist. He learnt the cello, drums and piano from an early age and developed a particular interest in jazz. He played as a night club pianist, and then served in the army, touring as a pianist (1950–52). He went on to study music at the Mannes College of Music, New York, the New School of Social Research, McGill University, Montreal and gained a scholarship to the Music Academy of the West, Santa Barbara, California. His composition teachers included Milhaud, Martinů and Cowell. Bacharach became an accompanist for Vic Damone, subsequently working with such performers as Polly Bergen, Steve Lawrence, the Ames Brothers and Paula Stewart, to whom he was married from 1953 to 1958. From 1958 to 1961 he toured internationally with Marlene Dietrich. Bacharach began writing arrangements and composing songs in the mid-1950s, working at the Brill Building and collaborating with the lyricist Hal David (*b* Brooklyn, NY, 25 May 1921), the brother of the lyricist Mack David, on a large number of popular songs, including *The Story of My Life* (1957), *Magic Moments* (1958), *Anyone Who Had a Heart* (1963), *Walk on by* (1964) and *(There's) Always something there to remind me* (1964). Some 60 of their songs were recorded by their protégée Dionne Warwick and these, along with recordings by Dusty Springfield (notably *I just don't know what to do with myself* and *The Look of Love*), remain among the best interpretations of the Bacharach-David repertory. Such songs, in addition to the Broadway musical *Promises, Promises* (1968), which was also staged to great success in Australia and Europe, made them one of the most successful songwriting teams in American music history.

Bacharach's style, though eclectic, is well defined and accessible; its heterogenous elements include variable metre, irregular phrasing, pandiatonic and jazz harmonies, rhythmic ostinatos from various sources and effects from the black American styles. Many of his melodies – for example, *Do you know the way to San Jose?* – exhibit an internal momentum, created by the repetition of short, syncopated rhythmic patterns, which complements David's clever, colloquial lyrics. Bacharach has written a number of film scores, and won two Academy Awards for *Butch Cassidy and the Sundance Kid* (1969), for best score and best song ('Raindrops keep fallin' on my head'). He has also contributed to other films including the title song to *Alfie* (1966), and collaborated with Carole Bayer Sager on the song 'Arthur's Theme' for *Arthur* (1981) which won an Academy Award. He married Sager in 1982.

A revival of interest in 'lounge' music and easy-listening in the early 1990s brought Bacharach back to international prominence, and his work has since been covered by such groups as REM and Oasis. He has continued to perform regularly in concert, wrote a further song for Dionne Warwick (*Sunny Weather Love*, 1993) and collaborated with Elvis Costello on the song *God give me strength* (1995) and the album *Painted from Memory* (1998).

WORKS
(*selective list*)

lyrics by H. David unless otherwise stated

Stage, writers shown as (lyricist; book authors): Promises, Promises (musical, 2, H. David; N. Simon after B. Wilder and I.A.L. Diamond: *The Apartment*), Schubert, New York, 1 Dec 1968 [incl. I'll never fall in love again; Promises, Promises; Whoever you are I love you]

Film scores and songs: What's New, Pussycat?, 1965 [incl. Here I am, My Little Red Book]; Casino Royale, 1968 [incl. the Look of Love]; Butch Cassidy and the Sundance Kid, 1969 [incl. Raindrops keep fallin' on my head, Come touch the sun]; Lost Horizon (musical), 1973 [incl. Question me an answer, Reflections, The world is a circle]; Night Shift (C.B. Sager), 1982 [incl. That's what friends are for]; Arthur 2: On the Rocks (Sager), 1988 [incl. Love is my decision]

Many popular songs, incl. Magic Moments, 1957; The Story of my Life, 1958; I just don't know what to do with myself, 1962; Make it easy on yourself, 1962; (The Man who Shot) Liberty Valance, 1962; Close to You, 1963; Twenty-Four Hours from Tulsa, 1963; Wishin' and Hopin', 1963; Everyone needs someone to love, 1964; (There's) Always something there to remind me, 1964; Walk on by, 1964; Don't go breaking my heart, 1965; Trains and Boats and Planes, 1965; What the world needs now is love, 1965; Alfie, 1966; Made in Paris, 1966; Do you know the way to San Jose?,

1967; This guy's in love with you, 1968; The Hurtin' Kind, 1970; Arthur's Theme (Sager, C. Cross and P. Allen), 1981; Sunny Weather Love, 1993; God give me strength (E. Costello), 1995

Principal publishers: Blue Seas, Jac, US Songs

MICHAEL J. BUDDS/R

Bachauer, Gina (*b* Athens, 21 May 1910; *d* Athens, 22 Aug 1976). Greek pianist. Her father was from an Austrian family which had settled in Greece in 1877, while her mother came from near Trieste. Bachauer studied at the Athens Conservatory under Woldemar Freeman and later at the Ecole Normale, Paris, with Cortot. Freeman introduced her to Rachmaninoff, with whom she also took lessons. Her French solo début took place in the Salle Chopin, Paris, in 1929, and she first played in England in 1932 at the Aeolian Hall, London. In 1933 she won the medal of honour at an international piano competition in Vienna, and in the 1930s played concertos with the Paris SO conducted by Monteux and the Athens SO under Mitropoulos. For several years following her marriage in 1936 to John Christodoulo she lived in Alexandria, giving over 600 concerts for allied troops in various parts of northern Egypt during World War II. In 1946 she made her British orchestral début at the Albert Hall, London, playing Grieg's Piano Concerto with the New London Orchestra under Alec Sherman. Following her American début at New York's Town Hall in 1950, she undertook many coast-to-coast tours of the USA. After the death of her first husband she married Alec Sherman in 1951.

Bachauer was at her most formidable in the 19th- and early 20th-century repertory, impressing with the strength and breadth of her keyboard command and essentially balanced musicianship. Her recordings of concertos by Beethoven, Brahms, Chopin and Grieg, as well as solo works by Debussy, Ravel and Stravinsky, have been reissued on compact disc.

GRAHAM WADE

Bach Choir. London amateur choir founded in 1875. *See* LONDON, §VI, 3 (ii).

Bach disposition. A disposition used on many early 20th-century harpsichords (and thus specified in some 20th-century compositions) in imitation of the so-called BACH HARPSICHORD.

Bache. English family of musicians.

(1) **Francis Edward Bache** (*b* Birmingham, 14 Sept 1833; *d* Birmingham, 24 Aug 1858). Composer and pianist. He was the eldest of the seven children of Samuel Bache (1804–76), a well-known Unitarian minister who officiated at the New Meeting, Birmingham (1832–59), and his wife Emily Higginson (*d* 1855), from whom Francis inherited his musical gifts. He was educated at his father's school and studied with James Stimpson, city organist of Birmingham, and with Alfred Mellon. He played the violin in the 1846 Birmingham Festival, and in 1849 went to London as a private pupil of Sterndale Bennett, with whom he studied composition for more than three years. In October 1850 he became organist of All Saints, Gordon Square. In this period he composed concertos, overtures, two dramatic pieces, a string quartet and a piano trio, as well as many piano pieces. His first appearance as a concert performer was at Keighley, Yorkshire, on 21 January 1851. When he played the Allegro of an unpublished piano concerto of his own in June 1852, Henry Chorley was moved to remark: 'We have met with no Englishman more likely to give us the English composer for whom we have so long been waiting than Mr Bache'. In November 1851 he went to live with Mellon, by then resident in London, and in 1852 was given a contract by Addison, Hollier and Lucas to write light piano pieces, which he turned out in considerable numbers. Of one of these he wrote, 'I must say that I would *sooner* have written my *Galop di Bravura* than many a Sonata which is only printed to lie on the shelf a dead weight on account of deficiency of anything like idea'.

In October 1853, on Bennett's recommendation, Bache went to Leipzig, where he studied with Moritz Hauptmann, and acquired the conventional prejudices against the music of Berlioz, Liszt and Wagner. He visited Dresden, and returned to England by way of Paris in February 1855. He attended the 1855 Birmingham Festival, writing some of the reviews for the local newspapers, but was then attacked by a severe recurrence of the tuberculosis which had troubled him for several years. Early in 1856 he went to Algiers on medical advice, where he gave a concert on 28 March. He travelled by way of Paris to Leipzig (June 1856), and then, through Dresden and Vienna, to Rome (December 1856). His health again deteriorated and he returned home in June 1857, spending the next winter in Torquay, where he succeeded in giving a concert in February 1858. On his return to Birmingham he gradually declined, and after a farewell concert of his music on 5 August, he died less than three weeks later, at the age of 24.

Bache's piano music has many qualities of his master, Sterndale Bennett, with a pleasant freshness and vitality to compensate for a certain lack of solidity and substance. He was most at ease in the virtuoso concert piece. More remarkable are the Six Songs op.16, which come near to establishing an English analogue of the lied; and the Piano Trio in D minor op.25, which, in spite of obvious gleanings from Mozart, Beethoven, Mendelssohn and Bennett, has a vigour found in few English instrumental compositions of its period (it was revived at a concert given by the Victorian Society at Leighton House on 26 September 1964). Bache's early death deprived Victorian music of one of its most promising talents.

17 songs, incl. 6 Songs (J.L. Uhland, J.W. von Goethe, H. Heine), op.16 (*c*1850); 4 songs, n.d.

(2) **Walter Bache** (*b* Birmingham, 19 June 1842; *d* London, 26 March 1888). Pianist and conductor, brother of (1) Francis Edward Bache. Like his elder brother he attended his father's school and studied with Stimpson. In August 1858 he too went to Leipzig, but after a short stay at Milan and Florence he arrived at Rome in the summer of 1862, where for three years he received regular lessons from Liszt; this experience gave his life a different direction. In 1865 he returned to London, and soon began his lifelong crusade to establish his master's reputation there: he played a two-piano arrangement of *Les préludes* with Edward Dannreuther on 4 July 1865. In the summer of 1867 he and Dannreuther formed a small association for the promotion of the music of Wagner and Liszt in England, dubbing themselves 'The Working Men's Society', with Karl Klindworth as a kind of elder statesman. At first they had to be content with piano arrangements, but in 1871 Bache began annual orchestral concerts at which more and more works by Liszt and other controversial composers were introduced to the London public. In the course of these concerts (1871–86) Bache introduced five of Liszt's symphonic poems, the *Faust* and *Dante* symphonies, *Die Legende von der heiligen Elisabeth*, and other major works. In this enterprise he had to face an almost continuous barrage of opposition and scorn from other musicians and critics. Joseph Bennett wrote of him: 'I was content to remain on my own side of the great gulf which circumstances had fixed between us'. But, largely through Bache's indomitable perseverance, a section of the public was gradually brought round. On Liszt's visit to England in the spring of 1886 Bache gave a memorable reception at the Grosvenor Gallery on 8 April, followed by a series of concerts in which he and his master appeared together. Bache was a professor of piano at the RAM, and was instrumental in founding the Liszt Scholarship there.

(3) **Constance Bache** (*b* Birmingham, 11 March 1846; *d* Montreux, 28 June 1903). Writer on music, sister of (1) Francis Edward Bache. She prepared the English version of Humperdinck's *Hänsel und Gretel* and also translated La Mara's edition of *Letters of Franz Liszt* (London, 1894) and *The Early Correspondence of Hans von Bülow* (London, 1896).

NICHOLAS TEMPERLEY

Bachelbel, Johann. *See* PACHELBEL family, (1).

Bacheler [Bachiler, Batchiler, Batchelar], **Daniel** (bap. Aston Clinton, Bucks, 16 March 1572; bur. Lee, Kent, 29 Jan 1619). English lutenist and composer. He was apprenticed at age seven to his uncle Thomas Cardell, lutenist and dancing master to Queen Elizabeth, suggesting that special talent was already evident. In 1587 his apprenticeship was transferred to the Queen's principal secretary, Sir Francis Walsingham, a move that was to determine the course of Bacheler's career. In that same year he took part as a page in the funeral procession of Walsingham's son-in-law Sir Philip Sidney. The earliest music attributed to Bacheler survives in the Walsingham consort books whose date, 1588, indicate that the music was composed and copied when Bacheler was only 15 or 16. His contribution includes seven pieces scored for the recently developed mixed consort of treble and bass viols, flute, lute, cittern and bandora.

By October 1594, a year before the stipulated completion of his apprenticeship, he was in the service of the Earl of Essex at the generous salary of £30 (£20 was normal). The position may have been secured for him by Lady Essex (née Walsingham), who was Sir Philip Sidney's widow. Most likely Bacheler was still servant to Essex in 1599, when he was paid to deliver letters from the Privy Council to him in Ireland. During the same period Bacheler set the Earl's bitter sonnet *To plead my faith*, addressed and almost certainly sung directly to Queen Elizabeth. The song was printed in Robert Dowland's *Musicall Banquet* in 1610.

Bacheler presumably remained as servant to Lady Essex after the Earl's execution in 1601; he accompanied her to the court of James I two years later. There, he was appointed groom of Queen Anne's Privy Chamber at the extraordinarily high yearly salary of £160. Other grooms were paid £60 and royal lutenists only £20–£40. Bacheler was also employed as secretary (a 'thank-you' letter on behalf of the Queen is preserved in Hatfield House Library, C.P.118/134), but no doubt his musical skills were specially valued. The advanced style of some lute solos suggests that he was still composing in the last years of his life. He applied for and was granted a coat of arms in February 1607, confirming his status as 'gentleman'. He died at age 46 in 1619 and was buried at Lee, close to Queen Anne's household at Greenwich, and where the Walsinghams had property.

More than 50 lute solos survive, an output exceeded only by Dowland and Holborne. Bacheler's divisions are florid, requiring technical skill, and he was one of the first lutenists to explore the lower sonorities of the instrument, occasionally taking a melody down to the fourth and fifth courses. He wrote divisions on three French popular tunes and was probably the first English lutenist to play unmeasured preludes. These last are preserved in the lutebook of Lord Herbert of Cherbury (*GB-Cfm*) who may well have introduced Bacheler to French influence when he visited Queen Anne on his return from Paris in 1609. Many solos survive in unreliable texts with irregular strain lengths and one galliard exists in two versions (Long's nos.13b and 29), suggesting that Bacheler improvised more than most lutenists and that scribes such as Matthew Holmes had difficulty notating his playing. Because he was employed as groom he probably did not feel constrained by the expectations placed on professional lutenists, encouraging a more experimental approach to composition and playing. He was frequently referred to

as 'Mr Daniell', which has caused confusion with John Danyel, particularly as the same divisions of *Monsieur's Almain* were ascribed to both composers. It is now clear that 'Mr Daniell' refers to Bacheler.

WORKS

Edition: *Daniel Bacheler: Selected Works for Lute*, ed. M. Long (London, 1972) [incl. complete list of works and sources][L]

LUTE SOLO

6 preludes, 1 in L; 1 fantasy, L; 1 pavan and galliard pair, pavan in L; 17 pavans, 2 in L; 15 galliards, 3 in L; 1 almain, L; 3 courantes, 2 in L; 1 volt, L (no.39 as 'courante'); 4 divisions on popular tunes, 1 in L; Daniells Jigge, *GB-Cu* Dd.v.78.3, f.69 (not listed in L)

MIXED CONSORT

Sir Francis Walsingham's Goodnight; Sir Francis Walsingham's Goodmorrow; The Lady Sidney's Felicity: The Lady Walsingham's Conceits; Daniel's Trial; The Widow's Mite; Daniel's Almain; all ed. in MB, xl (1977)

SONG WITH LUTE AND BASE VIOL

To plead my faith (poem by Robert Devereux, Earl of Essex); ed. P. Stroud: Robert Dowland: *A Musicall Banquet* (London, 1968)

ROBERT SPENCER

Bachelet, Alfred (*b* Paris, 26 Feb 1864; *d* Nancy, 10 Feb 1944). French composer. After studying with Guiraud at the Paris Conservatoire he won the Prix de Rome in 1890. He became chorus master and subsequently conductor at the Paris Opéra and succeeded Ropartz as head of the Conservatoire in Nancy in 1919. In 1929 he replaced Messager on the Académie des Beaux-Arts.

He was from the start drawn towards programmatic works for large orchestra, and extracts from projected works were performed in several concerts around 1900 with some success. He was considered a French Wagnerian by many critics and, apart from the *Ballade* for violin and orchestra, the Nocturne from which enjoyed some celebrity, it is for his operas that he is best remembered. His first, *Scemo*, set in Corsica, was first performed on the eve of World War I; it is an opulent, lengthy score somewhat in the manner of Richard Strauss. Its naturalistic subject matter was not well received by the critics either at the première or at its revival at the Opéra-Comique in 1926, although the music drew praise from Dukas and Hahn among others. The one-act *Quand la cloche sonnera* is set in World War I and concerns a girl who rings the church bell as a signal to soldiers to blow up a bridge, even though she knows her lover is waiting beneath it. His third and last opera, *Un jardin sur l'Oronte*, was widely considered his most successful. It tells of the love between an oriental princess and a Christian invader, and Bachelet uses pastiche of both oriental and medieval music to portray the clash of cultures. Gustave Samazeuilh, one of his most faithful supporters, considered the poème lyrique *Sûryâ* to be one of the finest pieces of French music to be written during World War II. Bachelet was also active as a conductor; his début at the Paris Opéra was with Gounod's *Faust* in 1907.

WORKS

STAGE

Cléopâtre (scene lyrique, F. Beissier), 1890
Scemo (drame lyrique, 3, C. Méré), Paris, Opéra, 6 May 1914, vs (Paris, 1914)
Quand la cloche sonnera (drame musical, 1, Y. de Hansewick and P. de Wattryne), Paris, OC (Favart), 6 Nov 1922 (Paris, 1922)
Un jardin sur l'Oronte (drame lyrique, 4, Franc-Nohain, after M. Barrèn), Paris, Opéra, 3 Nov 1932, vs (Paris, 1932)

VOCAL

Choral: Fiona (légende irlandaise), solo vv, chorus, orch, 1896; L'amour des Ondines, sym. poem, solo vv, chorus, pf, orch, 1903; Sûryâ, Hymne Védique (C.M.R. Leconte de Lisle), solo vv, chorus, orch (1943)
Songs (1v, pf unless otherwise stated): Vocalise-étude (1893); Tendresse (J. Lahor) (1894); Le vent (E. Vollaine) (1894); Le dormeur du val (A. Rimbaud) (1915); Noël (T. Gautier), 2vv, pf (1918); La chanson des trois roses (A. Bausil) (1924); Le vent (Vollaine) (1935); Terre Lorraine (J. Grosdidier de Matons) (1938); Chère nuit (Eugène Adenis); Mélodies: Au bois dormant (L. Durocher), Pâle étoile du soir (A. de Musset), also orchd

INSTRUMENTAL

Orch: Poème, vc, orch, 1890–5 (1952); Ballade, vn, orch (1920); Barcarolle, Nocturne et Petit Histoire, vn, vc, orch, pf (1927); Joie, sym. poem
Chbr and solo inst: 2 impromptus, pf (1894); Fantaisie mélancolique, pf (1895); Morceau de concours, trbn, pf (1902); Chant nuptiale, vn, vc, pf (1905); Dans la montagne, ballade, hn/vn, pf/orch (1907); Lamento, F, vc/hn, pf/orch (1927, 1935); Berceuse, pf (1928); Humoresque, pf (1928); Fantasie et fugue, org (1943); Sérénade

RICHARD LANGHAM SMITH

Bachelier, Louis (*b* 1703; *d* Angers, 1782). French composer. He received his musical education in the Angers choir school, which he left in 1723 to become an adult chorister. On 14 November 1724 he was a candidate for the post of *maître de chapelle* to succeed Louis Vigné, and it is likely that he was appointed to the post and occupied it until 1732, the year in which he left Angers. He is next heard of in Orléans and then in Verdun, where a *Te Deum* and motets by him were sung before the king. In 1747 he became *maître de musique* at Clermont-Ferrand, a position he left in 1760 to return to Angers, where he was again *maître de chapelle* until 1768 at the latest, after which he undertook various responsibilities within the chapter. On 8 May 1772 he donated 14 masses (no longer extant) to the chapter.

Three works, dated 1749, by Bachelier have survived (*F-Pn* Vm1 1315–17). They are the *grands motets Deus deorum locutus est* (Psalm xliv), *Nisi Dominus* (Psalm cxxvi) and *Deus misereatur nostri* (Psalm lvi) for soloists, five-part chorus, *symphonie* (violins and oboes) and continuo, composed in the Versailles manner of the time. Certain short passages call for trumpets and a bassoon. (J. Poirier: *La maîtrise de la cathédrale d'Angers: six cents ans d'histoire*, Angers, 1983)

JEAN-CHARLES LÉON

Bach-Gesellschaft. A society founded on the centenary of Bach's death (1850) to publish a complete critical edition

of his works. By that time all the principal keyboard works had been printed, but it was obvious that a non-commercial scheme was needed for the vocal works.

The notion of a Bach-Gesellschaft, dating back to the 1830s, can be linked with Mendelssohn's efforts on the composer's behalf. A further stimulus came in 1843 when the English Handel Society was founded in London. In July 1850 Otto Jahn, together with Robert Schumann, C.F. Becker, Mortiz Hauptmann and the Leipzig firm of Breitkopf & Härtel, issued a preliminary announcement which was sent to a number of prospective supporters. By the end of the same month it had gained the support, in various periodicals, of Liszt, Spohr and many others. The society's inaugural meeting took place in Leipzig on 15 December 1850.

As the first German musicological project of such vast scope, the Bach edition encountered many problems over the following years. The main difficulty was in obtaining a comprehensive overview of the composer's surviving output. A catalogue of his works begun in the 1830s by Franz Hauser was a basic source of information on Bach's compositions and the location of autographs and other relevant manuscripts. Individual volumes were delayed because the owners of various sources denied the editors access to important material. For example, the edition of the B minor Mass was deferred several times because Hermann Nägeli would allow no-one to inspect the autograph in his possession; it was not until Friedrich Chrysander had obtained the source that the volume could be completed. There were also differences of opinion among the members of the committee as to how far the edition should cater for the needs of practical music-making; it was debated, for example, whether the scores of the vocal works should be provided with piano reductions. When the idea was rejected, Moscheles, who had championed the cause of the performing musician, resigned from the committee. The first volume of the Bach edition, containing cantatas nos.1–10, appeared in December 1851; it was edited by Hauptmann, who over the next few years shared the responsibility for a number of volumes with Julius Rietz and Wilhelm Rust. From 1859 Rust assumed sole charge, which he finally relinquished in 1882 after disagreements with Philipp Spitta. The later volumes were again supervised by several different editors.

The complete Bach edition initiated a significant change in contemporary attitudes to early music, and paved the way for comparable editions of the works of Handel, Schütz, Palestrina and Lassus. Although it does not match contemporary standards of source criticism, the editors' approach was remarkably scrupulous and scientific for its time. The whole edition is free of editorial accretions. Rust prefaced numerous volumes with forewords discussing the sources and performance practice, and in volume xliv the editors provided a thorough documentation of the composer's handwriting. Only a few of Bach's works are missing, while a few compositions now known to be by other composers were erroneously included.

With the completion of volume lxvi, presented to the committee on 27 January 1900, the Bach-Gesellschaft was dissolved, in accordance with its statutes. On the same day the Neue Bachgesellschaft (NBG) was founded in order to disseminate and research into the composer's works, and from the early years of the century held regular Bach festivals. In its first years, especially, it published a large quantity of music, including collections of arias and arrangements aimed at the needs of performing musicians. Its journal, the *Bach-Jahrbuch*, has appeared almost every year since 1904. In 1906 the society acquired the house in Eisenach where the composer was once thought to have been born, and opened a Bach museum there. Unlike many other German musicological organizations, the NBG survived intact during the period of the country's division.

Bach harpsichord [Ger. *Bach-Cembalo*, *Bach-Flügel*]. A two-manual instrument made after 1700 by the workshop of Harrass in Breitenbach, Thuringia. It was owned by the Voss family of Berlin at the end of the 18th century. The instrument then passed into the hands of the family of the Bach scholar Wilhelm Rust, and in 1890 it was sold by the Leipzig collector Paul de Wit to the newly founded Sammlung Alter Musikinstrumente, now the Musikinstrumenten-Museum des Staatlichen Instituts für Musikforschung Preussischer Kulturbesitz, Berlin (catalogue no.316). During the sales negotiations it was said that the instrument had once belonged to J.S. Bach and had come into the possession of the Voss family by way of W.F. Bach. This claim, which cannot be proved, led to its being regarded from about 1900 to about 1960 as the ideal of the harpsichord, so that it was copied and imitated in all sorts of ways. It has a rather unusual disposition (8′ and 16′ on the lower manual, 4′ and 8′ with buff stop and push coupler on the upper manual), which has been followed in instruments produced by Ammer, Dolmetsch, Neupert, Sperrhake and Wittmayer. Recent research has shown that the instrument originally had a three-register disposition (4′ and 16′ in the lower manual; 8′ with buff stop and push coupler in the upper manual) which was expanded to four in the 18th century.

The characteristic four-register disposition of the Bach harpsichord, together with the rapid changes of register made possible by the addition of pedals in the modern instruments, is taken as the norm in many 20th-century compositions for harpsichord. The contrasts of sound made possible cannot be fully achieved with a normal historical disposition of 2 × 8′, 1 × 4′. The Bach harpsichord should not be confused with the keyboard instrument known as a BACHKLAVIER.

Bachiler, Daniel. *See* BACHELER, DANIEL.

Bachklavier. A keyboard instrument of the harpsichord type designed and built by the Munich instrument-making firm of MAENDLER-SCHRAMM in the 1920s. Its mechanism was designed to allow dynamic gradation: a pad was fitted diagonally between the back key lever and the adjustable screw of a specially sprung jack, so that the length of the plectrum could be regulated by touch (patented 25 May 1923). These instruments were advertised as 'harpsichords with a sound capable of modulation in the modern way'. Similar instruments were built by other firms in the first half of the 20th century, but they did not prove popular. The Bachklavier should not be confused with the BACH HARPSICHORD.

MARTIN ELSTE

Bachmann, Carl Ludwig (*b* Berlin, 1748; *d* Berlin, 26 May 1809). German viol player and instrument maker. He was a viol player in the royal chapel from 1765, and in 1770, together with J.F.E. Benda, he established the Berlin Liebhaberkonzerte. With Benda's death in 1785 Bachmann succeeded him as director of the concerts; in the same year he married the noted singer and pianist Charlotte Caroline Wilhelmine Stöwe. Throughout this period he also made instruments in the shop of his father, the violin maker and court violinist Anton Bachmann (1716–1800), and may have been responsible for several innovations, including a screw-tuning mechanism for double basses which he introduced in about 1778, although a similiar mechanism was already known in France, having been developed by Benoît Fleury in 1766. He continued alone in his father's business from 1791, at about which time he passed the directorship of the Liebhaberkonzerte to his younger brother, the court violinist Friedrich Wilhelm Bachmann (1749–1825). Rellstab, though agreeing with the generally held low opinion of Bachmann's musical abilities, found his instruments excellent, a judgment which has been borne out by Henley alone among later commentators.

EUGENE HELM/MARTIN ELSTE

Bachmann [née Stöwe], **Charlotte Caroline Wilhelmine** [Charlotte Wilhelmine Caroline] (*b* Berlin, 2 Nov 1757; *d* Berlin, 19 Aug 1817). German singer. The daughter of a musician, she received early training in singing and keyboard playing, and at the age of nine sang in the Berlin Liebhaberkonzerte, whose performances she was later to dominate. In 1785 she married the Berlin violist and instrument maker Carl Ludwig Bachmann (1748–1809). She was one of the original 20 members of the Berlin Sing-Akademie (founded in 1791), and was essential in establishing its annual performances of C.H. Graun's *Der Tod Jesu* between 1797 and 1806, the beginning of the cult of that work. Her singing was highly regarded in her native Berlin, though the *Bermerkungen eines Reisenden* (1788) found her voice lacking in natural qualities, and declared her excellent keyboard playing to be her finest attainment. She also composed a few songs, one of which appeared in Rellstab's *Clavier-Magazin* (1787).

EUGENE HELM

Bachmann, Sixt [Joseph Siegmund Eugen] (*b* Kettershausen, nr Illertissen, 18 July 1754; *d* Reutlingendorf, nr Ehingen an der Donau, 18 Oct 1825). German composer and keyboard player. A child prodigy, he probably received his earliest instruction in music from his grandfather Franz Joseph Schmöger, choral director and organist in Markt Biberbach. It was there on 5 or 6 November 1766 that the famous organ contest between Bachmann and the ten-year-old Mozart took place, from which both emerged with credit. In 1771 he entered the Premonstratensian monastery in Obermarchtal, where he took his vows in 1773 and was ordained to the priesthood in 1778. There he met the writer Sebastian Sailer (*d* 1777), whose *Schriften im schwäbischen Dialekte* he later edited (Buchau, 1819). In Obermarchtal he taught music and directed choirs, and was professor of theology (from 1800). He was also responsible for the monastery parish of Reutlingendorf (1779, 1789, 1796–9); he then became pastor in Seedorf but returned to Reutlingendorf in 1800. In 1803 the monastery in Obermarchtal was dissolved and he settled in Reutlingendorf.

Bachmann obtained his grounding in composition principally from the study of theoretical works, especially G.J. Vogler's. His output includes piano sonatas characterized by contrapuntal technique and monothematic movements; he also wrote organ works and ecclesiastical music combining (according to Wilss) the new homophonic style with the traditional contrapuntal language of church music. Gerber stated that one of his sonatas was arbitrarily altered by the Viennese publisher Hoffmeister.

WORKS

EBERHARD STIEFEL

Bachofen, Johann Caspar [Hans Kaspar] (*b* Zürich, 26 Dec 1695; *d* Zürich, 23 June 1755). Swiss composer and music pedagogue. The year of his birth has been given incorrectly in some sources as 1697. His father Joseph, originally a tailor and from 1692 a schoolteacher, planned a theological training for Johann Caspar, who was his second son. After study at the cathedral school, the Collegium Humanitatis, and (from 1715) the theology class, Bachofen gained the title V.D.M. (*verbi divini minister*) in 1720. In 1711 he joined the collegium musicum at the chapter house, and in 1715 he became a member of one that met at the German School. In 1720 he became a singing teacher at the lower grammar school. His small income compelled him to seek a secondary source of income, from trading in violin strings. Despite disputes with officials and colleagues, he was appointed, after J.K. Albertin's death in 1742, to the important position of Kantor at the Grossmünster, the most important cathedral in Zürich; at the same time he became director of the chapter house collegium musicum. In 1739 he had also assumed the role of Kapellmeister at the German School, thus combining several of the most important musical posts in Zürich. By 1748, however, he had become ill, and bad health hindered the execution of his duties and overshadowed his final years.

Bachofen's significance in the history of Swiss music lies primarily in the exceptional popularity of some of his works. His music was criticized, even by his contemporaries, for deficiencies of construction, harmonic language and melodic development; but his most important collection of sacred songs, *Musicalisches Hallelujah*, appeared in no less than 11 editions between 1727 and 1803, and became one of the favourite songbooks for popular music-making in the home. In the St Gall district the term 'bachofele' was used well into the 19th century for a gathering of singers for rehearsal. Three of Bachofen's arrangements of sacred songs were reprinted by Goldschmid (1942), and he is represented today in the hymnbook of the Swiss Reformed Church by the hymn *Auf, auf ihr Reichsgenossen.*

As the preface of the *Musicalisches Hallelujah* makes clear, Bachofen's works were specifically intended for domestic use. He broke away from the tradition of four-part writing (in the manner of Goudimel's psalms), and most of his settings are in three voices. The continuo part, presumably to be played on the home organ, also constitutes the vocal bass, and there are two soprano parts which frequently cross. Solo songs with organ are inserted to fill gaps on the printed pages resulting from publication in separate parts, with each three-part song beginning a new page.

Bachofen is also important for his pedagogical work, in particular his expansion of the collegia musica, the centres of the day for German Swiss music and the predecessors of the future concert institutions. He also published a *Musicalisches Noten-Büchlein* (Zürich, n.d.), designed to provide the beginner with a 'theoretical conception of the art of music and song in a short time'.

PETER ROSS

Báchorek, Milan (*b* Staříč, north-eastern Moravia, 18 Aug 1939). Czech composer. He studied the piano with Milada Šlachtová in Ostrava (1953–60) and composition with Miroslav Klega at the Ostrava Conservatory (until 1967). He began teaching at the Ostrava Conservatory in 1960 and was appointed its director in 1992. He was secretary to the Union of Composers in Ostrava for many years. His early compositions are influenced by 20th-century composers and by the folk music of his native region. *Ritornello* (1969) marked a new period in his composition, in which he evolved a more uncompromisingly modern language. His other pieces include an important series of three vocal works (*Lidice*, *Stereophonietta* and *Hukvaldská poéma*), and the Cello Concerto (awarded a prize by the Czech Composers' Union in 1991). These works are notable for their imaginative exploration of timbre, their melodiousness and their sense of drama.

KAREL STEINMETZ

Bach Revival. The rediscovery during the first half of the 19th century of Johann Sebastian Bach's music marked the first time that a great composer, after a period of neglect, was accorded his rightful place by a later generation. Palestrina, Lully, Purcell and Handel had never been quite forgotten by the musical public, but Bach was known only to a small circle of pupils and devotees until the Romantic movement stimulated a growing interest in his art. The Bach Revival was an early example of a new historicism which eventually opened all periods of Western music to discovery and performance, and which now constitutes the dominant factor in the musical taste of advanced Western societies. It began at about the same time in Germany, where most of Bach's descendants and pupils, and most of his surviving music, were to be found; and in England, where musical historicism was already well advanced by the end of the 18th century.

See also EARLY MUSIC.

1. Germany and Austria. 2. England.

1. GERMANY AND AUSTRIA. Bach was always a conservative composer, and in the latter part of his career his style had become outmoded, failing to win for him any reputation as a composer in the fashionable world. His music was attacked by Scheibe in 1737 for 'excess of art' and for its 'turgid and confused style'. In the works of his last few years – the completed Mass in B minor, the *Musical Offering*, the *Art of Fugue* and others – he virtually turned his back on what remained of his public, writing for himself and, perhaps, for posterity. At his death public knowledge of his music was at a low ebb. Even at the Leipzig Thomaskirche, his successors only occasionally used his cantatas; the organ works, too, were rarely heard, unless they were played by one of his sons or pupils. Recent research has, however, modified the widespread belief, dating from the late 19th century, that Bach's compositions were largely ignored by his contemporaries and forgotten for more than 50 years after his death. Although few of his works were published during his lifetime, his keyboard music was disseminated widely in manuscript and enormous numbers of copies were made, particularly of *Das wohltemperirte Clavier*. There is evidence that Bach lent his sacred music to friends and former pupils such as J.W. Koch and C.G. Wecker. Indeed, Bach's large circle of pupils was a major force in the distribution of his works.

In the latter half of the 18th century Bach was remembered as a master of organ playing and of learned counterpoint. The first extended biographical notice of Bach, by J.A. Hiller, his third successor at the Thomaskirche, gave only a superficial and condescending account of his compositions (1784); while Reichardt remarked in 1782: 'Had Bach possessed the high integrity and the deep expressive feeling that inspired Handel, he would have been much greater even than Handel; but as it is he was only more painstaking and technically skilful'. Bach's own sons played a part in the rejection of the artistic principles he stood for, which went far beyond the normal changes in style that are found at other periods. C.P.E. Bach's feelings were ambivalent. During his Hamburg period (1768–88) he used recitatives and choruses from his father's two Passions as a framework for his own Passion music; he also incorporated some of the cantatas in pasticcios and edited the four-part chorales for publication. J.C.F. Bach too included chorale movements by the elder Bach in his cantata *Der Tod Jesu* and his oratorio *Die Auferweckung Lazarus*.

It was at Berlin, where C.P.E. Bach was employed until 1767, that the strongest group of Bach disciples was concentrated. They preserved and passed on most of the original manuscripts of Bach's works that have survived. Agricola, Kirnberger, Nichelmann and Marpurg owned large collections of music and published influential treatises which discussed Bach's compositions for various purposes. Increasingly conservative tendencies were manifested in the veneration of Bach by Kirnberger and the circle of Princess Amalia, where Bach was seen as a counterweight to recent developments in musical aesthetics. In Leipzig the cantatas acquired in 1750 from Anna Magdalena Bach's inheritance served as the basis for performance of his music by Gottlob Harrer, Bach's successor at the Thomaskirche, and J.F. Doles. A wish to have some of the large-scale choral works that had left Leipzig with Bach's sons available for performance by the pupils of the Thomasschule accounts for a number of spurious ascriptions (the *St Luke Passion*, the oratorio *Jesu, deine Passion*, the Mass in G major), which had a considerable effect on the image of Bach around the turn of the century. There is evidence that Bach's cantatas were performed in Leipzig in the early 19th century as well as in the second half of the 18th.

The Bach revival in Vienna in the late 18th century was instigated and greatly encouraged by such key figures as Baron Gottfried van Swieten and Fanny von Arnstein. The former was familiar with the Bach tradition from his post as ambassador to the Prussian court, and the latter from her origins in the Itzig family of Berlin. These two patrons must have had considerable influence on the regard in which Mozart and Beethoven held Bach. In April 1782 Mozart wrote that 'nothing but Handel and Bach' was played at the Sunday recitals in van Swieten's house. The Austrian government officer Franz Joseph, Reichsritter von Hess, also owned an extensive Bach collection.

A more general appreciation of Bach came only as a result of the Romantic cult of the past. Arising in England, this movement was immensely strengthened in its German phase by patriotic and religious motives. The military and

political humiliations of the Napoleonic period generated a desire to recover older German traditions, while a religious revival prompted the search for what was truly and distinctively religious in the cultural heritage. In this Bach was to become the archetypal figure. The influence of J.N. Forkel, organist and music director at Göttingen University, was particularly important. Forkel began planning a biography of Bach in the mid-1770s, and consequently was in touch with Bach's two eldest sons. Through them he became acquainted with many of Bach's compositions, and was able to acquire copies and in some cases original manuscripts. 'This great man', Forkel wrote, 'was a German. Be proud of him, German fatherland, but be worthy of him too. ... His works are an invaluable national patrimony with which no other nation has anything to be compared'.

Forkel was joined by Rochlitz in the Leipzig *Allgemeine musikalische Zeitung*, whose first volume (1798) contained a portrait of Bach. Rochlitz was inclined to paint a romantic, saintly picture of the master, comparing him aesthetically and morally with Dürer, Rubens, Newton and Michelangelo. The religious aspect of Bach's art was important to another early convert, C.F. Zelter, a conductor at the Berliner Sing-Akademie, founded in 1791 by C.F.C. Fasch, one of the earliest German institutions to organize historical concerts. He had inherited an extensive collection of Bach's music from Kirnberger and Agricola, and he drew from it in his pioneering revivals of Bach's motets and other sacred works. He rehearsed the Mass in B minor in 1811 and the *St Matthew Passion* in 1815, but did not think it practical to perform them. Through Rochlitz and Zelter, Goethe in his old age came to a profound appreciation of Bach. E.T.A. Hoffmann, another influential literary figure, developed the idealized Romantic conception that Rochlitz had begun to build.

The mounting enthusiasm for Bach culminated in the performance of the *St Matthew Passion* by the Sing-Akademie in 1829, with Mendelssohn conducting. This was the decisive turning-point in Bach's reputation, for it swiftly transformed the revival from a cult of intellectuals into a popular movement. Zelter had allowed a copy of the autograph to be made in 1823; with commendable self-effacement he turned over the honour of conducting the performance to his pupil. Mendelssohn, though at first hesitant, eventually agreed to attempt the formidable task. He made his own arrangement of the music from Zelter's copy; cuts, changes and additions were made (see illustration). After nearly two years of rehearsals, the performance took place on 11 March 1829, and was far more successful than the first performance exactly a century earlier. The audience was deeply moved; Hegel, who was present, later wrote of 'Bach's grand, truly Protestant, robust and erudite genius which we have only recently learnt again to appreciate at its full value'. Two more performances followed, the last conducted by Zelter. Mosewius, who also heard the work at Berlin, conducted it in 1830 at Breslau, an important centre of the Protestant religious revival and the home of Winterfeld. Königsberg was the next city to hear the Passion; it was not performed at Leipzig until 1841. Meanwhile the Berlin Sing-Akademie produced the *St John Passion* in 1833, and a truncated version of the Mass in B minor in 1835 (the Credo had been revived by Schelble at Frankfurt in 1828). A growing number of the cantatas were added to the choral repertory at this period.

The first half of the 19th century saw extensive efforts to preserve Bach's oeuvre. With the deaths of his sons and pupils, there was a danger that the cultivation of Bach's music, nurtured largely by oral traditions in the 18th century and based on private collections, would gradually fade away. In 1801 the Leipzig firm of Hoffmeister & Kühnel began publishing the keyboard works in a collection entitled *Oeuvres complettes*. It was subsequently supervised by Forkel, and concluded in 1804 with the appearance of the 16th volume. The publication of Forkel's biography of Bach by the same firm in 1802 was influential in advertising this 'complete edition'.

Further selections of Bach's music appeared soon after 1800, published in Leipzig by Breitkopf & Härtel (the motets, a four-volume edition of chorale preludes for organ and the spurious mass BWV Anh.167), by Simrock in Bonn (*Das wohltemperirte Clavier*) and in the series Musikalische Kunstwerke im strengen Style, edited by Hans Georg Nägeli (the sonatas for violin and harpsichord, the Goldberg Variations, *Das wohltemperirte Clavier* and *The Art of Fugue*). These editions emphasized the instrumental works, and with few exceptions paid little attention to Bach's vocal compositions. Significantly, music historians of the Romantic period saw Bach as a composer of instrumental music, and Forkel's biography takes the same line.

The editions mentioned above had a crucial effect on the image of Bach in the first four decades of the 19th century. At the same time there was an increasing demand for a complete edition of Bach's compositions. In many respects the London Handel Society editions, which began in 1843, were regarded as a model for the practicality of the project. The Bach-Gesellschaft was founded in 1850, on the 100th anniversary of Bach's death, to promote the complete edition of his works, and the society devoted itself to the task for the next 50 years. As a result the full range of Bach's achievement, particularly as a composer of vocal music, gradually became apparent to a larger audience. A companion-piece to the edition is Philipp Spitta's monumental Bach biography, published in two volumes in 1873 and 1880, which superseded all previous biographical writings on the composer. Yet while all of Bach's known music became available between 1850 and 1899, there was no immediate increase in the number of performances; indeed, during the 1870s, when the number of subscribers to the Bach-Gesellschaft dropped to little more than 300, it was doubtful for some time whether the edition could be completed. Nevertheless, the volumes, though they varied in scholarly precision, were a remarkable achievement, and established the basic principles for scholarly musical editions that have been followed ever since. They completed the Bach Revival, and made it possible for Bach to take his place in public esteem beside or above other great composers.

2. ENGLAND. England lacked the group of pupils and descendants who formed the nucleus of the German Bach Revival; but historicism and antiquarianism were more advanced than in Germany. The music of Handel, Corelli, Domenico Scarlatti and other late Baroque composers continued to be popular throughout the 18th century, while such bodies as the Academy of Ancient Music (1710–92), the Madrigal Society (founded 1741) and the Concert of Ancient Music ('Ancient Concerts', 1776–

1848) cultivated a taste for the music of the remoter past. Burney and Hawkins, though they failed to appreciate Bach's importance, gave him due mention in their histories of music – books of a kind that did not yet exist on the Continent.

The earliest extant copies of Bach's music in England come from the collection of Richard Fawcett and probably date from around 1750. According to Forkel, Bach composed his 'English' Suites for an English nobleman, but no documentation for this claim has been found. A note on a now lost manuscript containing excerpts from the Goldberg Variations stated that the copy was presented to the owner 'J.H.' (probably James Hutton) by Bach in 1749. There is evidence that a good deal of Bach's music was circulating in manuscript in England during the last three decades of the 18th century. J.C. Bach probably had little interest in his father's music, but he may have possessed some copies. Burney received a copy of book 1 of the '48' from C.P.E. Bach in 1772, while Clementi possessed a partly autograph copy of book 2. Queen Charlotte owned a manuscript volume dated 1788, containing the '48', *Clavier-Übung*, iii, and the Credo from the Mass in B minor. This music may have reached the queen through either of two German musicians recently arrived in London: C.F. Horn (1762–1830), her music teacher from 1782, or A.F.C. Kollmann (1756–1829), organist at the German chapel in the court of St James's from 1784.

Clementi, Horn and Kollmann are the most important early figures in the English Bach Revival. Clementi is said to have practised Bach for hours on end during his time at Peter Beckford's house in the early 1770s. His own music shows early traces of Bach's influence which become much stronger in the late sonatas and the *Gradus ad*

Parnassum. He incorporated several of the keyboard pieces in his didactic works. He must have passed on his love of Bach to his two most famous pupils, J.B. Cramer, whose studies of 1804 and 1810 show an obvious influence of the '48', and Field, who astonished audiences with his playing of Bach during his European tour of 1802–3 and who taught Bach's music to his Russian pupils. Kollmann consistently stressed the importance of Bach in his theoretical works in English, beginning with the *Essay on Musical Harmony* (1796), which offered a detailed analysis of the F minor fugue from book 2 of the '48'. In 1799 he advertised a plan to issue an analytical edition of the entire '48', but the scheme was anticipated by the three continental editions of 1801, two of which were reissued in London. He published the Chromatic Fantasia in 1806, with 'additions' by himself, analysed 12 Bach fugues in his *Quarterly Musical Register* (1812) and translated excerpts from Forkel's life of Bach into English, possibly assisting in a complete translation of the work (1820). Horn arranged 12 organ fugues for string quartet – with figured bass – and published them in 1807, and later collaborated with Wesley in the first English edition of the '48'. His son, C.E. Horn, another Bach enthusiast, included part of a fugue from the '48' in the overture to his comic opera *Rich and Poor* (1812).

The movement quickly spread to native English musicians. William Shield's *Introduction to Harmony* (1800) gave due place to Bach, and incorporated the D minor prelude from book 1 of the '48'. George Frederick Pinto, a close friend of Field's, tried to imitate Bach in his C minor Fantasia and Sonata (published posthumously, *c*1808), and it was he who first introduced Samuel Wesley to Bach's preludes and fugues, according to Wesley's memoirs. Wesley took up the cause with feverish intensity, shown in his well-known letters to Benjamin Jacob, another English Bach enthusiast. Wesley edited, with Horn, the six organ trios, published (for the first time anywhere) in 1809–10 in instalments, and a 'new and correct edition' of the '48' in 1810–13. In 1808 he began a series of concerts of Bach's music at Surrey Chapel, with Jacob, who was organist there; and soon afterwards he began a similar series at the Portuguese Embassy chapel, where his friend Vincent Novello was organist and soon became a Bach convert. Because of the lack of pedals on most English organs, Wesley often played Bach's organ music as duets with Jacob or Novello assisting him on a second manual (in some cases Dragonetti played the pedal parts on his double bass). He also played fugues from the '48', which he regarded as organ music.

Wesley saw Bach as a superhuman genius, even though there is a touch of whimsy in the nicknames he used for him – 'Saint Sebastian', 'The Man', 'Our Apollo' and so on. He felt that militant propaganda was needed to persuade the English that any musician could be superior to Handel. He found that his brother Charles was an unrepentant Handelian. But he won many converts, including even the aged Burney who at last recanted his earlier criticism of Bach. William Crotch was recruited to the cause, and was the first to play the 'St Anne's' fugue in public (on the piano). Both Wesley and Crotch gave prominence to Bach in lectures on the history of music. In later life Wesley's enthusiasm was unabated, and he converted Henry John Gauntlett and his own son S.S. Wesley, who played the 'St Anne's' fugue as an organ duet at St Stephen's, Coleman Street, in 1827.

As well as the keyboard works, Wesley endeavoured to promote other music of Bach. The motet *Jesu, meine Freude* was sung at his concert in the Hanover Square Rooms on 3 June 1809, and the following year he presented to the Madrigal Society a score of the same work (with text translated into Latin). He played the sonatas for violin and keyboard many times with Jacob, and on 6 June 1814 he played one with Salomon at the latter's benefit. Nevertheless, for many years Bach was known in England more by reputation than by experience. John Sainsbury's *Dictionary of Musicians* (1824) gave twice as much space to J.S. Bach as to all his sons and relatives put together – in itself a surprising fact; yet as late as 1849, at the opening of the Bach Society, he was still called 'this great and comparatively unknown master'. After Wesley's early efforts there was a period when little new progress was made. Mendelssohn's visits of 1829 and 1832 were a fresh stimulus, and his performances of organ works at St Paul's Cathedral, with pedals, and played with a degree of confidence and understanding that no English musician could equal, were undoubtedly a revelation to English audiences. Moscheles also played his part: he performed the D minor keyboard concerto (with additional orchestral parts of his own) at the King's Theatre on 13 May 1836, and the following year included preludes and fugues from the '48' at several concerts. Monck Mason announced Bach's Passion oratorios for the 1832 season of oratorio concerts at the King's Theatre, but nothing came of this. Parts of the *St Matthew Passion*, B minor Mass and *Magnificat* were given at the Birmingham Festival (1837) and at the Ancient Concerts. Prince Albert, after his marriage to Victoria in 1840, introduced music by Bach into concerts at Buckingham Palace and Windsor Castle and at aristocratic musical societies in which he was concerned. Sterndale Bennett was another champion of Bach, performing keyboard and chamber works at many of his concerts and editing some of the music, including the *St Matthew Passion*, for publication. At Cambridge in the 1840s T.A. Walmisley lectured on Bach and taught his students to revere him above all other composers.

The English Bach Revival culminated in the formation of the Bach Society, founded by Sterndale Bennett. The first meeting, on 27 October 1849, at Bennett's house in Russell Place, formulated the objects of the society, which included the collection and promotion, but not publication, of the works of the master (though the society did publish a volume of the motets, with English text added, in 1851). A number of concerts were given, and at last the *St Matthew Passion* had its first English performance (with English words) at the Hanover Square Rooms on 6 April 1854, Bennett conducting. Several other important works were revived before the society disbanded in 1870. The popularization of Bach was completed when his choral masterpieces were accepted alongside Handel's and Mendelssohn's. The *St Matthew Passion* was introduced at the Three Choirs Festival in 1871, and the Bach Choir undertook the regular performance of the larger choral works, beginning with the Mass in B minor in 1876.

NICHOLAS TEMPERLEY/PETER WOLLNY

Bachschmidt [Bachschmid], **(Johann) Anton (Adam)** (*b* Melk, Lower Austria, 11 Feb 1728; *d* Eichstätt, 29 Dec 1797). German composer and violin virtuoso of Austrian birth. He came from a long line of musicians who emigrated to Melk late in the 17th century from Traunstein, Bavaria. While still a young man he was appointed *Thurnermeister* (director of instrumental music) in Melk, a post which he held from July 1751 to May 1753. He left his native town for travels as a virtuoso and may have been employed briefly at Würzburg (or Wurzbach) before settling in Eichstätt. There he established himself as a versatile musician in the court orchestra of Prince-Bishop Johann Anton II, using steadily in rank from violinist (September 1753) to Konzertmeister (March 1768) and finally to court Kapellmeister (July 1773). Although he developed a reputation primarily as a church composer, Bachschmidt wrote a number of dramatic works for Eichstätt's theatres. His turn from Latin school drama to Italian opera reflects the closing of the Jesuit theatre in Eichstätt in 1773.

WORKS

MSS mainly in CH-E, D-BB, EB, Es, Ew, Mbm, OB, Rtt, WEY, WS

Operas: Erstickter Neid und Eifersucht, 1762, lost; Die Liebe zum Vaterland, 1766, lost; Il re pastore (P. Metastasio), 1774; L'eroe cinese (Metastasio), 1775, lost; La clemenza di Tito (Metastasio), 1776; Demetrio (Metastasio), 1777, lost; Antigono (Metastasio), 1778; Ezio (A. Raimund), 1780, lost

Lat. school dramas, music lost: Constantinus ultimus orientis Caesar, 1761; Jactura fidei, 1764; Pietas in parentem, 1765; S Richardus rex, 1766; Sol ex eclipsi, 1768

Church music: 21 masses, incl. Missa pastoritia, *A-M*; 1 Requiem; 3 Domine; 10 hymns; 29 litanies; 34 offertories; 2 processional songs for Corpus Christi; 9 psalms; 2 Stabat mater; 6 Te Deum; 12 vespers

Inst: 1 orch suite; 1 ov.; 3 vn concs.; Bn Conc.; 24 syms. listed in catalogue of *D-Rtt*; 6 str qts listed in Breitkopf catalogue (1773), lost; Ob Conc., listed in *GerberL*, lost

ROBERT N. FREEMAN

Bach Society. English society founded in 1849 by Sterndale Bennett as part of the English Bach Revival. *See* BACH REVIVAL, §2.

Bach trumpet (Ger. *Bachtrompete*). A misnomer still prevalent in German-speaking countries for any high TRUMPET used in modern performances of Baroque music. Originally, the term was applied to a straight trumpet in A (a 5th higher than the Baroque trumpet in D and a semitone lower than the modern B♭ trumpet) with two valves; such an instrument was first employed by the Berlin trumpeter Julius Kosleck in September 1884 in Eisenach. He also played it on 21 March 1885 in a historic performance of Bach's Mass in B minor at the Royal Albert Hall in London, with Walter Morrow and John Solomon playing the second and third parts on normal instruments. Kosleck's trumpet was described as being in B♭/A and possessing a posthorn (conical) bore. Its mouthpiece was also deeply conical. Morrow and Solomon immediately had such instruments made (they were apparently imported by Silvani & Smith from France), although theirs had the standard cylindro-conical trumpet bore and were played with a normal trumpet mouthpiece. Morrow first employed his at the 1886 Leeds Festival; Solomon's instrument still survives.

The public was misled by journalists to believe that the 'Bach trumpet' was a replica of the valveless trumpet of Bach's day, even though W.F.H. Blandford, with Morrow's support, published an article thoroughly exploding the fallacy. The straight 'Bach trumpet' in B♭/A was,

furthermore, discarded as soon as still shorter trumpets in D were made, also in the straight form but with three valves. The first was manufactured by Mahillon in 1892. Even before that, in 1885, Besson of Paris had made a high G trumpet for the Parisian Teste for a performance of Bach's *Magnificat*, and V.C. (not Barthélémy) Mahillon is said to have invented a so-called 'piccolo B flat "Bach" trumpet' a year later. The shorter instruments, with correspondingly greater distance between the notes of the harmonic series in any given register, considerably simplified the problem of accuracy in the high register. Curiously, the term 'Bach trumpet' was used to refer to the shorter instruments as well as to Kosleck's original model.

EDWARD H. TARR

Bachus, Johannes de. *See* BACCHIUS, JOHANNES DE.

Bacilieri, Giovanni (*fl* 1607–19). Italian composer. All that is known of his life is that for a time he was a priest at Ferrara. His three published collections are of church music intended for particular liturgical rites: some double-choir psalms and two rather more unusual compilations, for Holy Week and the Office of the Dead, neither of which was commonly set to measured music at this period. The Holy Week collection uses traditional styles, including *falsobordone*, chanting and *alternation* polyphony in five parts. This, together with the pompous Latin titles, suggests a rather conservative style for Ferrara, which on the whole had a progressive musical outlook at this time.

WORKS
all published in Venice

Totum defunctorum officium ex Pauli V Pont. Max. rituali recentiori modulatione, 5vv, musice redditum, op.3 (1619)

JEROME ROCHE/ELIZABETH ROCHE

Bacilly [Basilly, Bassilly], **Bénigne de** (*b* ?Normandy, ?*c*1625; *d* Paris, 27 Sept 1690). French singing teacher and composer. He may have been a priest. He lived for most of his life in Paris but he was also in the service of Charles of Lorraine, Duke of Elbeuf. Although he was important as a composer and teacher, Bacilly's most valuable legacy is the vocal treatise *Remarques curieuses sur l'art de bien chanter*, which has for long been recognized as one of the most detailed sources of information on French 17th-century vocal practice. However, until the publication of an English translation with the examples included, the application of its precepts to vocal performance had been virtually impossible since the examples Bacilly used to illustrate his teachings were not included in the text (he simply referred instead to specific passages in published volumes of *airs de cour*). The importance of the *Remarques* lies in two main areas: it is one of the earliest volumes to give specific descriptions and applications of the expressive melodic figures (*agréments*) that had been adopted into the musical language of all Europe by the 18th century, and fully half the treatise is devoted to an exhaustive discussion of the meaning, structure, pronunciation and rhythm of French poetry, with detailed instructions as to its amplification through musical ornamentation – ample evidence of the master–servant relationship between poetry and ornamentation. Bacilly took his examples from *airs* whose short, delicate couplets are matched by tender, unobtrusive melodies. In the anthologies of *airs* of Bacilly's time it was the composer's custom to print the melody of the second verse as an elaborate variation of the first. Bacilly referred to those diminutions as written-down improvisations of the singer-composer and analysed their relationship to the poetry. He was himself active as a composer in this genre, but many of his collections of *airs* were published in limited runs of 30 or fewer, and in some cases no copies are extant.

WORKS
all printed works published in Paris

SACRED

Les airs spirituels ... sur les stances chrestiennes de M l'Abbé Testu ... avec basse continue, et les seconds couplets en diminution (1672)
Les airs spirituels ... avec la basse continue, les chiffres pour l'accompagnement, et les seconds couplets en diminution, seconde partie (1677)
Les airs spirituels ... dans un plus grand nombre et une plus grande perfection que dans les précédents éditions, deux parties (1688) [revision of the two collections above; further edns in 1692 and 1693]

SECULAR

Nouveau livre d'airs (1661)
Premier livre d'airs (1662)
XXII livre de chansons pour danser et pour boire à deux parties (1663)
Second livre de chansons pour danser et pour boire à deux parties (1664)
Second livre d'airs à deux parties ... dédié à son Altesse Mademoiselle de Nemours (1664)
III. livre de chansons pour danser et pour boire (1665)
IIII. livre de chansons pour danser et pour boire (1666)
V. livre de chansons pour danser et pour boire (1667)
Capilotade bachique à deux parties contenant les alphabets de fragmens choisis des meilleures chansons à boire (1667)
Les trois livres d'airs ... augmentez de plusieurs airs nouveaux, de chiffres pour le théorbe et d'ornemens pour la méthode de chanter, première partie (1668)
VI. livre de chansons pour danser et pour boire (1668)
Meslanges d'airs à deux parties, d'airs à boire et autres chansons (1671)
II. livre des meslanges, de chansons, airs sérieux et à boire, à 2 et 3 parties (1674)
Second livre d'airs bachiques ... contenant plusieurs récits de basses et autres airs à deux et à trois parties avec une seconde édition du premier recueil corrigée et augmentée (1677)
Recueil des huit livres de chansons pour boire e pour danser (1699)
Songs, sacred and secular, in Airs de différents autheurs à deux parties (1658); IIe livre d'airs de différents autheurs à deux parties (1659); XX recueil de chansons pour danser et pour boire (1661); IVe [–XIIIe] livre d'airs de différents autheurs à deux parties (1661–70); XXI. livre de chansons pour danser et pour boire (1662); Premier livre d'airs à boire ... contre les incommoditez du temps (1673); Recueil de chansonettes de differents autheurs (1675); Mercure galant (1679–90); VIe recueil de Chansonettes de differents autheurs (1680); Nouvelles poésies spirituelles et morales (1737); Airs notez des cantiques sur les points les plus importans de la religion et de la morale chrétienne (1738); Airs et

brunettes à 2 et 3 dessus pour les flûtes traversières tirez des meilleurs autheurs (n.d.); MSS in *F-Pn*

EDITIONS

Recueil des plus beaux vers ... mis en chant, avec le nom des autheurs tant des airs que des paroles (1661)
Recueil des plus beaux vers ... mis en chant. 3me partie (1661)
Suite de la première partie du recueil des plus beaux vers ... (1661)
Recueil des plus beaux vers ... Seconde et novelle partie dans laquelle sont compris les airs de Versailles (1668)
Journal de toutes le nouveautés du chant (?1668), lost
Recueil de tous les plus beaux airs bachiques, avec les noms des autheurs du chant et des paroles (1671)
Le bon mary. Comédie (1678), lost, cited in *Le Mercure galant*
Premier recueil d'airs sérieux et à boire de différents autheurs, à deux et trois parties (1679)
Nouveau recueil des plus beaux vers mis en chant, augmenté de tous les airs les plus nouveaux et de plusieurs grands récits et autres couplets de Mme la Comtesse de la Suze ... (1680)

THEORETICAL WORKS

Remarques curieuses sur l'art de bien chanter (1668/*R*, 4/1681; Eng. trans., 1968; Eng. trans. of pt 1 in Lorimer)
Traité de la méthode, ou Art de bien chanter par le sieur B.D.B. (1671)
L'art de bien chanter de M de Bacilly, augmenté d'un discours qui sert de réponse à la critique de ce traité (1679)
Traité de la méthode, ou Art de chanter par M de B*** (1681), lost, cited in *FétisB*

AUSTIN B. CASWELL/R

Back [Bagg], **Konrad** (*b* Haigerloch, 23 June 1749; *d* Ottobeuren, 10 April 1810). South German monastic composer. After studying in Zwiefalten and Ehingen an der Donau, he entered the Benedictine monastery of Ottobeuren in 1771. He was taught music by Ernestus Weinrauch in Zwiefalten and by Franz Schnitzer and Christoph Neubauer in Ottobeuren. He served the monastery as choir leader, music teacher and master of novices. After the suspension of the state endowment to Ottobeuren in 1802, he continued to live there as a pensioner. Back enriched the active musical life of the abbey primarily through his liturgical compositions, of which two masses, dated 1793, survive in the Munich Staatsbibliothek and several smaller works in Ottobeuren. He also wrote at least one cantata for the abbey (*Der Tod Jesu*, manuscript copies in Munich and Salzburg), and some stage works, including a *drama musicum*, *Authore parente servata religio* (1794, autograph in Munich), and *Josephus honoratus*, performed at Ottobeuren in 1792 and now lost. His only known printed work is a symphony which appeared in an anthology published in Berlin by Hummel.

ADOLF LAYER

Back, Oskar (*b* Vienna, 9 June 1879; *d* Brussels, 3 Jan 1963). Dutch violinist and teacher of Hungarian origin. He studied at the conservatories in Vienna and Brussels (with Ysaÿe and César Thomson), and taught at the Brussels Conservatory, 1910–18. In 1919 he settled in Holland and was one of the distinguished violinists who supplemented the Amsterdam Concertgebouw Orchestra under Mengelberg for the historic Mahler Festival of 1920. Back devoted himself chiefly to teaching, first with private lessons and later at the Amsterdam Muzieklyceum and the Rotterdam Conservatory. He taught most of the leading Dutch violinists and orchestral leaders, among whom the best-known are Herman Krebbers, Theo Olof, Willem Noske, Jo Juda, Emmy Verhey and Jean Louis Stuurop; he also taught a number of foreign students, including Alma Moodie. The Oskar Back Foundation was set up after his death to provide assistance for talented young Dutch violinists; it organizes a national violinists' competition, held every other year.

TRUUS DE LEUR

Bäck, Sven-Erik (*b* Stockholm, 16 Sept 1919; *d* Stockholm, 10 Jan 1994). Swedish composer. He was born into a Protestant family and came into early contact with unpretentious chamber music, jazz and Lutheran church music. He studied the violin with Sven Karpe and then (1938–43) at the Stockholm Music High School with Charles Barkel, in whose quartet he played the viola (1944–53). The decisive influence on him, however, was Rosenberg, who gave him private tuition in composition (1940–45). With other Rosenberg pupils, including Blomdahl and Lidholm, he formed the Monday Group which met, from 1944 for some years, on Mondays at Blomdahl's home to discuss and analyse their own and other music; they also studied Hindemith's *Unterweisung im Tonsatz* and other works. Bäck subsequently took a leading position in Swedish musical life: he was on the boards of the Swedish Royal Academy of Music and of the Theatre and Music Council, and in 1958 he was appointed principal of the Edsberg Music School attached to Swedish radio, where he proved himself a brilliant teacher of interpretation and performance in Renaissance, Baroque and contemporary music. This side of his work dates back to 1948, when he visited the Schola Cantorum in Basle,

the orchestra whose style was emulated by the Lilla Kammarorkestern in which Bäck played (1943–8) and by the Kammarorkestern -53, which he led from its creation in 1953 to 1957.

Bäck first developed an individual style in religious works, notably *Ur Johannes 3* (1946) and *Ur Jesaja 9* (1947). The much-performed Solo Flute Sonata (1949) shows how short was the step, in his mind, from vocal to instrumental writing, for its first movement is a direct development of a setting of Psalm xlii. Rosenberg's teaching had stressed melody as an essential element even in polyphonic works, and Bäck introduced quite original melodic ornaments, easily recognized in his music of the 1950s. When, with the other members of the Monday Group, he discovered 12-note composition, he preferred the aphoristic and lyrical qualities of Webern, and this led him to a thoroughly *pointilliste* style best exploited in *A Game around a Game* for orchestra (1959). He often worked with artists in other media, notably in the successful chamber opera *Tranfjädrarna* ('The Crane Feathers', 1956), and extended the collaboration in such works as *Favola* (1962), for which Östen Sjöstrand wrote a poem and Björn Erling Evensen produced a sculpture; Evensen also constructed murals to be seen to the accompaniment of electronic music by Bäck. Towards electronic composition, as practised by Stockhausen and others, Bäck had at first remained sceptical, but from 1969 he worked intensively in the medium, composing some 'electronic motets' that form a sequel to those more conventional motets of his, for mixed choir *a cappella*, which are among the major contemporary contributions to liturgical music.

WORKS
(*selective list*)

STAGE

Operas: Tranfjädrarna [The Crane Feathers] (chbr op, B. Malmberg, after Kinoshita), 1956, Swedish radio, 1957; Gästabudet [The Banquet] (Ö. Sjöstrand), Stockholm, 1958; Fågeln [The Bird] (A. Obrenovic), 1960, Swedish radio, 1961

Ballets: Svanesång (B. Åkesson), children's chorus, fl, va, timp, 1947; Danssvit (Åkesson), 2 pf, 1951; Nature morte (Åkesson), va, bn, perc, 1955; Ikaros (Åkesson), orch, 1963; Movements (Åkesson), orch, 1965

ORCHESTRAL

Sinfonia, str, 1951; Variationer över en luthersk kyrkovisa, 1954, rev. as Fantasi över 'Dies sind die heilgen zehn Gebot', 1957; Sinfonia da camera, 1955; Vn Conc., 1957; A Game around a Game, 1959; Arkitektur, 2 ww orchs, perc, 1960; Intrada, 1964; Vc Conc., 1965; Movimento II [concert version of ballet Movements], 1966; O altitudo II, 1966; Ruoli, 1966; Serenade/Sumerki, str orch, 1977; Sumerki 90, 1990

VOCAL

Choral: Ur Johannes 3, vv, org ad lib, 1946; Ur Jesaja 9, 1947; Glädje i Gud, cant., solo vv, vv, org, 1948; Dityramb (G. Ekelöf), unison female vv, chbr orch, 1949; Kattresan (Conc. per bambini) (I. Arosenius), cant., children's vv, rec, vn, perc, 1952; Himlaljusens fader, cant., solo vv, vv, str, org, 1952; Sinfonia sacra, vv, orch, 1953; 15 motets for the church year, 1959–81; Uppbrottets mässa (O. Hartman, L. Håkansson), vv, unison vv, org, perc. 1967; Humlan (F. Isaksson), vv, vc, pf, perc, 1968; Behold I am Making all Things New, vv, 1968; Vid havets yttersta gräns (cant., Sjöstrand), solo vv, mixed choir, orch, tape, 1979

Back check. *See* CHECK.

Backer Grøndahl, Agathe (Ursula) (*b* Holmestrand, 1 Dec 1847; *d* Kristiania [now Oslo], 4 June 1907). Norwegian composer and pianist. She married the conductor Olams Andreas Grøndahl in 1875. She first studied the piano in Christiania with Winter-Hjelm and Kjerulf, then in Berlin at Kullak's Neue Akademie der Tonkunst (1865–7) and later (1871–2) with Bülow in Florence and Liszt in Weimar. She also studied theory and composition with L.M. Lindeman in Christiania and R. Wüerst in Berlin. Influential in Norway as both performer and teacher, she also made concert tours in the other Scandinavian countries and in Germany and England, and was recognized as an outstanding pianist by her contemporaries. Her chief significance, however, was as a composer of songs (of which she wrote about 190) and piano pieces (about 120); she also wrote some songs for chorus, and more than 50 Norwegian folksong arrangements; her orchestral compositions are limited to two works from her student days in Berlin.

The best of Backer Grøndahl's songs, such as the cycles *Barnets vårdag* ('The Child's Spring Day') to poems of A. Jynge, and *Ahasverus*, to poems of B.S. Ingemann, belong to the standard Norwegian Romantic song repertory. Their strength lies in the shapely, singable melodies reflecting the moods of the texts. Although the piano generally plays a supporting role, only rarely functioning independently, the accompaniments are nonetheless carefully worked out and sometimes include elements of tone-painting. Most of the songs are in varied strophic form, but there are also simple strophic and through-composed examples. Her piano works are for the most part descriptively titled lyric pieces in simple song forms or, less often, in larger fantasy-like forms. Among the best known are the *Serenade* (op.15 no.1), *Ballade* (op.36 no.5), *Sommervise* ('Summer Song') (op.45 no.3) and the

fairytale suite *I blaafjellet* ('In the Blue Mountain') (op.44). The concert studies are among her finest works, and some of them make considerable technical demands on the performer. Although Backer Grøndahl's career was in the heyday of late Romanticism, her style remained conservative and principally modelled on earlier composers, including Schubert, Mendelssohn and Schumann. The specifically folk-influenced Norwegian tradition, which left its stamp on many of her contemporaries, seems to have had only a slight effect on her music; her folksong arrangements show some of the characteristic traits of Norwegian folk music, but do not have the stylistic interest and originality of the arrangements by Grieg and Kjerulf. Her original compositions, however, have a melodic charm that has secured them a lasting place at the heart of the Norwegian Romantic repertory.

NILS GRINDE

Backers, Americus (*d* London, Jan 1778). Dutch or German maker of harpsichords and pianos, active in England. He worked at 22 Great Jermyn Street, London, from 1763 to 1778. Writing to the *Gentleman's Magazine* in 1812, James Shudi Broadwood attributed the invention of the English grand-piano action to the 'Dutchman' Backers in 1772. It was not until 90 years later that Henry Fowler Broadwood wrote, in his observations on his father's manuscript notes, that John Broadwood and Robert Stodart had assisted Backers with his invention; since Backers had advertised his 'Original Forte Piano' in the *Public Advertiser* of 1 March 1771, claiming that it was 'no Copy, being entirely his own Invention', Backers must have been primarily responsible. The English grand action was an improvement on the action invented by Cristofori: the intermediary underhammer was removed, allowing the hopper to work directly on the notch in the butt of the hammer, and a regulating button and screw to control the escapement was incorporated. Simple but perfect, it was a direct lever action and became standard as the English grand action. (For illustration *see* PIANOFORTE, fig.12.)

The earliest surviving piano that incorporates the English grand action is owned by the Duke of Wellington, and is on loan to Edinburgh University. Its nameboard reads: 'Americus Backers No. 21 Londini fecit 1772'; it is bichord and has una corda and damper pedals. Its hammers have rolled leather heads, although, according to Broadwood's *1862 International Exhibition: List of the Articles Exhibited*, Backers first planned to fit cork or softwood hammerheads, 'with a view to obtain the Harpsichord tone so much admired at that period'. Burney stated that Backers was German, and that he made trichord pianos costing between £60 and £70. Backers made 59 grand pianos; his only surviving harpsichord, owned by Lord Hylton, is dated 1766. It has a compass of five octaves and its disposition is 2 x 8′, 1 x 4′, with a lute which was originally operated by a pedal.

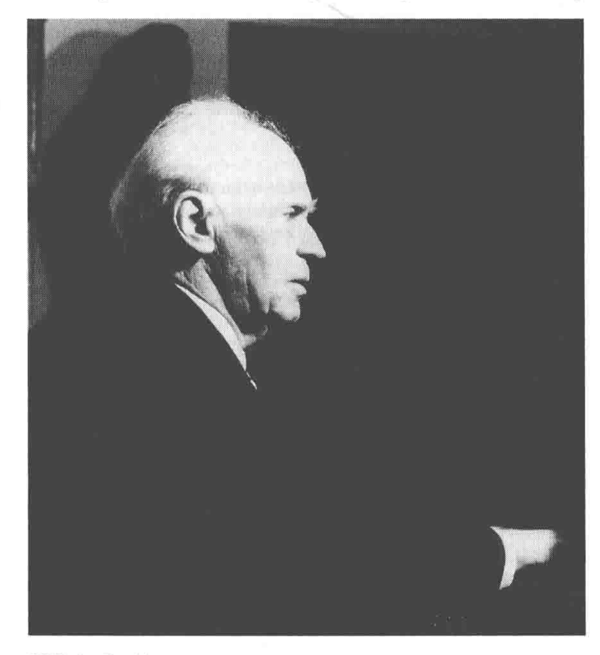
MARGARET CRANMER

Backfall (i). A term used to denote a short, descending appoggiatura applied on the beat to conjunct notes or notes a pair apart. The 'forefall' ('beat' or 'half-fall') was a rising appoggiatura. The less common slide or double backfall descended a 3rd onto the main note. *See* ORNAMENTS, §6.

Backfall (ii). A lever in an organ's key action or coupler mechanism, which transfers the key action to the vertical tracker or sticker, which in turn causes the pallet in the wind-chest to open. For illustrations *see* ORGAN, figs.5 and 6.

Backfall [backwell] **(iii).** A lever in a carillon's mechanism.



Background (Ger. *Hintergrund*). In Schenkerian analysis (*see* ANALYSIS, §II, 4) the first, i.e. fundamental, LAYER that underlies a piece or movement. The background layer of a piece is represented by one of a limited number of basic contrapuntal designs, called the URSATZ of the piece.

Thus many pieces of tonal music have the same background structure. For this reason the word 'background' is sometimes used more loosely by analysts to mean structure itself, in opposition to 'foreground' which connotes the surface of the piece.

WILLIAM DRABKIN

Background music. *See* ENVIRONMENTAL MUSIC.

Backhaus, Wilhelm (*b* Leipzig, 26 March 1884; *d* Villach, 5 July 1969). German pianist. He studied the piano with Alois Reckendorf and composition with Salomon Jadassohn at the Leipzig Conservatory. In 1898–9 he was a pupil of d'Albert, but after the age of 15 he was largely self-taught. In 1900–01 he toured England, substituting for Ziloti in a performance of Beethoven's Fourth Piano Concerto with the Hallé Orchestra under Hans Richter, and in 1901 he made his Promenade Concerts début with Mendelssohn's G minor Concerto, returning to perform Brahms's Paganini Variations at the Proms later the same season. In 1905 he won the Rubinstein Prize in Paris and commenced an intensive international career. Backhaus made the first of many North American tours in 1912–13, playing Beethoven's 'Emperor' Concerto with Walter Damrosch and giving a Carnegie Hall recital. A New York Town Hall recital given in 1921 drew a tumultuous response. However, between 1926 and 1954 his career was based chiefly in Europe, and in 1931 he became a Swiss citizen. His return to America in 1954 to give a series of Beethoven recitals in Carnegie Hall showed an undiminished authority. He held teaching appointments at the RMCM (1905) and at the Curtis Institute in Philadelphia (1925–6). However, he did not view himself as a teacher, and when questioned about his fabled technique commented drily that it was based on scales, arpeggios and Bach. Backhaus made the first-ever concerto recording (the Grieg A minor Concerto) in 1909, and the first complete recording of the Chopin études in 1928; shortly before his death he was completing a second recorded cycle of Beethoven's 32 sonatas which he had begun in 1964, when he was 80. His mastery in such daunting music as the Chopin études was legendary, although he is chiefly remembered for the ruggedness and integrity of his Beethoven and Brahms. Even in his 80s his command of the Brahms B♭ Concerto (which he played in the Royal Festival Hall, London, with Klemperer and recorded with Böhm) remained unfaltering, a tribute to his formidable technical security.

Backofen, Johann Georg Heinrich (*b* Durlach, 6 July 1768; *d* Darmstadt, 10 July 1839). German harpist, clarinettist and basset-horn player. With his brothers Ernst (bassoonist) and Gottfried (violinist and clarinettist) he went to Nuremberg in 1780 to study music. The Kapellmeister, G.W. Gruber, taught him composition, and H. Birckman the clarinet. From 1789 Backofen made several tours as a clarinettist. He returned to Nuremberg in 1794 and studied the flute. In 1802 he lived at Gotha, where he taught the harp. In 1806 he was appointed court chamber musician and in the same year saw the marriage in Gotha of his pupil Dorette Scheidler to Spohr. In 1811 Backofen became court musician at Darmstadt, where he manufactured clarinets. He wrote a clarinet and basset-horn method in 1803, but as this became outdated when Müller's inventions appeared he produced a new edition in 1824; this contains much useful information. Backofen also wrote a harp method (1801) and compositions for harp, clarinet, basset-horn and wind band. It was probably his niece who appeared as a singer, and whom Hermstedt engaged for the Sondershausen theatre.

PAMELA WESTON

Backus, John (Graham) (*b* Portland, OR, 29 April 1911; *d* Los Angeles, 28 Oct 1988). American acoustician. After studying at Reed College, Portland (BA 1932), he undertook postgraduate study at the University of California in Berkeley (MA 1936, PhD 1940). His early research work was in nuclear physics, working under the supervision of Ernest Lawrence in the Radiation Laboratory at Berkeley. In 1945 he was appointed professor of physics at the University of Southern California, and he continued in that post until his retirement in 1980. An accomplished performer on the piano and the bassoon, Backus was awarded the degree of MMus in conducting by the University of Southern California in 1959. In the later stages of his research career he made major contributions to the study of the acoustics of woodwind instruments, brass instruments and organ pipes. In 1969 the first edition of *The Acoustical Foundations of Music* was published; this became one of the most popular and successful introductory textbooks in musical acoustics. He was awarded the Silver Medal of the Acoustical Society of America in 1986.

MURRAY CAMPBELL

Bacon, Ernst (*b* Chicago, IL, 26 May 1898; *d* Orinda, CA, 16 March 1990). American composer and pianist. He studied at Northwestern University (1915–18), the University of Chicago (1919–20) and the University of California (MA 1935). Among his teachers were Alexander Raab and Glenn Dillard Gunn (piano), Weigl and Bloch (composition), and Eugene Goossens (conducting), under whom he was assistant conductor of the Rochester Opera Company. He taught at the Eastman School (1925–8) and the San Francisco Conservatory (1928–30); in 1935 he instituted and conducted the Carmel Bach Festival in California, and the next year he was supervisor of the WPA Federal Music Project in San Francisco and conductor of its orchestra. Subsequent teaching appointments took him to Converse College, Spartanburg, South Carolina, as dean and professor of piano (1938–45), and to Syracuse University, as director of the school of music and professor (1945–63, professor emeritus from 1964). Among the awards he received were a Pulitzer Prize (1932, for the Symphony no.1) and two Guggenheim Fellowships.

As a composer Bacon is best known for his songs, which show unusual sensitivity to the colour and inflection of words and a masterly use of syncopation to give the impression of natural speech. His settings of texts by Emily Dickinson and Walt Whitman are considered by many to be among the finest examples of 20th-century American art song. He made many folksong arrangements, and a number of his works on American subjects, such as the folk opera *A Tree on the Plains* (1942) and the orchestral suite *From these States* (1951), draw on various types of indigenous music, including black American and Appalachian tunes, hymns, spirituals and jazz. His music favours clear melodic contours, vigorous contrapuntal energy and strong rhythms that allude occasionally to ragtime and other dance idioms. Though he made use of non-diatonic scales, such as the octatonic, Bacon's harmony remained fundamentally tonal, with an emphasis on open, diatonic intervals.

In addition to composing, Bacon performed as a pianist in Europe and the USA. His published writings include two books, *Words on Music* (Syracuse, NY, 1960/*R*) and *Notes on the Piano* (Syracuse, NY, 1963/*R*). His article 'Our Musical Idiom', published in *The Monist* in October 1917, represents one of the earliest attempts at a systematic classification of all possible harmonies within the 12-note system.

WORKS

Dramatic: Take your Choice (musical comedy), collab. P. Mathias and R. Stoll, San Francisco, 1936; A Tree on the Plains (musical play, 2, P. Horgan), Spartanburg, SC, 1942; A Drumlin Legend (children's op, H. Carus), New York, 1949; Dr. Franklin (musical play, C. Lengyel), 1976; ballets

Orch: Sym. no.1, d, 1932; Bearwalla, pf, str, 1936; Country Roads, Unpaved, suite, 1936; Sym. no.2, 1937; Ford's Theater, 1946; From these States, suite, 1951; Fables (E. Bacon, J. Edmunds), nar, orch, 1953; Great River (Sym. no.3), 1956; Conc. grosso, 1957; Elegy, ob, str, 1957; Erie Waters, suite, 1961; Riolama (Pf Conc. no.1), 1963; Over the Waters, ov., 1976; Pf Conc. no.2, 1982; Remembering Ansel Adams, cl, str, 1985; band works; songs with orch

Chbr: Buncombe County, vn, pf, 1943; Sonata, vc, pf, 1948; Qnt, str qt, db, 1950; Peterborough, suite, va, pf, perf. 1952; A Life, suite, vc, pf, 1966–81; Old Airs from Many Countries, wind ens, 1968; Pf Trio no.1, 1978; Tumbleweeds, cycle, vn, pf, 1979; Sonata, vn, pf, 1982; Pf Trio no.2, 1986; Sonata, va, pf, 1987; pieces for pf, pf 4 hands and org; other works for various insts

Choral: Ecclesiastes, cant., S, B, SATB, orch, 1936; From Emily's Diary (E. Dickinson), women's chorus, pf/small orch, 1947; By Blue Ontario (W. Whitman), cant., A, B, SATB, orch, 1958; Requiem 'The Last Invocation' (Dickinson, Whitman), B, chorus, orch, 1968–71; orats; choral folksong arrs, hymns, and anthems

Songs, 1v, pf: Songs at Parting (Whitman) (1930); 6 Songs (C. Sandburg, Whitman, Dickinson) (1942); The Erie Canal (Amer.) (1942); 5 Poems (Dickinson) (1943); Along Unpaved Roads (Amer.), 8 songs (1944); Is there such a thing as day? (Dickinson) (1944); Buffalo Gals (Amer.) (1946); The Grass (Dickinson) (1946); O Friend (Dickinson) (1946); 4 Songs (W. Shakespeare, J. Lewis, E. Millay) (1946); The Commonplace (Whitman) (1946); The Red Rose (R. Burns) (1947); Velvet People (Dickinson) (1948); over 200 others

PHILIP L. MILLER/R

Bacon, Richard Mackenzie (*b* Norwich, 1 May 1776; *d* Cossey [now Costessey], 27 Nov 1844). English journalist

and writer on music. He was the only son of Richard Bacon (1745–1812), a grocer and printer from Yarmouth who in 1788 became co-proprietor of the weekly *Norwich Mercury*. R.M. Bacon joined him as manager of the printing department at the age of 18, and by 1804, on his father's retirement, became sole proprietor of the paper, a leading Whig journal with a county-wide circulation. The younger Bacon's musical interests – he had a good baritone voice and studied singing with Samuel Arnold – developed naturally in the convivial atmosphere of late 18th-century Norwich. He participated in cathedral events directed by J.C. Beckwith and vocal concerts given by the Anacreontic Society. He also gained local theatre ties, first through his marriage in 1797 to Louise Noverre (1768–1808), niece of the celebrated dancing-master Jean-Georges Noverre, and then through his shareholding interest in the Theatre Royal, Norwich (1806–12).

Bacon became a freeman of the city in 1798, served as captain (1803), then major (1804) in the Norwich Rifle Volunteers, and worked tirelessly to promote advances in local industry. From about 1805 he helped develop a new printing press using a rotary principle, and about 1807 formed a partnership to modernize the paper mill at nearby Taverham, installing a huge Fourdrinier machine. Neither project was completely successful; the mill speculation was in fact disastrous and Bacon spent several years trying to recover his loss. His idea for a quarterly music review – itself based on the innovatory critical approach of the new *Edinburgh Review* – sprang directly from personal financial need about this time. In 1816 he sold the mill and became salaried editor of the *Mercury*. Now living on the outskirts of Norwich, he and his second wife, Margaret Gilbert Burks, reared six children, and Bacon built a reputation as a cultured and articulate writer on many subjects. Liberal minded and humane, he proved to be one of the most distinguished newspaper editors of the early 19th century. Besides writing essays for the *Quarterly Musical Magazine and Review* (*QMMR*) and leading articles and arts reviews for the *Mercury*, he wrote pamphlets and essays on economic, social and political topics, drama and arts criticism (*Literary Gazette*), essays on music (*London Magazine*, 1820–25; *New Monthly Magazine*, 1833–5), two political biographies, and three books on singing: *The Grace Book, or Guide to the Science and Practice of Vocal Ornament* (London, *c*1821), *The Elements of Vocal Science, being a Philosophical Enquiry into some of the Principles of Singing* (London, 1824) and *The Art of Improving the Voice and Ear* (London, *c*1825). His ambitious plan for a two-volume encyclopaedia of music (*c*1819–22) was never realized.

Bacon's signal achievement in music was the *QMMR* (published by Robert Baldwin, then Hurst & Chance, autumn 1818–spring 1830), the first long-running English journal devoted to music literature. Its concept as both miscellany and serious critical organ, with a high literary-philosophical style, was unprecedented, and all the more extraordinary for originating outside London music circles. As the journal's founder, editor and chief contributor (all anonymously), printer and, probably, co-proprietor – with support from the London music seller Chappell – Bacon had complete control of the journal's content and tone. His goal was not only to establish a viable public forum for the exchange of musical ideas, but also to raise the intellectual respectability of music in Britain, and encourage mutual understanding among disparate social groups involved with its practise. He printed a mix of essays on theory, performance, musical institutions, vocal style in Italian and English music, social relations between amateurs and professionals, and issues in music education and patronage, as well as substantial reviews of printed music and books. A few articles are signed or initialled by genuine correspondents, many are translated excerpts from foreign music literature, and still more take the form of pseudonymous essay-letters 'To the Editor'. A large proportion of these can be shown to be by Bacon himself, promoting his Handelian tastes, the need for serious, 'all-sung' English opera, the benefits of the provincial festival movement, and the place of music in society. Among his certain collaborators, William Horsley was particularly important, serving as Bacon's most trenchant reviewer and his inside line to the London professional scene. The editor also relied on a wide circle of musical correspondents, British and foreign, for news, opinion, essay contributions and technical information. The *QMMR* eventually failed for lack of purchasers, but not before Bacon's influence had been felt. It was he who, in 1822, first suggested the Norwich Triennial Festival (established 1824) and, about the same time, was personally consulted over the curriculum of the new RAM. Later he was an effective intermediary between nobility and profession in sharing out printed editions from the King's Library, and in engaging singers for the Ancient Concerts.

Bacon's preoccupation with systems of music education, the rudiments of singing, formation of taste and the social status of musicians was at least partly connected with his concerns as a parent. Each of his four oldest children had some musical skill or interest, and helped with the *QMMR* project. Richard Noverre Bacon (1798–1884) played the cello and probably wrote on cadenzas; an authority on Norfolk agriculture, he later became proprietor of the *Norwich Mercury*. Louisa Mary Bacon (1800–85) gave editorial assistance, possibly wrote on Haydn for the journal, and later published several popular-education works for and about children, 1833–51, giving attention to music. She married a local merchant, John Barwell, and raised a family. Jane Margaret Bacon (*fl* 1820–70) studied music theory and singing in London and Paris, and attained some notice as a mezzo-soprano; she sang for RAM and Philharmonic Society concerts as well as for provincial festivals. Her reputation and professional contacts were helpful in securing musical intelligence for *QMMR*. She married George Taylor, a physician of Kingston, Surrey. Mary Anne Bacon (*c*1805–75) translated and wrote articles for the journal, translated German, French and Italian songs for Norwich festivals and the Concerts of Ancient Music, and later served as organist of a village church. She also wrote verse and prose tales, and reviewed French literature for the *New Monthly Magazine*. Latterly she compiled and annotated Bacon family papers (now in Cambridge University Library), and served as executrix of her father's estate, valued at around £8000.

LEANNE LANGLEY

Bacon [Baco], **Roger** (*b* nr Ilchester, *c*1214; *d* Oxford, *c*1292). English theologian and philosopher. He studied first under Grosseteste in Oxford, then in Paris. In 1247 he gave up his official teaching in Paris, returning some three years later to Oxford. In about 1255 he entered the order of friars minor. Guy de Foulques (later Pope Clement IV), then Archbishop of Narbonne, wrote about 1265 asking him to outline a syllabus for the reform of learning – a sign of the high esteem in which Bacon and his teaching were held. Bacon responded by composing the three summaries known as the *Opus maius*, the *Opus minor* and the *Opus tertium*, submitting them to the pope in 1268. Clement died, however, that same year, before he had had time to study or implement them. During the next decade Bacon produced further writings on mathematics, science and language, including Greek and Hebrew grammars and a *Compendium* to the study of philosophy. His opponents in Paris contrived to have him formally condemned by the General of his order in 1277 and forced to remain for over ten years in some form of compulsory retirement. He died shortly after regaining his freedom.

Bacon brought to its full flowering the school of Oxford thinkers founded by Grosseteste and developed by Adam Marsh. He was the first to presume to the authority of Aristotle, suggesting that results obtained by argument must always be tested by observation and experiment. He wrote extensively on music, his thoughts on this subject being scattered through several of his encyclopedic treatises. Following Boethius, he divided music into its three customary categories, *mundana*, *humana* and *instrumentalis*, but questioned whether *musica mundana* (the 'music of the spheres') should be included, since it could not be perceived by the human ear. With Cassiodorus he subdivided instrumental music into percussion, strings and wind, a division still used today. 'Human' music covered both song and speech, the latter embracing prose, metre and rhythm. Bacon further discussed music as being either audible or visible, classifying under this last head dancing and other gestures of the body. His notion of an all-embracing aesthetic experience – music as a synthesis of poetry, dancing and the art of sound – can be traced back through Gundissalinus and al-Fārābī to Remigius of Auxerre.

Bacon considered a knowledge of music to be essential to the study of theology, and *a fortiori* to the practical exercise of public worship. It contributed to the fostering of the moral and the spiritual life. He recommended a systematic study of the effect of music on the temper and health of men and beasts. An understanding of the art of dance and gesture was necessary to those who preach.

In discussing the diatonic, chromatic and enharmonic genera, Bacon asserted, on the authority of Boethius and the Fathers, that the enharmonic genus was the one best suited to chant and to the further development of music. He condemned abuses that had crept into sacred music in his own day, particularly falsetto singing, and he pointed the finger at great cathedrals and famous colleges that indulged in new-fangled and dissolute styles. He deplored a decline in the quality of hymn writing, attributing this to insufficient knowledge of metre and rhythm.

In the pursuit of knowledge, Bacon maintained, the importance of music could not be overestimated. All beauty, in his opinion, was ultimately derived from harmony and proportion, which in a final analysis was based on the science of numbers. Here alone could one find the absolute certainty of truth, for 'in sola mathematica est certitudo sine dubitatione'.

MARY BERRY

Bacquier, Gabriel(-Augustin-Raymond-Théodore-Louis) (*b* Béziers, 17 May 1924). French baritone. Having gained a *premier prix* and two opera prizes at the Paris Conservatoire he began his career in Beckman's Compagnie Lyrique (1950–52). After three years at La Monnaie, Brussels (début as Rossini's Figaro), he joined the Opéra-Comique (1956) singing Sharpless, Alfio, Albert (*Werther*), Zurga, Ourrias, Yevgeny Onegin and Gianni Schicchi. At the Opéra (1958–81) his roles included Germont, Rigoletto, Valentin, Escamillo, Boris, Boccanegra and Leporello; at Aix-en-Provence (1960–89) he sang Don Giovanni, Don Alfonso, Golaud, Falstaff, Don Pasquale and the King of Clubs. In 1962 he made his British début at Glyndebourne as Mozart's Count Almaviva and in 1964 sang Riccardo in *I puritani* at Covent Garden and the High Priest in *Samson et Dalila* at the Metropolitan, where his later roles (until 1981) included Melitone, the Hoffmann villains, Massenet's Lescaut, and Iago. His voice became richer and firmer during the early 1970s, his command of vocal and dramatic nuance increasingly skilful. His Scarpia was the more formidable for being sophisticated, his Dr Bartolo the more humorous for being stripped of buffoonery; his Don Alfonso, if suave, was also dominating. During the 1980s he sang Sancho Panza, the Father (*Louise*) and the Viceroy (*La

Périchole) with great success. In 1990 he returned to Covent Garden as Rossini's Dr Bartolo. Among his many recordings, his Dulcamara, Don Giovanni, William Tell, Iago, Sancho Panza and Golaud vividly reveal his native wit and skilled vocal acting. He was made a Chevalier of the Légion d'Honneur in 1975. (S. Segalini: 'Gabriel Bacquier', *Opera*, xxxiii (1982), 577–81)

ANDRÉ TUBEUF, ELIZABETH FORBES/R

Bacri, Nicolas (*b* Paris, 23 Nov 1961). French composer. After studying music analysis and composition with Françoise Gangloff, Christian Manen and Louis Saguer (from 1979), he entered the Paris Conservatoire (graduated 1983, premier prix for composition), where his teachers were Ballif, Marius Constant, Nigg and Philippot. During a two-year residency at the Académie de France in Rome (1983–5), he met Scelsi, who had a great influence on him. From 1987 he was head of the chamber music department of Radio France, a position he relinquished in 1991 to devote himself entirely to composition. He has also held residencies at the Casa de Velasquez (Spain) and with a number of French orchestras (from 1993). His early works, which culminate with the First Symphony (1983–4, dedicated to Elliott Carter), are rooted in a constructivist post-Webernian aesthetic. Later compositions, beginning with the Cello Concerto (1985–7, dedicated to Dutilleux), draw on the melodic continuity displaced by the predominant aesthetic of the postwar period. This change of style has placed Bacri in the musical aesthetic of his own time, where a spirit of reconciliation prevails. His honours include the grand prize of l'Académie du Disque (1993), and several awards from SACEM and the Académie des Beaux-Arts.

WORKS
(*selective list*)

Stage: Fleur et le miroir magique (conte lyrique for children, 1, C. Juliet), op.56, 1996–7

Orch: Vn Conc., op.7, 1982–3; Sym. no.1, op.11, 1983–4; Vc Conc., op.17, 1985–7; Capriccio notturno (Cl Conc.), op.20, 1986–7; Sym. no.2 'Sinfonia dolorosa', op.22, 1986–90; 3 canti e finale (Vn Conc. no.2), op.29, 1987–9; Requiem 'Musica notturna nos.1–3', op.23, va/vc, chbr orch, 1987–8; Folia, op.30, 1990 [arr. as op.30b, va/vc, str orch, 1990]; Musica, op.36b, str, 1991–2; Tpt Conc. 'Episodes', op.39, 1992; Conc., op.51, 2 pf, str orch, 1995–6; Sym. no.4 'Classique Sturm und Drang', op.49, 1995–6; Une prière, op.52, va/vc/vn, orch, 1995–7; Sym. no.5 'Conc. for Orch', op.55, 1996–7; Conc. da camera (Cl Conc. no.2), op.61, 1998; Sym. no.6, op.60, 1998; Fl Conc., op.63, 1999; Tpt Conc., op.65, 2000; other pieces

Vocal: Notturni (E. Cetrangolo), op.14, S, 7 insts, 1985–6; Sinfonia da requiem (Sym. no.3), op.33, Mez, chorus, orch, 1988–94; Fils d'Abraham (3 cants. from Sym. no.3), 1988–94: Vitae abdicatio, op.33/1 (cant., S.A. Madyan), Mez, ob, chbr orch, 1992–4, Vita et mors, op.33/3 (cant., B.I. Paqûda), Mez, vc, chbr orch, 1992–3, Coplas de Don J. Manrique por la muerte de su padre, op.33/2 (cant.), mixed chorus, 1993 [arr. as op.33/2b, female vv, 4 insts, wind/org, 1993–5]; Sonnet 66 (cant., W. Shakespeare), 1v, str orch, 1994–5 [arr. as 44b, 1v, pf, 1994–5]; 5 motets de souffrance et de consolation (W. Raleigh, Psalms, Jeremy), op.59, chorus, 1998

Chbr: Str Qt no.1 'Fantaisie', op.1, 1980; Str Qt no.2 '5 pièces', op.5, 1982; Str Trio '6 Sonatas', op.8, 1982–3; Esquisses pour un tombeau (Str Qt no.3), op.18, 1985–8, rev. 1989; Duo, op.25, vn, vc, 1987–92; Toccata sinfonica, op.34, pf trio, 1987–93; Str Qt no.4 'Omaggio a Beethoven', op.42, 1989–94, rev. 1994–5; Sonata, op.32, vn, pf, 1990–94; Str trio, op.37, 'Divertimento', 1991–2 [arr. as op.37b, cl, str trio, 1991–2]; Sonata, op.40, vn, pf, 1993–4; Im Volkston, op.43, vn, cl, vc, 1994; Pf Trio no.2 'Les contrastes', op.47, 1995; Pf Trio no.3 'Sonata notturna', op.54, 1996; Str Qt no.5 'Elegiaco', op.57, 1997; other pieces

Solo inst: 3 suites, op.31, vc, 1987–94; 2 préludes, op.24, pf, 1988; 3 préludes, op.28, pf, 1989; Prélude no.6, op.33/3b, pf, 1991; 3 préludes, op.46, pf, 1994–5; Sonata breve, op.45, vn, 1994; Suite no.4, op.50, vc, 1994–6; Sonata no.2, op.53, vn, 1996; other pieces

Principal publishers: Durand, Salabert, Peer Musik

PHILIPPE MICHEL

Bactria. Ancient civilization in Central Asia. It flourished in the last three centuries BCE in the area now covered by northern Afghanistan, Uzbekistan, Tajikistan and southern Turkmenistan. *See* IRAN, §II.

Baculewski, Krzysztof (*b* Warsaw, 26 Dec 1950). Polish composer and writer on music. He studied composition at the Warsaw Academy of Music with Rudziński (1969–74) and in Paris with Messiaen and Schaeffer (1975–6); he took the doctorate at Warsaw University in 1982. Subsequently, he became a lecturer at the Warsaw Academy. His music up to the mid-1970s shares many characteristics with Polish music generally at that time, including a concern with group textures and with focal pedal points. His involvement with extended instrumental techniques, however, came to an abrupt end with *Is-slottet* (1975). He has paid particular attention to musical form, and in several works, including *Vivace e cantilena* and *Ground*, he has developed a bipartite structure (also favoured by Górecki) of a segmented and often aggressive first section resolved in a quiet coda. Like some of his contemporaries in the 1980s and 90s, he found inspiration in 17th- and 18th-century idioms: *The Profane Anthem* is a mildly distorted reflection of the music of Purcell, while *Antitheton I* is based on Baroque musical-rhetorical figures (*tirata*, *aposiopesis* and *circulatio*) and *Antitheton II* incorporates more dislocated references, including overt allusions to the finale of Bach's Brandenburg Concerto no.3.

ADRIAN THOMAS

Baçus Correçarius de Bononia, Johannes. *See* JOHANNES BAÇUS CORREÇARIUS DE BONONIA.

Badajoz, Garci Sánchez de (*b* Ecija, province of Seville, *c*1460; *d* after 1524). Spanish poet, vihuelist and composer. He was one of the leading Castilian poets of the generation of JUAN DEL ENCINA; one of his poems received a response by Pedro de Cartagena, who died in 1485. His poetic style, quick-witted sallies and ingenious conceits were praised long after his death by Lope de Vega and Baltasar Gracián. His poetry is characterized by a desperate amatory vein in which suffering and death are always present. He is supposed to have been imprisoned for some time, owing to a madness brought on by an incestuous passion for a close relation, probably his sister. He is last recorded attending an imperial feast in Toledo in 1525.

The *Cancionero General* (Valencia, 1511/14/*R*, 2/1520/*R*) contains eight poems attributed to 'Badajoz el músico', and there are five villancicos and three canciones ascribed to 'Badajoz' in the *Cancionero Musical de Palacio* (*E-Mp* II-1335, ed. in MME, v, 1947; x, 1951). Resende, reminiscing about the period around 1500, included 'Badajoz' among a group of great musicians. Literary scholars have supposed that the poet-musician was to be identified with João de Badajós, who was listed as a *músico da camera* of João III of Portugal in 1558 (a romance by Badajós was printed with Antonio de Portalegre's *Meditação*, Coimbra, 1547). But Román referred to Garci Sánchez de Badajoz as the best vihuelist from the time of Ferdinand and Isabella, and João de Badajós' dates are a generation too late. Garci Sánchez is therefore much more likely to be the poet and composer referred to in the *Cancionero General* and the *Cancionero Musical de Palacio*; he may well be the composer of eight further villancicos whose poems are ascribed either to Garci Sánchez de Badajoz or to Badajoz el músico (RISM *c*1516[2] [actually two separate publications: Rome, 1518; Venice, 1520], 1576[8]; *F-Peb* Jean Masson 56, *I-Fn* Magl.XIX.107bis, *P-Cmn* 3391, *Em* 11793, *Ln* Ivo Cruz 60; ed. M. Joachim, *O cancioneiro musical e poetico da Biblioteca Públia Hortênsia*, Coimbra, 1940; ed. in G. Haberkamp, *Die weltliche Vokalmusik in Spanien um 1500*, Tutzing, 1968; ed. in PM, xxxi, 1977; PM, xlvii, 1986; CMM, xcviii, 1987). Two villancicos by Garci Sánchez were set by Escobar and one by Peñalosa.

EMILIO ROS-FÁBREGAS

Badalla, Rosa Giacinta (*b* ?Bergamo, *c*1660; *d* Milan, *c*1710). Italian composer. A Benedictine nun, she took her vows at the musical convent of S Radegonda in Milan about 1678. Her only printed collection, *Motetti a voce sola* (1684), is notable among contemporary Milanese solo motets for its vocal virtuosity, motivic originality and formal experimentation, with frequent use of ostinato figures and some surprising modulations. Of her two surviving secular cantatas (a testimony to the practice of secular music inside S Radegonda's walls), *Vuò cercando* is a succession of short da capo arias interspersed with recitative, while *O fronde care* (for which she also wrote the text) is a more extended piece with short melismas, repetitive bass patterns and instrumental *sinfonie*, probably dating from about 1700.

WORKS

Motetti a voce sola, 1v bc (Venice, 1684): 1 ed. in R.L. Kendrick: *Celestial Sirens: Nuns and their Music in Early Modern Milan* (Oxford, 1996); 1 ed. in S. Glickman and M.F. Schleifer: *Women Composers: Music through the Ages*, ii (New York, 1997)

ROBERT L. KENDRICK

Bądarzewska-Baranowska, Tekla (*b* Warsaw, 1834; *d* Warsaw, 29 Sept 1861). Polish composer. An amateur, with no musical training, she is known chiefly for her *Modlitwa dziewicy* ('The Maiden's Prayer'). This piece, which won world-wide popularity, was originally published in Warsaw in 1856; later the music appeared as a supplement to the *Revue et gazette musicale* (Paris, 1859), entitled *La prière d'une vierge*, and was issued by more than 80 publishers in France, Germany, Italy, England, Australia and the USA. Arrangements were produced for piano (four or eight hands) and other instruments, and for voice. *The Maiden's Prayer* is of no artistic merit, being a salon composition of a type common in the 19th century. Other works of a similar nature failed to repeat its success, although some of them gained some popularity: they include *Seconde prière d'une vierge*, *Prière exaucée, ou Réponse à la prière d'une vierge*, *Wspomnienie chatki* ('Memories of a Hut'), *Słodkie marzenia* ('Sweet Dreams') and *Pamiątka przyjaźni* ('Memories of a Friendship').

ZOFIA CHECHLIŃSKA

Badea, Christian (*b* Bucharest, 10 Dec 1947). American conductor of Romanian birth. He was a boy chorister at the Budapest Opera, studied the violin at the conservatory and joined the Opera as a répétiteur. After leaving Romania in 1970 he studied further in Brussels and Salzburg and at the Juilliard School. He was music director at the Spoleto Festival of Two Worlds in Italy from 1978 and directed the festivals in both Italy and Charleston, South Carolina, from 1980 to 1986, conducting a variety of operas ranging from Mozart and Verdi to Menotti and Shostakovich. During this time he conducted the first European production of Menotti's *The Hero* (1980) and made his British début in 1983 with Prokofiev's

The Gambler for the ENO. He has worked with the Metropolitan Opera, Canadian Opera, Netherlands Opera and at Verona, and made the first recording (with the Spoleto Festival Orchestra) of Barber's *Antony and Cleopatra* in 1985. He made his début with the Royal Opera at Covent Garden in 1996 with *La Bohème*. Badea is admired for his dramatic vitality and secure command of phrasing and balance, and has also appeared widely as an orchestral conductor. From 1983 to 1991 he was music director of the Columbus SO in Ohio, with whom he recorded works by Sessions and Mennin.

NOËL GOODWIN

Bad Ems. German town. *See under* KOBLENZ.

Baden, (Peter) Conrad (Krohn) (*b* Drammen, 31 Aug 1908; *d* Oslo, 12 June 1989). Norwegian composer and teacher. He graduated as an organist from the Oslo Conservatory in 1931 and then studied in Leipzig (1931–2), with later periods of study with Rivier in Paris (1950) and Hanns Jelinek in Vienna (1965). In 1932 he became an organist in Drammen; he held organ recitals and was also active as a choirmaster, accompanist and music critic for several newspapers. He taught theory and composition at the Oslo Conservatory (1948–73) and continued there until 1978 as a lecturer when the institution became the Norges Musikkhøgskole.

The first public performance of his works in 1946 revealed his thorough knowledge of classical forms allied to a national Romantic style. A strong interest in the polyphony of Palestrina is reflected in the Mass (1949) and other vocal works. In Paris he became acquainted with French neo-classicism, and with Hindemith's compositional technique as his background, Baden composed two symphonies, a concertino for clarinet and orchestra and chamber music that was frequently performed, such as the Wind Trio no.1. In the 1960s he ventured into 12-note technique (seen in his themes and his increasingly bold use of dissonance), and although he only used it extensively in the chamber work *Hymnus* (1967), he retained a certain freedom of approach (e.g. *Fantasia breve*, *Concerto per orchestra* and *Intrada sinfonica*). The form and treatment of dissonance is more free; at the same time greater importance is attached to sound planes and to timbre. In later works, such as the Symphony No.6 ('Sinfonia espressiva', 1982), there can be seen a synthesis of his earlier concentration on variation technique, on motivic-thematic development and on strict counterpoint. The tone is also warm and more lyrical, the form expressive and well-balanced.

HARALD HERRESTHAL

Baden-Baden. Town in south-west Germany. Before its 19th-century blossoming as a spa town, the town's musical life was unremarkable. The margraves patronized music from the 15th century onwards, most notably Philip II (*d* 1588), and the Jesuit college gave comedies with music until 1771.

Baden-Baden became one of the most famous international spas in Europe in the 19th century, not least because of its casino. It was the artistic 'summer capital' of Europe, and a meeting-place of fashionable society. Such virtuosos as Liszt, Thalbert and Paganini gave concerts there. The newly renovated Konversationshaus opened in 1855 with the première of *Les amoureux de Perrette*, an *opéra comique* by the French composer Louis Clapisson, successor to Halévy at the Académie des Beaux-Arts. Only a year later Clapisson's *opéra comique Le sylphe* also had its première in Baden-Baden. Berlioz conducted the Baden-Baden orchestra in the summer of 1853 and the summers of 1856 to 1863. He composed his last work, the opera *Béatrice et Bénédict*, for the opening of the theatre (Theater der Stadt) in 1862, devising its construction with the director of the casino, Edouard Bénazet. Bénazet also persuaded Gounod to have his opera *La Colombe* given its première in Baden-Baden (1860).

In the 1860s a series of famous musicians visited the spa, including Anton Rubinstein, Hugo Heermann and Aglaja Orgeni. Others settled in the town, among them the pianist Jacob Rosenhain and the singer Pauline Viardot, who opened a popular salon there. Clara Schumann moved into a permanent residence in Baden-Baden in 1863 and regularly performed in the town. Her house became a meeting-place for musicians, among others Joseph Joachim, Julius Stockhausen, Hermann Levi and above all Brahms, who composed and conducted in Baden-Baden during his summer holidays between 1864 and 1872 (the apartment in which he lived is now a museum). Offenbach was another guest in the town, and Bénazet commissioned his *opéra bouffe La princesse de Trébizonde*. Offenbach conducted its première himself at the Kurtheater in 1869 with the Bouffes-Parisiens.

In 1854 the town founded its own orchestra, the Symphonie- und Kurorchester (still extant as the Baden-Baden SO). Its guest conductors included Johann Strauss, Hans von Bülow and Brahms, and later Richard Strauss and Reger. A peak was reached in 1880 with the Tonkünstlerfest des Allgemeinen Musikvereins, in which Liszt, Felix Dessoff and Saint-Saëns took part.

In the 1920s Baden-Baden began to acquire an international reputation for the performance of contemporary music. Particularly important was the move of the Kammermusik-Aufführungen für Zeitgenössische Tonkunst concert series from Donaueschingen to Baden-Baden in 1927–9, where it was known as the Deutsche Kammermusik Baden-Baden. So-called Minutenopern had their premières there in 1927, including Hindemith's *Hin und zurück*, Milhaud's *L'enlèvement d'Europe* and Weill's *Mahagonny* Songspiel (with Lotte Lenya), one of the most notorious premières of the 1920s. For the first time a radio station featured as co-promoter of a musical festival, broadcasting the premières of 'Radiomusiken' – works composed expressly for radio – including *Der*

Lindberghflug by Brecht, Hindemith and Weill in 1929. Another important première was that of Bartók's piano sonata, played by the composer.

After World War II the radio network of south-west Germany, Südwestfunk (SWF), had great influence in Baden-Baden. The Grosses Orchester des SWF was founded in 1946 (renamed SWF SO in 1966 and SWF Orchestra of Baden-Baden in 1990). It immediately attracted guest conductors such as Klemperer and Stravinsky, who made his first post-1945 appearance in Germany here. Conducted by Gotthold Ephraim Lessing (1946–8), Hans Rosbaud (1948–62), Ernest Bour (1964–79), Kazimierz Kord (1980–86) and Michael Gielen (from 1986), the SWF orchestra became one of the leading orchestras of the Federal German Republic, particularly for contemporary music. Boulez performed contemporary works with them for many years, and began his international career in Baden-Baden. In 1998 SWF merged with Süddeutscher Rundfunk Stuttgart (SDR) to form Südwestrundfunk (SWR). The orchestra was renamed SWR Sinfonieorchester Baden-Baden und Freiburg. In 1999 Sylvain Cambreling was appointed chief conductor. In 1955 the 29th international music festival of the ISCM took place in Baden-Baden. The radio orchestra has commissioned works from such composers as Stockhausen, Ligeti, Boulez, Nono, Zimmermann and Rihm. Since the 1950s the orchestra, and the radio station's experimental studio in Freiburg im Breisgau (next to IRCAM in Paris, the most important European studio for the production of live electronic music) have been the major musical institutions involved in the internationally renowned Donaueschinger Musiktage für Neue Musik.

FRIEDRICH BASER/THORSTEN LORENZ

Bader. German family of organ builders. Daniel Bader (*b* ?Münster, ?*c*1560; *d* ?1636) may have been a pupil of Arnold Lampeler (who worked in Münster from 1573 to 1579 and from 1585 to 1588); possibly on his recommendation Bader went to Antwerp, where from 1603 to 1604 he worked in the church of St James; he also worked in Liège. In Westphalia he carried out extensive rebuilding in Münster Cathedral (1610–12). His son Hans Heinrich Bader (*fl c*1626–65) worked in Paderborn (1626–7, 1655–60); in Zutphen (1637–43); at the Willibrordikirche, Wesel (1644–50); in Unna (1661–5) and in Hildesheim (1655–64). Arnold, Ernst, Conrad and Tobias Bader (all sons of Daniel Bader) often worked together, both in Westphalia (at Herford and Vreden) and in Friesland (at the residence in Leeuwarden). Johann Gottfried Bader (a grandson of Daniel) worked at Recklinghausen and Coesfeld as well as at Brussels. For their larger instruments Daniel and Hans Heinrich used the Lampeler pattern, which they extended by means of narrow foundation stops and pedal stops. The most important organ workshops in Westphalia followed the Bader family tradition, and used the Bader principle of the spring-chest until well into the 18th century.

HANS KLOTZ

Badessa, Giovanni Battista. *See* ABATESSA, GIOVANNI BATTISTA.

Badger, Alfred G. (*b* Connecticut, 1815; *d* Brooklyn, NY, 8 Nov 1892). American flute maker. He began to make fifes and recorders at the age of 12, and in 1834 became apprenticed to Ball & Douglass, flute makers, in Utica, New York. In 1838 he went to Buffalo, where he was a partner in the Nickels & Badger music store from 1839 to 1841, making simple system flutes. After leaving Nickels he made flutes and clarinets on his own; these were BADGER/BUFFALO. He moved to Newark, New Jersey, after 1843, had opened a workshop in New York by 1846, and was briefly associated with Tebaldo Monzani in 1858.

Badger, a superb craftsman, stated that he always tried to make each instrument superior to its predecessor; many of his flutes are beautifully engraved. His instruments won silver medals and diplomas at several fairs and exhibitions in Massachusetts and New York. His insistence on excellence, his support of performers, and his widespread publications encouraged the rapid acceptance of the Boehm flute, of which he was the first commercial manufacturer in the USA (1846) and the most important American manufacturer during the mid-19th century. He was also the first musical-instrument manufacturer to use ebonite; he made four flutes in 1851 for Charles Goodyear, who exhibited them in London at the Great Exhibition (1851) and in Paris at the Exposition Universelle of 1855. By 1859 Badger had, at great cost, procured from the patentee of Goodyear's hard rubber the exclusive right to use this material in the construction of the Boehm flute. How long he owned the rights is not known; Theodore Berteling began to use ebonite before 1883. Badger apparently made the first American silver Boehm flute (1886) and the first American Boehm-system alto flute (before 1873). He was the first to use ebonite heads on silver bodies. He also made piccolos, experimental flutes and a combination flute-clarinet. Were it not for the excessively high pitch at which most of Badger's flutes were built (some as high as *a*′=452), his instruments might be played today. The Dayton C. Miller Collection at the Library of Congress has 11 of Badger's flutes, four are in the Yale University Collection, and many others are maintained in public and private collections. Badger's factory continued in operation after his death, and it was purchased by Penzel & Mueller in 1920.

MARY JEAN SIMPSON

Badham, Charles (*fl* London, 1698-1716). English church musician and copyist. He was probably a son (or other relation) of John Badham, vicar-choral and organist of Hereford Cathedral, 1660–88. Between 1698 and 1716 he was the seventh minor canon of St Paul's Cathedral, where his anthem *Unto thee will I cry* survives (incomplete). He was a none too reliable copyist of music by Blow, Purcell, Clarke and others. Manuscripts that are wholly or partly in his hand include *GB-Ob* Mus.Sch.B.7, Mus.Sch.C.38–40 and Tenbury 1031 and 1258. (I. Spink: *Restoration Cathedral Music, 1660–1714*, Oxford, 1995)

IAN SPINK

Badḥan (Yid.). A master of ceremonies at Jewish weddings or social festivities. *Badḥanim* often improvised poems and composed and performed their own songs. In eastern Europe they were also known as *marshaliks* or *leyzim* (sing. *leyz*) and performed at the almost obligatory traditional Purim celebrations, singing, dancing and acting in *Aḥashverosh* plays. Thus they were the real forerunners of the Yiddish theatre. These merry-makers, wandering actors and musicians performed in all Jewish towns and congregations. Elyokum Zunser (1840–1913), a *badḥan* from Vilna (now Vilnius), wrote about 600 songs, many of which were very popular and of strong Jewish appeal. Another very popular *badḥan* was Mark Varshavsky (1845–1907), a scholar and lawyer from Kiev; he was much influenced by the Yiddish writer Shalom Aleichem, and notated and published some of his own songs. His *Alefbet* ('Oyfn pripechok') is still sung in Jewish schools and homes, and in Hebrew translation in Israeli schools.

See also JEWISH MUSIC, §IV, 2(iv)(a).

SHLOMO HOFMAN

Badia, Carlo Agostino (*b* ?Venice, 1672; *d* Vienna, 23 Sept 1738). Italian composer. His earliest known work is the oratorio *La sete di Cristo in croce*, a *sepolcro* written for Innsbruck in 1691. At the begining of 1692 he may have lived in Rome, where his earliest secular dramatic works were produced. By spring 1692 he was a court composer at Innsbruck. He gained the enthusiastic patronage of Eleonora Maria (1653–97), widow of both King Michael Wisniowiecki of Poland and Duke Charles of Lorraine, and stepsister of Emperor Leopold I. Besides the 1691 oratorio, Badia composed for Innsbruck two operas in 1692, as well as two *sepolcri* for Holy Week 1693. With the support of Eleonora Maria, who moved to Vienna late in 1693, and with a recommendation from the King of Poland, he was appointed *Musik-Compositeur* at the imperial court on 1 July 1694, receiving an initial monthly salary of 60 florins retroactive to 1 July 1693. Badia thus became the first in a succession of distinguished composers (including Fux, Giovanni Bononcini, P.F. Tosi and Francesco Conti) to hold the title of court composer at Vienna.

After initial successes, Badia was sent by the emperor to Rome, probably in 1695, to complete his musical education, but because of a lack of funds he returned to Vienna before the end of that year. Until 1697 he seems to have composed only oratorios for Vienna. His first opera for the Habsburg court, *Bacco, vincitore dell'India*, was produced during Carnival 1697 and dedicated to Eleonora Maria. During 18 years at the courts of Leopold I (*d* 1705) and Joseph I (*d* 1711), Badia enjoyed a period of remarkable creative activity, producing at least 34 oratorios and 20 secular dramatic works. He also composed more than 50 chamber cantatas and duets. His salary was increased by 30 florins in 1699 and by an additional 30 in 1702, making him one of the highest-paid musicians at the court. He seems to have become a favourite of Leopold I, and was praised by Draghi as a 'guter Virtuoso' and by Draghi's successor Pancotti as 'gar guten Talento und ungeheimer prontezza'.

The date of Badia's marriage to the prima donna Anna Maria Elisabetta (Lisi) Nonetti, who arrived in Vienna in 1700, is unknown. In 1706 he probably accompanied her to Venice, where she appeared at the Teatro S Giovanni Grisostomo. Badia's operas and oratorios continued to be performed in northern Italy, but there is no evidence that he had a direct hand in any of the productions. In 1709 he was commissioned to write the opera *Gli amori di Circe con Ulisse* for Dresden; the performance took place during a visit by the King of Denmark. It seems unlikely that Badia travelled to Dresden for the performance, which was directed by Baron Francesco Ballerini, one of the most famous singers at the imperial court. Badia composed less prolifically during the reign of Joseph I, who favoured the Bononcini brothers, Giovanni and Antonio Maria, but the emperor frequently supplemented Badia's income with secret sums of money that apparently rescued him from persistent debts. After the death of Joseph I, the imperial chapel was reorganized and many musicians were released. But on 1 October 1711 the contracts of both Badias were renewed, and Carlo remained in the employ of the Habsburgs until his death, serving 44 years as court composer.

Under Charles VI (*d* 1740), who preferred the more progressive composers Fux and Caldara, Badia's activity declined sharply. Between 1712 and 1738 he is known to have composed only six oratorios and secular dramatic works. Anna Maria Lisi died on 7 January 1726, and by 1729 he had married Anna Maria Sophia Novelli, his first wife's niece; a son, Antonius Nicolaus, was born in 1729. In his last years Badia was closely associated with G.J. Dornberger, a pupil of Caldara.

Badia was the first of a group of Italian composers (including the Bononcinis, M.A. Ziani and Conti) who introduced the stylistic innovations of the late Baroque era to the Viennese court, long dominated by the conservative Draghi. Badia's style underwent a gradual maturing process (as Wellesz, 1919, showed). The numerous early works are characterized by smooth melodic writing, lyric grace and a lack of contrapuntal complexity. He can be credited with increasing the importance of idiomatic string writing at Vienna. The ritornellos and sinfonias of his operas and oratorios are longer than those of his predecessors, and he also called for more varied instrumental combinations as well as more frequent solo obbligatos. He may have been the first composer at Vienna to use concerto grosso contrasts: in the trio 'Quanti e di grande' from *Le gare dei beni* (1700; also attributed to M.A. Ziani) the composer called for two large opposing groups (he was perhaps influenced by Torelli, who visited Vienna between 1699 and 1700). The overture to one of Badia's best works, *Ercole, vincitore di*

Gerione, is unusual in consisting of four movements, the third a minuet. In his oratorios and his secular dramatic works he made extensive use of vocal ensemble numbers, especially trios. *La concordia della Virtù e della Fortuna* (1702) ends with a trio, a technique that foreshadows the use of ensemble finales in the operas of Fux and Caldara.

Most of Badia's chamber cantatas are for soprano or alto with continuo accompaniment only, but about a dozen require obbligato instruments: lutes, violins, flutes, or larger combinations. Formally, the cantatas consist of the regular alternation of recitative and aria normally found in the late Baroque era; Badia used the da capo aria almost exclusively. The numerous ritornellos are often thematically related to the vocal writing, which includes some large melodic leaps and long virtuoso, sequential patterns. The recitatives are also characteristic of the time with their simple modulations and cadential formulae.

It seems likely that Badia was related to the two other musicians of the name at the Habsburg court: Giuseppe (*b* 1642; *d* Vienna, 30 March 1706), who began his service as an instrumentalist on 26 August 1690, and Giovanni Giuseppe, who was active in Vienna as a singer about the same time. A letter from Parma from a Carlo Francesco Badia to G.A. Perti is preserved (*I-Bc*) and reproduced by Nemeth, who indicates that the author was definitely not C.A. Badia.

WORKS

STAGE

performed in Vienna unless otherwise stated

Amor che vince lo sdegno, ovvero Olimpia placata (A. Aureli), Rome, Capranica, carn. 1692

La Rosaura, ovvero Amore figlio della gratitudine (O. Malvezzi), Innsbruck, April 1692

L'amazone corsara, ovvero L'Alvilda, regina de' Goti (dramma per musica, G.C. Corradi), Innsbruck, aut. 1692, *A-Wn*

La ninfa Apollo (favola pastorale o scherzo scenica, F. de Lemene), Rome and Milan, 1692

Bacco, vincitore dell'India (festa teatrale, D. Cupeda), 14 Feb 1697

La pace tra i numi discordi nella rovina di Troia (serenata, N. Minato), 21 May 1697, *Wn*

L'idea del felice governo (serenata, Cupeda), Laxenburg, 9 June 1698

Lo squittinio dell'eroe (componimento per musica da camera), Neue Favorita, 26 July 1698

Imeneo trionfante (serenata), 28 Feb 1699, *Wn*, for the wedding of Joseph I and Wilhelmine Amalie of Braunschweig-Lüneburg

Il Narciso (favola boschereccia, Lemene), Laxenburg, 9 June 1699, *Wn*

Il commun giubilo del mondo (musica da camera, Cupeda), Neue Favorita, 26 July 1699, *Wn*

Cupido fuggitivo da Venere e ritrovato a' piedi della Sacra Reale Maestà d'Amalia (trattenimento carnevalesco, G. Spedazzi), carn. 1700

Diana rappacificata con Venere e con Amore (trattenimento musicale), Schönbrunn, 28 April 1700, *Wn*

La costanza d'Ulisse (dramma per musica, Cupeda), Neue Favorita, 29 June 1700

Le gare dei beni (applauso poetico per musica), 25 July 1700, *Wn*; also attrib. M.A. Ziani

L'amore vuol somiglianza (dramma per musica, P.A. Bernardoni), 18 Jan 1702

La concordia della Virtù e della Fortuna (poemetto drammatico, Bernardoni), Neue Favorita, 21 April 1702, *Wn*

Enea negli Elisi (poemetto drammatico, Bernardoni), 9 June 1702, *Wn*

L'Arianna (poemetto drammatico, Bernardoni), 21 Feb 1702

La Psiche (poemetto drammatico, Bernardoni), 22 July 1703, *Wn*

Napoli ritornata ai romani (componimento per musica, S. Stampiglia), Neue Favorita, 1 Oct 1707, *Wn*

Ercole, vincitore di Gerione (poemetto drammatico, Bernardoni), 4 Nov 1708, *Wn*

Gli amori di Circe con Ulisse (dramma per musica, G.B. Ancioni), Dresden, 20 June 1709

Il bel genio dell'Austria ed il Fato (dialogo), Nov 1723, *Wn*

ORATORIOS

first performed at Vienna, S Ursula, unless otherwise stated

La sete di Cristo in croce, Innsbruck, Jesuitenkirche, Holy Week 1691, lib *A-Imf*

Il transito de San Giuseppe, Innsbruck, Holy Week 1693, lib *Imf*

L'amor della redentione, Innsbruck, Jesuitenkirche, Good Friday 1693, lib *Imf*

L'innocenza, illesa dal tradimento, descritta in San Carlo (M. Angelico), Vienna, Imperial Chapel, Lent 1694, *Wn*

S Ursula, vergine e martire (R.M. Rossi), 21 Oct 1694, *Wn*

Gesu crocifisso (?A. Catelani), 2 April 1695, lib *I-Vnm*

Sant' Orsola, vergine e martire, 21 Oct 1695, *A-Wn*

La morte del Redentor (P. de Massimi), 21 April 1696, lib *I-Mb*

Il sacrificio d'Abramo (?M. Cavesano), 21 Oct 1696, lib *Vnm*

L'invenzione della croce (Massimi), 6 April 1697, lib *A-Wn*, *I-Vnm*

Il pianto di Maria vergine, e di S Maria Maddalena al S Sepolcro raddolcito dalla consolatione (?G. Spedazzi), 6 April 1697, lib *A-Wn*

Lo sposalizio di S Orsola, vergine e martire (?S. Amerighi), 21 Oct 1697, lib *I-Vnm*

La vicende di Giosafatte, Re di Giuda (?Cupeda), Vienna, Imperial Chapel, Lent 1698, *A-Wn*

La sepoltura di Christo (R.N. Batticassa), 29 March 1698, *Wn*

Il ritorno di Tobia (?G.B. Lampugnani), 21 Oct 1698, *Wn*

La depositione dalla croce, e sepoltura di Gesu, 18 April 1699, lib *I-Mb*, *Vnm*

Il trionfo della bellezza, della grazia e della virtu espresso nelle felicissimie nozze di Ester, la piu degna vergine del popolo eletto, con Assuero, il maggior monarco del mondo (G. Frigimelica Roberti), 21 Oct 1699, lib *Vnm*

Giesu nel pretorio, osia L'innocenza giudicata della malizia (Frigimelica Roberti), 10 April 1700, lib *A-Wn*, *I-Vnm*

La corte, noviziato del chiastre per la beata Caterina da Bologna (Frigimelica Roberti), 21 Oct 1700, *A-Wn*

L'empieta trionfante nella morte di Giesu Cristo, 26 March 1701, lib *I-Vnm*

L'amante innocenza, trionfatrice della perfidia, ovvero S Cecilia, vergine e martire, Vienna, Imperial Chapel, Lent 1702, lib *A-Wn*, *Wst*

La resurrezione di Giesu Cristo, 15 April 1702, lib *Wn*, *I-Mb*

Le promesse nuziali di S Orsola, 21 Oct 1702, lib *A-Wn*, *I-Vnm*

I pensieri divoti (Frigimelica Roberti), Rome, Palazzo Apostolico, Christmas Eve, 1702

La clemenza di Davide (P. Ruggieri), Vienna, Imperial Chapel, Lent 1703, *A-Wn*

La fuga in Egitto dal Patriarca S Giuseppe con Giesu e Maria, 21 Oct 1703, *Wn*

Trattenimento divoto, place of perf. unknown, 1703, lib *I-Vnm*

S Romoaldo, Vienna, Imperial Chapel, Lent 1704, lib *A-Wn*, *I-Vnm*

La Giuditta (?P. Ottoboni), 21 Oct 1704 and 1710, lib *Vnm*

La fuga di S Teresa, 21 Oct 1705, lib *Bc*, *Vnm*

La sepoltura di Cristo (Bernardoni), place of perf. unknown, 1706

S Teresa (?Filippeschi), Vienna, Imperial Chapel and Milan, S Giovanni in Conca, Lent 1706, lib *Wn*, *I-Vnm*

L'innocenza calpestata dal mondo, e proletta da Dio (?Spedazzi), 21 Oct 1706, lib *Vnm*

Il ritorno di Tobia (P.A. del Negro), Vienna, Imperial Chapel, Lent 1707, *A-Wn*

Il martirio di S Susanna (Negro), 1707, lib *I-Vnm*

Il pentimento di Davide (S. Stampiglia), Vienna, Imperial Chapel, Lent 1708, *A-Wn*

Santa Teresa (Bernardoni), 21 Oct 1708, *Wn*

Il martirio de' Maccabei (Stampiglia), Vienna, Imperial Chapel, Lent 1709, *Wn*

La Giuditta (Stampiglia), Vienna, Imperial Chapel, Lent 1710, *Wn*

Santa Geltrude (Filippeschi), Vienna, Imperial Chapel, Lent 1711, *Wn*, *D-MEI*

La esaltazione di Salomone (B. Maddali), place of perf. unknown, ?21 Oct 1716, *A-Wn*

Ismaele (B. Perfetti), Vienna, Imperial Chapel, 11 March 1717, *Wn*, *D-MEI*

Il profeta Elia (G. Zati), Vienna, Imperial Chapel, 2 March 1730 [?previously perf. Venice, 1720], *A-Wn*

CANTATAS

Tributi armonici, 12 chamber cants. (Nuremberg, *c*1699)

La Pace e Marte, supplicanti avanti al trono della Gloria (Filippeschi), Vienna, 19 March 1701, score *A-Wn*

Il sacrificio di Berenice (P.A. del Negro), Vienna, 28 August 1712, score *Wn*
41 chbr cants., *Wn, D-Bsb, Dl, MEIr, F-Pn, GB-Lgc*; 4 chbr duets, *A-Wn*; facs. of 2 cants. in ICSC, xvi (1985)

LAWRENCE E. BENNETT

Badía [d'Agustí], **Conchita** [Conxita; Concepción] (*b* Barcelona, 14 Nov 1897; *d* Barcelona, 2 May 1975). Spanish soprano. She studied with Granados, Casals and Falla, and made her début in Barcelona in 1913, giving the first performance of the *Canciones amatorias* of Granados (two of which are dedicated to her) with the composer accompanying. Many other first performances included Falla's *Psyché* (1927), Gerhard's *Cançons populars catalanes* (1928) and the *Cançons* of Casals (1934). She was a frequent oratorio soloist with the Pablo Casals Orchestra, and gave numerous recitals (often of lieder), sometimes to her own accompaniment. Her only important operatic appearance was in the title role of *María del Carmen* (Granados) at the Liceo, Barcelona, in 1935. Although much of her career was spent in her native city, she sang in Paris in 1937 (more than once with Cortot as accompanist) and in 1958, at the 1932 ISCM Festival in Vienna (first performance of the orchestral version of Gerhard's Catalan songs), in London (five BBC broadcasts, 1937), in Belgium and Switzerland. From 1938 to 1947 she lived in Argentina, where she worked closely with Falla during the last years of his life.

Badía was professor of singing at the Barcelona Conservatory and of piano at the Granados Academy. Among her pupils was Montserrat Caballé. As a singer Badía combined intelligence and spontaneity with a keen sense of style and exemplary diction; her voice had a strongly distinctive, personal quality. She recorded a number of discs in the 1960s, including one with De Larrocha.

RONALD CRICHTON/ALAN BLYTH

Badian, Maya (*b* Bucharest, 18 April 1945). Canadian composer and musicologist of Romanian origin. She began to study the piano from the age of five. Later (1961–8) she attended classes in composition under Tiberiu Olah at the Academy of Music in Bucharest. After graduation, she became an editor at Romanian Radio-Television (1968–72), after which she taught at the George Enescu School for the Arts (1972–86). Between 1972 and 1974 she completed her training in Weimar and at the Francesco Canetti Institute in Vicenza.

In 1987 she emigrated to Canada, settling in Montreal, teaching in the Music department at the University (1990–92), later transferring to the Faculty of Continuing Education at the same University (1992–5). Badian obtained her doctorate in music and composition in Montreal in 1992. She has given lectures about the music of Canada in Germany, Italy and Hungary.

Her compositional style interprets modernism through the 'prism' of Romanian traditional music, enriched by aspects of Canadian folk music which she collected enthusiastically, building a collection of lesser-known material. Through her melodic techniques, she makes these themes her own, with recurring motifs, incantations and outbursts of vitality.

OCTAVIAN COSMA

Badinage, badinerie (Fr.: 'jest', 'piece of fun', 'trifle'). A term applied to suite movements of a playful nature. The titles 'badinage' or 'badinerie' first appeared in the early 18th century; they have no precise musical meaning but rather suggest a mood, jocular, frivolous or bantering.

The only known badinerie is the final movement of J.S. Bach's Suite no.2 in B minor BWV1067. Rhythmically, this movement has much in common with the gavotte: it begins with a half-bar, the first phrase is eight beats long (the crotchet is the beat), with a caesura after the fourth and a point of repose on the eighth; the phrases are later extended. It is in 2/4, faster in tempo than an ordinary gavotte.

Telemann included a badinage in the orchestral suite in his *Musique de table*, iii (1733); the suite includes dances as well as character pieces with French titles. His badinage is based on gavotte rhythms: it is in common time, marked 'très vite'. The piece uses drone basses and alternates with a trio. The third cantata of Montéclair's first book is entitled *La badine*, and opens with an air in 2/4, in gavotte

rhythm. The opening words give an idea of the cantata's bantering nature: 'The ever sighing lover makes me sigh with boredom'. Several 18th-century harpsichord collections include pieces entitled 'badinage' or 'badine' (see B. Gustafson and D.R. Fuller: *A Catalogue of French Harpsichord Music, 1699–1780*, Oxford, 1990).

Examples of the badinage in the 19th and 20th centuries are few. Lyadov's *Musical Snuffbox* op.32 is subtitled 'Valse-badinage'. Godowsky, in his Studies on Chopin's Etudes, combined the two G♭ études into a piece he called 'Badinage' – 'a polyphonic joke'. Prokofiev included a badinage or *shutka* ('little joke') in his piano pieces of op.3.

ERICH SCHWANDT

Badings, Henk (*b* Bandung, Java, 17 Jan 1907; *d* Maarheeze, 26 June 1998). Dutch composer.

1. Life. Born of Dutch parents in Java, he went to the Netherlands in 1915 as an orphan. His wish to follow a musical career met with strong opposition from his guardian, who forced him to train at the Technical University in Delft. He graduated with honours in 1931 and was appointed demonstrator in palaeontology and historical geology there. During his student years he had been teaching himself composition and music theory, and in 1930 he sat for an examination set by Pijper. He then studied composition with Pijper for a time, but this contact was not particularly fruitful because of their widely differing views. Pijper did, however, stimulate Badings to write a major symphonic work, his prize winning First Symphony (later withdrawn), whose first performance by the Concertgebouw Orchestra in 1930 aroused the interest of press and public in the then completely unknown composer. In 1933 Eduard van Beinum conducted his Second Symphony and in 1935 his Third was given its première by the Concertgebouw under Mengelberg, followed by the *Symphonic Variations*, and the Second Violin Concerto.

In 1934 Badings was appointed lecturer in composition and theory at the Rotterdam Conservatory, and in 1937 he became co-director of the Amsterdam Muzieklyceum, his special task being the reorganization of the system of instruction. From 1941 to 1945, during the German occupation, he directed the State Conservatory in The Hague; he was subsequently punished for holding the post and banned for some years from public life, though in 1948 the Concertgebouw Orchestra commissioned him to write his Sixth Symphony. Until 1961, Badings mainly lived as a freelance composer. In 1960–61 he directed the electronic music studio at the University of Utrecht and was appointed there in 1961 to teach acoustics (until 1977). From that period his reputation as an outstanding teacher began to spread abroad; he had already achieved international renown as a composer. He was professor of composition at the Staatliche Hochschule für Musik, Stuttgart (1962–72), and gave lectures at the University of Adelaide (1962–3), in addition to numerous lectures in the USA and South Africa.

2. Works. The features of Badings's music for which he became best known are his use of various scales of six, or especially eight notes, systems built on harmonic or subharmonic series and micro-intervals, in particular as part of a 31-note scale. However, Badings also retained a preference for counterpoint, a gift for striking instrumentation and great care for formal integration. The second of these is evident as early as the first movement of the Second Symphony, a sonata form which is clearly divided into five sections, partly through contrasting orchestration; formal integration is displayed in the work's finale, where the rondo theme functions as a link between numerous ingenious variants developed from the material of the first two movements. There is also evidence here of Bading's predeliction for contrasting motifs, on the one hand lyrical, on the other strongly punctuated, which result in a sort of Beethovenian dialectic propelling the music forward. Further examples of such propulsion are to be found in the other early symphonies and concertos, together with the first four piano sonatas and most of the chamber music.

All Bading's finest works from the 1930s to the 1950s continued to exhibit traditional structures of three or four movements, coupled with the employment of sonata, song or variation forms. Such works include the *Tema con variazioni* for piano (1938), the *Four Sacred Songs* for a cappella choir (1941), the choreographic drama *Orpheus en Euridice* (1941), the *Sinfonischer Prolog* (1942), the Octet (1952) and the Double Concerto no.1 (1954). Stylistically speaking, Badings's music remained during these years mainly Romantic and expressive; nevertheless a predominant Germanic quality gradually gave way during World War II to a greater degree of French-like lightness and brilliance. Badings's Fifth Symphony, written on the occasion of the 60th anniversary of the Concertgebouw Orchestra in 1948, typifies this change. This is a work which also clearly shows his preoccupation with non-diatonic tonalities; there are scales of six, seven and eight notes, which on the one hand suggest a combination of Lydian and Mixolydian modalities, and on the other, as a result of the successions of augmented and minor 2nds in the six-note scales, influence the music towards polytonality.

In the 1950s Badings began to experiment with new scales, micro-intervals and diverse acoustical phenomena. This resulted in the development of the 31-note scale, in conjunction with A.D. Fokker and based on ideas formulated by Christiaan Huygens in the 17th century (*see* Microtone). Bading's first compositions with the scale are *Preludium en Fuga I* (1952) and the Suite (1954) written for the 31-note organ Fokker had constructed in the Teylers Museum in Haarlem. The microtonal system (with the *diesis* as the smallest interval) allowed for a finer control of overtones as well as leading to experimentation with different kinds of tuning. Subsequent works which explore the various attributes of the scale include the Sonatas nos.2–5 for two violins, the Fourth String Quartet (1966) and the Fifth Double Concerto for two violins and orchestra (1969).

During the early 1950s Badings also worked in the electronic studio of the Technical University, Delft. This resulted in his first electronic compositions: a fragment of theatre music for *The Countess Cathleen* (1952) and parts of the radiophonic opera *Orestes* (1954). This attracted great international attention – it was awarded the Italia Prize in 1954 – for its skilful use of the manipulative possibilities offered by tape, and by electronic sound generators and filters. For example, Badings achieved a fearsome effect for the Eumenides by using a recording of a male chorus played at accelerated speed, and, in another choral section, a slower speed was used to attain extreme bass notes. Varied speed techniques were also employed

with instrumental sounds, as well as reversed recordings of cymbals and tam-tams. Badings's principle throughout was to realize previously unavailable pitches, timbres and rhythms. The ballet *Kain* (1956) was his first completely electronic work: an oscilloscope was used to assist in tuning in pure harmonics up to the 12th, and a 'melody' of timbre was produced by means of a photo-siren. A second radio opera, *Asterion*, was composed in 1957 to a commission from South African radio, and the television opera *Salto mortale* received a prize in the 1959 International Competition of Television Societies in Salzburg. From 1960 Badings used electronic sounds in combination with conventional instruments in many compositions, and his work with electronics influenced his orchestral writing. He was given a second Italia Prize in 1971 for the oratorio *Ballade van die bloeddorstige Jagter*, again commissioned by South African radio.

Electronics came to play a significant role in Badings's music, but of his enormous output – he wrote over 600 compositions – most were acoustic and encompassed all genres, including, particularly in his later career, music for amateurs and for educational purposes. For example he wrote many scores for wind band, eight volumes of *Arcadia* for piano and piano four hands (1945–67), and 16 volumes of *Trois Cosmos* for three violins or three violin groups (1981–2) from beginning to advanced levels. His many choral pieces, e.g. *Trios chansons bretonnes* (1946), *Languentibus in purgatorio* (1959) and *Missa antiphonica* (1985), are still a backbone for amateur and professional choral societies alike.

JOS WOUTERS/LEO SAMAMA

Badini, Carlo Francesco (*fl* 1770–93). Italian librettist and journalist. He was in London by 1769, when he wrote the libretto for Pugnani's comic opera *Nanetta e Lubino*. Probably supplementing his income by translating and teaching Italian, Badini wrote a few librettos for the King's Theatre during the 1770s, including *Le pazzie di Orlando* (set by P.A. Guglielmi in 1771), a witty, ambitious work which Nunziato Porta adapted for Haydn as *Orlando paladino* (1782, Eszterháza). Badini's other works from this period include *Il disertore* (1770), set by Guglielmi and revived in Lisbon in 1772, and *L'ali d'amore* (1776), which was set by Venanzio Rauzzini.

An early sign of Badini's individuality is found in the libretto for Bertoni's *La governante*, a free translation of the English dialogue opera *The Duenna* by R.B. Sheridan. While Badini retained many of Sheridan's lyrics, he reworked the drama into a typical three-act burletta whose arias, unlike Sheridan's, advance the plot. Another example of Badini's interest in English drama is *Il duca d'Atene* (set by Bertoni in 1780), the plot of which is partly drawn from *The Taming of the Shrew*.

Badini kept abreast of new developments in opera, as evidenced in *Il trionfo della costanza* (set by Anfossi in 1782). Indebted to Sedaine's *Le roi et le fermier*, this highly melodramatic libretto includes an exceptionally long first-act finale comparable to those of Casti and Da Ponte in its depiction of domestic chaos. Badini later expressed contempt for his fellow Italian librettists in the preface to his libretto *L'amore protetto dal cielo, o sia La vestale* (1787), an *opera seria* with music composed and assembled by Rauzzini.

Badini's fortunes fluctuated during his later career. In 1779 he was sued by the King's Theatre manager, Antoine Le Texier; two years later he was sued by the harpsichord maker Jacob Kirkman and sentenced to debtors' prison. Beginning with the 1783–4 season, he was employed by the King's Theatre as one of two house poets, with a

salary of £100 which rose to £150 in the following seasons. In 1785 he was appointed principal librettist at the King's and became a close associate of the manager, G.A. Gallini. In 1788 it was reported that he had briefly been editor of the *Morning Post*. With his compatriot Andrea Carnavale, he was accused of writing a libellous pamphlet, the *Case of the Opera-House Disputes* (1784), a vicious attack on the former owner-manager of the King's Theatre, William Taylor, Gallini's arch-enemy. He may also have been a newspaper critic.

In early 1791 Badini was commissioned to write a libretto for Haydn during his first visit to London: this was *L'anima del filosofo* (*Orfeo ed Euridice*), which Haydn did not finish. Badini's brilliant though flawed libretto is one of the most peculiar for an *opera seria*. Taking a completely different approach from Calzabigi and Gluck, Badini reverts to Virgil's violent ending, with Orpheus killed by the Bacchantes. In 1792 Badini was reappointed house poet at the King's Theatre only to be dismissed a year later for unknown reasons. He was replaced by Lorenzo da Ponte, who had arrived in London in 1792.

CURTIS PRICE

Badinski, Nikolai (*b* Sofia, 19 Dec 1937). Bulgarian composer. He graduated from the Sofia Academy of Music in 1961, and from 1962 worked in Halle as a violinist and composer. From 1967 to 1970 he studied composition with Wagner-Régeny and Günter Kochan as a postgraduate at the Akademie der Künste in East Berlin. In 1975 and 1976 he attended courses in Siena given by Dallapiccola and Donatoni, and from 1974 took part in Darmstadt summer courses. In 1976 he moved to West Berlin, where he has since worked as a freelance composer. In 1980 he received a one-year scholarship to the Villa Massimo, Rome, and in 1981–2 and 1985–6 received stipends to live and work in Paris. He was composer-in-residence at the Djerassi Foundation, 1987, and has taught at a number of colleges and universities, notably in Stockholm and Copenhagen. He has won many international awards, for instance in the Viotti, Stockhausen and Trieste competitions, and in 1983 he became a corresponding member of the European Academy of Arts, Sciences and Literature.

In his extensive output (over 130 works) Badinski has a tendency towards a polystylistic means of expression, often in a late Romantic manner, as witnessed by his dense orchestration and the dynamic range of detailed and intricate treatment of individual instruments. His voluminous melodies, full of glissandos, tremolos and melismas, are particularly noticeable in his instrumental concertos. In both his acoustic and his electronically composed music there is often a wave-like or crescendo development of form based on superimposition of different rhythms and instrumental colours. His music alludes to styles ranging from Johann Strauss, Bach and Stravinsky to Bulgarian folk music.

MARIA KOSTAKEVA

Badoaro [Badoer, Badoero, Badovero], **Giacomo** [Iacopo] (*b* Venice, 1602; *d* Venice, 1654). Italian librettist. He was a member of the Venetian nobility. He wrote a great deal of verse in Italian and in Venetian dialect and had an extensive poetic exchange with G.F. Busenello. His reputation as a librettist rests on Monteverdi's supposed predilection for his work in his *Il ritorno d'Ulisse in patria* (1640) and *Le nozze d'Enea in Lavinia* (1641). The latter text, however, is by another (unidentified) poet, as its printed scenario makes clear. Badoaro's next libretto, *L'Ulisse errante* (1644, music by Sacrati), also drew on the Odyssey; each of its five acts presents an independent episode of Ulysses' adventure. The deliberate, even selfconscious rejection of Aristotelian unity of action may have been inspired by Giacomo Torelli, who created sets and machinery for the production. Chronicles of Venetian opera also attribute to Badoaro *Helena rapita da Theseo* (1653, music possibly by Cavalli), which is not, contrary to the assertion of Ivanovich, based on a plot by Giovanni Faustini. His works were given only single productions in Venice, except for the Bolognese performance of *Il ritorno*

d'Ulisse (also 1640), one of several works exported there during the first decade of public opera in Venice. The presence at Vienna of the sole surviving score of *Il ritorno d'Ulisse in patria* has led some scholars to suppose that it was used for a performance there. Like many of the other early Venetian librettists, Badoaro was a member of the cynical and libertine Accademia degli Incogniti; he was financially involved in the Teatro Novissimo at the time of its closure in 1645.

THOMAS WALKER

Bado y Gómez, Juan del. *See* VADO Y GÓMEZ, JUAN DEL.

Badura-Skoda [née Halfar], **Eva** (*b* Munich, 15 Jan 1929). Austrian musicologist, wife of PAUL BADURA-SKODA. She studied the violin, the piano and theory, both privately and at the Vienna Academy. She attended universities in Heidelberg, Regensburg, Vienna and Innsbruck, working with Stäblein and Wilhelm Fischer, and in 1953 received the doctorate from the University of Innsbruck with a dissertation on music teaching in Austria from the 16th century to the 18th. She was on the staff of the International Summer Academy of the Salzburg Mozarteum in 1962 and 1963 and taught at the University of Wisconsin, first as a guest professor in 1964 and then as professor from 1966 to 1974. She has also been a visiting professor at Boston University, Queens University, Ontario, the University of Göttingen and McGill Uiversity, and has lecturered at institutions in Europe, Asia and North America.

Badura-Skoda's research has centred on 18th-century topics, particularly the music of the Scarlattis, Mozart and Haydn, and also on Schubert. She has also written on problems of editing and performing practice, the history of the fortepiano, Viennese music history and the development of various genres of comic opera such as Singspiel, *opera buffa* and *opéra comique*. As co-author with her husband of *Mozart-Interpretation* she has combined her experience as a pianist with her historical studies to give useful insights into the performance of Mozart's keyboard works, particularly the piano sonatas and concertos. She has contributed articles to German and English music dictionaries (including *MGG1* and *Grove6*) and is a member of the Joseph-Haydn-Institut and the Zentralinstitut für Mozart-Forschung. In 1986 she was awarded the Österreichisches Ehrenkreuz für Wissenschaften und Kunst. She and her husband were concerned with the publicity surrounding the 'Haydn' sonatas later found to be forged.

PAULA MORGAN

Badura-Skoda [Badura], **Paul** (*b* Vienna, 6 Oct 1927). Austrian pianist, husband of EVA BADURA-SKODA. He studied the piano and conducting at the Vienna Conservatory under Viola Thern (1945–8), and then in Lucerne at the masterclasses of Edwin Fischer, who exerted a great influence on him. After winning the Austrian Music Competition in 1947, he made his concert début the following year. He soon became one of the most prominent Austrian pianists, touring throughout the

world. From 1966 to 1971 he was artist-in-residence at the University of Wisconsin, USA. His recital programmes have centred on the Viennese Classics, but have also embraced contemporary composers, for instance Frank Martin, whose Second Piano Concerto is dedicated to him. Badura-Skoda has a strong interest in historical keyboard instruments, and his own collection includes instruments by Schantz, Broadwood, Graf and Schneider. With these, and by means of his interpretative and editorial research, he strives to achieve fidelity to the original sources and tone-colours. He has made many recordings on period and modern instruments, including the complete sonatas of Beethoven and Schubert. He also composes and has written numerous cadenzas for concertos of the Viennese Classical period. His editions include three Mozart piano concertos (with his wife, Eva), K453, 456 and 459, for the Neue Mozart-Ausgabe (Kassel, 1965); Beethoven's piano sonatas; Chopin *Etudes* opp.10 and 25 (Vienna, 1973); and piano works by Schubert.

RUDOLF KLEIN/MARTIN ELSTE

Baehr, Joseph. *See* BEER, JOSEPH.

Baena, Gonzalo de (*b* ?Seville, *c*1476–80; *d* ?Lisbon, after 1540). Spanish composer. A number of musicians by the name of Baena were employed in the Castilian, Aragonese and Portuguese royal chapels in the latter part of the 15th century and first half of the 16th. At least three families or clans can be identified: from Valladolid (the royal singer Alonso de Baena and his son Bernaldino), Segovia (*see* BAENA, LOPE DE) and Seville, Gonzalo's home town. Gonzalo was one of three musical sons born to a different Alonso de Baena who served as a player of the bowed vihuela in the royal household of Isabella from May 1493 until 1499; he died in 1505. Gonzalo and his two brothers, Francisco and Diego, may have served at the queen's court before moving to Portugal some time between 1496 and 1500; a document dated 1508 refers to all three as chamber musicians at the court of Manoel I. Gonzalo himself had a musical son, Antonio, who, together with his father and his uncle Francisco, was also in the service of João III. (Their relationship, if any, with the Afonso de Baena in the service of Don Enrique, the king's brother, at Evora, is not clear.)

In June 1536 Gonzalo applied for a royal licence to print a keyboard manual and four years later he published his *Arte nouamente inuentada pera aprender a tanger* (Lisbon, 1540) with a dedication to João III. This is the earliest surviving book of keyboard music from the Iberian peninsula and its musical repertory includes intabulations of vocal works by Franco-Flemish and Spanish composers from the latter part of the 15th century through to his son's generation of the 1530s. Ockeghem, Compère, Agricola, Févin, Josquin, Peñalosa, Escobar, Anchieta, Basurto and Morales are among the composers represented. Eight items (all of which are sections from Mass movements) are attributed to Gonzalo's son Antonio, while two, a setting of the hymn *Ave maris stella* and a motet *Si dedero*, are by Gonzalo himself. The prologue includes a concise set of instructions on how to read the tablature (an alphabet-based version unique to this source) and how to play the keyboard (the frontispiece depicts an organ but Baena refers to the 'monachordio' or clavichord throughout). The didactic purpose of the collection is thus clear and is reinforced by the grouping of the pieces by the number of voice parts, from two to four; the volume ends with a four-part canon attributed to Antonio de Baena. Gonzalo's own works are conservative in style. His three-voice setting of *Ave maris stella* preserves the chant unadorned and in equal note values in the tenor. The motet, likewise in three voices and on the same text as, and with a similar opening to, the well known version by Agricola (also included in the *Arte*), is more contrapuntally conceived.

TESS KNIGHTON

Baena [Vaena], **Lope de** (*b* Segovia; *fl* 1476–*c*1506). Spanish composer. He was appointed 'player [of the organ] and singer of the chapel' of Ferdinand of Aragon on 15 April 1478 and served the king until at least 1482. By 1495 he was being paid as a member of the Castilian household as organist of the royal chapel, but after Isabella's death in 1504 he returned to the service of the king until August 1506 when his name disappears from the pay documents. He may have died shortly afterwards.

Baena's Segovian origins distinguish him from at least two other musical families using the name Baena, one from Valladolid, the other from Seville (*see* BAENA, GONZALO DE). This has led to some confusion as to the identity of Lope: he was praised as a vihuelist and composer by Fray Francisco de Avila in 1508, but he was almost certainly not the organist-composer mentioned by the Portuguese chronicler Garcia de Resende, who was probably referring to Gonzalo.

Since several of the other Baenas are known to have been composers, there may be some doubt as to the authorship of those pieces attributed only to 'Baena' in the sources: all nine extant songs have until now been associated with Lope, but only five of these are firmly ascribed to him. Nevertheless, he remains the strongest candidate as the song composer. With the exception of the canción *Vos mayor, vos mejor*, all the compositions are villancicos. Four of the pieces are sacred and the rest are love songs. The refrain text and melody of *Todos duermen, coraçón* were well known throughout the 16th

century. Baena's style is versatile: *Vos mayor, vos mejor* and *Rogad vos, virgen, rogad*, are in a hymnlike, chordal style, whereas the prayer to St Michael, *Arcángel San Miguel*, is in a fluid triple metre with independently moving parts. *Todo quanto yo servi* is exceptional in using F clefs for all the voices. Occasionally brief points of imitation are used to introduce inner phrases.

ISABEL POPE/TESS KNIGHTON

Baer, Johann. *See* BEER, JOHANN.

Baermann. German family of musicians.

(1) Heinrich (Joseph) Baermann (*b* Potsdam, 14 Feb 1784; *d* Munich, 11 June 1847). Clarinettist. He and his brother Carl Baermann (i) (1782–1842), a bassoonist in the Berlin court orchestra, were sent by their soldier father to the School of Military Music in Potsdam. At 14, having first studied the oboe, Heinrich became a bandsman in the Prussian Life Guards and during this time studied the clarinet with Beer. In 1805, under the patronage of Prince Louis Ferdinand, he had lessons with Tausch. He fought at the battles of Saalfeld and Jena and was captured, but escaped and found his way to Munich. Here he obtained a court appointment, which he held until his retirement in 1834.

Baermann toured extensively, first to Switzerland and France in 1808. In 1811, after successful performances at Munich of Weber's newly composed Concertino and concertos, clarinettist and composer toured together through Austria and Germany. At Berlin Baermann's artistry helped to convince the musical public of the composer's worth. In Vienna and Prague in 1813, Italy in 1815–16 and Berlin in 1818, Baermann gave concerts with the Munich prima donna, Helene Harlas (1785–1818); she had four children by him. Paris gave him a phenomenal reception in 1817 and 1838, as did Russia in 1822–3 and 1832. In 1819 Baermann was invited to England, where he played for the Prince Regent at Brighton and, during six months of concerts in London, performed his own compositions on two occasions for the Philharmonic Society.

Heinrich Baermann was sometimes called the Rubini of the clarinet on account of his expressive playing and his luxurious, velvety tone, in contrast to the shriller style of some earlier players. Weber referred in his diary to the 'welcome homogeneity of tone from top to bottom', and gave great credit to Baermann for the success of his clarinet works. All of these except the Grand Duo were written for Baermann, as were Mendelssohn's concert pieces and Meyerbeer's Quintet and (also for Helene Harlas) his cantata *Gli amori*. His liveliness of mind and his companionable nature made him widely popular, and he became a close friend of these composers, who made frequent reference to him in their correspondence. His own works include quartets, quintets and concertinos for clarinet and various instrumental combinations. His instrument was first a ten-keyed clarinet made by Griesling & Schlott; by 1819 he had one of twelve keys.

(2) Carl Baermann (ii) (*b* Munich, 24 Oct 1810; *d* Munich, 23 May 1885). Clarinettist and basset-horn player, son of (1) Heinrich Baermann and Helene Harlas. He was taught the clarinet by his father and by the age of 14 was occasionally playing in the court orchestra. In 1832 he was officially appointed second clarinettist and in 1834 succeeded his father as principal. Carl accompanied his father on concert tours in 1827, 1832 and 1838, attracting much attention playing the basset-horn. Conscious of his father's superior talent as a soloist, he turned to teaching, making a great success of this as professor at the Königliche Musikschule in Munich. His *Vollständige Clarinett-Schule* (1864–75) remains one of the most used methods. His other compositions, comprising 88 opus numbers in all, were once popular with virtuosos. In 1860, in conjunction with Ottensteiner of Munich, he produced an 18-keyed Müller-type clarinet, which found favour with many players, including Mühlfeld. He was pensioned from the court orchestra in 1880 and retired from teaching in 1882.

(3) Carl Baermann (iii) (*b* Munich, 9 July 1839; *d* Newton, nr Boston, MA, 17 Jan 1913). Pianist, son of (2) Carl Baermann (ii). He studied in Munich with Franz Lachner and Peter Cornelius and later became a pupil and close friend of Liszt. He taught for many years at the Königliche Musikschule in Munich, becoming a professor in 1876. In 1881 he moved to the USA, where he made a successful début as a pianist in Boston and also became highly esteemed as a teacher (Amy Beach and Frederick Converse were among his pupils). His compositions include a *Festival March* for orchestra and a number of piano compositions including a set of 12 *Etüden* op.4 (1877) and a *Polonaise pathétique* (1914).

PAMELA WESTON

Baervoets, Raymond (*b* Brussels, 6 Nov 1930; *d* Rome, 19 Aug 1989). Belgian composer. After studying at the Brussels Conservatory, he attended Petrassi's composition course at the Accademia di S Cecilia (1961–2). He received the Belgian Music Critics' Prize (1961), the Koopal Prize (1962) and the prize awarded by the city of Trieste (1965). At Gaudeamus Foundation courses he received instruction from Seiber, van Baaren and Ligeti; in 1966 he joined the group Spectra in Ghent. His classical education led him at first to compose traditional works in a neo-classical style in which he did not venture beyond polytonality. Under the influence of Petrassi his aesthetic outlook changed radically. He followed a path leading towards post-serialism, with some incursions into the aleatory field, and he used quarter-tones in a systematic way. He retained the traditional orchestra, using it to create new sonorities.

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Baethen [Batius, Bathenius], **Jacob** (*b* ?Leuven, *c*1525; *d* ?Düsseldorf, after 1557). South Netherlandish printer. His publications are important in the history of music printing in the Low Countries. From 1545 to 1551 he worked at Leuven, probably as a university printer. Besides music, he printed mainly official documents and religious commentaries, of which a number were published by M. Rotaire and PHALÈSE. During this period he printed the first, third, fourth (and perhaps fifth) of *Des chansons reduictz en tablature de lut*, which were Phalèse's first music publications and the first books of lute tablature printed from type in the Low Countries.

By 1554 Baethen was in Maastricht, where his publications included a book of Flemish songs, *Dat ierste boeck vanden nievve Duytsche liedekens*, one of five such anthologies published in the Low Countries during the 16th century. In 1555 he moved to Düsseldorf, where he published three books of motets, 1555–6 (for the heirs of Arnold Byrckmann), and a theory book, *Practicae musicae* (1557). The music type used by Baethen in Maastricht and Düsseldorf is identical with that used by Phalèse at that time so it may be assumed that he took a fount with him when he left Leuven. He is sometimes confused with Johan Baethen (perhaps his brother), who was a printer in Leuven and Cologne from 1552 to 1562, but who printed no music.

SUSAN BAIN

Baetz. *See* BÄTZ firm.

Baeyens, August (*b* Antwerp, 5 June 1895; *d* Antwerp, 17 July 1966). Belgian viola player and composer. He studied at the Antwerp Conservatory and was partly self-taught. Shortly after World War I he became the leader of the Expressionist school in Flemish music, his principal fellow members being Karel Albert and Jef Van Durme. He played the viola in the Antwerp Chamber Music Society, thereby wielding great influence in promoting modern chamber music, especially the works of the Second Viennese School. He was secretary of the Koninklijke Vlaamsche Opera in Antwerp from 1931 to 1944, when he was made director. In 1958 he retired from active musical life to dedicate himself entirely to composition.

In his last orchestral works, concertos for viola (1956) and for trumpet (1965), the Expressionist phrasing yielded to concertante playfulness, and in the late chamber works and songs the musical substance is treated with a remarkable purity of expression. (*CeBeDeM directory*)

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Baez, Joan (Chandos) (*b* New York, 9 Jan 1941). American folk singer and songwriter. Her early repertory drew on Child ballads (*Mary Hamilton*), Appalachian songs (*Wildwood Flower*) and a smattering of international material such as *Donna, Donna* and *Plaisir d'Amour*, along with radical songs such as the civil rights anthem *We Shall Overcome* and Earl Robinson's *Ballad of Joe Hill*. The influence of Bob Dylan brought such contemporary songs into her repertory as Dylan's *Farewell Angelina*, *Suzanne* by Leonard Cohen and *There but for Fortune* by Phil Ochs (1965).

By the early 1970s Baez was beginning to compose, the most durable of her songs being *Rider, please pass by* (1972) and *Diamonds and Rust* (1975). She also varied the format of her recordings, choosing to work in Nashville, Tennessee, with a group of country session musicians supervised by producer Norbert Putnam. The most commercially successful of her recordings from this relationship was a version of The Band's stirring Civil War ballad *The Night They Drove Old Dixie Down* (1971). She also increasingly paid tribute to her Latin heritage notably with a 1974 album, *Gracias a la Vida*,

which contained songs by the Chilean musicians Violeta Parra and Victor Jara.

From her debut performance at the Newport Folk Festival in 1959, Baez's untrained yet pitch-perfect soprano has set the standard for female singers of folk revival material. Her purity of tone and almost unornamented vocal delivery is perhaps less suited to the singer-songwriter and even rock material which she has also performed and recorded in a prolific career which has included nearly 30 albums and some thousands of concerts. Throughout her career Baez strove to coordinate her professional career with her radical political convictions. In the mid 1960s she financed an Institute for Non Violence and withheld tax payments in protest at nuclear weapons; she has also performed numerous fund-raising concerts and appeared in war zones such as Vietnam and Bosnia.

DAVE LAING

Baeza [Vaeza] **Saavedra, Juan de** (*fl* Puebla, 1662–77). Mexican composer. His extant works – three *romances*, a villancico, a *chanzoneta* and a *negrilla* – are in the Jesús Sánchez Garza collection at the Centro Nacional de Investigación, Documentación e Información Musical, Mexico City. They were composed for the Convento de la SS Trinidad, Puebla. The best known is the *negrilla*, *Por celebrar este día* (ed. R. Stevenson, *Christmas Music from Baroque Mexico*, Berkeley and Los Angeles, 1974; ed. F. Ramírez Ramírez, *Trece obras de la colección J. Sánchez Garza*, Mexico City, 1981; ed. in Stevenson, 1984–5); it imitates African American dialect and speech, and is rich in the metrical shifts and cross-rhythms typical of the genre.

CRAIG H. RUSSELL

Baffo, Giovanni [Joannes] **Antonio** (*fl* Venice, 1570–79). Italian harpsichord and virginal maker. Although many antique instruments were fraudulently given Baffo's name, his genuine, signed work comprises only three harpsichords and one virginal. Two further harpsichords and five polygonal virginals may also be identified as his work (see Wraight), one of which is the so-called 'Queen Elizabeth's Virginal' (Victoria and Albert Museum, London; *see* VIRGINAL, fig.3). This virginal and the signed harpsichord of 1574 (*see* HARPSICHORD, fig.3) in the same collection are excellent examples of the highly ornate style of case decoration used in late 16th-century Venetian instruments. Documents record that Baffo also made instruments for the court at Ferrara. Baffo's harpsichords are of considerable interest since they were made for unusual pitches. The Victoria and Albert Museum harpsichord and one of 1579 (which originally had the unusually wide compass *C/E–c''''*) in the Musée de la Musique, Paris, were both built to be tuned a 4th lower than one of the most common 8′ pitches of the time (*a′* = *c*467). Another unsigned harpsichord attributed to Baffo (private collection) is pitched a 4th above *a′* = *c*448. It would not be correct to call these 'transposing' instruments (*see* TRANSPOSING KEYBOARD): a wide range of pitch standards were in use in Venice (*see* HARPSICHORD, §2(i)).

DENZIL WRAIGHT

Bafoyev, Mustafa (*b* Ganchkash, Bukhara district, 10 Nov 1946). Uzbek composer. He trained at the Tashkent Conservatory as a performer on Uzbek instruments (1964–9) and as a composer (1972–7), finishing a postgraduate course under Boris Giyenko in 1979. He has taught at the Bukhara Pedagogical Institute (1969–72), has conducted the Uzbek folk instruments orchestra for the Uzbek TV and radio company (1980–86) and in 1986 was appointed artistic director of this folk orchestra. His works have a broad appeal and are heard in festivals and competitions as well as local celebrations; they are rooted in Uzbek folk traditions. Bafoyer has received numerous awards, including the A. Kadïri State Premium (1997) and the title of Meritorious Worker of Arts of Uzbekistan (1995).

RAZIA SULTANOVA

Bagatelle. A trifle, a short piece of music in light vein. The title implies no specific form. It is first found in François Couperin, who published in 1717 in his tenth *ordre* for harpsichord a rondeau entitled 'Les bagatelles'. It was also used by the French publisher Borvin for a collection of dances (*c*1753), and in 1797 Breitkopf & Härtel published a series called *Musikalische Bagatellen*. The term as a generic title received its accolade with Beethoven's three sets of bagatelles for piano opp.33, 119 and 126. Some of these are trifles (Beethoven called the first six of op.119 by the equivalent German term 'Kleinigkeiten'), but many of the later ones are thoroughly typical of their composer and show affinities with the greater instrumental works written at the same time.

The bagatelle since Beethoven has usually been given a descriptive title, and more often than not composers have published them in sets; Smetana composed a collection of

bagatelles and impromptus in 1844, and Saint-Saëns published a set of six as his op.3 in 1856. Sibelius's Six Bagatelles op.97 have titles, including 'Little Waltz' and 'Humorous March'. Other composers of bagatelles are Bartók (14, op.6, 1908; he orchestrated the last one as no.2 of *Two Portraits* op.5), Vítězslav Novák (op.5) and Krenek (Four Bagatelles op.70). The bagatelle is also found in the work of three British composers: Tovey (Bagatelles, 1900), Rawsthorne (Bagatelles, 1938) and Howard Ferguson (Five Bagatelles op.9, 1944).

Bagatelles have almost invariably been written for piano solo, but the four in Dvořák's op.47 (1878) are charmingly scored for two violins, cello and harmonium. Webern's *Sechs Bagatellen* for string quartet op.9 (1911–13) was probably the first in a series of 20th-century ensemble works to use the title; a later example is Nicolaus A. Huber's *Sechs Bagatellen* of 1981.

MAURICE J.E. BROWN/R

Bagatti [Bagati], **Francesco** (*fl* 1658–*c*1680). Italian composer and organist. He seems to have spent his whole life in Milan. From Picinelli and from the title-pages of his publications we know that he was organist and *maestro di cappella* of the churches of S Sepolcro, S Vittore al Corpo and S Maria alla Porta between 1658 and 1672. In 1662 he was also organist at the ducal court. In 1669, after the death of M.A. Grancini, he competed for the office of *maestro di cappella* at the Duomo, Milan, but was passed over in favour of G.A. Grossi. As far as we know, Bagatti composed only sacred music. In his concertato compositions he showed a marked preference for expressive solo writing, and he wrote a number of dialogues, for instance between Man, an Angel and the Devil in op.3, and between the Soul and an Angel in op.4.

Bagg, Konrad. *See* BACK, KONRAD.

Bagge [Bach], Baron de [Ennal, Charles-Ernest] (*b* Fockenhof, Kurland, 14 Feb 1722; *d* Paris, 24 March 1791). French dilettante, amateur violinist and composer, patron of the arts and instrument collector. A magnificent and very wealthy nobleman, he both amused and astounded his contemporaries. M. Audinot in his comic opera *La musicomanie* (1779), and possibly E.T.A. Hoffmann in his tale *Die Serapionsbrüder* (1819), attempted to evoke his strange personality, emphasizing its ridiculous nature.

At the death of his father, a landed nobleman, in 1747, Bagge inherited a large fortune which enabled him to study the violin in Italy with Tartini. By 1750 he had settled in Paris; in the following year he was awarded the title *chambellan du Roi de Prusse* (then Frederick II) and married the daughter of the Swiss banker Jacob Maudry. With Maudry's death in 1762 the very large inheritance proved a source of contention to the ill-matched couple and they soon separated. Bagge later attempted to gain possession of the inheritance of Mme Maudry, who had died in 1767, and the resulting lawsuits scandalized Paris until the Parlement decided in his wife's favour in 1773.

After the separation Bagge devoted himself entirely to music, and exercised considerable influence on Parisian musical life as concert organizer, patron, performer, composer and teacher. Every Friday in his hotel on the rue de La Feuillade he held a concert at which his protégés performed; on one of these occasions in 1783 Kreutzer gave the first performance of one of Bagge's violin concertos. He travelled in 1778 to England and in 1784 to Vienna, where he performed before Mozart. In 1790, having left France at the outbreak of the Revolution, he was appointed Kammerherr to Friedrich Wilhelm II in Berlin. His death in the following year was accompanied by rumours that he had been poisoned by his mistress, though several public disclaimers later that year discredit the accusation.

Bagge was a freemason and belonged to two of the Parisian lodges with the most active music programmes: the celebrated Loge Olympique and particularly Les Neuf Soeurs, where he was director of concerts and organized the musical side of Voltaire's initiation. His talent as a violinist and particularly his technical capabilities were perhaps not so negligible as earlier writers have maintained. He showed special skill in performing ascending and descending scales on a single string using only one finger of the left hand. His compositions, though hardly original, reveal sureness of taste and irreproachable workmanship. He was criticized for his nervous twitches and strange attitudes while performing; the *Allgemeine musikalische Zeitung* (iii, 1800, col.841) recalled of his playing that

> No Baron can ever have made such horrible grimaces the moment he took violin and bow in hand. His face, his muscles, the whole of his body underwent most painful contortions, and, as his playing increased in animation, the sounds that proceeded could only be likened to the wailing of a cat.

This doubtless gave rise to the ambiguous compliment paid by the Emperor Joseph II ('My dear Baron, I have never heard anyone play the violin quite like you'), and the quatrain under one of his portraits:

> Du Dieu de l'harmonie adorateur fidèle,
> Son zèle impetueux ne saurait s'arrêter;
> Dans l'art du violon il n'a point de modèle
> Et personne jamais n'osera l'imiter.

As a patron Bagge was extraordinarily generous. Although he favoured artists who were also freemasons (Kreutzer, Viotti, Duport, Capron and Gossec), or who were closely linked with the order (Gaviniès and Boccherini), he nevertheless helped only deserving musicians. He insisted, however, on giving lessons to the violinists among them, paying them to accept his tuition, and was

thus able to boast of himself as leader of the French violin school. His private collection of violins was prodigious, and included instruments by Stradivari, Amati and Gasparo da Salò, which he generously conferred on his 'pupils'. This collection, as well as his large music library which he freely extended to other musicians, reverted at his death to his wife together with the rest of his largely depleted estate, and has since been untraced.

Several portraits of Bagge are known, one of which was engraved by Nicolas Cochin (reproduced in Terry) and another of which portrayed him with a violin 'comme un ménétrier'.

ROGER J.V. COTTE

Bagge, Selmar (*b* Coburg, 30 June 1823; *d* Basle, 16 July 1896). German critic, teacher and composer. He studied the piano and cello at the Prague Conservatory and moved to Vienna in 1842, where he studied theory with Sechter and was active performing, teaching and composing. He was appointed to the Vienna Conservatory in 1852, but his high standards and outspoken critical stance led to his dismissal in 1855. In 1859 Bagge became the editor of a new journal, the *Deutsche Musik-Zeitung*, which opposed the 'New German' sympathies of Franz Brendel's *Neue Zeitschrift für Musik*. He moved to Leipzig in 1863 to edit the *Allgemeine musikalische Zeitung* (later the *Leipziger allgemeine musikalische Zeitung*); it closely reflected his conviction that composers should strive to imitate music of the past. Bagge's own reviews praise music by such composers as Bargiel, Volkmann, Reinecke and Kirchner. He regarded much of Brahms's music as undisciplined, contributing to a critical climate that may have prompted Brahms to adopt a more classically-oriented style.

In 1868 Bagge became the director of the Musikschule in Basle, and held this post until his death in 1896. From 1876 he lectured at the University of Basle, was granted an honorary doctorate in 1880 and promoted to extraordinarius professor in 1893. Bagge's published compositions include piano music, string quartets and songs. He also wrote choral works, symphonies, overtures and a piano concerto. His music is skilfully crafted and conservative, and its marked dependence upon Beethoven accords well with Bagge's values as a critic.

ROSE MAURO

Baggiani, Guido (*b* Naples, 4 March 1932). Italian composer. He graduated from the Conservatorio di S Cecilia as a pupil of Porena. In 1965 he joined the Rome-based Nuova Consonanza group, serving as one of its directors in 1971–2. He studied with Stockhausen in Cologne in 1966, an experience that decisively influenced him as a composer. The following year he attended Evangelisti's seminars on electronic music in Rome. In 1972, together with Mario Bertoncini, Walter Branchi and Giorgio Nottoli, he formed the Gruppo Team Roma, an ensemble making use of live electronics. Again with Branchi, in 1977, he founded Musica Verticale, an association devoted mainly to electro-acoustic music. He taught composition at the conservatoires of Pesaro (1972–9) and Perugia (1979–95). In 1995 he returned to Rome to teach at the Conservatory.

In the first phase of his output (*Mimesis* and *Metafora*) the elements of the music are rigorously predetermined; later he used forms offering a choice to the performers. After exploring new forms of expression using electroacoustic and instrumental techniques, he has progressively abandoned timbral research in pursuit of more abstract formal possibilities, especially in orchestral works such as *Gongora* and *Labirinti*.

PIERLUIGI PETROBELLI

Bag-hornpipe. An early type of bagpipe. *See* BAGPIPE, §8 and HORNPIPE (i).

Bagiński, Zbigniew (*b* Szczecin, 19 Jan 1949). Polish composer. From 1967 to 1972 he attended the Warsaw Academy, where his teachers included Paciorkiewicz. He was appointed lecturer at the Academy in 1987, and in 1989 he was elected general secretary of the Union of Polish Composers. Something of a late developer, Bagiński came to the fore as a composer during the mid-1980s. He developed a vein of lighthearted mock antiquity which owed more to pre-war European models than to contemporary postmodernist trends. His referential inclinations adopted a more serious tone in the Piano Quartet (1990) which carried echoes of 19th century music, while the impulse for *Hawaiian Songs* stemmed from a walk along Waikiki Beach. Bagiński's sensitivity to humour in music is balanced by profound, introspective lyricism (as in the two symphonies), supported by his preference for clearly delineated ideas, forward-moving structures and resonant harmony. His music has a simple, unabashed directness which eschews unnecessary clutter.

ADRIAN THOMAS

Bağlama. Turkish long-necked lute of the ṬANBŪR family (for illustration *see* KURDISH MUSIC, fig.2). The pear-shaped bowl resonator is carved (*oyma*) or carvel-built (*yapraklı*). The soundtable is of wood, usually coniferous. The neck has a variable number of movable frets. Traditionally these were made of sheepgut or copper wire but nylon line is now used. The instrument's name, dating from the 17th century, derives from these 'tied' frets (*bağ*: 'fret', 'knot'; *bağlamak*: 'to tie, knot'). The movability of the frets allows the setting of scales to include microtones. There are three double courses of metal strings tuned with wooden pegs. The *bağlama* is generally played with a cherry-bark plectrum, though formerly the fingertips were widely used. The melody is commonly played on the first double course of strings, while the remaining courses are struck open as drones. Sometimes, however, the second and third courses are also fingered. The second finger of the plectrum hand is often used to strike the soundtable to add a percussive element to the melody.

The *bağlama* is the most popular and widely played long-necked lute in TURKEY. It is often known as, simply, SAZ ('instrument'). By the 11th century, a long-necked lute similar to the *bağlama*, called *kopuz*, was the favoured instrument of the minstrel poets (*ozan*) of the Oğuz Turkish tribes of south-west Asia. Their Ottoman descendants, called *saz şairleri* ('*saz* minstrel poets') or *aşıklar* (sing.: *aşık*), use the *bağlama* to accompany the recitation of epics and popular tales (*halk hikayeleri*) as well as their own compositions and repertory of songs by earlier *aşıklar*. The *bağlama* is still played in the dervish ceremonies of some sects, including the Alevi. The instrument itself is viewed as symbolically significant: the body is 'Alī, the neck his sword, and so on; *see* ISLAMIC RELIGIOUS MUSIC §III, 2(i).

The *bağlama* is also the prime melody instrument of entertainment and dance music in both town and country. In this case it is sometimes accompanied by percussion instruments such as *dümbelek* (goblet drum), *parmak zili* and *zilli maşa* (types of cymbal). The *bağlama* is also played in small ensembles with other types of *saz* (long-necked lutes). In the 1970s the addition of a built-in electric pick-up produced a type of instrument known as *elekrosaz*. This is used at rural weddings with voice and *darbuka* (goblet drum). The *bağlama* and *elektrosaz* are important in Turkish music (*see* TURKEY, §§1–4).

The Greek *baylamas* is a miniature version of the *bouzouki*, with three double courses of metal strings, and is used mainly to accompany the *bouzouki* or the smaller *tzouras* (long-necked lutes).

Bagliani, Carlo. *See* BALIANI, CARLO.

Baglioni, Antonio (*fl* 1780s–90s). Italian tenor and singing teacher. He may have been related to Francesco Baglioni. He sang in productions of comic opera, particularly in Venice during the late 1780s and early 90s, and of serious opera. Two of his most important roles were Don Ottavio in the first production of Mozart's *Don Giovanni* (1787, Prague) and Titus in *La clemenza di Tito* (1791, Prague). His range encompassed *e* to *b♭′*. He was said to have had a well-trained, pure and expressive voice. As a singing teacher, he taught, among others, Giulietta da Ponte, the niece of Mozart's librettist, Lorenzo Da Ponte, who claimed that Baglioni was 'a man of perfect taste and great musical knowledge who had trained the most celebrated singers in Italy'. Baglioni published a set of vocal exercises (Milan, n.d.) and a duet *Sommo ciel* (Venice, n.d.); his only other extant works are an *Ave regina* for three voices and an aria, *Come aboro fu deciso* (MSS in *I-Bc*, *Fc*).

SVEN HANSELL/BARBARA D. MACKENZIE

Baglioni, Francesco [Carnace] (*fl* 1729–62). Italian bass and impresario. He was one of the most popular comic opera singers of his day and a particularly important figure in the development and dissemination of the genre in the middle of the century. He performed in at least 100 productions beginning in the late 1720s, when he sang intermezzos in Foligno and Pesaro. He launched his comic opera career in Rome in 1738 with Gaetano Latilla's *La finta cameriera* and *Madama Ciana* and Rinaldo di

Capua's *La commedia in commedia*. Productions throughout northern Italy of these operas along with another first performed in Rome, Rinaldo's *La libertà nociva* (1740), dominated Baglioni's career for the next decade. In 1749 he appeared in the *dramma giocoso L'Arcadia in Brenta* in Venice, the first collaboration between Galuppi and Goldoni, and for the remainder of his career he primarily sang texts written by Goldoni, in cities along the axis from Venice to Turin. His range encompassed *B♭* to *f′* and music written for him is predominantly syllabic and laden with comic effects. Baglioni sang in the opera troupes of at least three well-known impresarios: Angelo Mingotti, Eustachio Bambini and Girolamo Medebach. Evidence that he worked as an impresario himself include a payment record from 1744 indicating his fee of 155 lire for duties as impresario in Venice's San Cassiano for the autumn and carnival seasons (*I–Vas*). Three of his daughters appeared in productions with him: Giovanna from 1752, Clementina from 1754 (she later created the role of Rosina in Mozart's *La finta semplice*) and Vincenza from 1757. His other children include the singers Costanza, Rosina and perhaps Antonio (who created both Don Ottavio in Mozart's *Don Giovanni* and Tito in Mozart's *La clemenza di Tito*).

BARBARA D. MACKENZIE

Baglioni [Ballioni], **Girolamo** (*b* Milan, *c*1575; *d* Milan, 1608). Italian composer. He was organist of S Maria della Scala, Milan, and was a pupil of Guglielmo Arnone. At the end of his *Liber primus et opus secundum sacrarum cantionum*, published by his father Francesco soon after his death and dedicated in March 1608, the printer Filippo Lomazzo recalled that Baglioni was learned both in Greek and Latin literature and in philosophy. His first published works are two instrumental duos included in a collection of works by Gastoldi and other Milanese composers (RISM 1598[13]), dedicated by the printer to Baglioni's father; they are described as 'the first work by this his son'. This information shows that there was a close relationship between the two Baglionis, the well-educated printers Lomazzo, Tini, Besozzi and Castiglioni, and, through the agency of Arnone and Gastoldi, the musical centre at the Mantuan court. Baglioni's compositions consist solely of sacred music. In the *Sacrae cantiones* he follows the practice, then popular in Milan, of treating the voices in a concertante style above a bass played on the organ. In the instrumental score the vocal lines are combined. One of these, 'Maria Magdalena con una canzon francese in soprano', uses instrumental passages alternating with vocal polyphony. The two instrumental duos of 1598 are skilful fugal pieces.

WORKS

Sacrarum cantionum, liber primus, 1–6vv, op.2 (Milan, 1608)

2 instrumental duos, 1598[13]; 1 antiphon, 6vv, 1612[3]; 1 motet, 1621[2]; 1 motet, 3vv, bc, 1627[1]

Baglioni, Luigi. *See* BAILLOU, LUIGI DE.

Bagnacavallo, Giuseppe da. *See* TAMBURINI, GIUSEPPE.

Bagni, Benedetto [Bagnius, Benedictus] (*b* ?Ferrara; *fl* 1608). Italian composer and organist. His birthplace is given in *FétisB*. On the title-page of his publication of 1608 he called himself a 'musician to the illustrious city fathers of Bologna'. This statement is confirmed by Banchieri (*Conclusioni del suono dell'organo*, Bologna, 1609/*R*, 2/1626 as *Armoniche conclusioni nel suono dell'organo*; Eng. trans., 1982, p.25), who referred to him as a distinguished organist in the service of the city of Bologna. His *Motectorum octonis vocibus ... una cum basso generalis pro organo liber primus* (Venice, 1608) contains 21 eight-part motets for double choir, organized on the concertato principle and with two continuo parts. Several of the motets in this collection were included in leading German anthologies of the period and are also found intabulated in manuscripts.

JOHANNES GÜNTHER KRANER

Bagniera [Bagnera, Baniera, Bannieri], **Antonio** [Antoine] (*b* ?Rome, 1638; *d* Versailles, 1740). Swiss boy (later castrato) singer, active in France. Son of one of Louis XIV's Swiss guards, Bagniera was a *Page de la Chapelle* (a boy singer in the royal chapel choir) noted for the 'prodigious volume and extreme beauty of his voice' (Bêche). Small stature and physical deformities may have been factors in his decision to persuade his cousin, a surgeon, to castrate him in a (successful) bid to preserve his greatest asset, his voice. When Louis XIV discovered what had taken place, he threatened Bagniera with banishment, but pardoned him after intervention by the Swiss guards who pleaded that his action had only been for the best interests of the king's music. Bagniera continued to sing both in the chapel and in court operatic performances (e.g. Lully's *Alceste* in 1677). He became a naturalized French citizen in 1680. From a year earlier, Louis XIV employed as many as five Italian castrati at any one time, alongside Bagniera, who sang to the age of 77, retiring at the king's death in 1715; he survived to 102.

LIONEL SAWKINS

Bagnolesi, Anna Maria Antonia (*fl* 1726–43). Italian contralto. She was a Florentine in the employment of the Grand Duchess of Tuscany, and married to the tenor G.B. Pinacci (1732). She sang in Florence (1725–6), Bologna (1726–8), Livorno (1727), Naples (1727, in operas by Vinci and Hasse) and Milan (1728, 1730). She may have been the Anna Bolognesi who appeared in Venice in 1729, and she sang in Turin in 1731 (Porpora's *Poro*). Engaged by Handel for the London season of 1731–2, she made her début at the King's Theatre as Alcestis in a revival of *Admeto* on 7 December. She sang in the original productions of *Ezio* and *Sosarme*, in revivals of *Giulio Cesare*, *Flavio*, the bilingual *Acis and Galatea* and Ariosti's *Coriolano*, and in the pasticcio *Lucio Papirio dittatore*. The two parts Handel composed for her,

Valentinian in *Ezio* and Erenice in *Sosarme*, are restricted in compass (*b♭* to *e♭″* in the arias) and of no exceptional technical difficulty, but the scope and quality of the music suggests confidence in her powers of expression; her affected delivery, however, reminded Horace Mann of 'a person talking upon a close stool'. After her return to Italy she sang in Naples in operas by Hasse, Pergolesi and N. Conti (1733–4), Milan (1736–7, 1739), Venice (1739–40) and Florence (1732–3, 1739, 1741–3). She often took male roles. There is a caricature of her by A.M. Zanetti in the Cini collection (*I-Vgc*).

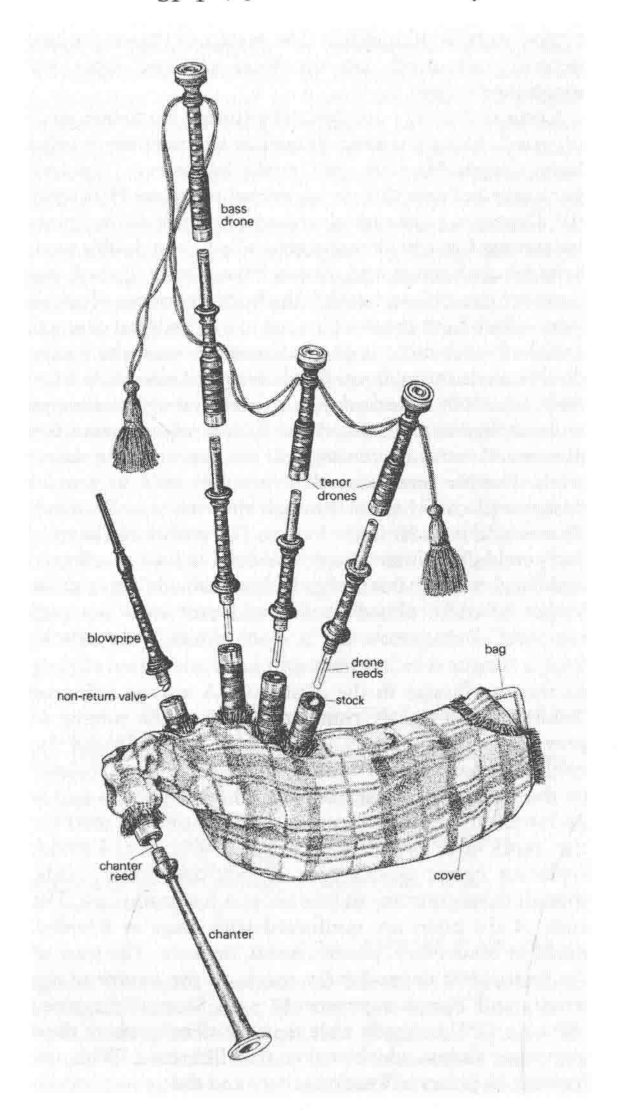
WINTON DEAN

Bagnols, Magister **Leon de.** *See* GERSONIDES.

Bagpipe (Fr. *cornemuse*; Ger. *Dudelsack*, *Sackpfeife*; It. *cornamusa, piva, zampogna*; Port. *gaita*; Sp. *cornamusa, gaita, zampoña*). A wind instrument which in its commonest forms consists of a chanter and one or more drones, all supplied with air from the bag, which is compressed under the player's arm to provide a constant pressure. The instrument is classed as a composite reedpipe.

Bagpipes are generally used in the performance of traditional folk musics, and their designs vary in different countries or ethnic regions. The main exceptions to this rule include the occasional adoption of bagpipes by fashionable society and by composers of opera, ballet, concertos and chamber music, most notably in 18th-century France (*see* MUSETTE (i), §§1 and 2), and the case of the Scottish Highland bagpipe, which became widespread in the 19th century and has displaced some local types. Some bagpipe traditions have flourished continuously to the present day, notably in Great Britain and Ireland, in north-western Spain, and in Bulgaria, but by the mid-20th century many regional types had become obsolete. Since the 1960s, however, there has been a considerable revival of interest, and many regional and older types are again being manufactured and played.

1. Structure. 2. General history. 3. Scotland: (i) Highland pipe (pìob mhór) (ii) Other bagpipes. 4. Ireland. 5. England. 6. France, Belgium. 7. Other countries: (i) Spain and Portugal (ii) Northern Europe (iii) Italy (iv) Poland, Czech Republic, Slovakia (v) Hungary, Romania (vi) Yugoslavia, Bulgaria (vii) India. 8. Bag-hornpipes. 9. Music. 10. Present state.



1. STRUCTURE. The principal variables within the above definition are the type of chanter, either conical- or cylindrical-bored; the number and tuning of the drones; and whether the pipes are blown by mouth or with bellows strapped between the player's arm and waist. Mouth blowing is generally associated with bagpipes intended for outdoor use; bellows with more delicate instruments for indoor playing. Some bagpipes have double chanters, and some have keywork to extend the tonal range.

In many traditions, bags consist of the whole skin of an animal such as a sheep or goat, variously cured or tanned, and with the hair side turned inside. Usually the pipes are tied into the natural neck and forelegs. Almost always the pipes are actually inserted into wooden or bone sockets ('stocks'), so that they can easily be taken out to adjust the reeds. Most modern bagpipes have bags of cured or tanned skin cut to shape and sewn, and this type of bag can be seen in some medieval depictions as well. For a mouth-blown bagpipe it is of course essential that the bag should not only be airtight but should maintain a constant temperature and humidity. The materials that work best depend very much on the local climate; some are mentioned below.

Conical chanters are generally turned from one piece of wood, like a shawm; cylindrical chanters more often have a separable foot joint at the lower end. The foot joint may be formed from an animal horn (*see* HORNPIPE (i)). Drones are cylindrical with one or more sliding joints for tuning. Conical chanters generally have a double reed; cylindrical chanters and drones have a beating reed, but there are exceptions, notably the British varieties of 'small pipe' which have the double reed in a cylindrical chanter, and the French musette and Italian *zampogna* which have double reeds throughout. Reeds are generally made from cane, especially *arundo donax*, grown in southern Europe and supplied to pipe makers' particular requirements, but plastic and metal are coming into use, especially for drone reeds. Double reeds resemble the oboe reed in general design and construction (though they are usually much shorter and broader in the blade). The traditional beating (or 'percussion') is an 'idioglot percussion reed' (*see* REED, and REED INSTRUMENTS, fig. 1). It is formed from a short length of cane, closed at one end and with the pith removed. A transverse cut is made through the skin to form a tongue which is then split back and raised slightly so that it vibrates in the airstream. A waxed string or 'bridle' is tied tightly round the root of the tongue to prevent further splitting (fig.1). In some traditions the reed is cut so that the vibrating end of the tongue is closer to the open end of the reed, in others a greater gap is preferred. In modern bagpipes the chief timbers used for the pipes are ebony, cocus wood and brazil-wood, replacing native woods such as box and fruit woods, though these continue to be used in a few traditions. The ends of the pipes are reinforced with rings or ferrules, made of bone ivory, plastic, metal, or bone. The tone of the instrument depends very much on the nature of the wood, and recent experiments with Scottish bagpipes (Moore, 1991) suggest that it is the density more than any other factor which makes the difference. With the increase in prices of exotic timbers and the general desire to conserve non-renewable materials, synthetic materials are coming more into use.

2. GENERAL HISTORY. There are a few references to bagpipes in ancient literature (Aristophanes, Suetonius, Martial, Dio Chrysostom; see Baines, 1960) but no surviving instruments, or unambiguous depictions. Popular writings on bagpipes over the last two hundred years have given a different impression about this ambiguity, but on re-examination, such claims may all be discounted, notably the persistent belief that the bagpipe had military use in the Roman army (Askew, 1940; Collinson, 1975).

Closely related to the bagpipe is the hornpipe, consisting of one or two pipes made from natural tubular materials (bone or cane), with beating reeds blown directly by mouth with circular breathing so that the music is continuous, as is that of the bagpipe. Hornpipes with bags also exist and constitute a supposedly primitive type of bagpipe. Although rare, hornpipes are distributed over a very wide area, 'from Atlantic Europe and the Maghrib to the Urals and India' (Baines, 1960), and if bagpipes are viewed as a technical development from the hornpipe this is the strongest reason for supposing that they too have an ancient history.

1. Exploded diagram of a Scottish Highland bagpipe

The historical record effectively begins in the early Middle Ages, in Western Europe. The word 'musa' (root of the medieval French word 'muse', meaning 'bagpipe') occurs between 'tibiae' and 'fistula', both pipe names, in the *Epistola de armonica institutione* of Regino of Prüm (*c*842–915). The term ESTIVE, also believed to denote a form of bagpipe, occurs frequently in medieval French poetry and romances, usually in association with 'soft' instruments such as the harp and fiddle, which would indicate that it, too, had a refined and delicate sound. An Anglo Saxon riddle of the 10th century has been considered as referring to a bagpipe (Sutherland, 1967). The independent drone is mentioned in Adam de la Halle's *Jeu de Robin et de Marion* (*c*1283), and a drone pipe of this period has been found at Weoley Castle, Warwickshire, England. Depictions in pictures and carvings become abundant from then on. In the British Isles bagpiping was both a popular and a courtly entertainment at least from the early 14th century (Bullock-Davies, 1978), but began gradually to die out, receding northwards and westwards from the 16th century onwards (Cannon, 1971). From the 17th century, mouth-blown bagpipes tended to be displaced by bellows-blown forms for indoor use, and in Ireland and Northumberland these became progressively more elaborate during the 18th and 19th centuries. Historical references to 'Lincolnshire' (16th century) and 'Lancashire' (18th century) bagpipes presumably imply persistent playing traditions; they may or may not refer to distinctive regional types of instrument. The last traces of bagpiping in 19th-century Yorkshire have been carefully researched (Schofield, 1993–4), indicating that the Irish type of 'union pipe' was played.

3. SCOTLAND.

(i) Highland pipe (pìob mhór). The Highland bagpipe (figs.1 and 4*a*) has been a martial instrument at least since the 16th century. It has three drones, two tenor and one bass, the chanter and the blowpipe. The latter is long, thus enabling the bag to be held well under the left arm and the piper's head to be kept erect. Blowpipes in other traditions are shorter, and the bag may be held in front of the body, leading to a crouching attitude unlike the military bearing of the Scots piper. The drones are spread fanwise and held at their distance by ornamental cords, the bass drone resting on the piper's shoulder. Each tenor drone is 40 cm long and is tuned an octave below the six-finger note of the chanter (which is named A, i.e. *a′*, though the actual pitch is closer to *b♭*). The bass drone is 80 cm and is tuned an octave below the tenors. Bagpipes with two tenor drones and no bass drone were customary in some districts in the 18th century, but the three-drone arrangement is now standard.

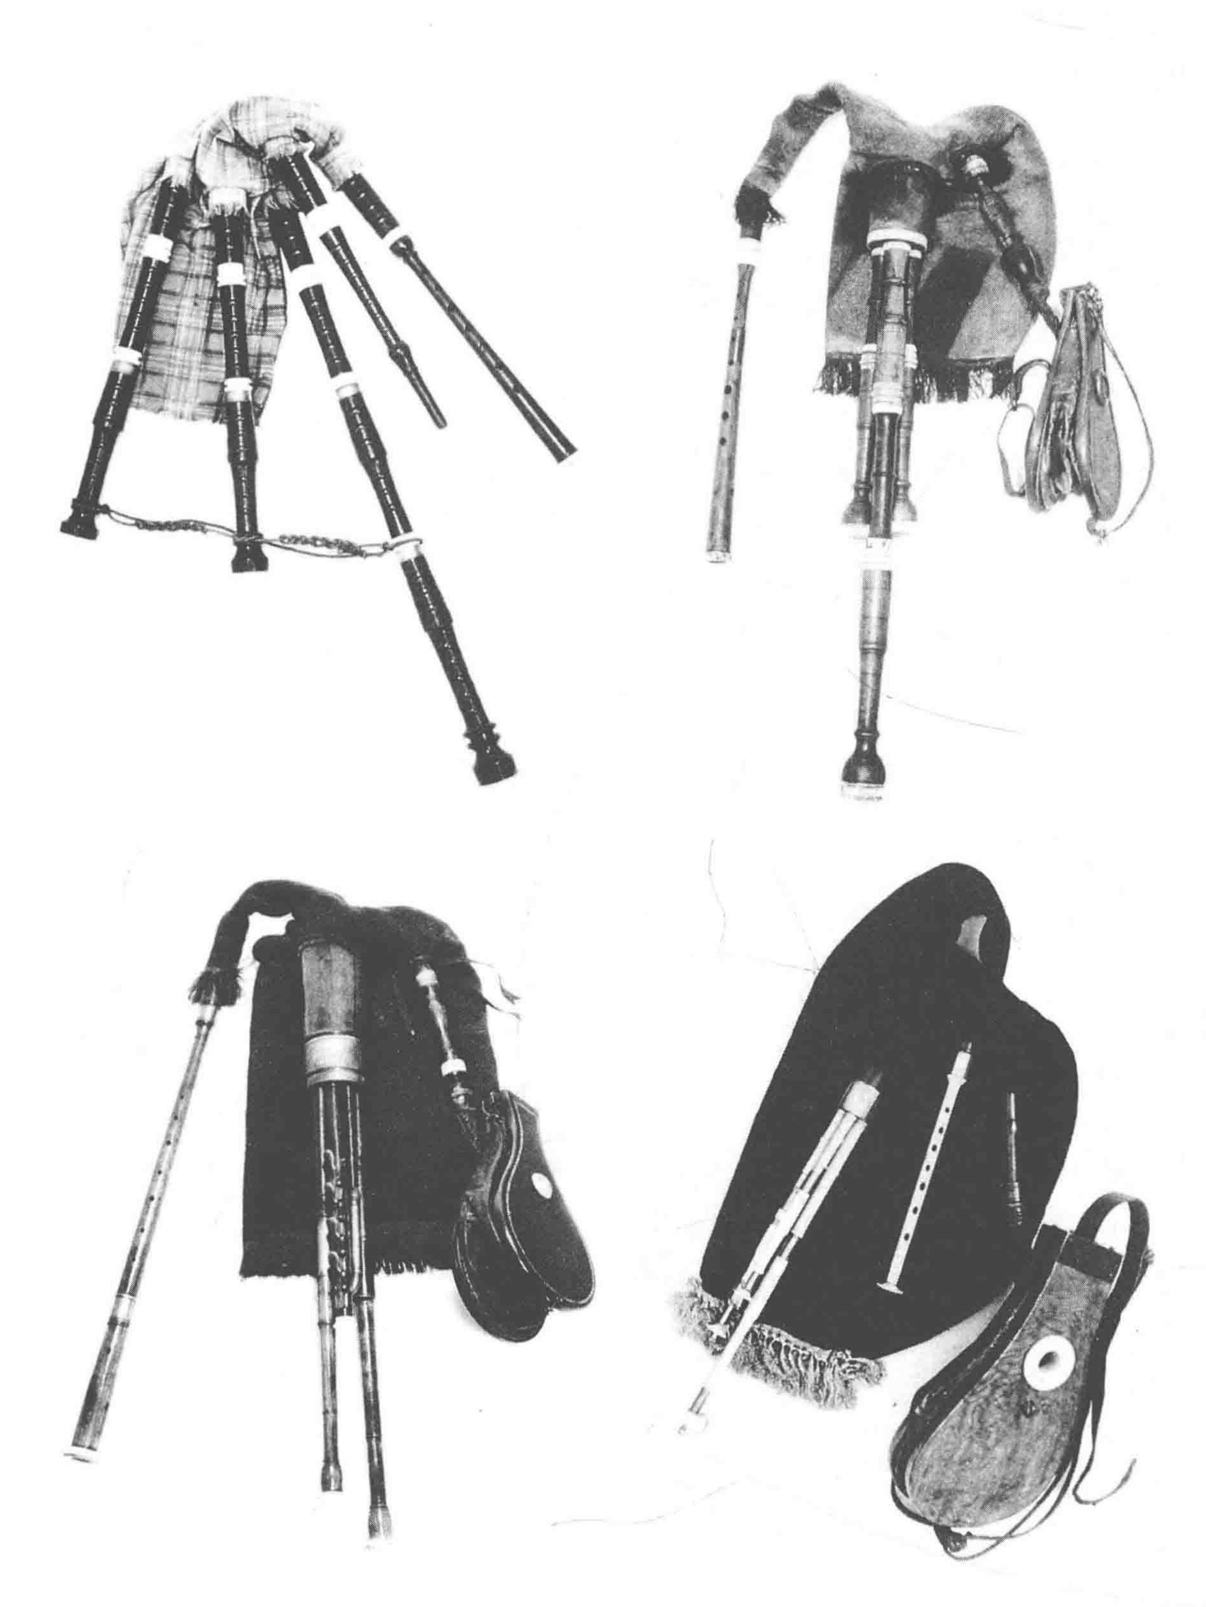
The chanter is of a wide conical bore, with eight holes and a double vent-hole which is never stopped. The tone is exceedingly loud and penetrating. Highland pipes are made in two sizes; in addition there is a miniature-sized pipe with a practice chanter in place of the normal bagpipe chanter. Scottish bagpipe manufacture is a well-established industry. The instrument is largely standardized in design and construction. The favourite timbers since the early 19th century have been African blackwood

2. Bagpipes without drones: miniature from the 'Cantigas de Santa María', Spanish, c1270–90 (E-E b.I.2, f.235v)

3. Bagpipe with single drone and chanter: marginal illustration from the Luttrell Psalter, English, c1330–40 (GB-Lbl Add.42130, f.176r)

or cocus wood, with ivory or silver reinforcing rings and ferrules. Imitation ivory is now usual, and makers are experimenting with synthetic materials in place of wood. Moulded plastic 'Polypenco' pipe chanters are widely accepted for use by bands. Plastic and metal drone reeds are beginning to replace cane. For the bag, sheepskin, cured but not tanned, is traditional in northern climates, but leather works better in drier conditions; more recently the synthetic material Gore-Tex has become popular.

The scale of the Highland chanter consists of the notes *g′*, *a′*, *b′*, *c*♯″, *d″*, *e″*, *f*♯″, *g″*, *a″*; but they are tuned in a characteristic way, which has given rise to a good deal of speculation and research (early results and discussions are summarized by MacNeill and Lenihan, 1960–61). In the 19th century there was fairly general agreement that the *c*♯″ and *f*♯″ were appreciably flatter, and the *g′* and *g″* appreciably sharper than in the accepted diatonic scales of the period; in fact most of the 3rds were thought to be intermediate between major and minor 3rds. Baines (1960) pointed out that neutral 3rds are a common characteristic of folk wind instruments, and a general explanation is that pipe makers everywhere have tended to set the holes in the pipe at equal distances so as to lie comfortably under the fingers: some refinement of pitch is then obtained by varying the size of the holes. The first reliable measurements, made by Lenihan and MacNeill in 1954, gave somewhat different results, showing the following intervals, expressed in cents, between *g′* and each successive note: *a′* = 199 cents above *g′*; *b′* = 395 cents; *c*♯″ = 582 cents; *d″* = 715 cents; *e″* = 904 cents; *f*♯″ = 1086 cents; *g″* = 1220 cents; and *a″* = 1404 cents. The *c*♯″ and *f*♯″ are close to their values in just intonation while the *d″* is appreciably sharp. Harris and others (1963) confirmed these intervals, and also reported details of the harmonic structure of the notes of both chanter and drones.



Measurements made by Mackenzie (1995) have used greatly improved techniques, sampling the notes actually played in performance, with the drones sounding, and taking care that the players were themselves satisfied with the sound produced. The results have shown very close agreement between different pipers and instruments, and a strong tendency to tune the chanter notes in consonance with appropriate harmonies of the drones. But no corresponding measurements have been reported for old chanters. What is certain is that all good players are keenly aware of, and strive to attain, what they consider to be the true intonation, different though this may be from the standards adopted by other musicians.

The nine notes are not produced simply by successive opening of the eight finger-holes: as with most bagpipes, the fingering system is such that when middle and upper notes are played, certain of the lower holes must be kept closed. Although in theory cross-fingerings could be used to produce additional chromatic semitones, in practice all the traditional music is restricted to the nine notes listed above. The 19th-century bagpipe maker David Glen published fingering charts showing two notes *g″*, one slightly sharpened, but this innovation was not generally adopted. A considerable number of tunes have been adapted to the bagpipe from other sources and this has led to a number of 'wrong' notes which are now accepted as traditional. Thus, *g″* is accepted as a passing note in place of *g*♯″, in tunes which would otherwise be in the key of A major, and to a lesser extent *c*♯″ is accepted where parallel traditions have *c″*. Some tunes exist in minor modes in the song and fiddle traditions but in major modes in the bagpipe tradition, perhaps for a similar reason.

(ii) Other bagpipes. The Lowland bagpipe is a bellows-blown instrument, with three drones all in one stock. They lie across the piper's chest while in use, and the piper is seated. The chanter and drone are slightly smaller than in the Highland pipe, but in musical essentials they are the same (see fig.4*b*). By the end of the 19th century the Lowland bagpipe had almost ceased to be played (Duncan, 1990), though in the early 20th century some pipe makers offered instead the half-sized Highland bagpipe blown by bellows. In the late 20th century the Lowland pipe has been revived.

Another type of bagpipe made and played in Scotland in the 18th and early 19th centuries is essentially similar to early forms of Irish union pipe (see fig.4*c* and §4 below). In 20th-century literature it has been called the 'hybrid union pipe'; more recently, the 'pastoral' pipe, following Geoghegan (*c*1746; see §4 below).

A Scottish form of small-pipe is found in some museum collections. The chanter is cylindrical and gives a nine-note scale. The three drones are set in one stock and tuned as in the Northumbrian pipes (see §5 below), i.e. the smallest in unison with the six-finger note on the chanter, the largest an octave below, and the intermediate drone at the 5th in between. After a long period of disuse, small-pipes are again being played, with a chanter redesigned to accept Highland pipe fingering. It is available in two pitches, one an octave below the Highland pipe (nominally 'in A') with the corresponding scale including *g* and *g′*,

4. (a) Scottish Highland bagpipe, with blowpipe, chanter and three drones; (b) Scottish Lowland bagpipe, with bellows and three drones; (c) early Irish union pipe, with bellows, plain chanter, three drones and a tenor regulator with four keys (all Pitt Rivers Museum, Oxford); (d) early Northumbrian small-pipe, with bellows, plain chanter and three drones, c1770 (National Bagpipe Museum, Newcastle upon Tyne)

5. Piper to the Laird of Grant playing the Scottish Highland bagpipe: painting by Richard Waitt, 1714 (Royal Museum of Scotland, Edinburgh)

both natural; and the other a 4th higher ('in D'). Both mouth-blown and bellows forms are played.

4. Ireland. Historical and literary references to the bagpipe in Ireland go back to 1544, and show that it was used for the same purposes as in Gaelic Scotland, notably in battle and for laments at funerals (see Donnelly, 1981). A crudely drawn illustration was given by John Derricke in *Image of Irelande* (London, 1581; fig.6): it depicts a mouthblown instrument with two drones of unequal length set in one stock, and a long chanter with bell; the proportions are grotesque, and the woodcut must be accepted with caution. These references imply a loud instrument, presumably mouth-blown and similar to the Scottish bagpipe of the time, but in the 18th century it died out and little is known about it. It is said that there used to be an example in the Musée de Cluny, Paris (Collinson, 1975).

The Scottish bagpipe began to be used in Ireland in the 19th century, and in time the custom began of using a variant form with a single tenor drone instead of a pair. The two drones are set in separate stocks, with the bass resting on the piper's shoulder. Another pattern of Irish war-pipe was evolved about 1900–10 by Henry Starck of London and named the 'Brian Boru' bagpipe. It had three drones all set in one stock and sounding as follows: tenor, one octave below the key note; bass, one octave below this; baritone, the 5th between. The chanter was made with several differing key arrangements and was capable of sounding a diatonic scale from a 3rd below the key note to a 3rd above. The Brian Boru pipe was used by the Royal Inniskilling Fusiliers from 1926 to 1968, but all Irish infantry regiments now use the Scottish Highland bagpipe, though their repertories still emphasize Irish tunes.

The Irish uilleann pipe is a bellows pipe, played sitting and with the drones lying across the knees, and is believed to have been introduced in the early 18th century. The name 'uilleann pipe', from the Irish word *uilleann* ('elbow'), has been shown to be spurious (see Carolan, 1981–2) but is now firmly established. The usual term in the 19th century was 'union pipe'. Successive elaborations in its design and musical capabilities can be traced through the earlier published tutors (Geoghegan, O'Farrell, Colclough).

The earliest known form of uilleann pipe was the 'pastoral or new bagpipe' (Geoghegan). It had an open-ended chanter without keywork, giving the six-finger note d' and a range of c' to d''', the upper register being obtained by overblowing; the two drones were set in one stock and tuned *a* and *A*. Subsequent developments include lowering the drones to *d* and *D*, the extra length of the bass drone being obtained by folding the tube back into the stock (see fig.4*c*), and the addition of a third, treble, drone (tuned d') and of what is now known as the tenor regulator. This latter is inserted in the same stock as the drones and is of conical bore, stopped at the end and possessing four or five keys. It is fitted with a double reed like that used in the chanter, and the purpose is to enable the piper to provide a variable chord by striking a suitable key with the heel of his hand. Bagpipes of this type are no longer played, but a number survive in museum collections. The chanter is characteristically made in two parts, the main part with the finger-holes, and a removable foot joint with two holes, bored crossways, which determine the pitch of the lowest note, as in the Scottish Highland and Lowland chanters. For

6. Possible representation of the old Irish war-pipe: woodcut from John Derricke's 'Image of Irelande' (London, 1581)

this reason the pipes are sometimes called 'hybrid uilleann pipes', on the supposition that they represent a fusion of Irish and Scottish forms. This may not be correct: the alternative view is that these pipes represent the older form, and that the present Irish pipe is a further development.

In the modern Irish uilleann pipe (first described in O'Farrell, *c*1804, and later in Colclough) the chanter has no foot joint and its range is two octaves (*d′*–*d‴*), and it has three drones (*D*, *d*, *d′*). A fourth drone, occasionally found, is tuned to *g′*. Many drone stocks are fitted with a plug to silence the drones, at the same time allowing the regulators to sound. The bass drone is a simple folded pipe, not re-entering the stock, and the regulators are increased to three, and occasionally four, which together give the piper the ability to sound full chords. Players have been known to silence their chanter on occasion and play the air entirely on the regulator keys, to the plain drone accompaniment, but the general method of using regulators is either to provide an occasional chord or to emphasize the time by a rhythmic 'vamping'. A modern set of regulators is tuned to sound: tenor, *f*♯′, *g′*, *a′*, *b′*, *c′*; baritone, *d′*, *f*♯′, *g′*, *a′*; bass, *g*, *a*, *b*, *c*♯′. Where a double bass is provided, it usually sounds one octave below the baritone. Regulators are tuned by inserting a length of wire or rush pith into the bore. Many of them are very loud and have a tendency to overwhelm the chanter. Some players dispense with them.

Early chanters were made without keys, but at various times these have been added, and now up to nine may be found, the compass of two octaves remaining the same. The chanter, though an open one, is played with the end closed by resting it on a pad of leather on the piper's knee, and raised for certain notes.

The uilleann bagpipe varies considerably in pitch from two whole tones below standard (*a′* = 440) up to standard pitch itself. For concert-hall work, where greater volume is desired, chanters have been made with a double bore and two reeds, the piper's fingers spanning both sets of holes. Double reeds are used in all chanters and regulators, and beating reeds in the drones. The modern uilleann pipe has become such a complex instrument that it has sometimes been called the 'Irish organ'.

5. ENGLAND. The Northumbrian half-long pipe may be identified with the Scottish Lowland pipe, having three drones in one stock, and an open chanter sounding nine notes. The drones, however, differ in one respect, for instead of bass, tenor and tenor, the Northumbrian pattern is bass, tenor and treble, the treble being a 5th above the tenor. Apart from this difference in the drones, the instrument is identical to the Lowland variety and, if played sitting, the drones lie across the breast, but if in use for marching they lie on the piper's shoulder. Having died out in the 19th century, this instrument was revived in the 1920s with partial success for the use of Scout troops and other groups, and has been revived again since about 1980. The earlier revival used a different drone tuning with a baritone drone and no treble, but this is now considered erroneous and the later revival uses the tuning described here.

The shuttle pipe, long disused, had barrel drones of the musette type (see fig.7*b* below) and a chanter of early Northumbrian type, keyless and open-ended. Only two examples are known. One of these is dated 1695 and was formerly in the possession of J. Campbell Noble. The other, of about the same date, was in the collection of W.A. Cocks (now in the Morpeth Chantry Bagpipe Museum).

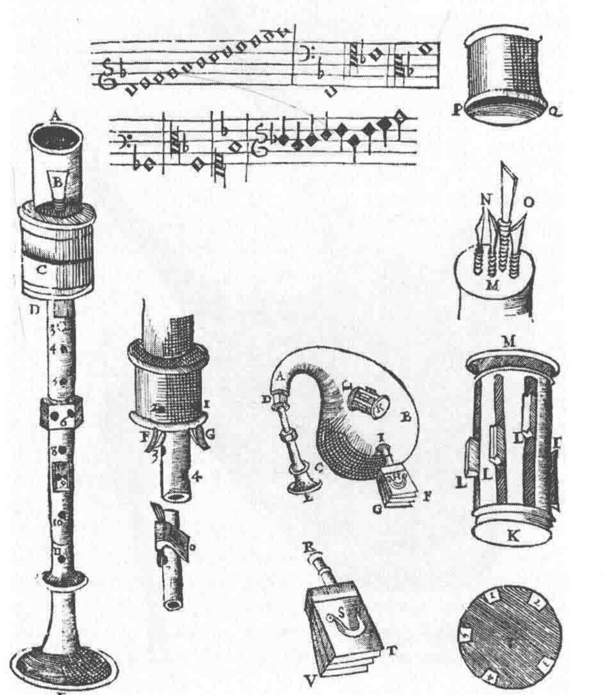
The Northumbrian small-pipe (see fig.4*d*) is an indoor instrument and in its early form consisted of a plain open chanter, cylindrically bored, with double reed, giving a scale of nine notes. It had three drones sounding the key note, the octave below and the 5th between, all inserted in one stock. Small-pipe drones lie across the player's chest in all cases. The small-pipe was not standardized, each maker having worked to his own set of measurements. The earliest known small-pipe (now in the Morpeth Chantry Bagpipe Museum) probably dates from the late 17th century. It is of ivory, and has a plain open-ended chanter of narrow cylindrical bore, 16 cm long. The three open-ended drones are 22, 13·5 and 12 cm and sound *g*, *d′* and *g′* respectively. This type was in use until the middle of the 18th century. About that time an unknown pipe maker conceived the idea of closing the end of the chanter, and this has been the rule ever since; it is the only closed chanter found on any type of bagpipe. The closure reduced the compass of the chanter by one note, but, since the fingering method is to open only one hole at a time, it enabled the piper to play staccato and to repeat the same note many times in succession, without having to interpolate grace notes. It added greatly to the crispness and distinctness of the music, and this feature is characteristic of Northumbrian piping.

The small-pipe remained at this stage until about 1805, when John Peacock, one of the town waits of Newcastle upon Tyne, collaborated with John Dunn, pipe maker, also of Newcastle, to add the first four keys to the chanter. This increased the compass from *d′* to *a″*, the key note being *g′*. The later addition of a fifth key, *c*♯″, enabled the piper to play in the key of D, which necessitated a fourth drone to provide the correct harmony. At the same time stops were fitted to all drones, so that any of them could be silenced at will. The increased possibilities of the keyed small-pipe led other makers, notably Robert Reid of North Shields, to add further keys, and by the time of Reid's death in 1837, at the age of 53, the number of keys had been increased to 14 and the drones to five, fitted with a switch in the drone stock, so that the piper may change over quickly from key G to key D, or vice versa. His son James Reid further increased the keys to 17, giving a full chromatic scale from *b* to *b″*.

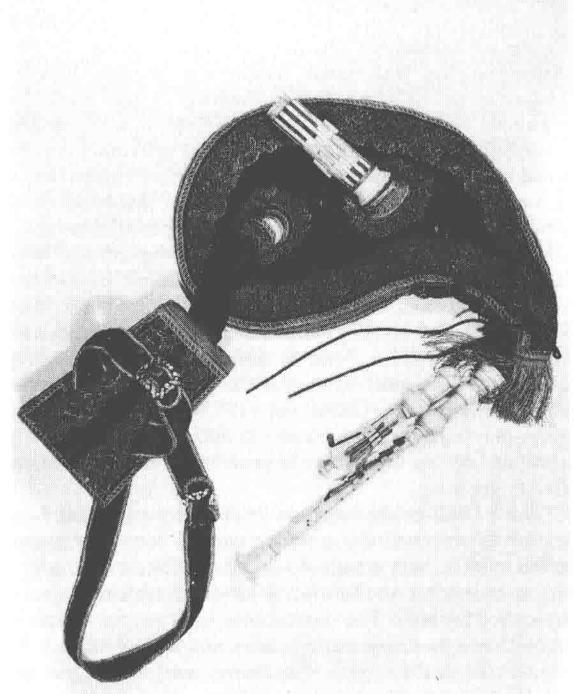
These multi-keyed chanters are not common, the most usual pattern having seven keys only, with which nearly all the existing pipe music may be played. These seven keys are closed, worked by the little finger of the upper hand or the thumb of the lower, and the holes they cover are the seven plain finger-holes and top thumb-hole. Since the fingering principle is still to open only one hole at once, this gives 15 notes: *d′*, *e′*, *f*♯′, *g′*, *a′*, *b′*, *c″*, *c*♯″, *d″*, *d*♯″, *e″*, *f*♯″, *g″*, *a″*, *b″*. Of the four drones, three can give either of two notes, thus *d*, *g*/*a*, *d′*/*e′*, *g′*/*a′*, and by sounding only three drones at any one time, the harmonies *g*–*d′*–*g′*, *d*–*a*–*d′*, *a*–*e′*–*a′* can be selected. The six-finger note is called G and written *g′* on the stave, though the actual pitch is usually *f″*. (For a set of pipes designed to play with other instruments it is precisely *f″* at *a″* = 440 Hz, but traditionally it was little sharper than this). As regards the intonation, Butler (1987) describes a system in which G, B and D notes of the chanter are designed to be in consonance with the G drones, F♯ and A with the D

drones, C♯ and E with the A drones, presumably seeking pure 5th, 4th and major 3rd intervals respectively.

Small-pipes were made mainly from home-grown materials in early days, the woods used including box, walnut and holly; modern pipes are usually of ebony or cocus-wood. Many old instruments were constructed wholly of ivory, with silver mounts and chains; they are exceedingly elegant, but the tone is not so mellow as that from pipes of wood. Small-pipe reeds are made of cane or elderberry, or often entirely of metal.

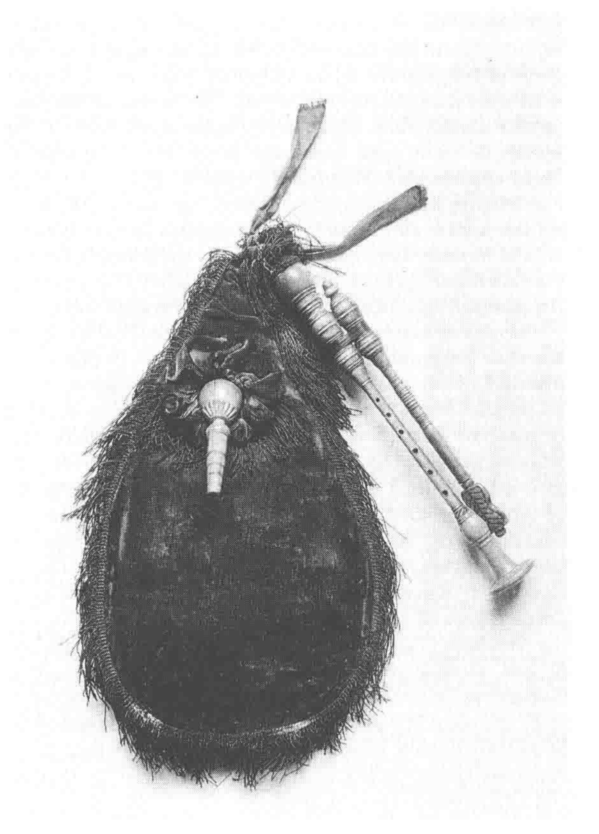


6. France, Belgium. The bellows-blown musette is a highly developed bagpipe of great compass and refined musical quality (fig.7). It became fashionable at the French court and in society during the 17th and 18th centuries, and the artistic skill lavished on the adornment of the wood and ivory work was of an exceedingly high order. The bag-covers were of rich silks, often covered with embroidery and bordered with metallic fringe and tassels. These pieces of fine needlework required protection from the grease of the bag by means of padded undercovers, and they frequently had an outer cover in addition. Musettes were often made entirely of ivory (*see* Musette).



The origin of the musette, which appears to have been the prototype of the bellows bagpipe, is not known with certainty, but it was probably 16th-century, for at the beginning of the 17th century the instrument is found in an advanced state of development. It was described by Praetorius (*Syntagma musicum*, ii) as having a single chanter, a set of barrel drones, and bellows. The chanter was of narrow cylindrical bore and without keys; it was fitted with a double reed.

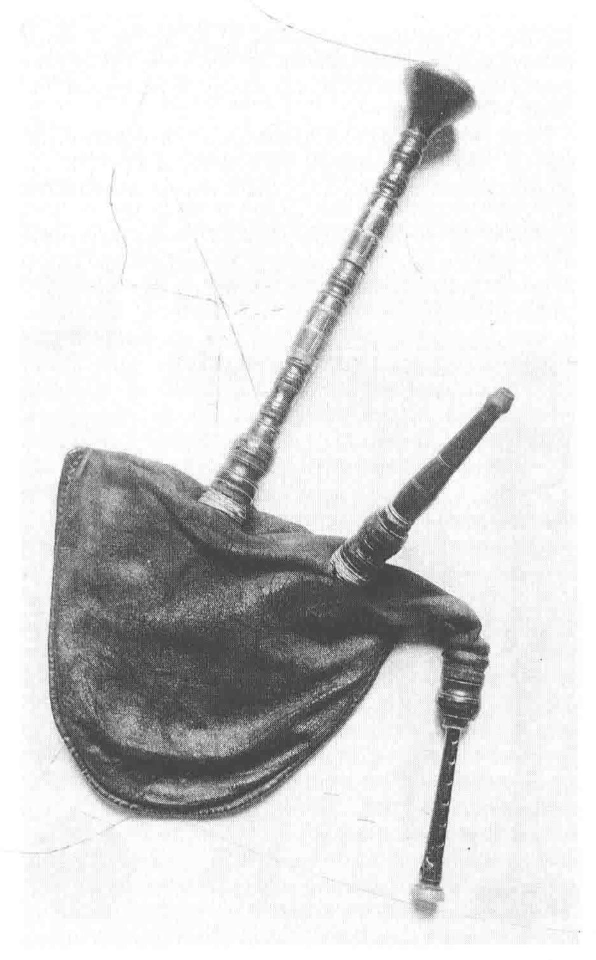
By 1636–7, the date of Mersenne's *Harmonie universelle*, it had been supplied with the first keys for the production of semitones. Later in the same century Martin Hotteterre added a second chanter with six keys, which lay parallel to the first and extended the scale upwards. Both chanters were set in a double stock which was in turn inserted into the bag stock. The larger of the two (*grand chalumeau*) sounded the scale from *f*♯ to *a″* by means of eight open holes and seven keys; the smaller (*petit chalumeau*) extended the scale to *d‴*, all the extra notes being sounded by the six keys, three of which were on the upper- and three on the underside of the chanter. All the musette keys were actuated by the fourth finger of the left hand and the thumb of the right. The chanters remained in this form until the musette became extinct.



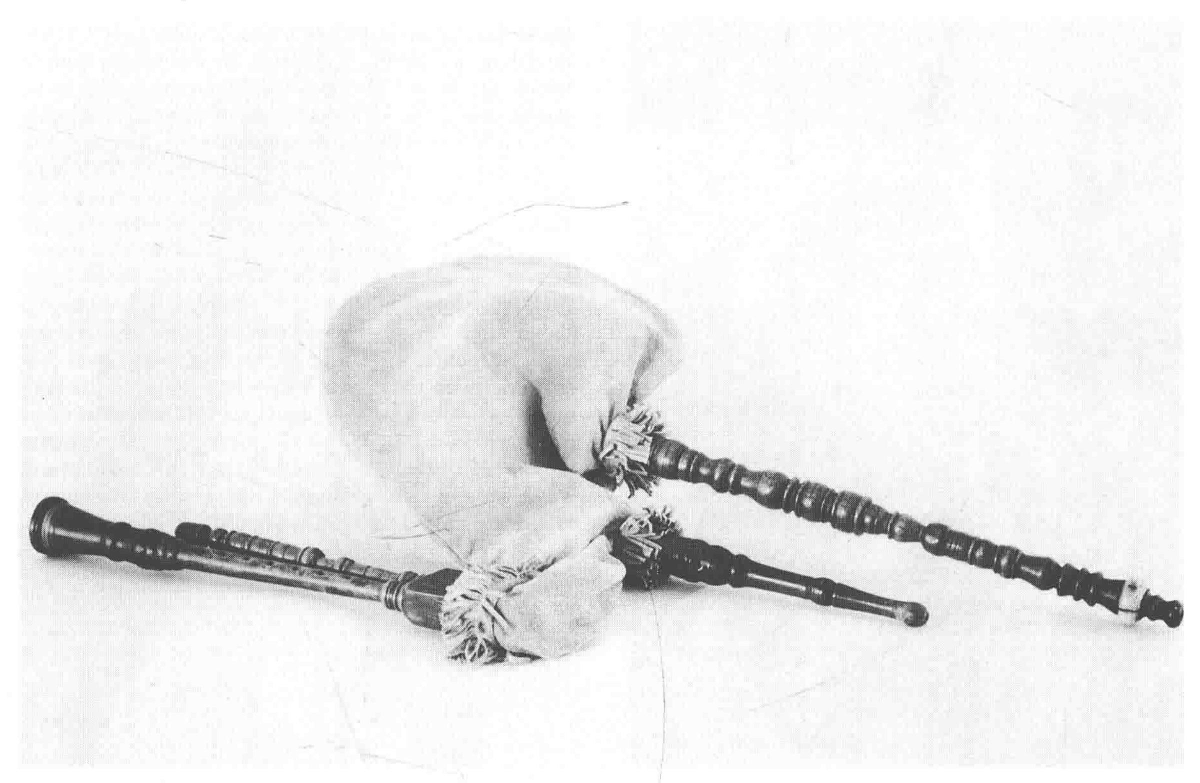
The drone barrel was formed of a cylindrical block of wood or ivory, about 15 cm long and 4 cm in diameter, inserted 2·5 cm into the stock. It was pierced longitudinally by parallel bores which were connected in series in twos or more to give the necessary lengths and terminated in slots in the side (fig.7*a*). These slots were in dovetailed grooves, in which were fitted *layettes* (slides), by means of which the drones were tuned. The *layettes* were the equivalent of the sliding joints on the usual type of bagpipe drone, and they could also be used to silence unwanted drones completely. Lissieu of Lyons was a noted maker of musettes, and a fine specimen by him, in the Morpeth Chantry Bagpipe Museum, is fitted with six drones. Double reeds were fitted throughout the entire instrument. Musette drones were usually tuned in octaves of C and G. Very detailed descriptions and illustrations of all the French bagpipes were given by Mersenne in *Harmonie universelle* and in the *Encyclopédie* of Diderot and D'Alembert (Paris, 1763).

The traditional bagpipe of the Auvergne and Bourbonnais is characterized by a chanter and drone set parallel to each other, either joined (fig.8), or set in a common

7. *Musette: (a) details of the chanter, bellows, barrel drone and drone reeds, from Mersenne's 'Harmonie universelle' (1636–7); (b) musette with bellows, two chanters and barrel drone, French, 18th century (Royal College of Music, London)*



8. Cornemuse with blowpipe, and chanter with side extension carrying a single treble drone, French, 18th century



stock. Some bagpipes of this type have a second, separate drone an octave lower than the first, and some also a third drone set behind the chanter, an octave higher. In the Auvergne the traditional names are *chèvre* ('goat'), *chèvrette* or *cabrette*, but *cornemuse* is the name in standard French. Although it has pastoral and peasant associations, the elaborately decorated instruments produced by several makers in the 19th century catered for a self-consciously rural bourgeois taste (Montbel and Blanchard, 1990). The Auvergne piping tradition never died out, but by the later 19th century the *cabrette* was mainly played in concert with other instruments and the drones had ceased to be used; they were either blocked or replaced by unbored dummy drones. The instrument was regularly played in Paris in cafés with an Auvergnat clientele. The local traditions have been extensively researched by J.F. Chassaing (1982). Ladonne (1987) gives playing instructions and a collection of tunes with a compass of ten notes, the highest being the overblown five-finger note.

The *biniou* is the bagpipe of Brittany (fig.9). It is a mouth-blown instrument with a narrow conical chanter, fitted with a very small double reed. There are seven finger-holes, but no thumb-hole, and a double unstopped hole in the bell. The one drone lies on the player's shoulder; it has two tuning-slides and a very wide bell, contracted at the mouth. The instrument was frequently made of boxwood, without any metal or mountings, but now is generally of blackwood. The bag is of sheepskin and it is held high on the piper's chest in playing. The instrument is generally played *àcouple*, that is in conjunction with the *bombarde*, which is a separate chanter (without a bag; a type of shawm) of wide conical bore, pitched an octave lower and blown directly from the mouth of a second player (*see* FRANCE, fig.16*d*). Traditionally the two were used at weddings and dances. Since World War II a loud bagpipe, *biniou bras* (actually the Highland bagpipe introduced from Scotland), pitched in the same octave as the *bombarde*, has been introduced and is played in pipe and drum bands along with the *bombarde*. The older instrument is still played, nevertheless, and is enjoying a considerable revival (Bigot, 1991). The *veuze* is a similar instrument to the *biniou*, though larger and sounding an octave lower. It survived until the 19th century in the Nantes region, and has recently been revived.

In Belgium, the early history of the bagpipe was similar to that of the French mouth-blown pipes; the musette was also played. In the 19th century, up to 1900, two types of bagpipe were still played by shepherds in Hainaut and east Flanders. One had a chanter only; the other, the *muse-au-sac*, had two drones of which the smaller lay beside the chanter as in the French *cornemuse*. Examples of the second type are in the Instruments Museum of the Brussels Conservatory (fig.10). A few bagpipe melodies

9. Biniou with blowpipe, chanter and single drone, French, 17th century

10. Muse-au-sac from Arc-Ainières, Hainaut (Musée des Instruments de Musique, Brussels)

from France and Belgium have been published (Boone, 1983).

The *bouha* of the Landes de Gascogne had a double chanter, one bore having melody holes, the other bore a single hole giving alternate tonic and dominant drone, the whole strongly resembling the Hungarian *duda* (see §7(v) below; Dominique, 1987).

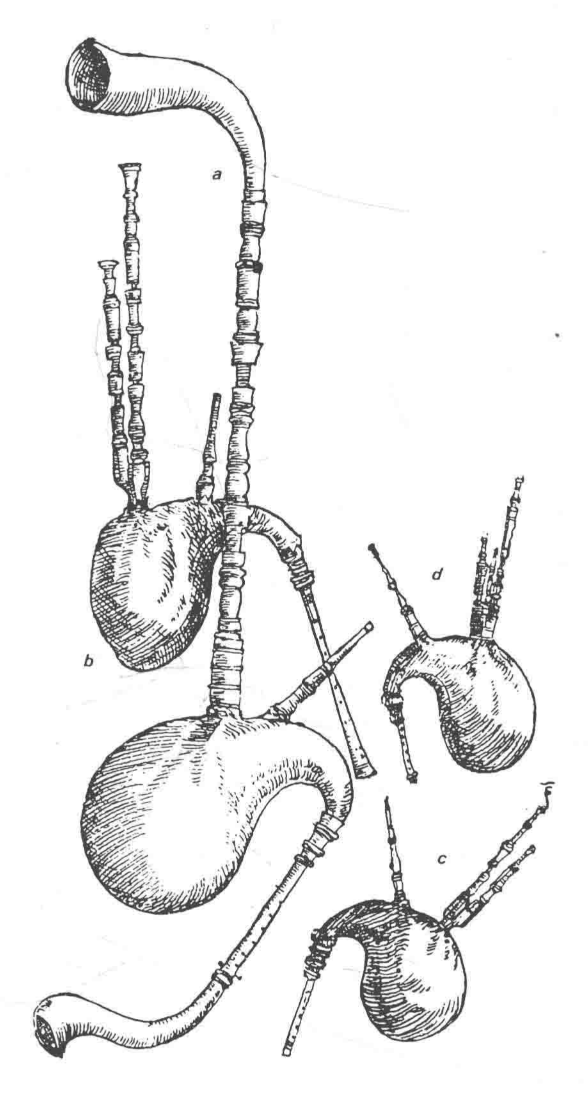
7. OTHER COUNTRIES.

(i) Spain and Portugal. In Asturias, Galicia and the Minho across the border the mouth-blown *gaita* (fig.11) continues to flourish. It usually has only one drone. The chanter has a wide conical bore, seven holes and a thumb-hole, three vent-holes lower down, and a double reed. The drone has two tuning-slides; it is fitted with a beating reed, adorned with a heavy silk fringe, and lies on the player's shoulder. The pipes are still often made of boxwood with brass mounts for the drone but blackwood is used for the best quality instruments. Modern bags are made of moulded rubber covered with cloth. The chanter has a C major scale from *b′* to *c‴*, though Galician pipers can reach *f‴* or *g‴* by overblowing. Instruments also exist in B♭ and D. Among the many tutors published for the *gaita*, those by Covello (1978), Santiago (1978) and Estévez Vila (1987) may be mentioned.

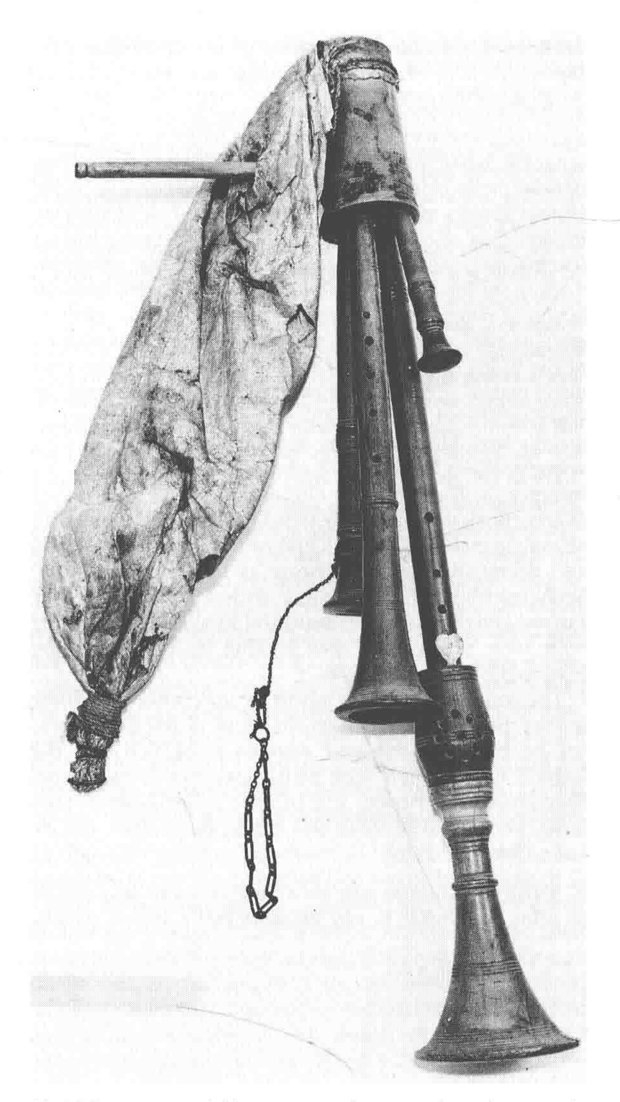
The Catalan *cornamusa* has been extinct for a century, but the shepherd's *zampoña* of the Balearic Islands is still played. The chanter resembles that of the *gaita* but the drone hangs down in front of the bag, held in a large stock in which are also two small drones, usually blocked up and silent.

(ii) Northern Europe. Praetorius (*Syntagma musicum*, ii) gave the best descriptions and illustrations of old German bagpipes (fig.12). The *Bock*, with deep-sounding horn-belled chanter and drone, was of the western Slav type. It survived in use in the Böhmerwald, where it was recorded by Künzig (1958). The *Schäferpfeife*, called *Sackpfeiff* in Virdung's *Musica getutscht* (1511), was of a kind which in one form or another was widespread over northern Europe up to the 18th century. The chanter was narrowly conical, and the two drones held in one drone-stock were of unequal length and probably tuned to a 5th. Only one bagpipe which fits this description is known to exist in the Kunsthistorisches Museum, Vienna. Its provenance is unknown but it is conjectured to be 18th-century German (Boone, 1983).

The *Hümmelchen* and the *dudy* (a Czech name) were much smaller, again with drones of unequal length, the *dudy* having three. Their chanter bores may have been cylindrical, as in the present Baltic types, but no specimens are known to survive and the nature of the reed is unknown. Praetorius also described a bagpipe that he heard in Magdeburg, with two chanters branching from a single stock (one for each hand and sounding a 5th apart), enabling the piper to play simple two-part melodies; it had a drone-stock with two drones like those of the *Schäferpfeife*.



A simple bagpipe, the *Säckpipa*, survived into the 20th century in the Swedish district of Dalarna. It has a cylindrical chanter 23 cm in length with six holes and a thumb-hole, and a beating reed. Two short drones are held in one stock, but the shorter is a dummy. In certain islands and coastal districts of Estonia the bagpipe consists of a bag made from a seal's stomach, a cylindrical chanter 15 cm long with six holes and beating reed, and two drones tuned to a 5th, branching from a single drone-stock. The drones have cavernous terminations as in



11. Gaita from Galicia, Spain

Scotland and Spain. There are (or were) similar instruments to be found in Latvia.

(iii) Italy. The principal bagpipe is the *zampogna* (fig.13), native to the south and to Sicily (where the name is *cornamusa*) but often heard in the north played by itinerant players. It has a bag usually formed of a whole skin. The four pipes, all held in one large stock, include two conical chanters, one for each hand, and two crudely bored cylindrical drones. All four have double reeds of a characteristic long-bladed pattern. There are two main types of *zampogna*: one is played alone, the other accompanies a conical chanter (*ciaramella*, *cornamusina*, occasionally *piffaro*) which a second player blows directly with his mouth. The holes of the chanters of the first type, five in one, four in the other, give a series of notes a 4th apart whereby the chanters are sounded in 3rds or contrapuntally. The visual effect recalls that of the Roman Phrygian aulos. The chanters of the second type are an octave apart, and the lowest hole of the larger chanter is covered by an open key protected by a wooden barrel as in many Renaissance wind instruments (fig.13*a*). This type can be quite large, the longer chanter over 150 cm with *F* as its lowest note; such an instrument sounds rather like an organ. The two drones are tuned to an octave or a 12th; in neither type of *zampogna* do they necessarily sound deeper than the chanters. The two-man teams, *zampognari* or *pifferari*, make a practice of coming into the towns at the Christmas season to serenade the images of the infant Christ set up at the roadside. Baroque oratorio contains well-known allusions to this music, such as the pastoral symphonies in Handel's *Messiah* and Bach's *Christmas Oratorio*. A complex bellows-blown elaboration of the *zampogna* was described by Mersenne as a Neapolitan invention, *sordellina*, with numerous closed keys on the drones somewhat similar to the Irish regulators. A collection of music for this instrument was published in tablature by Giovanni Lorenzo Baldano (1576–1660). The *piva* of northern Italy, no longer heard, was a western form of bagpipe with conical chanter and cylindrical drone. (*See* ITALY, §II, 6.)

12. German bagpipe types, (a) Bock, (b) Schäferpfeife, (c) Hümmelchen, (d) dudy: woodcut from Praetorius's 'Theatrum instrumentorum' (1620)

13. *(a) Zampogna with blowpipe, two chanters and two drones, Italian (Pitt Rivers Museum, Oxford); (b) zampogna player: detail from 'The Shepherds', fresco from the cycle 'Life and Glory of the Virgin' by Ludovico Seitz, 1892–1902 (Cappella Tedesca, Santa Casa, Loreto)*

See also PHAGOTUM.

(iv) Poland, Czech Republic, Slovakia. The Polish *dudy* and *kozioł* (*see* POLAND, §II, 5, figs.5 and 6) are bellows-blown, with a cylindrical, beating-reed chanter held in a carved stock. The drone rests on the shoulder and is either straight, or right-angled to hang down behind the player's back. Often the tube is twice doubled back inside a wooden butt joint for compactness. Both chanter and drone have large upturned bells of cowhorn or horn and metal. The *dudy* has six finger-holes and a thumb-hole giving a plagal scale omitting the lower submediant. The *kozioł* includes a seventh hole for the little finger and covers a plagal 11th, the top two notes being overblown. Closed fingering is used in both types, and staccato can be made by closing all holes to interpose the low dominant, which when continually touched in this manner gives the effect of a subsidiary drone. The common name 'wedding pipes' indicates the instruments' traditional association; they can be traced in pictures back to the 14th century. The earliest examples were mouth-blown. The Bohemian *dudy* is similar to the Polish; its beating reeds sometimes consist of a slip of cane tied over a slot in a short metal or bone tube, on the principle of the clarinet. This *dudy* is much used with fiddle and clarinet. Moravia and Slovakia have bagpipes of this kind or rather smaller (in Slovakia they are called *gajdy* and may be mouth-blown), and a double-bore chanter resembling the Hungarian type. Simplified instruments resembling the single-chanter *dudy* are found in Belarus and the Ukraine (*duda*).

(v) Hungary, Romania. The Hungarian *duda* (*see* HUNGARY, §II, 6(iv)) is mouth-blown, though bellows-blown versions exist in museums. The goat-head stock holds a chanter carved in rectangular cross-section containing two parallel cylindrical bores. One is the chanter proper, with six holes and a thumb-hole. The highest finger-hole, placed opposite the thumb-hole, is very small (the 'flea hole') and when uncovered raises any note of the scale by approximately a semitone, whereby sharps and modulations are possible. The lowest note sounds through an oblong vent. The other bore, the *kontra*, has one hole controlled by the little finger of the

lower hand. When open it sounds in unison with the bottom note of the melody bore. When closed the note is emitted through a bell extension (often ending with a cowhorn) and sounds a 4th lower. Movement of the little finger provides a drone harmony which pendulates between these two notes, independent of the fingering of the melody bore. A very efficient staccato is possible since the interpolated bottom note of the melody bore is in unison with the open hole note of the *kontra*, effecting a momentary silence in the melody. The instrument has a normal bass drone. Traditional playing died out in the 1960s but was revived in the 1980s, with instruments again being manufactured and music published (Csoóri, 1986). Romania has a similar instrument, the *cimpoi* (see Habenicht, 1972–4).

(vi) Yugoslavia, Bulgaria. The bellows-blown *gajde* of the north-eastern plains and parts of Serbia has a double-bore chanter of oval outer cross-section with large upturned wooden bell. It has only five holes, but the *kontra* bore also has a hole for the little finger, which is used as in Hungary but at a slower speed appropriate to the deeper sound of the pipes; the bass drone may sound as low as *G′*, the necessary length being obtained with the help of a butt section or a length of rubber hose. The *diple sa mješinom* or *mih* of Dalmatia and Bosnia is a simple mouth-blown instrument with double-bore chanter without bell, and no drone. There are six holes to each bore, spanned by the same finger and sounding a unison except on the low note, where one hole only is covered to produce a major 2nd. In some specimens one bore is a plain drone; in others different arrangements of the holes are found, similar to those among hornpipes. The *diple* is also played without a bag, the cup-like stock being placed directly to the mouth.

The Macedonian *gajde* has a single chanter turned in boxwood and mounted with horn. The lower end is formed in a characteristic obtuse angle carved from horn. There are seven holes and a thumb-hole, the first finger-hole being a 'flea hole' bushed with quill. The drone is also of boxwood and horn-mounted. This bagpipe is also found in Bulgaria, as are other types of *gayda* with conically bored chanters (still with beating reed) and a similar arrangement of holes. Its size and pitch vary according to region. The *gayda* remains strongly associated with weddings and village dance festivities, though mostly it is heard in large ensembles and 'folk orchestras'. Accounts of Bulgarian piping at different periods are given in Katzarova, 1937; Levy, 1985; and Rice, 1994.

The Serbian *gajde* and the *diple* are now rare, but the Macedonian and Bulgarian bagpipes continue to flourish. (*See* BULGARIA, §II.)

(vii) India. The native bagpipe of India (Hindustani *maśak*); also known by other names, e.g. *śruti upaṅga*) has a melody pipe and a drone pipe lashed together, but some examples have one pipe only, with the finger-holes often sealed with wax for sounding a drone to another instrument. It appears in ceremonial and devotional ensembles. The principal bagpipe in use throughout India and the Indian army is, however, the Scottish Highland pipe, which is manufactured commercially in both India and Pakistan. It sometimes is used at wedding ceremonies, especially in the North, where it is known by various local names such as *mashak* and *bīn bājā* (Alter, 1997–8). The Scottish bagpipe may have inspired the fitting of a long drone with a tuning-slide to many Indian snake-charmers' pipes.

8. BAG-HORNPIPES. This term conveniently describes numerous and widespread primitive bagpipes that lack a separate drone and possess a chanter composed of two parallel canes held in a cradle-like wooden stock or 'yoke' almost always mounted with a cowhorn bell or wooden imitation of one. Examples occur in the Aegean Islands (*tsambouna*) and Crete (*askomandoura*), in northeast Turkey (*tulum*), Armenia (*parkapzuk*), Georgia (*gudastviri*) and neighbouring regions of the Caucasus (*chiboni* etc.), and among the Mari and other Finno-Ugric peoples of the Volga (*shüvïr* etc.). Like the bagless hornpipes they differ mainly in the arrangement of holes and hence in the scales produced. One pipe always has the full complement, usually five. The other may have five, three, two or one, whereby many kinds of two-part effects are obtained: for instance, a drone rapidly alternating over a major 2nd (Karpathos); decoration by rapidly interposed high notes above the melody (Turkey); and a mixture of 3rds, unison and drone (Russia) so intricate as to defy description. Such instruments once had a wider distribution over Europe and the Mediterranean, and an old Welsh example with twin horn bells, now lacking its bag, is in the National Museum of Wales.

The common species of north Africa (*zukra* etc.) differ in that the two canes, which have four or five holes each, are held in a disc-shaped wooden stock tied into the kidskin bag; a small horn bell is attached to each pipe. Best known in Tunisia (fig.14) and Algeria, specimens have been found in Syria and Egypt, the Fezzan and by Lake Chad.

9. MUSIC. Scotland was for a long time the only region to print pipe music in any quantity (see Cannon, 1980),

14. Bag-hornpipe, Tunisia (Pitt Rivers Museum, Oxford)

with Ireland, Northumberland and Brittany following far behind; but, along with the revival in playing, other countries have begun to print tutors and anthologies of traditional pipe tunes.

Among the chief characteristics of bagpipe music are the facts that the chanter is never silent, so that there can be no rests or momentary pauses between notes, and that its loudness cannot be varied. These problems are overcome to some extent by the use of grace notes, which at their simplest consist of the momentary uncovering of a hole by one finger, to produce a high-pitched grace note, or momentary covering of one or more holes simultaneously to produce a low-pitched grace note. The actual pitch of the grace note is not usually fully perceived, and the effect is of a bright or dull clicking sound. Grace notes are essential to divide two successive melody notes of the same pitch, and are also commonly played on the downbeat notes of the melody to mark out the rhythm. In many piping traditions grace notes are used sparingly, but Scottish pipers have a large fund of embellishments – 'doublings', 'shakes', 'throws' and 'grips' – which are carefully taught and are written into the music, and an analogous but largely different set in the older PIBROCH repertory. Irish uilleann pipers use multiple grace notes, but to a much lesser extent. The Northumbrian small-pipe chanter, being closed, can be silenced and this makes the use of grace notes unnecessary, though in fact they are played to some extent. On some bagpipes (for instance the Czech *dudy* and Hungarian *duda*; see §7(iv) and (v) above) the same effect is obtained by relying on the illusion of silence when certain chanter notes are sounded.

10. PRESENT STATE. The Scottish Highland pipe continues to dominate the public perception of bagpiping. It is played in ever-increasing numbers, and the standards both of playing and of construction and tuning have risen markedly in the last half of the 20th century. Although the British army maintains fewer pipe bands than before, this decrease is more than offset by the increase in civilian pipe bands throughout the world, and not only in countries of obvious British influence. Solo piping continues at virtuoso level including the traditional *pìobaireachd*, with pipers from the USA, Brittany and elsewhere regularly taking prizes in competitions. But throughout Europe, there has also been a revival of interest in other bagpipes, fostered usually by young players who have relearnt the craft of pipe making by copying instruments from museum collections, and playing technique from old recordings or, when possible, directly from the remaining traditional players. There have also been attempts to reconstruct medieval and later bagpipes from purely iconographic evidence; among these may be mentioned the English Great Pipe by Jon Swayne, and impressive reconstructions of the large peasant bagpipes shown in paintings by Breughel and others. In the British Isles these activities have been generally encouraged by the foundation of the Lowland and Border Pipers' Society (1983) and the Bagpipe Society (1985), as well as the longer-established Northumbrian Pipers' Society (1928) and Na Píobarí Uilleann (1963). These and similar groups in other countries publish periodicals, maintain websites, organize concerts and instrument making workshops, and provide a market for the sale of pipes. International gatherings of makers and players take place regularly at St Chartier, France, and Strakonice, Czech Republic. The publication of bagpipe music, arranged from old sources or from diverse piping traditions, has increased. The bagpipes of the revival tend to follow traditional models closely in general construction and playing technique, but entirely new or remodelled instruments are also being developed (Goodacre, 1992; Swayne, 1995; Moore, 1999). These are designed to play together with each other and with other instruments, and in public performance they may be heard as part of a line-up of instruments in many folk or folk-rock groups. Some of these groups have achieved international reputations, such as the pioneering Whistlebinkies (Scotland), Blowzabella (England), Battlefield Band (Scotland) and Run Rig (Gaelic, folk-rock). If the question is asked, whether some essential element of bagpiping is being lost in these new formats, it can be answered at least in part by noticing how, in many cases, it is still the bagpipe that dominates the sound and is perhaps the chief attraction to the listening public.

Bags. MILT JACKSON. *See also* MODERN JAZZ QUARTET.

Baguala [joi-joi, tonada, vidalita, vidala coya]. A lyric song form of Paraguay and northern Argentina. The *baguala* is characterized by melodies that use only the three pitches of a single major triad. Accompanied by the *caja* (frame drum) and *tambor* (bass drum), it is typically performed in Carnival season by men, women and children, grouped in a circle and singing choruses in unison and in octaves, while a leader uses falsetto and *kenko* (appoggiatura and vocal ornamentation) in the rendition of the main text. *Bagualas* are often sung as part of the music performed at the ritual marking of animals in the Argentine pampa and northern provinces, the *señalada*, accompanied by the *erkencho* (single reed concussion aerophone) and snare drum.

WILLIAM GRADANTE/R

Baguer, Carles [Carlos] (*b* Barcelona, ?13 March 1768; *d* Barcelona, 29 Feb 1808). Catalan composer and organist. He was known affectionately as 'Carlets' to his Catalan

contemporaries. Having studied under his uncle Francesc Mariner, in 1786 he succeeded him as organist of Barcelona Cathedral, where he remained until his death. He played an active part in the city's musical life, was much admired for his organ improvisations and attracted many pupils, such as Francisco Andreví y Castellar, Ramón Carnicer and Mateo Ferrer. He was a prolific composer and his work was unusually widely disseminated for a Catalan composer of the day.

Baguer's sacred works testify to a clear Italian influence and he only occasionally used the learned style. His oratorios consist chiefly of four-part homophonic choruses alternating with arias (often with coloratura) and recitative interspersed with arioso passages. His sinfonías fall into two patterns: a single sonata-form movement with a slow introduction, or four movements. In the latter case the second movements take the form of theme and variations and the third are minuets. His style shows a desire to emulate that of Haydn, especially in his use of musical form and his melodic patterns. But in tonal range, thematic treatment, textures and harmonic progressions Baguer's style is simpler and more restrained. His keyboard works, for organ or piano and probably written for his own and his pupils' use, span a broad variety of styles and forms. Some pieces recall the Spanish polyphonic organ tradition. Others in the modern pianistic style combine Italian and Austrian influences with a traditional local style. On the whole, his output bears witness to this singular mixture of influences that affected Catalan music at the time. Baguer's works, however, remain the only surviving examples of a movement of unprecedented diffusion within this geographical area.

WORKS

all MS, principally E-MO and Bc, also Bu, E, SU, TAc and various other Catalan archives

VOCAL

La Principessa filosofa, o sea El desdén con el desdén (op), Barcelona, S Creu, 4 Nov 1797

14 dramas sacros (orats), mostly for S Felip Neri, Barcelona: El santo Job, 1804; La adoración del Niño Dios por los ángeles y pastores, 1805; La partida del hijo pródigo, 1806; La resurrección de Lázaro, 1806; El regreso a Barcelona su patria de Dr Josef Oriol, 1807; El regreso del hijo pródigo, 1807; Cavatina, recitativo y polaca, 1808; Aplaude festivo el mundo; Conozco de tu mano; Coro y aria de tenor; Dios supremo; Grande Dios tu fuerte diestra; La bondad y tierno amor; La mística Raquel: all *E-Bc*, *OL* or Manresa, S Maria de la Seu

Secular arias (for bass): Quel amabile sembiante; T'amerò benché tirana

Sacred arias: Al rigor de adversa suerte, A, orch; Bello infante, S, orch; Este nuevo esplendor, A, orch; El dolor, B, orch; Hasta que el cruel, T, orch; Hasta que mi contrario, B, orch; La dulce memoria, T, orch; La tranquilidad, S, orch; Si el arca; Varón perfecto

8 masses, 3–4vv, orch; requiem, 4vv, orch; motets, psalms, lamentations, other sacred works, 3–8vv, orch

INSTRUMENTAL

Orch: Conc., 2 bn, orch; 19 sinfonías, 8 ed. J.M. Vilar (Barcelona, 1996–7), many arr. by Baguer for solo kbd, 3 ed. M.A. Ester-Sala (Madrid, 1984); Pastorela, D

8 duos, 2 fl

Kbd: 7 sonatas, ed. M.A. Ester-Sala (Madrid, 1976); rondos, sinfonías, minuets, contredances, preludes, fugues, versos, other pieces

Bahatïrow [Bogatïryov], **Anatol' Vasil'yevich** (*b* Vitebsk, 31 July/13 Aug 1913). Belarusian composer. He graduated from the Conservatory of Belarus' in 1937 where he studied under Zolotaryov. He was chairman of the board of the Belarusian Union of Composers (1938–41 and 1942–9) and pro-rector of the Sverdlovsk Conservatory (1941–3). From 1948 he taught composition at the National Conservatory, Minsk (rector 1948–62, professor 1960, head of department 1962) where his pupils included Hlebaw, Luchanok, Mdivani and Smol'sky. He was awarded many honours including the USSR State Prize (1941). Bahatïrow is one of the founders and leading representatives of the Belarusian school; he composed one of the first national operas – *U pushchakh Palessya* ('In the Virgin Forests of the Poles'ye') – while his contribution to the development of the genres of cantata, oratorio, a cappella chorus and the romance has been considerable. Whether vocal or instrumental, his works are arresting for the richness of their melodies and for their polyphonic textures. Remaining true to traditional tonal thinking, Bahatïrow enriched his style by unique use of natural modal systems and by the employment of rhythmic characteristics of Belarusian folk music.

WORKS

(selective list)

Ops: V pushchakh Palessya [In the Virgin Forests of the Poles'ye] (Ye. Romanovich, after Ya. Kolas: *Drïgva* [Quagmire]), 1939, Minsk, 28 Aug 1939; Nadezhda Durova (I. Keller), 1946, Minsk, 22 Dec 1956

Bahia. Brazilian state. *See* SALVADOR.

Bahr [Bähr], **Johann** (*b* ?Schleswig, *c*1610; *d* Visby, Gotland, 3 June 1670). Swedish organist and composer of German birth. He went to Visby, on the Swedish island of Gotland, about 1630 as a poor music student in search of his brother. In 1633 he was appointed assistant organist to David Herlicius at the cathedral there, and at Herlicius's death in 1638 he became organist and registrar. He retained these posts until his death. On his arrival at Visby he had in his possession an organ tablature (now in *S-VIl*) copied in 1611 by Berendt Petri, who was probably a pupil of Jacob Praetorius (ii) in Hamburg. On the inside cover (now missing) he wrote 'Johann Bahr organ m.m.: Anno 1638', and for this reason the book is often misleadingly referred to as the Johann Bahr Tablature Book. His ownership of it suggests that he studied with Praetorius or Petri. The book contains compositions by Praetorius and his father, Hieronymus, as well as many anonymous pieces, possibly by the latter. On pages left blank by Petri, Bahr wrote out two organ pieces and two vocal concertos of his own composition (all ed. in Kite-Powell). The *Magnificat a 4 voci octavi toni* has three verses and is markedly influenced by the style of the pieces in the tablature; *O lux beata Trinitas*, dated 20 March 1655, is in the manner of a chorale fantasia consisting principally of passages using echo devices. The four-part concerto *So ziehet hin* is for two discants (instrumental or vocal), tenor, bass and continuo, and the solo concerto *Befiehle dem Herrn deine Wege*, dated 15 October 1666, is for discant or tenor and continuo (both ed. A. Sjögren, Slite, 1970). All four works are written in the new German organ tablature notation. The alto parts of two other vocal pieces by Bahr, *Adora me in die* and *Die nobis Maria*, are in the Källunge book (*VIl*).

Bähr, Johann. *See* BEER, JOHANN.

Bähr, (Franz) Josef (*b* 19 Feb 1770; *d* Vienna, 7 Aug 1819). Austrian clarinettist. He was employed as a clarinettist from 1787 to 1794 in the Hofkapelle of Prince Kraft Ernst of Oettingen-Wallerstein. The prince sent him to Würzburg to study with the clarinet virtuoso Philipp Meissner, and in 1794 Bähr left on a concert tour to Potsdam and Ludwigslust. In 1796 he went to Vienna on a tour accompanied by the composer Friedrich Witt. About 1797 he resigned his position and entered the service of Count Johann Joseph Liechtenstein, who had brought his orchestra to Vienna for the season. The Liechtenstein family was associated with Beethoven, and it is quite possible that all of Beethoven's solo clarinet parts composed between 1796 and 1802 were written for Bähr. Reviews of his playing were quite complimentary.

Bähr has often been confused with the better-known virtuoso Josef Beer because of the similarity of names. When both of these clarinettists performed in the same city Bähr received the greater praise for his playing.

Bahrain (Arab. Dawlat al Bahrayn). An independent state, consisting of an archipelago of islands, in the ARABIAN GULF.

Bahr-Mildenburg [née Mildenburg von Bellschau], **Anna** (*b* Vienna, 29 Nov 1872; *d* Vienna, 27 Jan 1947). Austrian soprano. Having studied with Rosa Papier, she sang in 1895 to the Hamburg impresario Pollini, including in a formidable audition programme Bellini's 'Casta diva', Weber's 'Ozean, du Ungeheuer', Ortrud's curse, Brünnhilde's battle-cry and arias of Donna Anna and the Queen of Night. Pollini immediately engaged her, and presented her as Brünnhilde in *Die Walküre* on 12 September 1895 in a performance conducted by Mahler.

Anna Bahr-Mildenburg as Clytemnestra in Richard Strauss's 'Elektra'

This was the beginning of a relationship between the young singer and Mahler which was personally emotional and somewhat tempestuous, but artistically harmonious and fruitful. Though greatly admired in Hamburg, she soon followed Mahler to Vienna, where she remained a much valued member of the company from 1898 until 1916, returning as a guest in 1920 and 1921. She excelled in all the great Wagner roles (including Kundry, which she often sang at Bayreuth between 1897 and 1914) and as the heroines of *Fidelio*, *Oberon* and *Don Giovanni* (Donna Anna); she also appeared successfully as Norma and in other Italian parts. In 1906 she was seen at Covent Garden as Isolde and Elisabeth; she made a still greater impression in the Beecham seasons of spring and winter 1910, and in 1913, especially for her masterly study of Strauss's Clytemnestra (see illustration). With such demands placed on it, her voice began to show signs of deterioration, and she gradually relinquished the heavier roles in favour of less vocally strenuous parts. As an intimate friend of the Wagner family, she assisted Cosima in her work at Bayreuth and later undertook similar duties with the Munich Opera. In 1922 and 1925 she appeared as an actress at the Salzburg Festival, and in 1927 gave an operatic recital there at the Mozarteum. Her one recording, made in 1904, is of the recitative only of Weber's 'Ozean' aria, and gives a good, though tantalizing, impression of her brilliant voice and commanding style. In 1909 she married the Viennese author Hermann Bahr (1863–1934).

Baiczka, Franz Xaver. *See* WOSCHITKA, FRANZ XAVER.

Baïf, Jean-Antoine de (*b* Venice, 19 Feb 1532; *d* Paris, 19 Sept 1589). French poet. He was the illegitimate son of Lazare de Baïf (*c*1496–1547), a humanist and translator who served as François I's ambassador to Venice between 1529 and 1534. He studied Latin and Greek under Charles Estienne and Jacques Toussaint (1540–44). Like Ronsard, he continued his studies with Jean Dorat at the Collège de Cocqueret (1547–50) and became associated with the young literary group known as the Brigade and subsequently as the Pléiade. His first significant collection of 42 Petrarchan sonnets with 32 sensual 'baisers' and 'chansons' (based mainly on Latin or neo-Latin elegiac or erotic models) was published in 1552 as *Les amours de J.-A. de B.* and republished in the *Euvres* of 1573 as *Les amours de Méline*. In 1554 he accompanied Jacques Tahureau to Poitiers, where he fell in love with Françoise de Gennes, to whom he dedicated the Italianate sonnets and voluptuous chansons of his *Quatre livres de l'amour de Francine* (1555). Having received the tonsure, he enjoyed four church livings as well as a pension, first granted by François II and subsequently continued by Charles IX, whom he served as secretary. Much of the occasional and official verse which he wrote for the court appeared collectively in the *Euvres* of 1573, as did his neo-classical tragedy *Antigone*, his comedy *Le brave* (adapted from Plautus and staged in January 1567) and his eclogues.

Important as his innovations in drama and bucolic verse (eclogues) were, Baïf's most radical work dates from 1567, when he experimented with a new poetic style, the *vers mesurés à l'antique*, in order to achieve a closer union of verse and music. Here he made use of the quantitative metres of classical poetry in an attempt to revive the fabled moral and spiritual 'effects' of the ancients. Collaborating with the musician Joachim Thibault de Courville, he founded the Académie de Poésie et de Musique, the statutes of which were confirmed by letters patent from Charles IX. The Académie met regularly at Baïf's Paris home in the Fossés-St-Victor from May 1571 until 1576. It comprised 'musiciens' (poets, singers and instrumentalists) and 'auditeurs' (subscribers) and promoted the composition and performance of *musique mesurée* as well as intellectual, artistic and physical disciplines of many kinds. Henri III changed the enterprise to the Académie du Palais, holding meetings at the Louvre and indulging, under the guidance of Guy du Faur de Pibrac, in more philosophical debate and oratory.

Although the first Académie guarded the art of measured verse and music as secret, Baïf devised a new phonetic orthography in order to fix the pronunciation and thereby to determine the value of syllables and to regulate the laws of prosody. His first extended work in measured verse was a translation of the Psalter, which he began in 1567 (see Groth). He completed a second metrical translation by 1573 and a third, in rhymed verse, by 1587 (see Le Hir); manuscript copies of these, with three books of measured 'chansonnettes', survive (*F-Pn* fr.19140). In 1623 Mersenne referred to another measured version of the *Psalms* in Latin as being set to music by Le Jeune and Mauduit: this is now lost. Some of the psalms were printed, as were settings of *chansonnettes mesurées* (many not in the Paris manuscript) by Courville, Beaulieu and Caietain (1576), Lassus (1576), Le Blanc (1578), La Grotte (1583), Le Jeune (1583–1603), Mauduit (1586) and Du Caurroy (1610). The only collection published by the poet himself was the *Etrénes* (1574), which included official odes and translations of Greek gnomics but which betrayed the basic principles of measured verse by appearing without music.

Baïf reverted to rhymed verse with the Latin *Carminum* (1577) and the three editions of *Mimes, enseignemens et proverbes* (1576, 1587 and 1597), which reflect the new vogue for sententious poetry instigated by Pibrac's *Quatrains* (1574). His last works (*Epitafes de feu M. Anne de Joieuse* and *Prières*) are characterized by religious lyricism. On 1 November 1589 his friend Mauduit rescued his unpublished manuscripts from his home in the suburbs of Paris during the invasion of Henri IV's troops.

Baïf stressed rhythm rather than harmony as the prime element in lyric verse: an innovator in versification and prosody, he helped to establish the Alexandrine (12-syllable line), invented the 15-syllable *vers baïfin* and displayed great diversity of strophic forms and metrical patterns in his odes, chansons, chansonnettes and psalms. The weakness of measured verse was the arbitrary element in quantifying vowels by the 2:1 ratio in a language with accentual rhythm; by establishing fixed rules (he insisted for instance that all vowels followed by two consonants be long) he confused accent and quantity, counting

stressed syllables as long and unstressed as short, and thus in many cases ignoring the effects of tonic accent. Yet his experiment had important results for music, liberating the rhythm of the new *air* from the chanson's conventional octosyllabic and decasyllabic lines, creating novel syncopations and fluctuating metres. In this he worked closely with Courville, Guy du Faur de Pibrac, Le Jeune and Mauduit, whom he praised in his poetry. Some of his earlier sonnets and chansons were set by Janequin (RISM 1556[14]), Arcadelt (1557[15]), François Roussel (1559[13]) and Clereau (1559).

Contemporary bibliographies by Antione Du Verdier (1587) and Philippe Maréchal (1598) refer to a collection of 12 *chansons spirituelles* by Baïf set for four voices by Adrian Le Roy in 1562; La Borde's *Essai sur la musique* (1780, iv, p.11) even suggests that the poet wrote both its words and music. Baïf dedicated a sonnet to Adrian Le Roy in Janequin's *Verger de musique* (1559) and in the *Euvres* (1573) there is an epitaph to Alberto da Ripa and an *estrene* to Costeley.

Baïf's measured verse made an immediate impact in England and is reflected in the work of Spenser, Harvey, Sidney, Webbe, Fraunce, Ascham and Campion.

FRANK DOBBINS

Baij, Tommaso. *See* BAJ, TOMMASO.

Baildon, Joseph (*b c*1727; *d* London, bur. 2 May 1774). English composer and singer. He was for some time a lay clerk in Westminster Abbey and in 1754, 1758 and 1759 took part in the Foundling Hospital performances of *Messiah* under Handel. He was described in the subsequent list of Boyce's *Cathedral Music* (1760) as organist of St Luke's, Old Street, and All Saints, Fulham. Baildon's best songs rival those of T.A. Arne and his music for 'When is it best', with which he won the Catch Club prize in 1763, was occasionally borrowed for the theatre by Arne and Stephen Storace (ii).

In accordance with the spirit of the age Baildon sometimes parodied Handel, as for example with the extravagant figuration in 'A Complaint'. The songs in the final version of *The Laurel* almost constitute a song cycle.

His brother Thomas Baildon (*d* London, 1 Oct 1762) was a member of the choirs of St Paul's Cathedral, Westminster Abbey and the Chapel Royal; he sang in the Foundling Hospital performances mentioned above and was also in demand as a soloist. He composed some songs in *Clio and Euterpe* (London, 1758–9).

WORKS

printed works published in London

Sacred: St Luke's, St Luke's New, Fulham, hymn tunes in Parochial Harmony, ed. W. Riley (1762); Behold how joyful a thing it is, anthem, in Harmonia Sacra, ed. J. Page, ii (1800); Behold how good, anthem, *GB-Lbl*; Melodies for the Psalms ... according to the version of Christopher Smart (*c*1760); single and double chants in Divine Harmony, ed. T. Vandermant (1770)

Song collections: A New Favourite Cantata and 2 Songs ... sung by Mr Lowe at Vauxhall (1750); The Laurel: a New Collection of English Songs sung by Mr Lowe and Miss Faulkner at Marybone-Gardens (1750–57, enlarged as The Laurel: a Collection of English Songs sung by Miss Stevenson and Mr Beard, *c*1784); A Collection of New Songs sung ... at Ranelagh (1760); A Collection of New Songs, sung by Mr Beard, Miss Stevenson and Miss Formantel (1765); A Collection of Glees and Catches (1768)

Many solo and partsongs pubd singly and in 18th-century anthologies

PERCY M. YOUNG

Baile. A Spanish term with a wide variety of connotations, all relating to dance. It can refer simply to an occasion for social dancing (thus as an equivalent of the English 'ball'), or to a specific dance type like the waltz or the minuet, or it can be used as the Spanish equivalent of 'ballet'. Some 17th-century writers (e.g. Rodrigo Caro and Gonzalo de Salas) distinguished between 'baile' and the nearly synonymous 'danza', saying that 'danza' referred to a courtly, ceremonious dance using grave and measured steps and little or no arm movement, while 'baile' referred to an energetic dance involving arm gestures, especially if performed in the theatre. Thus pavans were considered 'danzas' while *zarabandas* and *ciacconas* were 'bailes'.

During the 17th and 18th centuries the term 'baile' was used for a specific literary form, a combination of poetry, music and dance performed between the second and third acts of a play (thus resembling the intermezzo; *see* INTERMEZZO (ii)). These *bailes* consisted of rhymed poetry recited by one or more actors to a usually simple musical accompaniment. Despite the dance connotations of the term, not all theatrical *bailes* actually included dancing, although most at least had dance-songs (e.g. sung *minués*). The *bailes* included in the plays of Lope de Vega are considered unusual for their dominance of dance over poetry. *See also* SPAIN, §II, 4.

In Central America 'baile' refers to a genre of music-dramatic spectacle performed at religious festivals that combine Christian and pre-Christian imagery.

□

Bailecito [bailecito de tierra]. A couple-dance common to the indigenous peoples of Bolivia and northern Argentina, featuring *zapateo* (foot-stamping), handkerchief-waving and other circular movements. Melodies are frequently pentatonic and performed in parallel 3rds to melancholy *seguidilla* verses. A common trait is the contrast between the 3/4 melodies of the voices, violin, harp and accordion, and the syncopated 6/8 accompaniment of the *caja* (frame drum), *bombo* (bass drum), guitar and *charango*.

WILLIAM GRADANTE

Bailey [née Rinker], **Mildred** (*b* Tekoa, WA, 27 Feb 1907; *d* Poughkeepsie, NY, 12 Dec 1951). American jazz singer. She was educated in Spokane, Washington, and began her career on the West Coast as a cinema pianist and radio performer. In 1929 she made her first recording (with Eddie Lang), and from then until 1933 sang with the band led by Paul Whiteman, to whom she was introduced by her brother, Al Rinker, a member of the vocal trio Whiteman's Rhythm Boys. On radio, she sang for the shows of George Jessel and Willard Robison (1934–5) and with Benny Goodman (1939). From 1936 to 1939 Bailey performed Eddie Sauter's arrangements in Red Norvo's band. During the 1930s she was known as the 'Rockin' Chair Lady' because of her renditions of Hoagy Carmichael's song *Rockin' Chair* (1932, Vic.) Despite recurrent illness after 1940, Bailey continued to perform.

Bailey was the first white singer to absorb and master the jazz-flavoured phrasing, enunciation, embellishments, improvisatory fervour and swinging rhythm of her black contemporaries, notably Ethel Waters, Bessie Smith and Billie Holiday. She was essentially a jazz musician and at her best when inspired by a band of the finest players; she often used her voice as if it were the lead instrument, and was a skilled scat singer.

RAYMONDE S. KRAMLICH/R, HENRY PLEASANTS

Bailey, Norman (Stanley) (*b* Birmingham, 23 March 1933). English baritone. He studied at Rhodes University, South Africa, and at the Vienna Music Academy, making his début with the Vienna Chamber Opera as Tobias Mill in Rossini's *La cambiale di matrimonio* in 1959. He sang at Linz (1960–63) and in Germany (1963–7), where his roles included Rigoletto, Boccanegra, Nabucco and Renato. He joined the Sadler's Wells Opera (later the ENO) in 1967, making his British début in Manchester as Mozart's Count Almaviva; he celebrated his 25th anniversary with the company in 1992 as Sharpless. His London début, as Hans Sachs under Goodall (1968), established him as a Wagnerian of more than local importance, and he later undertook the role at Covent Garden, in Hamburg, Brussels and Munich, and at Bayreuth. He was an equally impressive Wotan (in a new production of the *Ring* at the London Coliseum, 1970–73), while at Bayreuth (Gunther, Amfortas) and elsewhere he expanded his Heldenbariton repertory. In 1972, starting with Luna at the Coliseum, he resumed the big Italian roles of his early days in Germany. At the Coliseum Bailey sang Pizarro, Kutuzov (*War and Peace*), the Forester and Prince Gremin. His La Scala début was in 1967 as Dallapiccola's Job. In 1975 he sang Hans Sachs with the New York City Opera and in 1976 made his début with the Metropolitan in the same role. In 1985 at Duisburg he created Johann Matthys in Goehr's *Behold the Sun*. Later roles included Oroveso (1993) and Landgrave Herrmann in *Tannhäuser* (1997) for Opera North. In 1996 he made his Glyndebourne début, as Schigolch (*Lulu*). He was made a CBE in 1977. His timbre was definite, individual, firm, not rich or romantic in an italianate manner. Clarity, incisiveness and high musical intelligence distinguished his interpretations, as can be heard in his authoritative recordings of Wotan and Hans Sachs. His command of musical gesture, his vivid projection and his 'three-dimensional' presentation of a character have given his performances at once romance and uncommon dramatic power. (E. Forbes: 'Norman Bailey', *Opera*, xxiv, 1973, 774–80)

ANDREW PORTER

Bailey, Robert (*b* Flint, MI, 21 June 1937). American musicologist. He received the BA from Dartmouth College in 1959. Following a year of study at the Staatliche Hochschule für Musik in Munich, he began graduate work in musicology at Princeton University. He studied piano with Eduard Steuermann during this time, and his Princeton professors included Oliver Strunk and Milton Babbitt; he received the MFA from Princeton in 1962 and the PhD in 1969. Bailey taught at Yale University from 1964 to 1977. He was on the faculty of the Eastman School of Music, first as associate professor (1977–85) and then as professor (1985–6); in 1986 he was appointed Carroll and Milton Petrie Professor of Music at New York University and a member of the graduate faculty of the Juilliard School.

In his research, Bailey has concentrated on German music of the 19th and 20th centuries, particularly Wagner, Brahms and Mahler, and on 19th-century musical autographs. In addition to his more strictly academic activities, he has lectured on Wagner at the Bayreuth Festival (1990 and 1992) and at the Seattle Opera (1991).

PAULA MORGAN

Bailleux, Antoine (*b* *c*1720; *d* Paris, *c*1798). French publisher, composer and teacher. On 27 April 1765 he took over the music publishing house known as A la Règle d'Or, which comprised businesses once owned by Boivin, Ballard and Bayard. During some 30 years he issued many works by both French and foreign composers, the latter including not only early masters like Corelli and Vivaldi, but also some of those who were influential in the development of the emerging Classical school: Carl Stamitz, Haydn, Piccinni, Paisiello, Cimarosa, Boccherini and Clementi. French composers included Gossec, Davaux, Monsigny and Brassac, and some of the earlier generation, Lully, Lalande and Campra. One of his major publications was the *Journal d'ariettes des plus célèbres compositeurs*, comprising 240 works issued in 63 volumes (scores and parts) from 1779 to 1788. Bailleux's adoption of the royal privilege granted to the Ballard family led to his imprisonment during the Terror. He was released after the coup d'état of 9 Thermidor (27 July 1794). His publishing house was taken over by Erard between 1798 and 1801.

Although it was probably as a publisher that Bailleux exerted his greatest influence on French music, his compositions, especially the symphonies, must also be reckoned as interesting contributions to the music of their day. The stimulus of mid-century Italianism in France (after the 1752 performance of Pergolesi's *La serva padrona*, a work which Bailleux was to publish) can clearly be seen in his music. For his first published compositions, *Sei sinfonie a quatro* published by Bayard *c*1758, he even styled himself Antonio Bailleux; in a considerably later work, the *cantatille Pigmalion* (1770), the music is described as being in 'le goût italien' and stands in striking contrast to the Baroque texture of the earlier, more characteristic French cantata. As a teacher Bailleux's qualities may be gauged from his *Méthode raisonée pour apprendre à jouer du violon* cited by La Laurencie as an important contribution to the pedagogy of the subject.

WORKS
all published in Paris

VOCAL

6 cantatilles: Le bouquet de l'amitié, 1v, orch (1758), Borée et Orithie (1760), Le prix de la beauté, 1v, bc (*c*1760), La vengeance de l'Amour, 1v, orch (1761), L'Hymne à Bacchus (1761), Pigmalion (1770)

Ariettes: Le berger malheureux (1758); La timidité (1765); Le ruisselet, with insts (1766); L'amour bravé, with insts (1771); Recueil d'ariettes choisis dans les meilleurs opéra-comiques (1773)

Duos: Duo français (1761); La constance couronnée, S, T, insts (1761)

Les petits concerts de Paris, airs, 1–3vv, some with hpd/hp, vn/fl acc. (1768)

Ode patriotique sur la prise de Toulon par les Français, et 2 romances, pf acc. (1794)

INSTRUMENTAL

6 sinfonia a quatro, 2 vn, va, b (1756–8)

6 symphonies à grande orchestre, op.11 (*c*1767)

PEDAGOGICAL WORKS

Méthode de chant (Paris, 1760)

Méthode pour apprendre facilement la musique vocale et instrumentale . . . et 100 leçons dans le goût nouveau à 1 et 2 parties (Paris, 1770, 3/1770 as Solfèges)

Méthode de guitarre par musique et tablature (Paris, 1773/*R*)

Nouveaux solfèges d'Italie avec la basse . . . suite aux Solfèges (Paris, 1783)

Méthode raisonnée pour apprendre à jouer du violon . . . précédé des principes de musique (Paris, 1798)

DAVID TUNLEY

Baillie, Alexander (*b* Stockport, 6 Jan 1956). English cellist. He studied with Joan Dickson and Anna Shuttleworth at the RCM (1972–5), with Navarra at the Hochschule für Musik in Vienna (1975–8) and also with Fournier, Pleeth, Rostropovich and du Pré. He was a prizewinner in the ARD Competition in Munich (1978) and the Casals Competition in Budapest (1982). He made his recital début at the Wigmore Hall in 1978 and his orchestral début playing Dutilleux's *Toute un monde lointain* with the BBC SO under Mark Elder in 1981. From 1978 to 1980 he was a member of the Fires of London. Baillie also plays in the Villiers Piano Quartet, and in recital with the pianists Piers Lane and Kathron Sturrock. Several composers have dedicated works to him, including Colin Matthews (First Concerto and *Three Enigmas*), Gordon Crosse (*Wavesongs*), Mark-Anthony Turnage (*Sleep On*) and Richard Rodney Bennett (Sonata). He has also given the premières of Takemitsu's *Orion and Pleiades*, Schnittke's Cello Sonata and Lutosławski's *Grave*. His recordings include Britten's Sonata and suites for solo cello as well as contemporary British works. He was appointed visiting professor at the RCM in 1994 and professor at the Hochschule für Künste in Bremen in 1995.

MARGARET CAMPBELL

Baillie, Dame **Isobel** (*b* Hawick, Roxburghshire, 9 March 1895; *d* Manchester, 24 Sept 1983). Scottish soprano. She was brought up in Manchester and studied there before going to Milan. She made her London début in 1923 and was for more than 30 years one of Britain's leading oratorio sopranos, particularly renowned for her singing in *Messiah*, *Elijah* and Brahms's *German Requiem*. She sang at Covent Garden in Gluck's *Orphée* in 1937, but did not consider opera her true métier. She was also an engaging recitalist, continuing to sing until well into her seventies. Her voice had a treble-like purity; 'angelic' was sometimes applied to it to suggest the effect, 'not so much personal as brightly and serenely spiritual, made by her soaring and equable tones' (R. Capell, *Grove5*). Her many recordings, particularly her early ones, give a fair idea of her attributes. An autobiography, *Never Sing Louder than Lovely*, was published in London in 1982. She was made a DBE in 1978.

ALAN BLYTH

Baillion [Ballioni, Baillon], **Luigi de.** *See* BAILLOU, LUIGI DE.

Baillot, Pierre (Marie François de Sales) (*b* Passy, nr Paris, 1 Oct 1771; *d* Paris, 15 Sept 1842). French violinist and

composer. He showed remarkable talent when very young and, according to Fétis, was taught first by the Florentine Polidori and then by Sainte-Marie. When his father died in 1783 Baillot was placed under the care of M. de Boucheporn, a high government official, who sent him with his own children to Rome. There he was placed under the tuition of Nardini's pupil Pollani. Between 1791 and 1795 he had a varied life in Paris, first as a violinist in the orchestra of the Théâtre Feydeau (an appointment gained thanks to Viotti, and one that led to a close friendship with Rode), then in the ministry of finance and afterwards in military service. However, his main enthusiasm was for music; when he was ten Viotti's violin playing had fired his imagination. He applied himself with renewed zest to the study of the Classical violin composers and took lessons in composition from Catel, Reicha and Cherubini. After a successful public performance of a Viotti concerto he was appointed professor at the recently opened Conservatoire on 22 December 1795, at first temporarily as Rode's replacement, and then officially on 21 March 1799. In 1802 he joined Napoleon's private orchestra to lead the second violins, and between 1805 and 1808 he toured Russia with brilliant success.

Baillot's excellence as a chamber music player was firmly established when he led a series of concerts in Paris beginning in 1814 – both Mendelssohn and Spohr praised him enthusiastically – and his fame spread to Holland, Belgium and England where he toured in 1815–16. From 1821 to 1831 he was the leader of the orchestra of the Paris Opéra; from 1825 he occupied the same position in the orchestra of the Chapelle Royale, where he was officially appointed in 1827. In 1833 he made a final tour through Switzerland and Italy.

Baillot was the last representative of the Classical Paris school of violinists. A remarkable virtuoso, his playing was distinguished by a noble, powerful tone, neatness of execution and a pure, elevated style. It is said that he hid his face when Paganini played harmonies, left-hand pizzicatos or staccato passages. The founder in France of the first chamber music group of professional musicians, he made a major contribution to the diffusion of a hitherto unknown repertory (principally the quartets and quintets of Boccherini and Mozart and the quartets of Hadyn and Beethoven) as a result of his 154 concerts, organised between 12 December 1814 and 4 April 1840 and attended by an appreciative public; he also scheduled concerts of his own works (notably his 'airs variés') and those of his contemporaries (Cherubini, Onslow and Mendelssohn, but also Kreutzer, Rode, Romberg and Viotti among others). Respectful of the tradition he had inherited, he was responsible for a rediscovery of old music: J.S. Bach, Barbella, Corelli, Germiniani, Handel and Tartini.

A renowned and influential pedagogue, Baillot had numerous pupils, including Mazas, Sauzay, and Charles and Léopold Dancla. A prolific and talented composer, besides nine concertos and a symphonie concertante for two violins, he wrote 'airs' and 'thèmes variés', caprices and études, duos, trios, string quartets and a sonata for piano and violin. Although his compositions are almost entirely forgotten, *L'art du violon* (1834) still holds its place as a standard work. He took a prominent part with Viotti's other two greatest pupils, Rode and Kreutzer, in compiling and editing the *Méthode de violon* and a similar work for the cello. His obituary notices of Grétry (Paris, 1814) and Viotti (Paris, 1825) and other occasional writings show remarkable critical power and elegance of style. He left an abundance of correspondence.

WORKS

published in Paris unless otherwise stated

ORCHESTRA WITH VIOLIN SOLO

Symphonie concertante, 2 vn, op.38, 1816 (Lyons)

9 concertos: no.1, op.3, 1802; no.2, op.6, *c*1804; no.3, op.7, *c*1804; no.4, op.10, *c*1805; no.5, op.13, 1807; no.6, op.18, 1811; no.7, op.21, 1809; no.8, op.22, 1809; no.9, op.30, *c*1820

Air russe, op.14, 1808; Thème varié, op.17, 1807; Air russe, op.24, 1807; Air 'Vive Henri IV' varié, op.27; Andante, op.29, 1817; Menuet favori de Pugnani varié, op.36, 1817 (Lyons)

CHAMBER AND SOLO VIOLIN MUSIC

Vn solo, 2 vn, va, b: Air russe varié, op.11, 1810; 3 airs français variés, op.15, 1807; Air russe varié, op.37, *c*1825

2vn, va, b: 3 airs russes variés, op.20, 1810; Romance variée et air russe, op.23, 1813; Charmante Gabrielle, air varié, op.25, 1814; 3 quatuors, op.34, 1805

2vn, b: 6 trios, op.1, 1800; 3 trios, op.4, 1803; 2 airs variés en trio, op.5, 1803; 3 trios, op.9, 1805; Air varié en trio de Paisiello, op.19, 1810; Air de Grétry varié en trio, op.33, 1815; 3 trios ou sonates, op.39, *c*1831; 2 trios, unpubd

Vn, pf: 3 airs variés, op.31, 1818; Sonate, op.32, 1820; 3 nocturnes op.35, 1821 (Lyons); Caprice, unpubd

2vn: 3 duos, op.8, 1804; 6 airs russes variés, op.12, 1806 [2nd vn acc.]; 3 duos, op.16, 1811; 24 études, op. posth. (1851) [2nd vn acc.]

Vn, b: 12 caprices, op.2, 1802; Andante, op.26, 1814; Air de la famille Suisse varié, op.28, 1815; Adagio et rondo, op.40; various unpubd pieces

PEDAGOGICAL WORKS

Méthode de violon (with Rode and Kreutzer) (1803/*R*)

Méthode de violoncelle (with Levasseur, Catel, Baudiot) (1804/*R*)

L'art du violon: nouvelle méthode (1834)

PAUL DAVID/MANOUG PARIKIAN/MICHELLE GARNIER-BUTE

Baillou [Baylou, Ballion, Baillon, Baglioni], **(Pietro) Luigi** [Louis] **(Francesco) de** (*b* Milan, 27 July 1936; *d* Milan, 14 March 1804). Italian violinist and composer. Burney's erroneous alliance of Baillou with the famous 18th-century family of opera singers – the Baglioni – has led nearly every later writer to distinguish Luigi Baglioni the Stuttgart court violinist from the Milanese Luigi (Louis) de Baillou; but a programme for the ballet *Le premier âge de l'innocence* (in *I-Ma*) clearly states that the music was by 'Monsieur Bailou, formerly in the service of the Most Serene Duke of Württemberg', and a libretto for a Roman production of one of his ballets (Teatro Argentina, Carnival 1789) names the composer 'Sig. Baglioni, *primo viol. del ducal Teatro La Scala di Milano*'.

Grigolato has shown that Baillou was born in Milan, not Paris, as Fétis and others have claimed; this is now confirmed by the discovery of his baptismal certificate in

Milan Cathedral (under the metropolitan parish of S Tecla). There is documentation (in the archives of S Maria presso S Satiro) of the Baillou family's presence in Milan from the second half of the 18th century onwards, although there is no information covering the years Baillou spent there before his appointment at Stuttgart (28 Jan 1762). Baillou may have studied in Paris with the virtuoso violinist Nicolas Capron, as Fétis reported, although no records of any Parisian orchestras of the late 1750s or early 1760s include his name. One of many foreign musicians at Stuttgart, Baillou advanced through the ranks to become first orchestral violin of the ducal orchestra by 1771. Little is known about his activities as a composer there however since the few works attributed to him are of doubtful authenticity. On 19 July 1774 he was dismissed along with all other remaining foreign musicians, and by the succeeding winter he had re-established himself in Milan where he remained until his death.

Between 1 February 1775 and 1 January 1777 Baillou composed scores for six ballets, four of them choreographed by the controversial Noverre, who had been at Stuttgart during Baillou's tenure there. Baillou's name does not appear again in Milanese productions until the inauguration of the Teatro alla Scala one and a half years later; during this period he wrote two ballets for Florence and possibly an opera for Stuttgart. The return to Milan of the choreographer Gasparo Angiolini coincided with Baillou's elevation to the post of opera orchestra director at La Scala (1779), a prestigious position which he held for 23 years. Because Angiolini wrote his own ballet music, Baillou composed for the dance only during the choreographer's sojourn at St Petersburg (1783–8), writing at least seven more ballets for La Scala. Also from 1783 Baillou was principal violinist and occasional spokesman for the newly founded Pio Istituto de' Professori di Musica, an organization which provided employment for musicians and concerts for the city between the carnival and autumn opera seasons.

In January 1797 Bailiou contributed the 'republican' ballet *Lucio Giunio Bruto* for the first carnival season of Napoleon's occupation of Milan. His last ballet; *La disfatta di Abderamo* written in collaboration with Capuci), was staged posthumously at the La Scala during the 1809 season. The registration of Baillou's death on 14 March 1804, is held at the church of S Babila, Milan.

In the absence of Baillou's ballet scores and of contemporary evaluations of them, little can be said about the quality of his efforts in his most important genre. His collaborations with Noverre were poorly received by Milanese audiences, but the cause lay with the choreographer, none of whose grandiose ballets succeeded there; indeed, Baillou continued to be called upon as a ballet composer for La Scala and his music was performed in Naples, Rome and elsewhere.

Baillou's orchestral output, which includes five symphonies and an overture, reveals a brilliant, fluent, but not particularly inspired, composer: his themes are based on simple melodic ideas that are often repeated without modification; the harmony is fairly simple as is his orchestration. His pedagogic works include an *Arpegio a 4 corde* and *Solfeggi*; his duet for two violins and five trios were also probably composed for teaching purposes as they present only elementary difficulties.

Recent archive acquisitions (in *I-Mt*) reveal that several of Baillou's children and grandchildren were also musicians. These include his son Francesco (*b* Ludwigsburg, 1772; *d* Milan (1842), first violin at La Scala and composer of two symphonies (*I-Mc*); His grandson Giuseppe (*b* Milan 1796; *d* Milan, 1739), a violinist at La Scala; and his granddaughter Felicita de Baillou Hillaret (*b* Milan 1804; *d* Milan 1871) a mezzo-soprano who sang leading roles at La Scala between 1831 and 1843.

WORKS

BALLETS

all performed as entr'actes; music lost

Rinaldo ed Armida (ballo eroico, 5, J.-G. Noverre), Milan, Regio Ducal, Feb 1775, in C. Monza's Alessandro nell'Indie

Festa di villaggio (Noverre), Milan, Regio Ducal, 1 Feb 1775, in Monza's Alessandro nell'Indie

Le premier âge de l'innocence, ou La rosière de Salency (ballet pantomime, 12 scenes, Noverre), Milan, Regio Ducal, Aug 1775, in Paisiello's La Frascatana

La nuova sposa persiana (3 scenes, Noverre), Milan, Regio Ducal, 27 Jan 1776, in Traetta's La Merope

Il disertor francese (ballo pantomimo, 5, D. Ricciardi), Milan, Interinale, 8 Oct 1776, in Antossi's L'avaro

Andromaca e Pirro (ballo tragico pantomimo, 4, Ricciardi), Milan, Interinale, 1 Jan 1777, in Bertoni's Artaserse

Il Tancredi, Florence, della Pergola, 13 Sept 1777, in Sarti's Medonte, rè di Epiro

La guinguette allemande, Florence, della Pergola, 13 Sept 1777, in Sarti's Medonte, rè di Epiro

Apollo placato (azione teatrale pantomimica, 3 scenes, G. Canziani), Milan, La Scala, 3 Aug 1778, in Salieri's Europa riconosciuta; with recit, aria, chorus by Salieri

Mirza (V. Monari), Milan, La Scala, 9 Aug 1783, in Guglielmi's I fratelli pappamosca

La guinguetta inglese (Monari), Milan, La Scala, 9 Aug 1783, in Guglielmi's I fratelli pappamosca

La zingara riconosciuta (ballo comico pantomimo, 5, Monari), Milan, La Scala, aut. 1783, in Paisiello's Il Socrate immaginario

Giulio Sabino (ballo eroico pantomimo, 5, P. Franchi), Milan, La Scala, 27 Dec 1783, in Tarchi's Ademira

Ludovico il Moro (ballo eroico pantomimo, 5, S. Gallet), Milan, La Scala, 26 Dec 1785, in Rispoli's Ipermestra

Il Vologeso (Gallet), Milan, La Scala, Jan 1786, in Tarchi's Ariarate

Guatimozin, ossia La conquista del Messico (ballo eroico tragico pantomimo, 5, Franchi), Milan, La Scala, Jan 1787, in Zingarelli's Ifigenia in Aulide

Bellezza e onestà, Osia Una cosa rara (ballo eroicomico, F. Beretti), Rome, Argentina, carn. 1789, collab. V. Martín y Soler

Lucio Giunio Bruto (ballo eroico tragico pantomimo, 5, Franchi), Milan, La Scala, Jan 1797, in Zingarelli's Meleagro

Die beiden Nebenbuhlerinnen (Die allzustrenge Probe) (P. Angiolini), Vienna, Kärntnertor, 20 Jan 1809

La disfatta di Abderamo, ossia Consalvo di Cordova (ballo serio, 5, De Rossy), Milan, La Scala, 9 April 1809, collab. A. Capuci, in Weigl's L'uniforme

OTHER WORKS

Aria in Gli avventurieri (op), *I-Tf*

4 syms., C, E♭, D, d; Ov., C, obbl insts; Padedù e Alemande, A, carn. 1796: Duet, G, 2 vn; Solfeggi, vn, b; Arpegio a 4 corde, vn: all *Mc*

Sinfonia, A, arr. hpd, *IBborromeo*; 5 trios, C, E♭, G, F, B♭ 2vn, va, OS; Divertimento, E♭, *CH-Zz*; Marcia, f, *F-Pn*

DOUBTFUL WORKS

Tancredi (op), Stuttgart Hof, 1770 or 1777, probably identical to ballet of same title

Il casino di campagna (comic op), Stuttgart, Hof, 1777

L'amante generosa (ballet, G. Canziani), Milan, Interinale, aut. 1777

Raimira ed Attida (ballet, L. Bardelli), Pavia, Associati, carn. 1792

Bailly, Henry du [de]. *See* LE BAILLY, HENRY.

Bails, Benito (*b* San Adrián de Besós, nr Barcelona, 4 Feb 1730/31; *d* Madrid, 1797). Spanish mathematician. He attended university in France, at Toulouse and Perpignan. By 1755 he was in Paris, where he was acquainted with d'Alembert and became involved with work on the *Encyclopédie*. He returned to Spain in 1761 and in 1767 was appointed professor of mathematics at the Real Academia de Bellas Artes de S Fernando. He translated numerous foreign scientific writings, publishing them in the ten-volume *Elementos de matemáticos* (1772–83); the eighth volume contains a translation of d'Alembert's *Eléments de musique théorique et pratique*, first published in 1752. An enthusiastic amateur musician, he prepared a Spanish version of Bemetzrieder and Diderot's *Leçons de clavecin, et principes d'harmonie* (Paris, 1771) under the title *Lecciones de clave y principios de harmonia* (Madrid, 1775). In the dedication he described his frustration in endeavouring to learn keyboard improvisation until a friend showed him this work, which proved to be 'the philosopher's stone'. He was helped in preparing the translation by the royal organist Juan Sessé. Bails's version is more a paraphrase than a translation; by suppressing the dialogue form and social small talk of the original, and by rearranging material, he achieved a clearer and more systematic though less entertaining approach to the subject. The modern harmonic concepts, wide-ranging modulations and advanced chord structures illustrated in the work were in striking contrast to the general conservatism of contemporary Spanish music pedagogy.

Baily, Anselm. *See* BAYLY, ANSELM.

Bainbridge, Simon (Jeremy) (*b* London, 30 Aug 1952). English composer. Son of the painter John Bainbridge, he studied with Lambert (composition) and Sidney Fell (clarinet) at the RCM (1969–72) and with Schuller at Tanglewood (1973–4). He was Forman Fellow in Composition at the University of Edinburgh (1976–8), holder of a USA bicentennial fellowship (1978–9) and composer-in-residence at Southern Arts (1983–5). Subsequently he taught composition at the RCM (1988–2000), the GSM (1990–99), the University of Cardiff (1992) and the University of Louisville (1998-2000); in 1999 he was appointed head of composition at the RAM. His awards include the 1987 Gemini Fellowship, for which he wrote *Cantus contra cantum* for orchestra (1989), and the 1997 Grawemeyer Prize for *Ad ora incerta* (1994), four songs from Primo Levi for mezzo-soprano, bassoon and orchestra.

Bainbridge came to public attention with *Spirogyra* (1970), which already displays a characteristically luminous textural tracery and sensuous melodic nuance. In the works which followed, sonorous surfaces were moulded into gradually unfolding linear structures – in the 1970s exemplified by the expressive sweep of the Viola Concerto (1976), written for Walter Trampler, and the patterned continuities of *Music for Mel and Nora* for oboe and piano (1979, rewritten in 1983 as the *Concertante in moto perpetuo* for oboe and small ensemble). The use of close repetition in the latter work was in part a response to American minimalism, which Bainbridge had experienced during his fellowship year in the USA. But the unpredictability of harmonic change and the tension between stasis and directedness gives the music a quality quite its own. The interplay of 'solid' patternings and organic fluidity has remained a fundamental aspect: from the spaced, hypnotic recurrences of the low flute in *The Path to Othona* (1982) and the antiphonally pulsating, long-breathed harmonies at the start of the *Fantasia* for double orchestra (1983–4, rev. 1989); to the variation principle behind the beautifully understated *For Miles* (1994) – a homage to Miles Davis and to be-bop harmony – and the heterophonic *Chant* (1999). The last of these exemplifies Bainbridge's continuing passion for elaborate textures, not least in the intricate relationship of foreground to background layers. It is something which he has explored in a number of other pieces, including *Metamorphosis*, a chamber concerto for 13 players (1988), and the orchestral *Toccata* (1992), in which a long-limbed melody expands spiral-fashion against a polyrhythmic panoply of secondary lines. Though Bainbridge's music has often been built upon abstract ideas, this has rarely been at the expense of an expressive dimension. During the 1990s, a new expressivity emerged, exemplified by the searing melodic richness, at times reminiscent of Berg, of *Ad ora incerta*.

MICHAEL ZEV GORDON

Bainbridge, William (*d c*1831). English woodwind instrument inventor, maker and player and music publisher. Having originally trained as a turner, he began his career playing oboe, flute and flageolet at two London theatres. As maker, his first patent was in 1803 for a new model of 'English flageolet', which, by changing the fingering of the tonic from six to three fingers, led in about 1805 to the development of his double flageolet model in collaboration with John Parry (ii) (1776–1851). Between 1808 and 1821 he was in partnership with John Wood as Bainbridge & Wood, writing and publishing tutors and music for his instruments. From *c*1830 to 1835 the business was continued by Bainbridge's widow Harriet, and thereafter until 1855 by his successor, Hastrick, whose mark usually included the words 'late Bainbridge, inventor'.

The firm's speciality was the 'English flute' or 'English flageolet' – not to be confused with the French or the 'quadrille' flageolet – in its single, double and occasionally triple form. In addition they made single and double concert flutes with flageolet-type heads to be held transversely. These instruments, designed for amateurs of both sexes, enjoued enormous popularity, the double flageolet being much plagiarised (in spite of two unsuccessful legal actions) by rival makers both at home and abroad. Bainbridge was perhaps the earliest wind-instrument maker with the all-round abilities required to launch such projects successfully, combining single-handedly as he did the diverse skills of inventor, performer, teacher, manufacturer, author and publisher.

WRITINGS

Observations on the cause of imperfections in Wind Instruments, particularly of German Flutes … also remarks on Oboe, Clarionet, & Bassoon Reeds (London, 1823)

PHILIP BATE/WILLIAM WATERHOUSE

Baines, Anthony C(uthbert) (*b* London, 6 Oct 1912; *d* Farnham, Surrey, 2 Feb 1997). English musicologist, conductor and instrumentalist, brother of the double-bass player and composer FRANCIS BAINES. During his education at Westminster School (King's Scholar, 1925–30), his musical talents became evident, encouraged by the school director of music, C. Thornton Lofthouse. In 1930 he went to Christ Church, Oxford, where he studied natural sciences and graduated with honours in chemistry in 1933. The award of an open scholarship to the RCM changed the direction of his career, and after two years' study devoted mainly to the bassoon he joined the LPO as third bassoon and double bassoon in 1935. This appointment (interrupted by six years' army service) continued until 1948 and led to his election as assistant conductor in 1949. The following year he became associate conductor to the International Ballet Company, but remained a regular conductor of the LPO Schools Concerts. Between 1955 and 1965, as teacher of wind instruments at Uppingham School and later Dean Close, Baines devoted himself to the training of young musicians. During this period his musicological activities expanded greatly, and he travelled extensively in Europe studying both folk and art instruments and taking part in international conferences. From 1970 to 1980 he was a lecturer in music at Oxford University and curator of the Bate Collection of wind instruments there. By his retirement in 1982 he had enlarged its scope and content and created a unique resource centre for the practical study of musical instruments of all periods. A founder-member of the Galpin Society, he edited its journal from 1956 to 1963, and again from 1970 to 1984. His writings are chiefly concerned with instruments, particularly wind instruments, and their history, however, as a man of many parts, his career emcompassed several diverse fields. As an organologist of world rank, his writings are informed by a rare combination of enthusiasm, with and authority, backed by an unrivalled range of practical experience and research. Some of his books are now standard texts, and many have also appeared in German and Italian. The American Musical Instrument Society presented the Curt Sachs Award to him in 1985 for his contribution to a 'fuller understanding of the parallels and interactions between folk and art traditions'. Elected Ordinary Fellow of the British Academy in 1980, he received the degree of D. Litt. from Oxford University in 1977, and of D. Mus. from Edinburgh University in 1994. He is survived by his wife Patricia, née Stammers, whom he married in 1960.

PHILIP BATE

Baines, Francis (Athelstan) (*b* Oxford, 11 April 1917; *d* Ballydehob, Cork, 4 April 1999). English double bass player, viol player and teacher, brother of ANTHONY C. BAINES. He studied at the RCM, London (including composition with Herbert Howells), and became principal double bass of the Boyd Neel Orchestra and, later, the Philomusica, performing on an instrument by Nicolas Amati. In the 1970s he played with the newly formed period-instrument orchestras such as the Academy of Ancient Music. In 1959, with his wife June, he founded the JAYE CONSORT OF VIOLS, which gave over 70 broadcasts. To popularize the Jaye Consort in its early days, Baines would also perform medieval music on medieval bagpipes, harp, pipe and tabor, and shawm. The Baines's sweet and lyrical treble-viol playing, modelled on the English choral tradition, heralded a new approach to the instrument. However, Baines's greatest legacy is perhaps as a teacher. He had an intuitive feel for period instruments which made them come to life for a generation of students, notably those studying at the RCM where he founded and directed the (conductorless) Baroque orchestra. The debt felt to him by the early music fraternity was demonstrated by the 'Concert to remember Francis and June Baines' on 20 June 1999 in which many of the most distinguished British players performed, among them Alison Bury, Monica Huggett, Annette Isserlis, Catherine Mackintosh and Andrew Parrott. Baines also composed three symphonies, two overtures, a violin concerto and many chamber works.

LUCY ROBINSON

Baines, William (*b* Horbury, Yorks., 26 March 1899; *d* York, 6 Nov 1922). English composer and pianist. Although he came from a musical background (his father was a chapel organist and cinema pianist), his only training in composition came through lessons at the Yorkshire Training College of Music in Leeds and advice from the pianist Frederick Dawson. After a productive year in 1917, which saw many new compositions and his first solo recital, he was called up for military service in 1918. On his return to York in 1919 he worked as a relief pianist for his father at the Fossgate Cinema. His local concert recitals featured the works of Debussy, Ravel, Bridge and Scriabin in addition to his own compositions. Ill-health, exacerbated by influenza contracted in 1918 while in the army, led to his early death.

Baines was primarily a composer of impressionistic piano miniatures. The full spectrum of his style is encapsulated in the *Seven Preludes* (1919), whose characteristics range from virtuoso brilliance to rhapsodic contemplation, and from a lush Romanticism to sparse textures and acrid harmonies. A love of nature, frequently expressed in his diaries, is revealed in works such as *Paradise Gardens* and *Tides*. His fascination with light inspired a number of his later piano pieces, including the evocative 'Glancing Sunlight' from *A Last Sheaf*. Baines was an inveterate reviser, and works such as the F♯ minor Piano Sonata underwent a number of metamorphoses. His other notable composition is a symphony, which, despite its individuality and original orchestration, was not performed until 1991.

WORKS
(*selective list*)

PIANO

3 Slumber Songs, op.6, 1917; 4 Miniature Tone Pictures, 1917, withdrawn 1922; Impression from Cherry Ripe, 1917, withdrawn 1922; 5 Pieces, op.8a, 1917; 3 Impressions, op.9, 1917; 2 Elegies, op.11, 1917; 3 Playtime Sketches, op.12a, 1917; Sonata no.2, a, op.13, 1917; 6 Pieces, op.14, 1917; Rococo, 1917; Passion of Destiny, 1917, unfinished; 4 Sketches, 1917–18; 6 Dream Impressions, op.16, 1918; Sonata, f♯, op.4, 1918, rev. 1919 and 1921; Poem, B, op.6/2, 1918; Introduction and Valse Caprice, op.3/1, 1918; Concert Study, a, op.6/3, 1918; The Island of the Fay, 1918–19; Paradise Gardens, 1918–19; 7 Preludes, 1919; Dead Heart Flower, 1919

The Little Wavelets, 1919 [from Sonata no.2]; February Pastoral, 1919; Vale of Memories, 1919; 4 Poems, 1919–20; Coloured Leaves, 4 pieces, 1919–20; 3 Concert Studies, 1919–20; Milestones, 3 pieces, 1920; Prelude, D♭, 1920; Cyril Scott Fragment, 1920; Silverpoints, 4 pieces, 1920–21; Tides, 2 pieces, 1920–21; Pictures of Light, 3 pieces, 1920–22; 7 Preludes, set 2, 1920–22; Prelude and 7 Diversions, 2 pf, 1921; Twilight Pieces, 3 pieces, 1921; Poème de concert, 1921 [from final movt of Sonata, 1919]; Idyll (Nocturne), 1921, rev. 1922; Prelude-Filigree, 1921; A Last Sheaf, 4 pieces, 1921–2

FIONA RICHARDS

Baini, Giuseppe (Giacobbe Baldassarre) (*b* Rome, 21 Oct 1775; *d* Rome, 21 May 1844). Italian musicologist and composer. At 13 he entered the Seminario Romano and studied there under Stefano Silveyra. In 1795 he was accepted as a member of the choir of the papal chapel, even though he was not yet a priest (he became one in 1798). He studied singing with a bass from the choir, Saverio Bianchini, and, from 1802, counterpoint with Giuseppe Jannacconi. He was probably also a pupil of the organist G.B. Batti and of his uncle, the composer Lorenzo Baini. In 1814 he was entrusted with the reorganization of the archives of the papal chapel and in 1819 became *camerlengo* (general administrator) of the college of papal singers, an elective office which he held until his death. In 1825 he was made an examiner at the Congregazione di S Cecilia, although he was not a member of it. His efforts to persuade the pope to found a school of singing and a conservatory were unsuccessful. A member of many European academies and the teacher of

numerous composers and musicologists, among them Cartoni, La Fage, Nicolai, Proske and Hiller, he spent the last part of his life in extreme seclusion.

Baini was most important as a Palestrina scholar. It is to him – and to Alfieri, who continued his work after his death – that one owes the publication of a large number of Palestrina's works in the seven volumes of the Raccolta di Musica Sacra (Rome, 1841–6). The *Memorie storico-critiche*, in spite of its many failings in historical and philological method and its inaccuracies of fact, was the first attempt to provide a full and systematic view, biographical and musicological, of Palestrina. It contains much information on previously unknown composers. Baini also planned and gathered material for a history of the papal chapel, which was never written.

Baini demonstrated his devotion to the Roman tradition also on the political level, as a defender of the Catholic Church in its conflict with the Napoleonic empire. This resulted in some polemical works and in his refusing in 1811 the leadership of the ecclesiastical part of the reform of the Church within the empire. In 1838 he refused Spontini his support for a reform of sacred music because of his mistrust of the Prussian Protestant culture which Spontini at that time served. This aloofness and conservatism also influenced his own music, which aimed at an anachronistic and impossible reinstatement of the past, represented by Palestrinian polyphony. For the same reasons Baini did not understand the music of his own time, particularly instrumental music, to which he was strongly averse.

WRITINGS

all MSS in I-Rc

Dissertazione sopra i tuoni del canto gregoriano con l'aggiunta in fine delle regole per gli istromenti ebdomadarj: scritta a maggior chiarezza per interrogazioni e risposte ad uso de' cappelani-cantori pontificj (MS)

Regole circa il modo di cantare le Lezioni, le Lamentazioni ed i Capitoli, e di intuonare il canto gregoriano secondo lo stile osservato dai cappellani-cantori della Cappella pontificia: epilogate da uno de'cappellani suddetti l'anno 1806 (MS)

Breve notizia istorica e regole del contrappunto solito farsi da' Cantori pontificj nel cantare il canto gregoriano; e per incidenza, si tratta la questione se i cantori della Cappella giulia nella Basilica vaticana siano più antichi o almeno fosse immutuato il loro corpo per formare a parte li cappellani-cantori pontificj (MS)

SERGIO LATTES

Bainton, Edgar (Leslie) (*b* London, 14 Feb 1880; *d* Sydney, 8 Dec 1956). English composer, pianist and teacher. He studied at the RCM under Stanford and Franklin Taylor. In 1901 he was appointed to teach the piano and composition at the Newcastle Conservatory of which he became principal a few years later. He was on the Continent at the outbreak of World War I and was interned at Ruhleben. On his return to Newcastle he resumed his activities as teacher, pianist, conductor and composer until the end of 1933, when he was appointed director of the New South Wales State Conservatorium, Sydney. Immediately before his departure he was elected an FRCM and awarded an honorary DMus by the University of Durham. In Sydney he exercised a strong influence on the development of musical life, particularly through his fine conducting. His symphony 'Before Sunrise' won a Carnegie Award in 1917. Bainton was less affected by the modality of English folksong than were many contemporaries, although much of his work has a pastoral tone. He was drawn to late-Romantic harmony, yet even his richest writing never obscures the direct lyrical impulse. His works have clarity of form and show a high degree of craftsmanship. One of his major works, *The Pearl Tree*, was produced with great success in Sydney in 1944.

DAVID TUNLEY/MICHAEL JONES

Bainville, François (*b* Chartres, 1 April 1725; *d* Chartres, 26 Sept 1788). French organist and composer. He began his musical training as a choirboy in Chartres Cathedral. In September 1741 he received permission to play the organ there, provided he was properly supervised, and he was soon substituting for the cathedral organist J.-P. Dumail. He later played the organ at the Benedictine abbey of St Père-en-Vallée (now the parish church of St Pierre, Chartres). In 1751 he married Marie-Claude Renault, an organist in the parish of Ste Marguerite, Paris, and they moved to Paris in about 1754. In 1763 he was appointed organist of the Cathedral of St Maurice in Angers. Four years later his only known published work, *Nouvelles pieces d'orgue, composées sur différens tons*, appeared in Paris and Angers. Bainville retired from his post at Angers in 1782 and, having been granted a pension on full pay by the cathedral chapter, returned to Chartres. According to Port, Bainville had a son (name not given) who served as organist of St Pierre (? at Angers) and who 'soon departed for Paris'.

KENNETH LANGEVIN

Baiocchi, Regina Harris (*b* Chicago, 16 July 1956). American composer and writer. She studied at Roosevelt and De Paul universities, where her teachers included Robert Lombard and George Flynn. She has also studied jazz piano with Alan Swain and composition with Hale Smith. Her music reveals an eclectic mixture of idioms and techniques, from serialism to black American folk music. Jazz is seldom far from the surface in *Sketches* (1992) and *Gbeldahoven: No One's Child* (1996), an opera based on the lives of Harlem Renaissance writers Zora Neale Hurston and Langston Hughes that includes numbers inspired by African chant, spirituals, blues, jazz, gospel, work songs and rap music. The aria 'How It Feels to Be Colored Me' shares motivic material with the final movement of the brass quintet *QFX* (1993); both are based on a 12-note series she describes as her 'stand-by tone row', as well as on black American harmonies and rhythms. Her African heritage also provides sounds for *African Hands* (1997), a concerto for African drummer and orchestra. Works showing a strong influence of jazz include *Miles Per Hour* for trumpet (1990), which recalls the style of Miles Davis, and *Friday Night* (1995) for jazz singer and ensemble.

KARIN PENDLE

Baird, Tadeusz (*b* Grodzisk Mazowiecki, 26 July 1928; *d* Warsaw, 2 Sept 1981). Polish composer. He first studied composition in Warsaw during World War II with Woytowicz and Kazimierz Sikorski. He was taken prisoner by the Germans in 1944 after the Warsaw Uprising, and after liberation underwent treatment for spinal tuberculosis in Cologne before returning to Poland to train with Rytel and Perkowski at the Warsaw Academy of Music (1947–51). During this period he also studied piano with Tadeusz Wituski and musicology at Warsaw University.

In 1949, in response to the imposition of socialist realism as the only acceptable basis for composition, Baird formed Group 49 with Serocki and Krenz, their aim being the composition of anti-elitist music without abandoning contemporary techniques. Baird's works of these years were generally traditional in form (e.g. Sinfonietta, Concerto for Orchestra, First Symphony and the sonatinas for piano) and sometimes archaic in style (e.g. the *Colas Breugnon* suite based on 16th-century French dances), an approach he continued in later, post-socialist-realist works such as *Cztery sonety miłosne* ('Four Love Sonnets', 1956) and *Pieśni truwerów* ('Trouvère Songs', 1963). The slightly more permissive attitude of the authorities in the post-Stalinist era enabled Baird to collaborate with Serocki in the foundation of the Warsaw Festival of Contemporary Music (the 'Warsaw Autumn') in 1956 and, after becoming familiar with some of Alban Berg's works, to experiment with serialism, first evident in *Cassazione per orchestra* (1956).

Baird adopted an exceptionally free, essentially lyrical approach to serialism, introducing material unrelated to the original row, emphasizing specific intervals within the row (which becomes a freely exploitable fund of source material) and permitting tonal references to emerge. His encounter with Berg's work also resulted in greater intensity of expression, evident in the String Quartet

(1957) and *Cztery eseje* ('Four Essays', 1958), in which the orchestra is frequently treated in a chamber style. Sonata-schemes were abandoned in favour of freely-evolving structures, and by the late 1960s Baird regularly introduced static colouristic textures within his orchestral works. Such passages perhaps indicate the influence of Lutosławski's aleatory technique, but Baird always maintained strict control over their progress in that the pulse is not relaxed and they are usually composed of short, rapid figurations, the general effect of which is consistent from one performance to another.

Baird is often regarded as a late Romantic lyricist and successor not only to Berg, but Mahler and Szymanowski. Melody was of prime importance in his work, and especially in his later music there was an increasing reliance upon the voice or some underlying programmatic concept in an attempt to transmit concrete, unambivalent matter to his listeners. At the same time there was a perceptible darkening in tone, first apparent in 1966 with the opera *Jutro* ('Tomorrow'), based on a short story by Conrad, and culminating in his final work, *Głosy z oddali* ('Voices from afar'), a song cycle for baritone and orchestra to words by Jarosław Iwaszkiewicz dealing with death and personal extinction, its musical symbolism incorporating both the *Dies irae* and references to the sound world of 'Der Abschied' from Mahler's *Das Lied von der Erde*. Baird admitted that the more direct style of his later works arose from an attempt to portray bitterness in the face of reality, most notably in the orchestral pieces *Psychodrama* (1972), in his opinion the most brutal of all his works, and *Elegeia* (1973), which reveals a continuing affinity with the music of Berg.

Throughout his career Baird played an active part in Polish musical life. He continued to be involved in the organization of the Warsaw Autumn until 1969, and from 1974 taught at the Academy of Music in Warsaw, becoming director of the composition department in 1977. His numerous honours included several awards from the Polish government, the Cologne Music Prize (1963), the Koussevitzky Prize (1968), the Alfred Jurzykowski Foundation of New York Prize (1971), the Arthur Honegger Prize (1974), and three first prizes at the UNESCO International Rostrum of Composers (1959, 1963, 1966).

ALISTAIR WIGHTMAN

Bairstow, Sir **Edward C(uthbert)** (*b* Huddersfield, 22 Aug 1874; *d* York, 1 May 1946). English organist, composer and conductor. He studied with John Farmer of Balliol College, Oxford, and was articled to Frederick Bridge at Westminster Abbey, where he received organ tuition from the assistant organist Walter Alcock. In 1893 Bairstow became organist of All Saints, Norfolk Square, and in 1899 of Wigan parish church. In Wigan he built up a teaching practice, concentrating particularly on singing, and successfully directed the town's Philharmonic and other choral societies. On being appointed to Leeds parish church in 1907, he became organist to the Leeds Festival of that year and of 1910 and, later, conductor of the Leeds Philharmonic Society (from 1917 until his death). In 1913 he was appointed organist at York Minster, and from then until 1939 he directed the York Musical Society. His conducting engagements took him further afield; his appearances in London included a notable concert with the Royal Choral Society, in 1927, celebrating the 50th anniversary of the first English performance of Bach's B minor Mass. In 1929 he was appointed professor of music at Durham, then a non-resident post that enabled him to continue his duties at York; he had taken the DMus degree at the same university in 1901. He was knighted in 1932, and received honorary degrees of DLitt (Leeds, 1936) and DMus (Oxford, 1945). An accomplished performer and accompanist, he was also in frequent demand as a lecturer and guest speaker, proving an avid supporter in particular of the competitive festival movement. Above all, he was aware of his own special aptitude as a teacher.

Bairstow's compositions, published principally by OUP and Novello, are mainly for the church. Of his 29 anthems

Blessed City (1914), *Let all mortal flesh keep silence* (1925) and *Save us, O Lord* (1902) are well known. As with most of his other compositions, they are possessed of a deeply felt sentiment and enduring quality. Both his settings of the Morning, Communion and Evening services – in D and E♭ – and the late Evening in G are widely used and contrasted in style. Of his 13 organ pieces the *Evening Song* quickly gained popularity, but his finest is undoubtedly the Sonata in E♭ (1937), a late Romantic work displaying consummate craftsmanship and inspiration. Equally inspired are the Variations on an Original Theme for two pianos (1908) and the unjustly neglected Six Variations on an Original Theme for violin and piano (1916). The choral works *The Prodigal Son* (1939) and *Five Poems of the Spirit*, published posthumously in 1954, were composed during his later years.

FRANCIS JACKSON

Baitz. *See* BÄTZ.

Baj [Bai, Baij], **Tommaso** (*b* Crevalcuore, nr Bologna, *c*1650; *d* Rome, 22 Dec 1714). Italian composer and singer. He is first heard of on 20 October 1670 as an alto in the Cappella Giulia at S Pietro, Rome, which he served for the rest of his life. The account books from 1696 to 1713 list him as a tenor; he may have become a tenor shortly before this, but the account books for 1693–5 are missing. His long experience as a singer under such renowned directors as Benevoli, Ercole Bernabei, Masini and Lorenzani stimulated him to compose, and it may have been because of this that on 19 November 1713, shortly before Lorenzani died, he was himself appointed *maestro di cappella*, a post that he held for the 13 months until his own death. He was best known for his famous nine-part *Miserere* in falsobordone style. Except in 1768 and 1777 it has been sung regularly, together with Allegri's *Miserere*, by the papal choir during Holy Week (in 1821 Baini's *Miserere* was added). He was an adherent of the severe *stile antico*, but he also adopted an expressive manner more typical of his own day (as in the *Miserere*): the two styles are in apposition in his work, which includes choral parlando writing. Some of his works are for double choir.

WORKS

2 masses, 4, 5vv, *A-Wn, D-Bsb, Mbs, Mm, Rp*; Christe eleison, 4vv, *MÜs*
3 Miserere, 5vv, 8vv (1700), 9vv (1713, 1st chorus by Gregorio Allegri), *A-Wn, D-AÖhk, Bsb, HEms, LÜh, Mbs, Mf, Mk, Mm, MÜs, OB, Po, Rp, TRb, I-Bc, Nc, Rf, Rvat*; 1 ed. C. Burney, *La musica che si canta annualmente* (London, 1771)

SIEGFRIED GMEINWIESER

Bajamonti, Julije [Giulio] (*b* Split, 4 Aug 1744; *d* Split, 12 Nov 1800). Croatian composer. He studied medicine in Parma and between 1785 and 1790 practised in Hvar, on the island of the same name, where he was also the organist at the cathedral. In 1789 he moved to Split in the hope of becoming the town physician but was rejected because he was a musician. In Split he again performed the duties of cathedral organist. Of about 140 surviving works, over 120 are church music. Most of his music is simple in harmonic structure, with an obvious bias towards the development of melody. Italian operatic style exercised a strong influence on his sacred works.

WORKS

La traslazione di S Doimo, orat, Split, 1770
17 masses for choir and orchestra; 2 requiem masses; 2 Passions; 2 Stabat mater; 3 TeD; 8 Tantum ergo; Miserere; Magnificat; 54 motets, a cappella and for choir and orchestra
10 syms.; Str Qt, F (attrib. Bajamonti); Org Sonata, C, 1776
Non temo, aria buffa for bass, 1776

MSS in *HR-Sk, Zha*

BOJAN BUJIĆ

Bajete [Bajón] (Sp.). *See under* ORGAN STOP.

Bajić, Isidor (*b* Kula, 10 Aug 1878; *d* Novi Sad, 15 Sept 1915). Serbian composer. He was a pupil of Koessler in Budapest and later became an organizer of musical life in Novi Sad. From 1901 until his death he taught at the high school there and was also the school's principal conductor. He was editor of the magazine *Srpski muzički list* in 1903 as well as a series of music by Serbian composers (1903–4); he also founded a music school in 1909.

His Romantic style of composition, while rich in melodic invention, displays a lack of technical proficiency. His national opera *Knez Ivo od Semberije* ('Prince Ivo of Semberia', 1911), heavily influenced by folk music, is notable for its musical differentiation between Serbian and Turkish characters as well as its incidental music; some of its set pieces, such as the song *Jesen stiže dunjo moja* ('Autumn is Coming, my Dear') and the dance *Srpkinja* are more commonly thought of as folk pieces. His best works are those outside the folk tradition, such as *Pesme ljubavi* ('Songs of love') and the piano pieces with their Liszt-like virtuosity and romanticism akin to Tchaikovsky.

WORKS
(*selective list*)

Stage: Ksenije i Ksenija (operetta), 1909; Knez Ivo od Semberije [Prince Ivo of Semberia] (op, B. Nušić), perf. 1911; Žrtva ljubavi [The Victim of Love] (operetta); incid music, incl. Seoska loia [The Village Good-for-Nothing], Čučuk Stana [Little Stana], Šaran [The Carp]
Orch: Miloš Obrenovič, sym., 1902, lost; Męna, ov., 1902
Choral: Iz srpske gradine [From the Serbian Garden]; Srpski zvuci [Serbian Sounds]; Guslareva smrt [Guslar's Death]
Other vocal: Božestvena liturgija, chorus, 1906; Pesme ljubavi [Songs of Love], 1v, pf, 1912

Pf: Album kompozicija, 1908; Srpska fantazija [Serbian Phantasy], 4 hands; Srpsko cveće [Serbian Flowers]; other pf works

ROKSANDA PEJOVIĆ

Bajón (Sp.). *See under* ORGAN STOP (*Bajete*).

Bajoras, Feliksas Romualdas (*b* Alytus, Lithuania, 7 Oct 1934). Lithuanian composer and violinist. He grew up in Kaunas, where he received his first musical education. He then studied the violin with Aleksandras Livontas (1952–7), and composition with Juzeliūnas at the Vilnius Conservatory (1959–63). He worked as a violinist in the Vilnius Philharmonic Orchestra (1959–63), and also in the Lithuanian Radio Orchestra (1958–63). He was music director of the youth theatre from 1965 to 1984 and then spent four years in the USA. He then served as music director of the Academic Drama Theatre in Vilnius (1991–4) and since 1991 has been active in the Vilnius Music Academy, teaching music theory and rhythm to actors and theatrical and cinema directors. He was appointed to a lectureship in 1994. He has received 13 prizes for theatrical music, and was awarded the Lithuanian State Prize in 1981, the Balys-Dvarionas prize in 1989, the J. Švedas Prize in 1990 and the Lithuanian Art Prize in 1998.

Bajoras employs various techniques in his works. In the years from 1968 to 1979 he developed his own style, principally moulded by folk music. Characteristics of this style, which can be traced to Lithuanian folksong, are tonal variability, irregularity of structure and phrasing, traditional techniques of articulation, and rhetorical figures corresponding to these features. The theatre has had a strong influence on Bajoras, and his music indeed resembles a drama staged by performers (for instance in the Violin Sonata). He regards a musical work not primarily as a structure but as a conversation or incident, and consequently extra-musical factors are of great importance to him; in this he could be said to be continuing the Romantic tradition. From around 1980 he began to simplify his style: expressive, rhetorical and theatrical elements and those taken directly from folksong became less prominent, but his tendency towards polyphony and asymmetrical rhythms continued. The opera *Dievo avinėlis* ('Lamb of God', 1982) is regarded as his most important work. It is a psychological drama which, with its unique synthesis of contemporary techniques and folk music, represents a milestone in the history of Lithuanian opera.

WORKS
(*selective list*)

Stage: Dievo avinėlis [Lamb of God] (op, 3, R. Šavelis), 1982, Vilnius, 1991

Vocal: Sakmių siuita [Legend Suite], T/S, pf, 1968; Kodėl? [Why?], cycle, S, pf, 1977; Žiemužė-balta egluže [The White Fir Tree in Winter] (L. DANUTE KALAVINSKAITĖ

Bakala, Břetislav (*b* Fryšták, nr Holešov, 12 Feb 1897; *d* Brno, 1 April 1958). Czech conductor. At Brno he studied composition with Janáček (1912–15), conducting with Neumann (1919–20) and the piano with Vilém Kurz. He was engaged as a répétiteur and conductor in the Brno Opera in 1920, making his début with Gluck's *Orfeo*, and in 1925 gave the première of Martinů's ballet *Who is the Most Powerful in the World?*, which drew him towards new music. During the 1925–6 season he was an organist and accompanist in Philadelphia. He then worked in Czechoslovak Radio, where he conducted the (abridged) première of Janáček's *Fate* in 1934, and in 1937 became chief conductor of the Brno RSO, that year touring the USSR and Latvia. From 1929 to 1931 he was conductor of Brno Opera, where in 1930 he gave the première of Janáček's posthumous *From the House of the Dead*, completing the score with Osvald Chlubna. He was conductor of Vach's Choir of Moravian Women Teachers from 1936 and from 1956 chief conductor of the Brno State PO. He also taught at the Janáček Academy (JAMU) from 1951.

Musical life in Brno owes much to Bakala's development of the Brno RSO, with which he promoted many new works. One of the finest Janáček experts, he performed nearly all his compositions, and left exemplary recordings of the *Glagolitic Mass*, *Taras Bulba* and the Sinfonietta. His repertory also included the main works of Novák, with whom he had close ties, and of Suk and contemporary Moravian composers (he conducted Novák's *De profundis* at the International Music Festival in Copenhagen in 1947). An intellectual conductor, of sparse gesture, he precisely displayed the internal structure of a work through his firm rhythmic control and careful balance. Among his compositions were popular folksong arrangements for choir. He orchestrated the second movement of Janáček's Piano Sonata and made piano reductions of several of his major works.

Bakchos. *See* DIONYSUS.

Bakchylidēs. *See* BACCHYLIDES.

Bake, Arnold Adriaan (*b* Hilversum, 19 May 1899; *d* London, 8 Oct 1963). Dutch scholar of Indian music. He studied oriental languages at the University of Leiden and in 1930 took the DLitt at Utrecht University with a translation of a Sanskrit musical treatise. With his wife Cornelia he spent over 15 years in India. He studied music and language at Tagore's school in Santiniketan, and Bengal became one of his main areas of interest; subsequently he did fieldwork from Ceylon to Nepal, largely on folk and tribal traditions (financed by a fellowship from Brasenose College, Oxford, 1937–44). During the war he served as music adviser to the All India Radio in Delhi and as director of European music at the Calcutta Broadcasting Station. In 1948 he was appointed lecturer (later reader) in Sanskrit and Indian music at the School of Oriental and African Studies, London; he also gave many lectures and recitals (accompanied by his wife) in Europe, India and North America. During his final visit to the Indian subcontinent (1955–6) he again collected invaluable material on music and dance, primarily from Nepal. In the summer of 1958 he and his wife were involved in a street accident in Leiden, from which he never fully recovered. Most of his recordings, which include folk, tribal, devotional and classical music of India (on cylinders, discs and a film-recording device), as well as his many photographs and films, are divided between the School of Oriental and African Studies, University of London, the Research Centre for Ethnomusicology, New Delhi, and the Institute for Ethnomusicology Archive, UCLA.

Bake's publications (which include articles for *MGG1*, *NOHM* and *Grove's Dictionary*, 5th edn) scarcely indicate his vast knowledge of his subject; at his death he was working on a survey of Indian music commissioned by the Oxford University Press. He was a tireless scholar, continually discovering new material and recasting his lectures, which ranged far beyond the usual discussions of north and south Indian classical music and its theory. They included such diverse elements as Vedic chant, ancient music theory, the philosophical and aesthetic basis of Indian music, folk and tribal music and dance of India, music of the devotional and mystic groups, and the music of Tagore. With the help of his recordings, photographs and films, as well as his personal reminiscences and performances as a singer, he succeeded in conveying a real feeling for India in the throes of the industrial revolution.

NAZIR A. JAIRAZBHOY

Bakels, Kees (*b* Amsterdam, 14 Jan 1945). Dutch conductor. He studied at the Amsterdam Conservatory and began his career as a violinist, later working with Franco Ferrara and Bruno Rigacci at the Accademia Musicale Chigiana in Siena, and also with Kiril Kondrashin. His first conducting appointments were with the Amsterdam PO as associate conductor and the Netherlands CO as principal guest conductor. He has toured extensively in Europe and the USA, and in Britain with the BBC PO and BBC Welsh SO. His ENO début was in 1986 with *Aida*, and he returned for *Fidelio* in 1988; he has also conducted several productions for the WNO. He has a regular association as principal guest conductor with the Bournemouth SO and became principal conductor of the Netherlands RSO in 1993. He has also appeared frequently with the Netherlands Opera, and has conducted operatic performances in San Diego and Vancouver. His conducting is direct and unfussy, although singers have sometimes been disconcerted by his erratic tempos. Among his recordings are Mascagni's *Nerone* and *Il piccolo Marat*, and a series of Vaughan Williams symphonies with the Bournemouth SO.

NOËL GOODWIN

Baker, Arthur. American record producer. A club DJ in Boston, he ventured into dance music production by borrowing money from relatives. After producing a number of obscure dance singles he moved to New York in 1979, the year in which the first rap records were released. A meeting with Tom Silverman led to Baker's

engineering and producing Silverman's second release on his new Tommy Boy label, *Jazzy Sensation* by the Jazzy Five. The next single, *Planet Rock* by Afrika Bambaataa and Soul Sonic Force, was influenced by the electronic music of Kraftwerk, Yellow Magic Orchestra and Gary Numan and changed the sound of hip hop. Released in 1982, *Planet Rock* was produced by Baker, along with the ideas of Silverman and Bambaataa and the musicianship of John Robie. Baker's association with futuristic dance music, known as electro, led to production work for New Order and Freeze, along with further Afrika Bambaataa releases such as *Looking For the Perfect Beat* and *Renegades of Funk*. Launching a label, Streetwise, he released New Editions *ABC*. The trend of remixing artists for the dance market led to Baker's producing dance mixes of Bruce Springsteen's *Dancing In the Dark*. Later production and remix work included singles or albums by Hall & Oates, Bob Dylan, the Stylistics, Al Green and Diana Ross. After some years working in the mainstream, Baker returned to producing dance records, for clubs in New York, London and Miami.

DAVID TOOP

Baker, Chet [Chesney Henry] (*b* Yale, OK, 23 Dec 1929; *d* Amsterdam, 13 May 1988). American jazz trumpeter and singer. He first encountered jazz while playing in army bands, and by the time of his discharge in 1951 his distinctive, reticent style was fully developed. In 1952 he played briefly with Charlie Parker before beginning an important association with Gerry Mulligan in the latter's celebrated 'pianoless' quartet. His performances with the group, particularly his ballad rendition of *My Funny Valentine* (1952, Fan.), brought him instant fame; his clear tone and subdued, lyrical manner – he rarely played louder than *mezzo-forte* and sometimes restricted his melodic span to less than an octave – immediately became hallmarks of West Coast cool jazz, and were widely imitated. After leaving Mulligan in 1953 Baker rejoined Parker briefly and then led his own groups. He continued to dominate domestic and international jazz opinion polls for the next few years. Thereafter, owing largely to the effects of drug addiction, his career became erratic, being interrupted at one point by a prison sentence in Italy for drug-related offences (1960–61). Between 1964 and 1970 he played the flugelhorn after his trumpet was stolen. In the 1970s he resumed playing the trumpet regularly, particularly in ensembles without piano or drums, and by the mid-1980s he was again much in demand for club performances and recording dates. In 1989 he was the subject of Bruce Weber's celebrated film documentary *Let's Get Lost*.

J. BRADFORD ROBINSON

Baker, Israel (*b* Chicago, 11 Feb 1921). American violinist. He studied first at the American Conservatory, Chicago, and made his début at Orchestra Hall in Chicago at the age of six. After further periods of study with Louis Persinger at the Juilliard School and with Jacques Gordon and Bronisław Huberman, he developed a considerable reputation as a chamber musician, orchestral leader and soloist. Much of Baker's career was spent in California, where he was the regular second violinist in the Heifetz-Piatigorsky Chamber Concerts and leader in the long series of recordings by Stravinsky and by Bruno Walter. As a soloist he had particular success with such works as Schoenberg's Concerto and Phantasy and Berg's Chamber Concerto; his recordings of those pieces combine stylistic acumen with the advantages of a thorough grounding in the Viennese Romantic tradition. Both as a soloist and as a member of the Pacific Art Trio, Baker performed and recorded works by Antheil, Ives, Korngold, Vernon Duke and Gail Kubik.

BERNARD JACOBSON

Baker, Dame **Janet (Abbott)** (*b* Hatfield, Yorks., 21 Aug 1933). English mezzo-soprano. She studied in London with Helene Isepp and Meriel St Clair, making her début in 1956 as Miss Róza in *The Secret* (Oxford University Opera Club). In 1959 she sang Eduige in the Handel Opera Society's *Rodelinda*; other Handel roles included Ariodante (1964) and Orlando (1966), which she sang to great acclaim at the Barber Institute, Birmingham. With the English Opera Group at Aldeburgh she sang Purcell's Dido (1962), Polly (Britten's version of *The Beggar's Opera*) and Lucretia. At Glyndebourne she appeared again as Dido (1966) and as Diana/Jupiter (*Calisto*) and Penelope (*Il ritorno d'Ulisse*). For Scottish Opera she sang Dorabella, Dido (*Les Troyens*), Octavian, the Composer and Gluck's Orpheus. At Covent Garden she made her début in 1966 as Hermia, and later sang Berlioz's Dido, Kate in *Owen Wingrave* (the role she created in its original television version in 1971), Mozart's Vitellia (see illustration) and Idamantes, Walton's Cressida and Gluck's Alcestis (1981). For the ENO she sang Poppaea,

Janet Baker as Vitellia in Mozart's 'La clemenza di Tito', Covent Garden, London, 1974

Mary Stuart, Charlotte (*Werther*) and Julius Caesar. In 1982 she retired from opera, after singing Mary Stuart at the ENO and Gluck's Orpheus at Glyndebourne. She described her final opera season and her career in *Full Circle* (London, 1982). Complete emotional identification with her roles, many of which she recorded, and a rich, expressive and flexible voice enabled her to excel in florid as well as dramatic music.

Baker divided her time between the stage and the concert platform. Perhaps her greatest single success as a song recitalist was at her début in Town Hall, New York, on 2 December 1966; on that occasion her personal magnetism and sense of communication won her an entirely new audience. In her recital programmes she penetrated far beyond the normal confines of Schubert lieder, becoming a devoted exponent of French and English song. She gave the première (1975, Minneapolis) of Dominick Argento's song cycle *From the Diary of Virginia Woolf*, which won the Pulitzer Prize. Britten wrote his dramatic cantata *Phaedra* for her in 1975 (first performance, Aldeburgh Festival, 1976). She was also a noble interpreter of Mahler (all the great song cycles) and Elgar, and a Bach singer of peculiar eloquence and technical accomplishment. Everything she sang was imbued with an innate feeling for the meaning and emotional import of the text. Many discs document fully all facets of her career. Numerous honours have been awarded her, including the Hamburg Shakespeare Prize (1971), and honorary degrees from the universities of London, Birmingham and Oxford. She was made a CBE in 1970 and a DBE in 1976.

ALAN BLYTH

Baker, Josephine (*b* St Louis, 3 June 1906; *d* Paris, 12 April 1975). American singer and actress. She became a professional street musician at the age of 13, and toured with the Dixie Steppers vaudeville troupe. Following her success as end-girl in the chorus line on tour with the musical *Shuffle Along* (1921), she was featured in its sequel, *Chocolate Dandies* (1924), and in a New York nightclub revue. In 1925 she moved to Paris to star in *La revue nègre* at the Théâtre des Champs-Elysées, in which she indulged in frenzied dancing and exaggerated mimicry; the show concluded with a nude savage dance duet. Baker then appeared in the Folies-Bergère (1925), where she made her entrance clad in three bracelets and a girdle of rhinestone-studded bananas. Her combination of the erotic and comic made her one of the most celebrated performers in France: she became a darling of society, portrayed by such artists as Picasso and Calder (see illustration), and acclaimed as an inspiration to American blacks.

In the 1930s she ran nightclubs, appeared in films, toured, and played the leading role in a production of Offenbach's *La créole* (1934). During this period her image became more cultured and she included more songs in her act; her theme song was Vincent Scotto's *J'ai deux amours*. After World War II, during which she assisted the French Resistance and entertained troops, for which

Josephine Baker: iron-wire construction by Alexander Calder, 1927–9 (Museum of Modern Art, New York)

she was made a Chevalier of the Légion d'Honneur, she devoted much of her time to civil rights struggles and her 12 adopted children of different nationalities, her 'Rainbow Tribe'. Although her popularity fluctuated after the 1940s, as a consequence of civil rights confrontations, controversial political alliances and fewer successful performances, she continued performing until four days before her death.

SAMUEL S. BRYLAWSKI

Baker, Michael Conway (*b* West Palm Beach, FL, 13 Mar 1937). Canadian composer of American birth. He completed a BMus at the University of British Columbia (1966) and an MA at Western Washington University in Bellingham (1971); he also studied privately with Lennox Berkeley in London (1974–5). Baker's compositional activities have been divided between concert and film music. His style is generally tonal, strongly grounded in lyrical melodic writing and particularly noted for its rich orchestration. These features make his music generally accessible, and have contributed to its popular success. He has received awards for his concert works as well as for his film and television scores. Baker has resided in Vancouver, British Columbia, since 1958. In 1997 he was appointed to the Order of British Columbia for his contribution to the province. A number of his works have been recorded by CBC and Summit records.

JOAN BACKUS

Baker, Peter. *See* MEYER, ERNST HERMANN.

Baker, Theodore (*b* New York, 3 June 1851; *d* Dresden, 13 Oct 1934). American music scholar and lexicographer. Trained as a young man for a business career, he decided rather on music. For a time he was an organist in Concord, Massachusetts. He went to Germany to study in 1874 and took the doctorate at Leipzig in 1882 with a dissertation based on field studies among the Seneca Indians in New York state. This, the first serious work on American Indian music, was shown to MacDowell by Henry Gilbert, and provided themes for MacDowell's Second ('Indian') Suite for orchestra. Baker returned to the USA in 1891 and became literary editor and translator for the music publishing firm of Schirmer, Inc. (1892), a post he held until his retirement in 1926, when he returned to Germany. Besides making many translations into English of books, librettos and articles (the last especially for the *Musical Quarterly*, published by Schirmer), Baker compiled a useful dictionary of musical terms (1895) and a biographical dictionary (1900), the work for which he is best known.

H. WILEY HITCHCOCK

Baker, William (*d* 1685). English violin maker. He worked in Oxford at the end of the 17th century. The baptismal record of his first child in 1672 refers to him as 'Mr Baker the fidell maker', possibly the earliest reference to the profession in England. A cello attributed to the same year is thought to be the earliest surviving English cello, and in addition a small viola still in virtually original condition, once in the possession of the Oxford Music School and bearing a facsimile label of 1685, the year of his death, tells us much about the working practices of early English violin makers. The form of the instruments reflects Brescian patterns of more than 50 years earlier, with full archings and occasionally double purfling, but is probably derived more directly from the work of the Tyrolean-born violin maker Jacob Rayman, who worked in London from 1620 to 1650. Two other Bakers are recorded as viol makers; Francis Baker was contemporary with William and worked in St Paul's Churchyard in London, and John Baker worked in Oxford in the early 18th century. Neither has been proved to be related to William, although it would seem likely.

JOHN DILWORTH

Bakfark [Bacfarc, Bakfarc, Bakfarkh, Bakffark] [Greff alias Bakfark, Greff Bakfark], **Valentin** (*b* Brassó [Kronstadt], Transylvania [now Braşov, Romania], ?1526–30; *d* Padua, 22 Aug 1576). Hungarian lutenist and composer. His biography, formerly founded on inadequate documentation and misconstruction of available facts, has been badly distorted; more recently discovered evidence and reinterpretation of received data allow a far more accurate story to be given. Bakfark's family belonged to the German minority in Transylvania; the Hungarian form 'Bálint' for his Christian name, common in modern scholarship, is not found in contemporaneous sources. From 1565 he preferred the form 'Greff alias Bakfark' for his surname, which has also undergone variation in spelling in modern scholarship beyond what occurred during his lifetime. Bakfark's father Thomas was a lutenist, and so were his brother Michael (probably) and Michael's son Johannes (two dances ed. in *Valentini Bakfark opera omnia*, iii, appx 1–2). Valentin Bakfark's date of birth was formerly believed to be 1507 (or 1506/7) on the evidence of his epitaph in S Lorenzo, Padua, according to which he died in 1576 at the age of 69. Other documents make it probable that he was born between 1526 and 1530.

Information from Bakfark himself, presented in a deed of János Zsigmond, Prince of Transylvania, in 1570, asserts that as a young boy he showed musical talent and was taught as a music apprentice at the court of the Hungarian King János I Szapolyai (ruled 1526–40). A Kronstadt document of 1536 tells of a lutenist being sent with his son (probably Bakfark and his father) to the king. According to the 1570 deed, Bakfark's master was a learned court musician of János I. Although the exact identity of this person is obscure, some characteristics of Bakfark's works suggest an Italian teacher. In the preface to his Kraków publication of 1565 Bakfark referred to the excellent musicians of Pope Leo X whom he followed in his youth; this is probably an allusion to Mathias Marigliano of Milan (formerly *musico segreto* to Leo X), in Hungarian royal service between around 1538 and 1544.

Although it has been assumed that after the death of János I (22 July 1540) Bakfark left Hungary and went to France or possibly to Italy, the deed of 1570 states that from 1540 Bakfark 'served laudably many years' the king's widow, Queen Isabella Jagiełło (who resided in

Transylvania from 1542). Bakfark left her court in 1549 and went to Poland to seek employment. In Kraków on 14 May he was rewarded for his playing by King Zygmunt II August (brother of the widowed queen of Hungary), and from 8 June 1549 he appeared among the Polish court musicians. On 15 June he was officially admitted as an instrumentalist ('fistulator'). Before the summer of 1551 he married Katharina Narbutowna, a widow from Vilna (now Vilnius, Lithuania).

In autumn 1551 the king was visited in Vilna by his uncle Albrecht of Brandenburg, Duke of Prussia, and it was probably on this occasion that Bakfark became acquainted with the duke, an influential patron until at least 1562 or 1563. Bakfark appeared later in Königsberg (now Kaliningrad), Albrecht's city of residence, and also met the duke during his visits to Poland. He did not, however, act as an agent of the duke, as has been assumed owing to a misunderstanding of a letter from Bakfark to Albrecht of 1552. With Albrecht's support, Bakfark left the Polish court in February 1552 and travelled to Italy by way of Germany. In Nuremberg he (probably by chance) encountered Philipp Melanchthon, who recommended him to the Fugger family in Augsburg. However, military actions in southern Germany forced him to return to Poland. In September, after some months at the court, he left Zygmunt August's retinue in Königsberg and went to France (perhaps through Italy).

While in Lyons Bakfark published his first lutebook, which he dedicated on 23 January 1553 to Cardinal François Tournon, Archbishop of Lyons. According to a letter from Duke Albrecht (1554), Bakfark appeared at the French court – he probably accompanied Cardinal Tournon there in May – and also in Rome at the papal court. He returned to Königsberg about spring 1554 and rejoined the Polish king's court in May. Royal accounts and other documents show that from this time he stayed with the court continuously, leaving it only for short periods. (His frequent travels in Poland and Lithuania have been misunderstood: they were not separate journeys of his own, but part of the court itinerary.) Soon after his return in 1554, on Albrecht's recommendation, the king increased Bakfark's salary, making him one of the best-paid musicians of the Polish court; he continually received rises as well as gifts.

Within ten years of service Bakfark had amassed considerable wealth: he bought a house in Vilna in 1559; in the same year Duke Albrecht intervened on his behalf in a letter to Zygmunt August, which mentions some property given to Bakfark by the king; in a document of 1566 Bakfark referred to his estates (*bona*) in Vilna and its environs. His social status, fame and popularity increased immensely during his Polish years. While in Poland in 1552–6, János Zsigmond, son of Bakfark's Hungarian royal patrons, ennobled Bakfark and presumably his brother Michael.

Bakfark's actual service in Poland lasted until May or June 1565. About this time he travelled to Vienna to request a privilege (obtained on 16 July) for his second lutebook from the Emperor Maximilian II. Bakfark then returned to Kraków to take part in the process of publication. Although he dedicated the work to Zygmunt August on 15 October, he did not present it to the king in person. He remained in Kraków, but by the end of 1565 he had decided to transfer into Maximilian's service. His motive for the sudden change is not known (there is no evidence for his political activity, as has been suggested). He left Poland in June 1566. In the meantime his possessions had been plundered by Polish soldiers, possibly in revenge by the king for his disloyalty.

On 1 July Bakfark joined Maximilian's court, where his position was similar to the one he had left behind. He received the second highest (briefly the highest) salary among the musicians, comparable to that he had enjoyed in Poland. During his service at the Habsburg court he followed the emperor in his retinue to Hungary and Bohemia. His second marriage, to Juliana Taxear of Innsbruck, occurred most likely in 1567 or 1568. In 1569 Bakfark was accused of involvement in a rebellion against the emperor. After some hesitation he returned to Maxmilian in early October. He was arrested, but seems to have been released very quickly, since he left for Padua early in December.

Immediately thereafter, Bakfark entered into the service of János Zsigmond Szapolyai, Prince of Transylvania. In 1570 the prince rewarded the lutenist with the estate of a whole village close to his own residence in Gyulafehérvár (now Alba Iulia, Romania). In late summer or autumn 1571, some months after the death of the prince, Bakfark left Transylvania for Padua where his family had remained. He settled there close to the university and probably had pupils among the foreign students; his contact with them is well documented. Bakfark, his wife and their children (one daughter and three sons) all died during the plague of 1576. He was buried in S Lorenzo, Padua, on 23 August.

The Bakfarks' neighbour and executor of Bakfark's wife's will, the famous lute maker Wendelin Tieffenbrucker, compiled an inventory of their goods, which proves that Bakfark did not destroy his manuscripts as legend had it. The inventory records, besides printed editions of Josquin, Palestrina and Pietro Joanelli Bakfark's own Kraków lutebook and three tablatures in folio, two of them described as manuscripts. In 1578 Tieffenbrucker, together with the 'natio germanica' at the university, erected a memorial for Bakfark in S Lorenzo.

Bakfark's fame caused his name and Polish sobriquet 'Węgrzynek' ('the little Hungarian') to become a part of Polish speech. The Polish proverb concerning those who 'pick up the lute after [or in the presence of] Bakfark' first appeared in print in 1566. Bakfark's name was mentioned in Polish literature into the late 17th century, becoming a figure of legend. He was celebrated by poets, among them the famous Jan Kochanowsky (1530–84). In the next century the poet Andrzej Morsztyn wrote that he 'never wanted to be Bakfark or [Antoine] Gallot'. Foreigners also praised Bakfark: Melanchthon called him an enchanting musician (1552), and the papal nuncio found him excellent (1560). The Hungarian Bishop A. Dudith, sent by Maximilian II as ambassador to Poland, characterized him as a marvellous and unique master of his art (1566), which mirrors Duke Albrecht's statement in his letter to Zygmunt Augustus of 1559: 'one rarely finds anyone comparable in his art, and hardly a king has such a musician'. The Paduan lutenist Giulio Cesare Barbetta commemorated Bakfark in his 1582 lutebook with a *Passo'e mezo … detto il bachffart*, based on a popular German dance-tune (ed. in *Valentini Bakfark opera omnia*, iii, appx 3).

Bakfark's extant works, all for solo lute, date from his Polish years. More than three-quarters are strictly faithful

intabulations of motets, chansons and madrigals by Arcadelt, Gombert, Clemens non Papa, Josquin and others. Bakfark's nine fantasias are composed in a dense three- or four-part contrapuntal texture with consistent use of points of imitation. They show the influence of the vocal works of Gombert, Clemens and Willaert, and probably more immediately of the instrumental ensemble ricercares that appeared in Italy during the 1530s and 40s. The 'recercati' of Bakfark's 1553 Lyons publication are among the first such compositions for the lute. They are a clear departure from the less contrapuntal and formally looser fantasias of Bakfark's predecessors Francesco da Milano, Alberto da Ripa, Luis de Narváez and others. All Bakfark's compositions are ornamented with remarkable taste and variety. The frequent use of stereotyped formulae, typical of many contemporaneous lutenists, is absent from his output (with the exception of cadences). Bakfark's works are notably difficult; high left-hand positions and barré fingerings occur frequently.

WORKS
all for lute

Edition: *Valentini Bakfark opera omnia*, ed. I. Homolya and D. Benkő (Budapest, 1976–82) [HB]

Intabulatura Valentini Bacfarc transilvani coronensis liber primus (Lyons, 1553); ed. HB, i [1553]

PETER KIRÁLY

Bakhor, Firuz (*b* Dushanbe, 19 Nov 1942). Tajik composer. Born into a family with a strong operatic tradition, he received his first training as a pianist, firstly with Rafael′ Danilovich Ayrapetyants (1959–63) and then at the Gnesin Institute in Moscow (1963–6) where he started to show an interest in composition. He studied privately with Khagagortian and Ter-Osipov before transferring to the composition department of the Tashkent Conservatory in 1966. He worked in the Mirzo Tursun-zade Institute of Art (1971–6 and 1993–6) before settling in Germany. Although he has experimented with serial, aleatory and sonoristic techniques, these have always been subordinated to the national traditions which lie at the roots of his work. The six vocal and instrumental *shashmakom* which form the basis of Tajik folk music all constitute the main building blocks of Bakhor's compositions; they can be recognized not only by their modal properties, melodic contours and rhythmic or metrical characteristics of the works, but also by their instrumentation, methods of development, architecture and artistic imagery.

Bäkker, Dietrich. *See* BECKER, DIETRICH.

Baklanov [Bakkis], **Georgy (Andreyevich)** (*b* Riga, 23 Dec 1880/4 Jan 1881; *d* Basle, 6 Dec 1938). Russian baritone of Latvian birth. He studied with Pets in Kiev, Pryanishnikov in St Petersburg and Vanza in Milan. He made his début (1903, Kiev) as Rubinstein's Demon, sang with the Zimin Private Opera in Moscow and was engaged in 1905 by the Bol′shoy, creating the Baron in Rachmaninoff's *The Miserly Knight* (1906) and remaining until 1909, when he sang Barnaba (*La Gioconda*) at the inaugural performance of the Boston Opera House. At Covent Garden he appeared as Rigoletto (début, 1910), Scarpia and Amonasro, repeating the first two roles at the Komische Oper, Berlin in 1911. He sang in Boston (1915–

18), then with Chicago Opera (1917–26), and in New York, where he later became a mainstay of the Russian Opera Company. Baklanov's repertory included Yevgeny Onegin, Hamlet, Boris, Méphistophélès (*Faust*), the Father (*Louise*), Golaud (*Pelléas et Mélisande*), Telramund and Wotan. He was greatly admired for his dramatic talents, and his voice was rich and vibrant, particularly in the middle and upper registers. Between 1910 and 1930 he made a number of recordings. Further notes on his career can be found in M. Scott: *The Record of Singing*, ii (London, 1979), 12–14.

HAROLD BARNES, KATHERINE K. PRESTON

Bakshi, Aleksandr Moyseyevich (*b* Sukhumi, 12 March 1951). Russian composer. He graduated in 1977 from the Musical Pedagogical Institute of Rostov (now the Rachmaninoff State Conservatory), and later moved to Moscow. He became a member of the Union of Composers in 1983, and was a laureate of the State Prize of Russia in 1994.

Bakshi has been concerned with the concept of synthesis of music and theatre since he wrote *Drama* for piano, violin and cello as a student. Among his works there are almost no purely orchestral or choral pieces. They do not usually involve collective music-making in the usual sense. His attitude to musical material could be likened to that of a theatre producer; he lines up his sonic mise en scènes, and interprets each instrumental or vocal line as an independent musical or stage role. Thus, his poem-play *Ya – poėt . . .* ('I am a poet . . .'), set to verse by Aleksandr Blok and Vladimir Mayakovsky, is a tragifarce for 13 people: two singers and 11 instrumentalists.

Sidur-misteriya (The Sidur-Mystery), inspired by themes drawn from the sculptures of Vadim Sidur (1991) and *Igrï v installyatsiyakh* (Games in Installations) (1993) – both for voice and percussion – were the first works performed in Russia which were wholly built on the principles of instrumental theatre. Collaboration with performers has acquired a particular importance for the composer; a regular participant in Bakshi's instrumental theatre is the soprano L. Bakshi. Besides the works already mentioned, the play in one act *23/6* (1989), and *Prevrashcheniye* (Metamorphosis) for voice, an ensemble of exotic instruments, string trio, and piano (1995) were the result of collaborations with M. Pekarsky and his ensemble. The Pekarsky Ensemble has taken part in productions of *Rokovïye yaytsa* (The Fateful Eggs) and *Kaligula* (Caligula), for which Bakshi wrote incidental music; both were staged at the Yermolova Theatre. Bakshi wrote *Zima v Moskve. Gololyod* (Winter in Moscow. Icy Pavements) (1994), and *Stsena dlya Tat'yanï Gridenko i skripki* (Scene for Tat'yana Gridenko and a Violin) (1995) for the Academy of Ancient Music Ensemble, directed by Gridenko.

Starting from *Numer v gostinitse goroda NN* (A Room in a Hotel in the Town of NN), Bakshi has worked in collaboration exclusively with the producer Valery Fokin. In particular, works such as *Poslednyaya noch' poslednego tsarya* (The Last Night of the Last Tsar), and *Karamazovï i ad* (The Karamazovs and Hell) are based on the interaction of instrumental theatre and realistic psychological drama. *Installyatsii* (Installations) by Bakshi and Fokin was performed with great success at international festivals in France, Germany, Great Britain, Italy and the USA.

ALLA VLADIMIROVNA GRIGOR'YEVA

Bakuradze, Teimuraz (*b* Kutaisi, 17 April 1943). Georgian composer. In 1967 Bakuradze completed his musical education at the Tbilisi State Conservatory studying composition with Andria Balanchivadze. He lives and works in Tbilisi, composing on a freelance basis. Because of the originality and independence of his approach Bakuradze occupies a special place in Georgian music: having rejected prevailing norms and official aesthetic criteria from the start, he was the first Georgian composer to be interested in experimental instrumental theatre, 'happenings' and also the radical reinterpretation of traditional genres. His style is marked by the use of an array of techniques ranging from atonality and serialism to collage, minimalism, *musique concrète* along with aleatory and sonoristic methods. Most of his pieces contain extra-musical elements: some scores bear witness to his interest in mystical philosophy and Christian symbolism, which is organically combined with provocative wit and a touch of surrealism. In his first significant compositions (dating from the early 1970s), such as the String Quartet and *Praeludium* for soloists, orchestra and tape, instrumentalists are faced with problems concerning freely dramatic characterization, while he seeks to reorientate the role of the listener who is obliged to participate in the performance process. By means of spatial arrangement of musicians, he has achieved acoustical effects which belie minimum numbers of performers. Later works – such as the *Vespers* and *Two Books for Quintet* – are characterized by further stylistic developments which lend greater depth and conceptuality, and incorporate static and meditative elements in addition to

tonal episodes of a nostalgic nature. This minimalist, though highly expressive, music is defined by particular temporal relations, and is repetitive in not only thematic, but also textural, timbral, dynamic and rhythmical terms. The repeated elements are always of the utmost simplicity; the task of this sound-meditation is to transform the psyche of the listener, to propel him towards a state of 'abstract consciousness'. Such penetration into the unconscious is of particular significance to Bakuradze, who is one of the most radical representatives of post-avant-garde music and the leader of the young generation of Georgian composers.

LEAH DOLIDZE

Bālābān [balaman, yasti balaman, duduk]. (1) Cylindrical oboe of the Caucasus (particularly Azerbaijan), northern Iran and north-east Iraq. In northern Iran the *bālābān* is also known by its older Turkish name *nerme ney* or *mey*. It has a cylindrical wooden pipe, a broad reed and eight finger-holes, giving the scale E♭ (with an A♮). The warm, full tone of the *bālābān* is often used with the *choghur* (lute) and *qāvāl* (frame drum) to accompany the singing of an *'āshiq* (poet-singer); it is also played solo, and in pairs with one instrument providing a drone.

The Azerbaijani *balaban* is 28 to 31 cm long and made of mulberry or apricot wood. The reed is 9 to 11 cm long and is inserted into the globular head. The older *balaban* had five to seven finger-holes, while contemporary instruments have eight finger-holes and one thumb-hole. Sometimes an additional hole is made in the lower end of the tube at the back.

The *balaban* produces a diatonic scale with a range of a 9th or 11th. Chromatic notes are produced by partly covering the finger-holes. The *balaban* has a soft, velvety sound rich in dynamic nuances. Primarily an ensemble instrument, it is often played in duet (*see* IRAN, §III, 3); such instruments as the *nagara* (drum) or *daf* (frame drum) are played with the *balaban* duet for songs, dances and purely instrumental pieces. A *balaban* player also accompanies an *ashug* (poet-singer). The *balaban* is used in folk orchestras and played in larger professional or amateur ensembles belonging to urban and rural clubs.

The *bālābān* or *qarnāta* of the Turkmen and Kurds of north-east Iraq is made from a straight tube about 30 cm long, with seven finger-holes and one thumb-hole. The broad rectangular double reed (*pīk*, *qamīsh*) is 10 cm long and fitted with ring-shaped regulators. The instrument sometimes replaces the *zurna* at festivals, accompanied by a *ṭabl* (double-headed cylindrical drum). It accompanies the songs of the Turkmen and Kurds in the towns of Arbīl, Sulaymānīyah, Kirkīk and Tuz Khurmātū, either alone or with a single-headed drum. It is similar to the *duduk* of Armenia and Georgia.

(2) The *balaban* of the Uzbek and Tajik peoples of Central Asia is a clarinet. The instrument is called *balaman* by the neighbouring Qārāqalpaks and consists of a narrow cylindrical wooden bore, about 30 cm long, with a single reed inserted into the head. It has seven finger-holes and one thumb-hole.

Balachander, S. (*b* Madras [Chennai], Tamil Nadu, 18 Jan 1927; *d* Bhilai, Madhya Pradesh, 13 April 1990). South Indian *vīṇā* player. S. Balachander was one of the greatest and most influential Karnatak musicians of the 20th century. From the age of five he showed a great interest in music and at six he appeared on the concert platform for the first time, as a *kañjīrā* accompanist to vocalists. He also learnt other instruments including the *tablā*, *mṛdaṅgam* and *sitār*. He was a concert artist on the *sitār* between 12 and 16 years of age. From the age of 15 for three years he was a staff artist at the Madras station of All India Radio, playing various instruments, as a soloist, accompanist and as part of an ensemble.

He took up the *vīṇā* at age 16 and, self-taught, evolved a highly influential and original style which owed a great deal to the techniques of vocal music. This style is now known as the Balachander *bāni*. The features of the style are largely derived from the technique of deflecting the string across the fret to produce various phrases (*saṅgatis*) with a single pluck.

S. Balachander is credited with popularizing the *vīṇā* in the concert hall (previously it had been thought of as a chamber instrument) and he contributed to a growing awareness of Karnatak music with his numerous tours in India and abroad. His extensive discography includes recordings in all the 72 *melakartas*. He was the recipient of numerous honours and awards, including the Padma Bhushan.

SHANTHA BALACHANDER and S.B.S. RAMAN

Balada, Leonardo (*b* Barcelona, 22 Sept 1933). American composer of Spanish birth. After studying at the Barcelona conservatory, he won a scholarship (1956) to study at the New York College of Music; he graduated from the Juilliard School in 1960. His composition teachers included Aaron Copland, Alexandre Tansman and Vincent Persichetti. He taught at the United Nations International School (1963–70) and at Carnegie-Mellon University, where he became a professor in 1975.

Many of Balada's melodies have a Spanish flavour; although his works are primarily based on triadic harmonies, they are freely coloured by tone clusters, dense overlapping textures and other constructionist features. From around 1966 his experimentation with these techniques dominated his music, almost to the exclusion of melody (*Cuatris*, 1969; *Cumbres*, 1971). The two

orchestral *Homages* (1975), to Casals and Sarasate, marked a return to a nationalistic melodic style. Bright colours and aggressive rhythms are characteristic. Whether scored for the piano, tuned percussion, pizzicato strings or staccato brass, hard-edged tones are typical. In the early stage works (*Maria Sabina*, 1969; *No-Res*, 1974) human speech is also treated percussively. Later operatic ventures, beginning with *Hangman! Hangman!* (1982), a satire set in America's Old West, make liberal use of folk melodies. A more traditionally operatic vocal style is used in *Zapata* (1982–4) and especially in *Cristóbal Colón* (1989), composed for the 500th anniversary of Columbus's voyage to America, which also incorporates folk music and dissonant orchestral colours. Balada has cited the influence of Salvador Dali, with whom he collaborated; his presentation of familiar melodies in distorted surroundings often recalls Ives.

DAVID WRIGHT

Balaguer, Juan de Sessé y. *See* SESSÉ Y BALAGUER, JUAN DE.

Balakauskas, Osvaldas (*b* Miliūnai, Ukmerge district, Lithuania). Lithuanian composer. In 1961 he concluded his studies at the Vilnius Pedagogic Institute, and then went to study at the Kiev Conservatory with Lyatoshyns′ky (1964–8) and Skoryk (1969). He then worked as an editor with the music publishers Muzychna Ukraïna (1968–72), and was adviser to the Lithuanian Composers' Union (1972–85). In 1985 he was appointed to teach at the Lithuanian Music Academy (chair in composition 1988, full professor 1995). From 1992 to 1994 Balakauskas served as Lithuania's ambassador to France. He received the Lithuanian National Prize in 1996.

Since 1965 Balakauskas has used a serial technique of his own which is distinct from Schoenberg's. His series does not necessarily consist of 12 tones, but of 12 (or fewer) melodic or harmonic sequences, sometimes complete phrases, which are treated in the same way as the separate tones in serialism. The composer's overall aim is to control tensions and avoid extreme dissonances. As a fundamental idea this procedure could be described as a serialism of consonances. Many of his compositions are based on various diatonic systems with eight or more tones, each of which is distinguished by its own logic, colour, and functional possibilities. He set out the theory behind this system in his study *Dodekatonik* (1977). The metre of his works is influenced by jazz and the variable metres of Blacher.

Another typical feature of Balakauskas's his work is the combination of elements usually remote from one other, for instance his 'harmonization' of folk tunes with clusters (*Studi sonori*), his use of classical cadences as a serial element (in the second String Quartet), the combination of the medieval organum with jazz elements on a serial basis (*Erasmus*), and so on. However, he does not use these sources in a postmodern polystylistic sense, but brings them together to create a synthesis which gives rise to a style that is both integrated and individual.

WORKS

Stage: Macbeth (ballet, J. Smoriginas, after W. Shakespeare), 1988

Orch: Šokių siuita [Dance Suite], str, 1964; Concertino, pf, str, 1966; Ludus modorum, vc, chbr orch, 1972; Sym. no.1, 1973; Kalnų sonata [Mountain Sonata], cl, orch, 1975; . . . ad astra, 1976; Sym. no.2, 1979; Passio strumentale, str qt, orch, 1980; Conc., ob, hpd, str, 1981; Sinfonia concertante, vn, pf, orch, 1982; Spengla-Ūla, 16 str; Das bachjahr, fl, hpd, str, 1985; Opera strumentale, 1987; Sym. no.3 'Ostrobotnia', str, 1989; Polilogas, conc., a sax, str, 1991; Meridionale, Hommage à Witold Lutosławski, chbr orch, 1994; Concerto RK, vn, chbr orch, 1997; Sym. no.4, 1998

Vocal: Prie mėlynos gėlės [To the Blue Flowers] (L. Gutkauskas), cycle, chorus, fl, ob, vn, va, vc, pf, 1976; Daugybė pravirų šulinių [Many Half-Open Springs] (Gutkauskas), cycle, S, trbn/vc, pf, 1979; Dada-Conc. RŪTA GAIDAMAVIČIŪTĖ

Balakirev, Mily Alekseyevich (*b* Nizhniy Novgorod, 21 Dec 1836/2 Jan 1837; *d* St Petersburg, 16/29 May 1910). Russian composer, conductor, teacher and pianist.

1. Life: up to 1866. 2. 1866–72. 3. 1872–1910. 4. Works and influence.

1. LIFE: UP TO 1866. Balakirev was the son of a minor government official. His musical education began with his mother's piano tuition and proceeded to a course of summer lessons in Moscow with Aleksandr Dubuque. At that time the leading musical figure and patron in Nizhniy Novgorod (and author of books on Mozart and Beethoven) was Aleksandr Ulïbïshev, and it was through his household pianist and musical organizer Karl Eisrich that Balakirev's induction to music, embracing the crucial discoveries of Chopin and Glinka, continued. Eisrich and Ulïbïshev provided Balakirev with further opportunities to play, read and listen to music, and to rehearse other musicians in orchestral and choral works, including, when he was 14, Mozart's Requiem. His first surviving compositions date from the age of 15. Balakirev's formal education began at the Gymnasium in Nizhniy Novgorod and continued after his mother's death in 1847 at the Aleksandrovsky Institute there. In 1853 he became an unmatriculated student of mathematics at the University of Kazan′, still spending holidays in Nizhniy Novgorod or on Ulïbïshev's estate. While in Kazan′ he met the composer-pianist Ivan Laskovsky and the pianist Antoni Kątski, from whom he thought of taking piano lessons in St Petersburg.

Through Ulïbïshev, Balakirev met Glinka in St Petersburg in the late autumn of 1855. This acquaintance was marked by discussions, by Glinka handing on several Spanish musical themes, and entrusting the musical education of his four-year-old niece to Balakirev. Concert appearances as pianist were made at Kronstadt (December 1855) and St Petersburg (on 12/24 February 1856 at a university concert, Balakirev playing the solo part in the first movement of his projected Piano Concerto; and on 22 March/3 April in a concert of his piano and chamber compositions). Also in 1856 Balakirev made the acquaintance of other important figures, including Cui, the Stasov brothers, Serov, Aleksey L′vov, Dargomïzhsky, Prince Vladimir Odoyevsky and Count Michał Wielhorski [Viyel′gorsky]. In February 1858 he played the solo part in the 'Emperor' Concerto before the Tsar. His first compositions to be published (12 songs) appeared in 1858–9. The deaths of Glinka (in 1857) and Ulïbïshev (in 1858) deprived Balakirev of influential supporters, but in the meantime he was forming a circle of his own, which included Vladimir Stasov and the young composers much of whose early work he was to superintend. He met Musorgsky in 1858, Rimsky-Korsakov in November 1861 and Borodin in November or December 1862; for these three musical amateurs Balakirev was an instructor of magnetic personality capable of inspiring them to improbable heights of creativity. Of projected music for *Korol′ Lir* ('King Lear'), only the Overture was completed in 1859 and performed on 15/27 November 1859; the other incidental music was finished in 1861, revised from 1902 and the whole work published only thereafter.

The early part of the reign of Aleksandr II (1855–81), especially the first half of the 1860s, saw a new political climate favourable to reform and innovation. In music, the principal developments were the establishment of the Russian Musical Society in 1859 and the opening of its conservatories in St Petersburg (1862) and Moscow (1866). While the new institutions had powerful champions, especially among the social élite, they also found eloquent detractors fearful of the consequences of introducing to Russia alien (i.e. German) musical precepts and teachers. Balakirev's closest contacts (and sympathies) were with the latter group, and he frequently had derogatory comments to make about German musical 'routine', which, he considered, circumscribed a composer's originality. (Ridenour gives a good outline of how matters of personal rivalry, social and political outlook and musical taste were interwoven in the relationships of Russia's most prominent musicians in the 1860s.) Balakirev's piecemeal musical education made him an improbable candidate to play a part in the new institutions, though an invitation to join the staff of the Moscow Conservatory was extended to him twice during the 1870s. The anti-Conservatory group found a focus in the opening (on 18/30 March 1862) of the Free School of Music, whose tasks included providing musical education free of charge (that is the meaning of 'free' in the title, contrasted with the expensiveness of the Conservatory's provision), with an emphasis on singing and in particular on choral singing to meet the demands of the Orthodox Church. The initial idea for the School was Balakirev's, though it made sense for Gavriil Lomakin, an esteemed choirmaster, to be appointed director rather than Balaki-

1. *Mily Alekseyevich Balakirev*

rev. While the director conducted the School's choral concerts, his assistant, Balakirev, directed the orchestral ones, and his programmes favoured music by Russian composers and by Western composers of more advanced musical idiom, thereby forming a contrast with the more staid, 'classical' programmes of the Russian Musical Society concerts. On Lomakin's resignation Balakirev was appointed director on 28 January/9 February 1868, retaining the post until the spring of 1874, though latterly only nominally.

2. 1866–72. In 1866 Glinka's sister Lyudmila Shestakova asked Balakirev to take charge of performances of her brother's operas in Prague; devoted as he was to Glinka, Balakirev accepted. After delays caused by the Austro-Prussian War, he conducted *Ruslan and Lyudmila* there on 4/16, 5/17 and 7/19 February 1867 and *A Life for the Tsar* on 10/22 February. Balakirev was never easy to get on with if disagreement was involved, and this visit gave rise to some antagonism, with bad relations between Balakirev and Smetana; it seems likely that competing ambitions and some national rivalry came into play. On 12/24 May 1867 Balakirev conducted a concert for visitors attending a Slav conference, for which Stasov in his review coined the term *moguchaya kuchka*('mighty handful'). He was referring to the group of Russian composers, belonging to several generations and schools, whose works were now available for performance; it was only subsequently that the phrase was applied to the group more helpfully known as 'the Balakirev circle' (the composers Balakirev, Musorgsky, Rimsky-Korsakov and Borodin plus Cui – more as critic than as composer – and Stasov). The second expression is more helpful in that it describes with greater precision a group of friends who met regularly, with Balakirev as the presiding musician, to listen, play and speak about music, its objectives and methods, and in whose midst were forged ideas which exerted some influence on the course of Russian musical history. In the summer of 1867 Balakirev was also appointed conductor of the Russian Musical Society concerts in St Petersburg. This enabled him to present to the public even more of the music he admired, and he was responsible for inviting Berlioz to conduct a number of the concerts. For these two seasons (1867–8 and 1868–9) Balakirev was at the pinnacle of his career, having won recognition as Russia's leading conductor in charge of the repertory and performing standard of the capital city's two principal series of orchestral concerts. His dismissal from the Russian Musical Society conductorship in the spring of 1869 was the result of his determination to perform the modern and Russian music he liked, rather than offer a wider range of repertory with broader appeal. The arts of diplomacy and consensus passed Balakirev by.

The 1860s were a time of heroic activity, as conductor, teacher and composer. Balakirev encouraged to completion the first symphonies of Rimsky-Korsakov and Borodin, whose premières he conducted on 19/31 December 1865 and 4/16 January 1869 respectively. He also conducted for the first time Musorgsky's *The Destruction of Sennacherib* (6/18 March 1867) and the Polonaise from his *Boris Godunov* (3/15 April 1872). 1866 saw the publication of his *Sbornik russkikh narodnïkh pesen* ('Collection of Russian Folksongs'), which showed a new level of insight into the rhythm, harmony and types of song, even if the choice of key signatures and the elaborate piano textures disclosed Balakirev as the arranger. Caucasian holidays in 1862, 1863 and 1868 opened Balakirev's ears to the folk music of that region, which was to be an important source for his own compositions (not least *Islamey*, completed in 1869, second version 1902; fig.2) as well as deepening his love for the poetry and prose of Mikhail Lermontov, much of which also has a Caucasian background. The musical idiom known as 'oriental' and found, for example, in the 'oriental fantasy' *Islamey* looms large in Balakirev's music, even though it first surfaced before his 1862 holiday. Nikolay Rubinstein, the work's dedicatee, gave the first performance in St Petersburg on 30 November/12 December 1869. This dedication and its acceptance is one sign that the Moscow Rubinstein's Russian aspirations were stronger than those of his brother in St Petersburg. Tchaikovsky too settled in Moscow, and for a time his music had ideas in common with that of Balakirev. Thus, the Fantasy Overture *Romeo and Juliet* was composed with the same kind of prompting and intervention which Musorgsky, Rimsky-Korsakov and Borodin had experienced. Tchaikovsky was a graduate of the St Petersburg Conservatory and neither a dilettante nor an autodidact, and was therefore unlikely to tolerate much of Balakirev's dictatorship in musical matters. Nonetheless, Tchaikovsky dedicated to Balakirev *Fatum* ('Fate', of which Balakirev conducted the St Petersburg première on 17/29 March 1869), *Romeo and Juliet* and *Manfred*; the last-named project originated with a proposal from Stasov to Balakirev in the 1860s, which Balakirev first passed to Berlioz; the idea was eventually given to Tchaikovsky in a letter of 28 September/10 October 1882, followed in further correspondence by Stasov's programme, Balakirev's recommendations for keys, and a list of compositions (by Chopin, Berlioz, Liszt and Tchaikovsky himself) which Balakirev considered might have some bearing on the new work.

On 3/15 June 1869 Balakirev's father died in Klin, the town where he found his last job, bringing his son responsibility for winding up the estate and for the welfare of his younger sisters.

In the early 1870s, aware that the musical development of his pupils Musorgsky, Rimsky-Korsakov and Borodin was leading them away from him (not least in their interest in composing operas, an interest fostered by Dargomïzhsky and Cui), having lost ground as a conductor, forever struggling to make ends meet both for the Free School and himself (a good part of his life was spent giving piano lessons), and drained by his earlier efforts, Balakirev suffered some kind of breakdown. The earliest hint of the crisis may be traced to early 1871, when rumours about his mental state circulated. He sought consolation in rigorous observance of the prescriptions of the Orthodox Church (he dated his conversion to the anniversary of his mother's death, 9/21 March 1871) and gradually withdrew from the world of music and his friends there. He found clerical employment with a railway company, starting work on 6/18 July 1872.

3. 1872–1910. Balakirev later made a progressive return to musical activity, but never with the intensity of former years, and now with the narrower horizons which his changed religious and political outlook brought; if he had previously been a free thinker and radical, he was now a dogmatic Christian and reactionary. In 1876 Shestakova helped to draw him back into editing Glinka's works for

2. *Autograph manuscript of the opening of the second version of Balakirev's oriental fantasy for piano 'Islamey', composed 1902 (RUS-Psc)*

publication, and the score of *Ruslan and Lyudmila* was issued by Jürgenson on 10/22 November 1878; *A Life for the Tsar* came out in 1881, followed by other works. It was also in 1876 that Balakirev returned to the symphonic poem *Tamara*, started in 1867, all but finished in 1879, and actually completed on 14/26 September 1882; it was performed, with the composer conducting, on 7/19 March 1883. In 1881, after turning down the offer of the directorship of the Moscow Conservatory with the conductorship of the Moscow Russian Musical Society concerts (out of apprehension about the administrative workload and wiser after previous experience of the society), Balakirev accepted the invitation to resume the directorship of the Free School of Music. On 3/15 February 1883 he took up the appointment of musical director at the Court Kapella, a post in which his assistant was Rimsky-Korsakov. The two men worked in tandem, some disagreements notwithstanding, until 1894, thus serving for almost the whole of the reign of Aleksandr III. The Kapella's men and boys sang at court church services and on some other occasions. The institution furnished boys with a general and musical education and played a role in editing and publishing music for use in the worship of the Russian Orthodox Church. Caring for his charges' welfare was congenial to Balakirev, though the small number of church music compositions which he produced during his time at the Kapella have not generally been well thought of; however the work was well rewarded financially.

Rather than Balakirev, it was the Maecenas with the deep pocket, M.P. Belyayev [Belaïeff], who attracted the notice of the young composers of the 1880s and 90s. Musical gatherings *chez* Balakirev on Tuesdays were no match for Belyayev's convivial Fridays. Belyayev's musical advisers were from the St Petersburg Conservatory and included Rimsky-Korsakov and later Glazunov and Lyadov. Commissions more or less guaranteeing performance and publication were more appealing than anything the Free School could offer. In spite of his own problems in negotiating acceptable arrangements for his own compositions with music publishers, Balakirev did not use the services which Belyayev provided in that line (except when the latter acquired by purchase the rights in Balakirev's 1866 folksong collection after the death of the

original publisher). One of several reasons for the composer's antipathy was his idea that Belyayev's generosity gave artificial support to compositions which were unworthy, and thus contributed to lowering the quality of Russian music. It was only in 1899 that Balakirev encountered the music publisher J.H. Zimmermann whose firm was based in St Petersburg, and the latter's persistence yielded him the scores of Balakirev's symphonies (among other works), which he published in 1899 and 1908 respectively.

With the exception of Sergey Lyapunov, Balakirev was neglected by the younger generation of composers. Lyapunov came to him as a Moscow Conservatory graduate in 1884, and remained his faithful disciple and champion until his own death in 1924. Also from 1884 Balakirev enjoyed the friendship of Aleksandr Olenin, who composed, took an interest in folksong and accompanied his sister, the singer Mariya Olenina d'Alheim. Balakirev found stimulation and encouragement in a group gathered around the distinguished philologist, ethnographer and historian A.N. Pïpin and his family. Their musical evenings began in the mid-1880s, and the participants were known as the 'Weimar circle' after an evening when Balakirev had arranged a private concert in memory of Liszt in 1886. There Balakirev was once more the undisputed musical leader.

It is emblematic of Balakirev's outlook that he should have contributed to commemorating the work of the two Slav composers Glinka and Chopin. He raised money to erect a monument to the former in his home town of Smolensk, something which was achieved in 1885. He also worked towards marking Chopin's birthplace at Żelazowa Wola, which witnessed Balakirev's final appearance as a pianist, playing Chopin's B flat minor Sonata on 5/17 October 1894. In 1897 he became a member of the Folksong Commission of the Imperial Russian Geographical Society, and on their behalf harmonized 30 songs taken from the collection made in 1886 by G.O. Dütsch [Dyutsh] and F.M. Istomin in the Arkhangel and Olonets governments. These arrangements were published in about 1899, anticipated by Balakirev's own piano duet versions of them in 1898.

In his final period Balakirev was in the odd position of attending performances of compositions begun long ago but only recently completed. One instance was the First Symphony, which he started to write in 1864 and finished only in 1897; the composer directed the first performance on 11/23 April 1898, his last appearance as a conductor. The Second Symphony was largely composed in the 1900s, though it made use of some earlier material, and first performed on 10/23 April 1909, Lyapunov conducting. It is often the case that musical ideas associated with Rimsky-Korsakov or Borodin prove to have been prefigured in works by Balakirev, yet because of his slowness in bringing works before the public he has been denied credit for his inventiveness. On the other hand, works which if completed and performed in the 1860s or 70s would have enjoyed immense success, when heard for the first time towards the end of the composer's life made a much smaller impact, overtaken by the newer languages forged by younger composers of several nationalities. The late writings of Stasov (*d* 1906) and especially Cui (*d* 1918) often reveal minds fixed in an era of heroic struggle (the 1860s), unable to adapt to a world which long since came to terms with their points of view and moved ahead to new controversies. The same may be said of Balakirev's last years in composition.

4. Works and influence. Balakirev's first musical experience was as a pianist, and composers for his own instrument left their mark on the repertory and style of his compositions. All the genres developed by Chopin (except the Ballade) were cultivated by Balakirev, the largest number of whose solo piano works date from after the crisis of the early 1870s. Chopin's textures and musical idioms, to say nothing of the primacy of soloist over orchestra, are clearly audible in the single movement of the Piano Concerto in F♯ minor composed in 1855–6. The long line of nocturnes, scherzos, mazurkas, waltzes and kindred pieces, evoking a mood or derived from a dance, continue to recall the Polish composer, often with a comparable charm and grace, though on occasion without his sense of a satisfactory formal scheme, especially in later compositions where the spark of musical inspiration can seem weaker. Harmonic and emotional restraint seem also to relate these works to an early 19th-century style, of the kind which Balakirev himself met in studying Hummel, for instance; his powerful musical inheritance from Glinka may have strengthened the same characteristic. Noteworthy works for solo piano (besides the Lisztian *Islamey*) include the B♭ minor Sonata, the Second Scherzo, the Berceuse, the first two waltzes, the Dumka and the Tyrolienne. Balakirev's proficiency at the keyboard may have contributed to his strong predilection for certain keys. D♭ major, with its comfortable mixture of white and black keys, is a grateful tonality in which to play. At any rate, key signatures of two sharps and five flats occur with extraordinary frequency in Balakirev's compositions, and sometimes in works influenced by him, of which *Romeo and Juliet* is a striking example.

The other keyboard composer who strongly influenced Balakirev was Liszt. It was only after Schumann and Berlioz had long featured in Balakirev's orchestral programmes that Liszt began to appear there too, but some of the piano works show Lisztian technical bravura and small signs of compositional influence (for instance, in short passages of music linking two principal sections of a composition). *Islamey* demonstrates both aspects, and it is hardly surprising that the work appealed so greatly to Liszt, even without its 'oriental' vitality and languor. The same influence is clear in Balakirev's piano transcriptions of others' compositions, and in his own Fantasia on themes from *Zhizn' za tsarya* ('A Life for the Tsar') (or, at least, from its second form). While Liszt as inventor of the symphonic poem has some claim on *Tamara*, credit for the orchestral compositions which are based on folk themes belongs properly with Glinka and Balakirev himself. On the other hand, Balakirev's sympathy with Liszt's ideals accounts in part for the introduction into Russian music of a number of symphonic poems whether described as 'musical pictures' (*Sadko* and *In Central Asia*) or 'fantasy overture' (*Romeo and Juliet*).

The example of Glinka is felt most strongly when Balakirev deals with folk material. The starting-point is indicated when Balakirev began with the Spanish themes bequeathed to him by Glinka, rather than with Russian material. It is there, in the Fandango-étude (of 1856, revised as the *Sérénade espagnole* in 1902) for piano and the orchestral *Uvertyura na temu ispanskogo marsha* ('Overture on a Spanish March Theme', 1857) that we see the 'Glinka variations', also known as 'variations with

changing backgrounds' – without any trace of Russian 'nationalist' inclination. It is only later that explicit native ambitions manifest themselves, once the feeling of Russian distinctness from Europe had grown stronger. Like Glinka's *Kamarinskaya* of 1848, the *Uvertyura na temï tryokh russkikh pesen* ('Overture on the Themes of Three Russian Songs'), whether in its 1858 or 1881 versions, is an abstract work exploring musical relationships among folksong themes. What is most remarkable is the advance which Balakirev makes in handling material. Both the Overture and *Kamarinskaya* demonstrate how it is possible to construct a sustained musical argument employing folk musical resources. Neither composer, whether in his title or anywhere else, gives the slightest hint of any extra-musical narrative associated with his work. Balakirev goes further than Glinka, however, in reconciling the idiomatic treatment of folksong with the standard practices of art music: motivic fragmentation, contrapuntal combination, and a structure exploiting key relationships which also manages to draw on aspects typical of folk usage, such as ostinato, pedal, and harmonic practices foreign to most 19th-century art music. Between the two Overtures on Russian Themes came Balakirev's involvement with folksong collecting and arrangement, which fell largely between 1860 and 1865. That work alerted him to the frequency of the Dorian mode, the tendency of many melodies to swing between a major key and its relative minor or its flat 7th key, and the tendency to accentuate notes not consistent with dominant harmony. These essential qualities were authentically mirrored in Balakirev's harmonizations, and were recognized as significant new perceptions about the character of Russian folksongs. This activity finds reflection in his own subsequent handling of Russian folksong.

The second overture on Russian themes (first published in 1869 as *1000 let*, '1000 Years') is yet more sophisticated in compositional technique and more complex in the implications of its various titles. It shows the composer even more expert in deriving – Beethoven-like – short motifs from longer themes such that the motifs can be sewn together in a convincing contrapuntal fabric. This is a supreme example of how folk material may be reconciled with modern symphonic thinking, technique and structure. It can stand on its own as a specimen of abstract motivic-thematic working, yet since it employs folksongs it could also be represented as making a statement about nationality. It seems that it was first connected in Balakirev's mind (in 1863–4) with Herzen's campaign for political reform in Russia, then in its 1869 publication with the ideas evoked by its composer-given title *1000 Years*, tied to the millennium of the Russian state founded in 862 CE, and finally with the less specific ancient 'Rus'' (as the final version of it was known in Russian, despite the published title, *Russia*) – a form of the title upon which Balakirev insisted, wishing to avoid the modern term *Rossiya*. The changing subtitles, from 'Overture' in 1863–4, to 'musical picture' in 1869 and 'symphonic poem' in 1890 and 1907, tell the same story in a different way. As Richard Taruskin has argued (1983), this work thus illustrates its composer's evolution from a 'progressive', a 'man of the sixties', to the Slavophile obscurantist of his final years; increasing directness in claiming the work for the nationalist cause is underlined by the progression in the subtitles. It was these works of Balakirev, together with his *Uvertyura na tri cheskiye temï* ('Overture on Czech Themes', 1867), published in 1906 as *V Čechách* ('In Bohemia'), which served as models when Rimsky-Korsakov and Borodin came to write equivalent pieces. The finale of Tchaikovsky's Second Symphony, written in 1872 when the composer's interest in Balakirev's principles was at its height, demonstrates another way of creating a large-scale symphonic movement out of material which includes one folksong.

Balakirev's techniques of developing folk material contrapuntally are evident in his own symphonies, of which the first is by far the finer, being a compelling series of contrasted but uniformly strong movements; as with other late compositions, the second, in spite of some strengths (especially the Scherzo alla Cosacca), too often seems to be retracing familiar paths. Economical and ingenious development of motifs, with not a few harmonic *trouvailles*, are features of the finale of the first symphony.

In 1861–2 Balakirev gave much thought to a Piano Concerto in E♭ major, to the point where he was able to perform it all to Rimsky-Korsakov. Nothing beyond the first movement was written down then, and the composer returned to it only in 1906, even then leaving it unfinished on his death. In Lyapunov's completion the work adds something to our knowledge of the composer chiefly through its references to Russian church music.

The 'oriental' idiom cultivated in parts of *Ruslan and Lyudmila* was developed and made into a more consistent style by Balakirev. It appears in the *Georgian Song* (1863), *Islamey* and *Tamara*as well as occurring in (for example) the Polovtsian Dances, parts of *Sheherazade*, and the Dance of the Persian Slavegirls in *Khovanshchina*. Its ingredients comprise slow sinuous melody with decoration, often scored for clarinet or english horn, slow-moving harmonic progressions, often involving pedal with a movement between the fifth and sixth degrees via the raised 5th, and a drumlike accompanimental figure; the counterpart to that languorous vein is the ecstatic one, marked by a perpetuum mobile at a very fast tempo, with rapid melodic contours over not so rapid harmonic change with immensely colourful instrumentation. As the examples above suggest, this idiom was a somewhat anomalous matter. On the one hand, it served to evoke the mystery of the distant, or at least the exotic, 'east' with which Russia had not very direct contact; on the other hand, it could also be used to refer to recently colonized areas of the Russian Empire. It served to conjure up both the exotic and the local, both the 'self' and the 'other', and precisely which depended on non-musical elements. For Western listeners, on the other hand, the style suggested only the exotic, only the 'other', so that the exceptionally strong representation of this strand in the music of Russian composers, with suggestive costumes (often by Bakst) in Diaghilev's early seasons of opera and ballet in Paris, created a distorted image of Russian music in the minds of its new devotees. *Tamara* may reasonably be thought to be Balakirev's masterpiece. Inspired by Lermontov's poem and its beloved setting in the mountains and gorges of the Caucasus, Balakirev produced a wonderful evocation of the landscape and atmosphere in which the angelic and devilish seductive power of Tamara work their effect before the latest passing lover is discarded. The plot implies a wide musical range, and the composer supplies it with great subtlety within a satisfying structure.

Berlioz's lucid writing for the orchestra, and his magical scherzos (especially that associated with Queen Mab in *Roméo et Juliette*) made their way into Russian music through Balakirev's championship. In the case of orchestration, it was not surprising, since clarity was also a distinguishing aspect of Glinka's scoring – traceable to Weber and again, perhaps, to Berlioz. That quality remained in a great deal of Russian orchestral composition until the influences of Schumann and later Wagner prompted a more experimental blending of diverse sonorities. Several of the symphonic scherzos of Rimsky-Korsakov and Borodin confirm the influence of *Queen Mab*. Like Berlioz (and, for that matter, Schumann), Balakirev turned to Shakespeare for one of his compositions, supplying sensitive treatments of English songs communicated by Stasov for some of his incidental music for *King Lear*. Incidental music for a play was a tradition likewise inherited from Glinka, even if he composed for Kukol'nik's tragedy *Prince Kholmsky* rather than for Shakespearean drama.

Songs occur in both early and late periods of Balakirev's output – again with a tendency for the earlier works to be more strikingly original while the later ones compensate for lower creative temperature with greater craftsmanship. Of some 45 songs, 11 have texts by Lermontov, 8 by Kol'tsov and 5 by Khomyakov, with such lyric poets on permanent standby for composers as Fet or Mey set twice each and Maykov once; Musorgsky's friend Count Golenishchev-Kutuzov makes one appearance. Balakirev's songs are marked by consistency of texture and elegance of vocal line. The piano parts are sometimes demanding; several songs also exist with orchestral accompaniments. All the songs have high ambitions: they are not for the middle-brow market. Sometimes a Russian folklore strand is obvious: *Prologue* (1903) is an excellent example. At other times the 'oriental' pattern is to the fore, as in *Pesnya Selima* ('Song of Selim', 1858) or *Gruzinskaya pesnya* ('Georgian Song') – Balakirev's single song setting of Pushkin. *Kolïbel'naya pesnya* ('Cradle Song', 1858) demonstrates the composer's skill in devising a beautifully simple but memorable specimen of a standard genre. *Pesnya zolotoy rïbki* ('Song of the Golden Fish', 1860) is wonderfully suggestive of the enticing mermaid amid the waves and of the escapes from reality afforded by love and dreams; the composer generates an ecstatic atmosphere by means of expert control of technical resources.

Balakirev was a crucial figure in Russian music. He extended and developed the fusion which Glinka had accomplished between on the one hand the common-practice music of his day and on the other some musical elements of Russian character and others of a boldly experimental nature. Balakirev established patterns which could be used to express overtly national feeling in music. In his own compositions he demonstrated how this could be done, laying the basis for a rich repertory spanning all the contemporary genres. By taking amateur musicians of prescribed musical education but enormous potential, he made of Musorgsky, Rimsky-Korsakov and Borodin composers of national and eventually international rank, whose music represented Russia through its history, literature and traditions to the world beyond the Empire's frontiers. In doing so Balakirev imparted what he had himself concluded, so that a great deal of his thinking underlies the music of his pupils. Balakirev's compositions began to find their way abroad with *Islamey*. Thereafter *Tamara* and some other works became known in the wake of compositions by Borodin, Rimsky-Korsakov and Tchaikovsky – partly on account of delay in completing works likely to be found attractive in other countries. When Sibelius, Debussy, Ravel and Falla learnt from their Russian predecessors, they were absorbing Balakirev's discoveries and inventions, whether at first hand or through compositions by his pupils.

WORKS

THEATRICAL

STUART CAMPBELL

Balalaika. A long-necked chordophone with a triangular body and three strings. The soundboard is usually constructed from four strips of Russian spruce or silver fir and the slightly arched belly of seven pieces of maple. The instrument has a small soundhole, a fretted neck and strings of gut or steel. The balalaika is related to the *dömbra*, a variant of the long-necked lute played by peoples of Central Asia. The earliest mention in literature appeared in 1688 and Peter the Great used balalaikas in his grand orchestral procession of 1715. The instrument may have been a new arrival or a natural development of the 17th-century *domra*. The *skomorokhis* (minstrels) gave it a primary role in accompanying dance.

A public performance in 1886 began the balalaika's elevation from a peasant's instrument to one of artistic stature. The success of the balalaika is attributed to VASILY VASIL'YEVICH ANDREYEV (1861–1918) who, assisted by the instrument makers V. Ivanov, F. Paserbsky and S. Nalimov, produced a metal-fretted chromatic version in a family of sizes: prime (*e'–e'–a'*), second (*a'–a'–d'*), alto (*e'–e'–a*), bass (*E–A–d*) and double bass (*E'–A'–D*). Piccolo and descant sizes were developed but discarded. Andreyev's Society of Lovers of Balalaika Playing gave its first public performance in Russia in 1888 and in 1889 the Society performed at the Paris Exposition Universelle. The sound so impressed composers of art music that they began to include balalaikas in their orchestration. Tchaikovsky eulogized: 'How lovely is the balalaika. How striking the effect it makes in the orchestra. Timbrally – this is an indispensable instrument'.

By 1896 Andreyev had reorganized his instrumentalists as the Grand Russian Orchestra, which between 1909 and 1912 toured Europe and America (1910–11). Balalaika orchestras were soon formed in Britain (the first was the Royal Balalaika Orchestra, formed at royal request by the balalaika player Prince Tschagadaeff), and the USA (formed largely by Russian emigrants and their descendants). The St Louis Russian Balalaika Orchestra was founded in 1911 by Lewis Spindler and balalaika orchestras were formed in New York City in 1912 by A. Ivanoff and A. Kirilloff. The Balalaika and Domra Society was founded in 1961 and in 1974 John Garvey organized a student balalaika orchestra at the University of Illinois. Many film soundtracks incorporated the instrument and Charlie Chaplin, an afficionado, often performed on the violin or mandolin alongside it. The resurgence of balalaika music, after the McCarthyite suppression of all things Russian in the 1950s, came with the success of the motion picture *Dr Zhivago* in 1969.

Russian balalaika (long-necked lute)

MARTIN KISZKO

Bălan, George (*b* Turnu-Măgurele, 11 March 1929). Romanian musicologist. He studied at the Bucharest Conservatory (1950–55) and took the doctorate at Moscow University in 1963 with a dissertation on the philosophic content of music. In 1960 he was appointed professor in musical aesthetics at the Bucharest Conservatory, and has focussed his attention on problems of aesthetics and philosophy. He was music critic for the Bucharest *Contemporanul* (1951–7, 1961–3) and has contributed criticism to numerous Romanian journals.

Much of his recent writing has concerned his new listening method, Musicosophia.

VIOREL COSMA

Balanced action (Fr. *mécanique à balanciers/bascules*; Ger. *balancierte Traktur*; It. *meccanica/trasmissione a bilancia-/bilanciere*). A form of mechanical (or tracker) action used in organ construction since the 17th century, in which the key-shanks are pivoted near their centres, the upwards motion of the rear end of the keys being transmitted to open the pallet by an action in which pairs of squares or at least one backfall are essential. *See* ORGAN, §II, 5.

Balancement (Fr.: 'wavering'; Ger. *Bebung*; It. *tremolo*). A term used mainly for the tremolo obtainable on a clavichord, and also for the vibrato in vocal and string music. *See* ORNAMENTS, §7(ii)(a). *See also* BEBUNG; and VIBRATO.

Balanchine, George. *See* BALANCHIVADZE family, (2).

Balanchivadze. Georgian family of musicians.

(1) **Meliton Balanchivadze** (*b* Banoja, nr Kutaisi, 12/24 Dec 1862; *d* Kutaisi, 21 Nov 1937). Composer. One of the pioneers of Georgian professional music, he is the father of the composer Andria Balanchivadze and the ballet master, George Balanchine. He studied music at the Tbilisi Spiritual Seminary (1877–9), then singing in the choir of, and later taking solo roles at the Tbilisi Opera House. In 1882 he set up a folk choir of 12 singers; it was from this date that his musical and public duties began as a promulgator and a collector of Georgian folk songs. It was also during this period that he wrote his first compositions – the romances *Rodesats gitsker* ('When I Look at You'), *Shen ghetrpi marad* ('I am Eternally Drawn to You') and *Nana* ('Lullaby') – which were early and successful examples of the genre in Georgian music.

In 1889 Balanchivadze enrolled at the St Petersburg Conservatory as a singer, but in 1891 he turned to the serious study of composition, and entered Rimsky-Korsakov's class. Here Balanchivadze started work on his principal composition, the opera *Tamar tsbieri* ('Tamara the Cunning'), fragments of which were heard in St Petersburg in 1897. While living in Russia he organized and appeared with choral groups which performed Georgian folk songs in many towns. In 1906 he was a jury member of the First All-Russian Exhibition of musical instruments and in 1907 he financed the publication of Glinka's letters.

In 1917 Balanchivadze returned to Georgia. There he was actively engaged in musical and public duties, resolving matters of musical education and collecting and studying Georgian folk music. In 1918 he founded a music school (now bearing his name) in Kutaisi, the second largest town in Georgia, and at various times he was the director of the Kutaisi (1935), and Batumi (1929–31) music schools, as well as Chairman of the Board of the Georgian Music Society (1928). He completed *Tamara the Cunning* in 1926 and it was immediately staged in Tbilisi. Sometimes called the first Georgian opera (since it was partially composed and performed at the end of the 19th century) it is written on an historical subject in which patriotic and psychological dramatic lines are interwoven. In terms of its music, however, the opera is entirely sustained on a lyrical, small-scale level, and only acquires a dramatic colouring in places. Among the solo numbers of the opera, the following should be noted: King Georgi's aria, the Jester's Couplets, Tsira's Lullaby, and especially Gocha's aria.

WORKS
(*selective list*)

Op: Tamar tsbieri [Tamara the Cunning], extracts perf. 1897; rev. as Darejan tsbieri (V. Velichko, K. Potskhverashvili, after A. Tsereteli), 1937
Cantata: Dideba ZAHESs [Glory to ZAHES], for opening of first hydro-electric power station in the Caucasus
Songs, choral works, folksong arrs. etc.

Principal publishers: Muzgiz, Muzfond Gruzii (Tbilisi), Muzïka (Moscow and Leningrad)

(2) **George Balanchine** [Balanchivadze] (*b* St Petersburg, 10/22 Jan 1904; *d* New York, 30 April 1983). Georgian, later American, choreographer. *See* BALLET, §3(ii).

(3) **Andria Balanchivadze** [Andrey] (*b* St Petersburg, 19 May/1 June 1906; *d* Tbilisi, 28 April 1992). Composer and teacher. He was the son of the composer Meliton Balanchivadze, and brother of the ballet-master George Balanchine. He graduated in 1927 from the Tbilisi Conservatory where he studied composition with Ippolitov-Ivanov, and the piano with I. Aysberg, later continuing his education in the Leningrad Conservatory with Zhitomirsky (composition) and Mariya Yudina (piano). From

1931 he lived in Tbilisi, being for a time artistic director of the Georgian State SO (1941–8). An outstanding teacher, he was on the staff of Tbilisi Conservatory from 1935, was appointed professor in 1942, and later headed the composition department (1962–8). He was secretary of the Georgian Composers' Union more than once (1953–62 and 1968–73), and frequently appeared in performances of his own works as conductor and pianist. Balanchivadze was one of the founders of the modern Georgian school of composition both in terms of creative endeavour and through his teaching work. His most significant contributions lie in the fields of ballet, orchestral music and piano literature. His most successful works are distinguished by an individual musical language, an ability to translate into music the characteristics of the Georgian people and their national traditions, an optimistic attitude, a combination of the lyrical and the poetic with the manly and the epic, and an elegance in his use of form. His name became widely known in 1938 after the performance of his ballet *Mtebis guli* ('The Heart of the Mountains') (in its first version of 1936 as *Mzechabuki*) in Leningrad. It was staged by the great dancer V. Chabukiani who also took the leading role. *Mtebis guli* laid the foundations of Georgian ballet. Using folk material in the score, he blended the Georgian folk dancing tradition with the rigours of classical choreography. Lyrical, poetic and heroic themes predominate and the score is suffused with rich local colour. *Mtebis guli* was staged at many theatres of the former USSR.

Another important stage for Balanchivadze in becoming established as a composer, and indeed, one might say for the establishment of Georgian symphonic music as a whole, was his First Symphony (1944), in which he reacted to the terrible events of the war, recording the thoughts and feelings of his contemporaries. Whilst adhering to a Georgian style, Balanchivadze adopted and gave new life to classical traditions and to the Russian symphonism of that time. Another high point in his output is the Third Piano Concerto (1952), a popular work notable for its radiant lyricism, buoyancy, melodiousness and elegance of form. The work has established itself firmly in both pedagogical and professional repertories. Only the Second and Third Symphonies, the orchestral picture *Ritsis tba* ('Lake Ritsa'), and the Fourth Piano Concerto come close to this in popularity.

GULBAT TORADZE

Balasios [Balasios the Priest and Nomophylax; Balasēs ho Hiereūs kai Nomophylax] (*b* Constantinople, ?1615; *d* ?1700). Romaic (Greek) composer and patriarchal official. Born into a family of Peloponnesian origin, he received his general education at the Patriarchal Academy under Theophilos Korydalleus. Together with Kosmas Makedonos he was taught Byzantine chant by GERMANOS OF NEW PATRAS, for whom he composed an acclamation. In a pre-1660 manuscript Balasios refers to himself as a *domestikos*, which therefore places him among the musicians of the patriarchal cathedral at the time PANAGIOTES THE NEW CHRYSAPHES was *prōtopsaltēs*. After ordination to the priesthood he continued to serve the Ecumenical Patriarchate in an impressive series of liturgical and administrative posts (*c*1663–1700), but in musical manuscripts he is customarily described as 'nomophylax', a patriarchal title that he appears to have held from about 1680.

As a composer Balasios continued the renewal of the received medieval chant repertories pursued by Panagiotes and Germanos, complementing their 'beautified' stichēraria with a new edition of the Heirmologion and a complete series of 8 modally ordered Great Doxologies, the first such set ever written. Other chants for the Divine Office include a modally ordered series of eight *kekragaria* (Psalm cxl.1–2) for Hesperinos, and, for Orthros, eight *Magnificat* verses for the 9th ode of the kanon. He composed numerous works for the Byzantine eucharistic liturgies, including two sets of eight Cherubic Hymns, modally ordered series of 8 communion verses for Sundays, and two *dynamis* (codas to the Trisagia) for the feasts of the Holy Cross and of the Lord (the latter ed. Phōkaeus, 1834). He also contributed to the post-Byzantine repertories of kalophonic *heirmoi* and other paraliturgical chants. A number of his chants, transcribed by Gregorios the Protopsaltes, appear in Chrysanthine editions (see bibliography). A Turkish song attributed to Balasios in *GR-ATSiviron* 999 (f.389*r*) places him at the head of a distinguished series of Romaic church musicians who participated in the 'external' tradition of Ottoman secular music. (For a fuller list of works see Stathēs, 1995.)

Balasios was the first to produce realizations (*exēgēseis*) of pre-existing chants, featuring the transcription into intervallic neumes of melismas hitherto notated in shorthand with stereotyped melodic formulae (*theseis*). These *exēgēseis*, which mark the beginnings of a movement towards notational precision in florid repertories, also attest the existence in the late 17th century of a stenographic interpretation for Byzantine neumes. Arvanitis,

however, has argued persuasively for a comparatively literal realization of Balasios's Heirmologion, an influential volume that remained in use until its replacement by that of Petros Peloponnesios.

Polychronismos to the Ecumenical Patriarch by Balasios the Priest, Greek Byzantine Choir, dir. L. Angelopoulos, CD ELBUC 33 (1997)

ALEXANDER LINGAS

Balasanyan, Sergey Artem'yevich (*b* Ashkhabad, 13/26 Aug 1902; *d* Moscow, 3 June 1982). Russian composer of Armenian extraction. After graduating from Kabalevsky's composition class at the Moscow Conservatory (1935), he worked in Stalinabad (now Dushanbe) and took a large part in the development of professional music in the republics of central Asia. He made a serious study of Tajik folk music, recording and arranging a great number of songs. This work assisted him in creating the first Tajik works for the musical stage, among them the opera *Vosstaniye Vose* ('Vose's Uprising', 1939), which relates the story of a peasant revolt at the end of the 19th century and which uses many Tajik melodies in symphonic development. Balasanyan's music gradually grew more complex as his technical mastery became sharper. The ballet *Leyli i Medzhnun*, which achieved particular renown, is based on a widely known eastern legend; its subtle lyricism, vividly characterized images and symphonic growth established it in the Soviet repertory, and a successful film version was produced. Balasanyan has also drawn on other folk musics: Armenian, Afghan, Indian and Latin American. Of his expressive and colourful orchestral works the most notable is the suite *7 armyanskikh pesen* ('7 Armenian Songs'). His chamber pieces show him as a delicate lyricist and a master of small forms. From 1948 he taught at the Moscow Conservatory, heading the composition department there for many years. He was awarded the titles People's Artist of the Tajik SSR (1970) and Honoured Art Worker of the RSFSR (1964), and he was winner of the State Prize.

GALINA GRIGOR'YEVA

Balasaraswati, Thanjavur (*b* Thanjavur, Tamil Nadu, 13 May 1918; *d* ? Madras, 1984). South Indian dancer and musician. Her family included many distinguished dancers and musicians since the 18th century; during the 19th century some of her forebears studied with Subbaraya Śāstri. Her formal training as a dancer started when she was four under the noted teacher Kandappan Pillai (1899–1942), himself the inheritor of a great tradition, and her mother taught her music. When she was seven her *aranke̱rram* (formal début) took place at the Kāmākṣi Amman̠ temple, Kanchipuram, and her professional début was two years later in Madras. As a girl she was already an accomplished and mature dancer with a very large repertory, but she continued to study, notably the basis of *abhinaya* (dramatic expression) and its improvisation. She became a musician in her own right and a leading exponent of forms such as *padam* and *jāvali*.

She toured extensively throughout India and internationally. She also taught in the USA, notably at Wesleyan University with her brothers T. Viswanathan and T. Ranganathan. In 1973 she was the first dancer to preside over the annual conference of the Madras Academy of Music, and the first dancer to receive the title Sangita Kalanidhi. With Venkatarama Raghavan she wrote a book, *Bharata nāṭya* (1959). She received the presidential award for dancing and the Padma Vibhushan.

NARAYANA MENON/R

Balassa, Sándor (*b* Budapest, 20 Jan 1935). Hungarian composer. He was brought up in the country until 1951 when he returned to Budapest to work as a factory mechanic. His first experience of art music there made him decide to study at the Budapest Conservatory (1952–6), and after spending four further years teaching himself, he attended the Liszt Academy of Music (1960–65) as a composition pupil of Szervánszky. From 1964 to 1980 he was music director at Hungarian Radio. Awards made to him include the Erkel (1972), Kossuth (1983) and Bartók-Pásztory (1988, 1999) prizes. Also in 1972 his Requiem was voted the most distinguished composition of the year at the International Rostrum of Composers. In 1989 he was created Outstanding Artist of the Hungarian Republic.

Balassa's early compositions are freely dodecaphonic, generally without a strict application of serial principles (his only thoroughly serial work is the *Intermezzo*). His melodic invention is predominantly vocal in character, although *Antinomia* (1968) is an exception to this, and his use of instruments is formally functional, sometimes dramatic. He is particularly fond of writing for a solo voice embedded in an orchestral texture, or for chorus, and it is in his choral music that the influence of the Kodály school may be detected. Each of the major instrumental works (opp.20, 22, 24 and 25) follows the same fundamental form: a slow, lyrical introduction leading to a scherzo-like section which reaches a climax, with sometimes a gradual lowering of intensity to conclude the piece. Such a plan may be presented in several movements (*Xenia*, *Lupercalia*, *Tabulae*) or in a single one (*Iris*), and sometimes sections are recapitulated or varied later in the work. Above all, Balassa's work is lyrical: his vocal music reveals a strong feeling for the voice and a sensitive susceptibility to poetry.

In later works Balassa's freely dodecaphonic idiom developed strong leanings towards diatonicism as a consequence of drawing upon other musical sources. *Glarusi ének* ('Chant of Glarus', 1978), commissioned by the Koussevitzky Foundation, marked the beginnings of this change. Distancing himself from the stylistic aspirations of the first half of the 20th century, Balassa has sought inspiration from European classicism and the Hungarian folk tradition. With a new sense of freedom he has shaped the characteristics of his music with each new work. A return to tonality and recreating direct links with his audience and with the art of interpretation have become his priorities. Such goals were successfully realized in his three-act opera *Karl és Anna* (1987–92).

GYÖRGY KROÓ/MELINDA BERLÁSZ

Balatka, Hans (*b* Hoffnungsthal, nr Olmütz [now Olomouc, Czech Republic], ?26 Feb 1825; *d* Chicago, 17 April 1899). Moravian conductor and composer, active in the USA. He studied music at Hoffnungsthal and later at the gymnasium and university in Olomouc, where he was a choirboy at the cathedral. From 1845 he studied music (under Sechter and Proch) and law at the University of Vienna, where he worked as a music copyist and a tutor. During the 1848 revolution he sided with the Academic Legion, and following its defeat he fled Europe. He arrived in New York in 1849 and went via Chicago to Milwaukee, where he organized a male chorus (1849) and a string quartet (1850). From 1850 to 1860 he was musical director of the Milwaukee Musical Society (Musikverein) and conducted its first concert (May 1850) and its first oratorio, Haydn's *The Creation* (July 1851, in German), and directed and sang in its first opera, Lortzing's *Zar und Zimmermann* (April 1853). He also founded a singing school and served as musical director of the German theatre (1855–60). Because of his reputation with the Milwaukee Musical Society he was asked to conduct music festivals in Cleveland, Cincinnati, Detroit and Chicago. His performance of Mozart's Requiem for the Northwest Sängerfest (Chicago, 1860) led to his appointment as director of the Chicago Philharmonic Society (1860–69). His first concert on 19 November included Beethoven's second symphony and a chorus from *Tannhäuser*. While in Chicago he also conducted the Musical Union, the Oratorio Society and other singing groups. In 1871–2 he again conducted the Milwaukee Musical Society, but returned in 1876 to Chicago where he remained except for a short stay in St Louis (1877). In 1879 he founded the Balatka Academy of Musical Art, which was important to music education in Chicago in the late 19th and early 20th centuries. During his later residence in Chicago he directed the Mozart Club and the Germania Society. He was also active as a journalist and regularly contributed columns on music to the Chicago newspaper *Daheim*.

Balatka wrote several orchestral fantasies, a piano quartet and other piano music; his vocal works include about 30 songs, pieces for chorus such as *The Power of Song* (1856) for double male chorus, and a *Festival Cantata* (1869) for soprano and orchestra. Balatka's significance nevertheless was in his conducting and educationist activities, and he was one of the first important figures for the development of music in the American Midwest.

THOMAS H. SCHLEIS

Balbastre [Balbâtre], **Claude-Bénigne** (*b* Dijon, 22 Jan 1727; *d* Paris, 9 May 1799). French organist and composer. He probably received his first organ lessons from his father Bénigne Balbastre (*d* 1737), organist at St Médard, Dijon, from 1691 to 1705 and then at St Etienne until his death. Claude-Bénigne knew Claude Rameau (brother of Jean-Philippe) and may have studied with him; the extent of his other musical studies in Dijon is unknown, but by 1748 he had composed some rather insignificant fugues and other pieces for the harpsichord there.

At the age of 23 Balbastre went to Paris, arriving, according to La Borde, on 16 October 1750. There he befriended Jean-Philippe Rameau and studied composition with him, also receiving organ lessons from the organist Pierre Février. He returned briefly to Dijon, but established permanent residence in Paris. In March 1755 he performed an organ concerto of his own composition at the Concert Spirituel; his playing earned the praise of an anonymous reviewer in the *Mercure de France* (May 1755, pp.180–81):

> M. Balbatre played an organ concerto of his own composition, that surprised and charmed the entire assemblage; his brilliant playing made this instrument sound in an authoritative manner and made the impression that he alone has the right to lead all others. One cannot praise too highly … the singular talent of M. Balbatre.

Thereafter he appeared frequently at the Concert Spirituel until 1782, usually playing his own concertos (none of which survives) or transcriptions of overtures and airs from current operas by Rameau or Mondonville (*F-Pn* Vm^7 2108). On 26 March 1756 he obtained the post of organist at St Roch, and on 1 October 1760 he was also engaged as organist at Notre Dame for three months a year. In 1776 he was appointed organist to Monsieur (brother of the king, later Louis XVIII), a position he retained until the Revolution. While employed at court, he taught the harpsichord to Marie-Antoinette and the Duke of Chartres and served as organist of the royal chapel. As organist of the Panthémont, he taught the daughters of prominent French and foreign dignitaries, including Thomas Jefferson. With the fall of the royalty, he lived in poverty for the rest of his life. One of his last performances was his own arrangement of the Marseillaise, played on the organ of the deconsecrated Notre Dame.

Balbastre's performances were exceedingly popular, and his reputation was international. When he played his own *noëls en variations* at St Roch every year at Midnight Mass, the performance attracted such a crowd that in 1762 the archbishop finally forbade him to play. Rameau praised his performance of a transcription of the overture to *Pygmalion* at La Pouplinière's home in Passy. Charles Burney, eager to meet Balbastre, went to hear him at St Roch in 1770 and entered a long account of the performance in his *Present State of Music in France and Italy*:

> He performed in all styles in accompanying the choir. When the *Magnificat* was sung, he played likewise between each verse several minuets, fugues, imitations, and every species of music, even to hunting pieces and jigs, without surprising or offending the congregation, as far as I was able to discover.

Burney also visited Balbastre at home and described the instruments he saw there, including a large organ and

> a fine Rucker harpsichord which he has had painted inside and out with as much delicacy as the finest coach or snuff-box I ever saw at Paris. … On the outside is the birth of Venus; and on the inside of the cover the story of Rameau's most famous opera, *Castor and Pollux*;

earth, hell and elysium are there represented; in elysium, sitting on a bank, with a lyre in his hand, is that celebrated composer himself [i.e. Rameau]; ... The tone of this instrument is more delicate than powerful; one of the unisons is of buff, but very sweet and agreeable; the touch is very light, owing to the quilling, which in France is always weak.

The decoration Burney described survives, although it has been enlarged to serve as the lid for a 19th-century piano now in the private collection of Barbara Johnson in New Jersey. It includes details of scenery and costumes for two scenes of Rameau's opera, probably taken from the 1764 production. The unison of buff (or *peau de buffle*) so casually mentioned by Burney was, according to La Borde, a new invention of Balbastre's. Balbastre is also credited with the invention of the 'fortepiano organisé', a combination of the piano and organ at a single keyboard (*F-Pn* Vm[7]1941). An anonymous portrait (miniature on ivory, in the Dijon Museum), formerly thought to be of Balbastre, is of the singer Pierre de Jélyotte.

Balbastre's keyboard pieces are extremely varied in character. Most of the best pieces in the 1759 book follow the grand tradition of François Couperin ('La d'Héricourt') or Rameau ('La Lamarck'), though with a certain individuality. Others are more modern, such as the outstanding Scarlattian gigue 'La Lugeac', or the more simple-minded 'La Courteille' and 'La Malesherbe'. His *Quatuors* (1779), a volume of quite charming keyboard sonatas accompanied by two violins and cello with two *cors de chasse* ad lib, seem to have been an unsuccessful effort to combat the competition of 'les allemands', such as Honauer and Schobert, the latter of whom, according to Grimm (Ière lettre, December 1765), 'has completely destroyed the reputation of [A.-L.] Couperin, du Phly [Duphly], [and] Balbastre'. However, a *romance* from this collection became very popular, was parodied and has been 'recorded' (a remarkable example of contemporary performing practice) on the barrel organ. Another favourite composition must have been his Pastorale in A (*F-Pn*Vm[7] 2108), for he had it painted on the nameboard of his harpsichord, where it is dated 6 August 1767. Among his other surviving compositions is an unmeasured prelude which must either be one of the last written for the harpsichord or the first (and possibly last) for the piano.

ALAN CURTIS, MARY CYR

Balbi, Giovan Battista [Giambattista; 'il Tasquino'] (*fl* 1636–57). Italian choreographer, dancer, stage designer and impresario. He was involved with Venetian opera from its inception. Cited as 'Veneziano Ballarino celebre' in the libretto for Francesco Manelli's *L'Andromeda* (1637), he continued to provide choreography for operas at Venice for the next seven years. Beginning in 1645, his affiliation with the travelling Febiarmonici introduced Venetian opera to other Italian cities. They produced Francesco Sacrati's *La finta pazza* in Florence in 1645 and Cavalli's *La Deidamia* (first performed Venice, 1644) there in 1650. In December 1652 Balbi and the Febiarmonici produced *Veremonda l'Amazzone d'Aragona* (?Cavalli) in Naples. *Veremonda* and *La finta pazza*, presented earlier that year, served to introduce Neapolitan audiences to the innovations of the Venetian stage machinery and dance. During Carnival 1653 Balbi created the set designs and choreography for the anonymous *Le magie amorose* and for Provenzale's *Il Ciro* in Naples.

Balbi also played an important role in the introduction of Venetian opera to northern Europe. While in Florence in 1645, he was summoned to Paris by Anne of Austria. There he and Giacomo Torelli collaborated on a celebrated production of *La finta pazza* (14 December 1645). In 1647 Balbi created the choreography for the French production of Luigi Rossi's *Orfeo* and the following year he was called to Brussels. For the wedding of Philip IV and Maria Anna of Austria he created *Le balet du monde*, a grand 'balet a entrées' presented in Brussels on 24 February 1650, with Gioseffo Zamponi's *Ulisse nell'isola di Circe*. By carnival 1651 he was once again in Venice, providing choreography and stage designs for Cesti's *Alessandro vincitor di se stesso*. The following year he brought *Ciro* to Venice with new music by Cavalli; in the libretto Balbi noted that the opera had been adapted for Venetian taste. This libretto was reprinted in Palermo in 1657, and there is no further documentation of Balbi's activities.

Balbi's fanciful ballets incorporated animals and other 'exotica'. His descriptions, with engravings by Valerio Spada, were published as *Balletti d'invenzione nella Finta Pazza di Giovanbatta Balbi* (n.p., *c*1658).

IRENE ALM

Balbi, Ignazio (*fl* 1720–73). Italian composer. The earliest documentation of him is the score of the *Oratorio della Madonna de' sette dolori*; this bears a dedication to Emperor Charles VI, in whose service he already was at the time, signed 'Ignatio Balbi Dilettante' and dated 'Milan, 24 February 1720'. In 1724–5 Balbi contributed four arias to two oratorios performed in Milan, and according to Quadrio he also contributed to one given there in 1726; this was possibly *Il martirio di S Giovanni Nepomuceno*, whose published libretto does not bear any composer's name. The librettos of three other works performed in Milan name Balbi as composer: *La verità confessatasi da un'anima dannata* (1729), *La Passione* (1735) and *Ritornando il giorno trentesimo d'agosto l'anno MDCCLII* (1752). In the libretto of the last of these he is described as 'Virtuoso Dilettante Signor Don Ignazio Balbi Milanese, Segretario di S[ua] M[aestà] I[mperial] R[egia]'. The title 'Regio Segretario Imperiale' also appears in some of Balbi's letters, including one dated 2 August 1752 sent to Gasparo Francesconi (now lost; see Succi), who took the title role in his opera *Lucio Papirio* at Turin. That *Ciro in Armenia* (1753), an opera hitherto attributed to Maria Teresa Agnesi, was also by Balbi is suggested in his letter to Padre Martini dated 11 November 1753, while a relationship between Balbi and J.C. Bach is documented in three letters written by Bach to Martini in 1757. Balbi's last surviving letter to Martini (*I-Bc*) is dated 14 April 1773 (not 1775, as previously thought). He has been erroneously confused with the tenor Gregorio Babbi.

MARCO BRUSA, HERBERT SEIFERT

Balbi, Lodovico [Ludovico] (*b* Venice, *c*1545; *d* Venice, before 15 Dec 1604). Italian composer and friar. He entered the monastery of S Maria Gloriosa dei Frari, Venice, as a member of the order of Minor Conventuals. From 1565 to 1567 he was a pupil in Padua of Costanzo Porta, who belonged to the same religious order. From 1570 to 1578 he was a singer at S Marco, Venice, at the time when Zarlino was *maestro di cappella* there, and at Verona Cathedral. In 1578 he was appointed *maestro di cappella* of S Maria Gloriosa dei Frari, an appointment he probably held for four or five years. A document (in *I-Ma*, reproduced in Garbellotto) shows that in 1579 and again in 1582 Porta made great efforts to persuade Cardinal Borromeo, Archbishop of Milan, to accept Balbi as *maestro di cappella* of Milan Cathedral. At first no decision came from Milan and only in 1582 did the officials of the cathedral chapter decide to call Balbi, who, however, declined to accept, for reasons which are not recorded. On 7 November 1580 he participated unsuccessfully in a competition for the directorship of the choir of Padua Cathedral. On 18 May 1585 he was appointed *maestro di cappella* of the Cappella Antoniana in Padua, a post he held for over six years. On 28 November 1591 he obtained exemption from his duties, and from 13 July 1593 held a similar post at Feltre Cathedral. He remained there until 5 August 1597 when he left to take the post of *maestro di cappella* at Treviso Cathedral. On 10 June 1596 the chapter of his religious order named him, together with Porta and Gerolamo Vespa, *maestro dell'ordine*, an honorary degree denoting particular skill exercised over a long period. He left Treviso in 1598 and returned to S Maria Gloriosa, Venice, where he died.

Balbi had a thorough mastery of contrapuntal writing, though unequal in artistry to his teacher Porta. The *Psalmi ad vesperas* (1596, *I-FELc*), in the usual homophonic and homorhythmic style, show simple melodic and rhythmic invention. The *Musicale essercitio*, in which Balbi added four voice parts of his own under the superius parts of well-known madrigals, is a curious piece of academicism. His output has yet to be studied fully, however, and perhaps the two books of madrigals for four voices may yield greater musical interest.

GIANCARLO ROSTIROLLA

Balbi, Luigi [Alviso, Alciso, Aluigi, Aloysius] (*b* ?Venice; *fl* 1585–1621). Italian composer, organist and friar, nephew and pupil of Lodovico Balbi. He followed the same religious career as his uncle in the order of the Minor Conventuals. He was at first a singer in the choir of S Marco, Venice (1585), and in August 1585 entered the Cappella del Santo at the basilica of S Antonio, Padua. On 20 June 1586 he succeeded Bartolomeo Formenton as organist there. On 27 November 1587 he was appointed *maestro di cappella* at the church of the Carità in Venice. In 1590 he was in Zara, directing the local choir, after which he returned to Venice to serve in the choir of the Ca' Grande. In April 1606 he competed, at first unsuccessfully, for the directorship of the Cappella del Santo, Padua, a post he obtained on 4 August 1615. He remained there until August 1621, with some interruptions owing to the temporary suppression of the choir because of the lack of discipline among the singers.

WORKS

Ecclesiastici concentus ... liber primus (Venice, 1606)
Completorium, 12vv (Venice, 1609)
Motets, sacri concerti and other pieces, 1590[7], 1615[3], 1622[2], 1623[2], 1627[1], 1627[2]

Balbun, Noel [Noe]. *See* BAULDEWEYN, NOEL.

Baldan, Angelo (*b* Venice, 1753; *d* Venice, 23 April 1803). Italian composer. He studied with G.F. Brusa, was a singer at S Marco and became director of music at the churches of S Leonardo, S Marcuola and at the convent of S Maria Celeste in Venice. Some of his scores are dated and marked for use at other Venetian churches (S Rocco, S Pietro di Castello and S Geremia). *Assalone*, performed in 1789 in the oratory of S Filippo Neri, Venice, was his only dramatic work; he did, however, write arias to be used in performances of operas by other composers.

Aristocratic families employed Baldan as teacher. At soirées in the Venier palace he performed with his pupil Teresa Venier, née Ventura (known before her marriage as a singer at the Ospizio di S Lazzaro dei Mendicanti), his ballettos, sonatas and ricercares for harpsichord and his songs. Some of these canzoni with Venetian dialect texts became popular in the 19th century and were mistaken for folksongs (e.g. *Nina xe qua el to Nane*, *Per carità Bettina* and *Nella stagion dei boccoli*). At Baldan's funeral in S Geremia his Requiem for chorus and orchestra (1789) was performed.

WORKS

MSS in I-Vc, Vnm, Vs, Vsmc, Nc

Requiem, chorus, orch, 1789; 5 masses, 2–8vv; 12 mass movts, 2–5vv; 2 Mag, 3vv, 4vv; 2 TeD, 3vv, 4vv; 5 motets, S, orch; 26 ants, psalms etc.: mostly T, B, or 2T, B, with bc/orch
Assalone (orat), Venice, 1789
5 arie, 5 ariette, 5 canzoni, 11 duettini; mostly S, bc

SVEN HANSELL

Baldassari, Benedetto [Benedetti] (*fl* 1708–25). Italian soprano castrato. He was in the service of the Elector Palatine at Düsseldorf (*c*1708–14), where he sang a female part in Steffani's *Tassilone* in 1709. In 1710–11 he was at the Berlin court as the agent of the elector and Steffani in an attempt to convert the King and Queen of Prussia to Catholicism. In 1712 he went to London and sang in revivals of Mancini's *Idaspe fedele* and Gasparini's *Antioco* at the Queen's Theatre, playing a female part in the latter, and in the pasticcio *Ercole*. He was much applauded, again in a female role, in Gasparini's *Lucio Papirio* in Rome in 1714, and sang in operas by C.F. Pollarolo and Orlandini in Venice in 1718. Returning to London in 1719, he sang as an original member of the Royal Academy company, in Porta's *Numitore*, Handel's *Radamisto* (where he demanded to be elevated from a captain of the guard to a princely lover) and Roseingrave's adaptation of Domenico Scarlatti's *Narciso* in 1720, and in original productions of Handel's *Floridante* (1721) and Giovanni Bononcini's *Crispo* and *Griselda* (1722). In the autumn of 1725 he was singing in Dublin.

The two parts Handel wrote for him, Fraarte in *Radamisto* and Timante in *Floridante*, show that he was a high soprano with a compass from *e'* to *a"* but the two leading male roles in *Radamisto* were allotted to women, implying that Handel did not rate him as a front-rank

castrato. His portrait was painted by Beluzzi and engraved by Vertue.

WINTON DEAN

Baldassari [Baldassare, Baldasari], **Pietro** (*b* ?Brescia, *c*1683; *d* after 1768). Italian composer. Early historians name Rome as his birthplace, but some contemporary documents describe him as being from Brescia, where Baldassari was quite a common name. From his works it can be assumed that he was in Brescia in 1709, and in librettos he is named *maestro di cappella* of the Oratorio di S Filippo Neri (Congregazione della Pace) in Brescia. He held this post from 1714 until at least 1768 and until 1754 he was also *maestro di cappella* of S Clemente, Brescia. In December 1717 he competed, unsuccessfully, for the same post at the basilica of S Maria Maggiore, Bergamo. He took holy orders.

Apart from the *componimento per musica*, *Il giudizio di Paride*, written to celebrate the name day of the Empress Amalia Wilhelmina, little of Baldassari's music has survived. From that which has survived, his musical language can be said to bear traces of the canonic writing practised by members of the Accademia Filarmonica of Bologna. A letter to Padre Martini dated 21 February 1768 (*I-Bc*) reveals his intention to dedicate a collection of 12 psalms to Farinelli.

JAMES L. JACKMAN/MARCO BIZZARINI

Baldi, Antonio (*fl* 1714–35). Italian alto castrato. He came from Cortona and may have sung in three operas at Palermo in 1714–16. He appeared in 13 operas in Venice (1722–4, 1729 and 1733–5), including works by Gasparini, Orlandini, Giacomelli, Hasse and Leo, in Genoa (1723 and 1730), Milan (1723 and 1725), Florence and Turin (1730–31) and Rome (1731). He was engaged for three seasons (1725–8) by the Royal Academy in London, making his début in a revival of the Vinci-Orlandini *Elpidia*. He sang in ten operas by Handel (four of them revivals), the pasticcio *Elisa*, Ariosti's *Lucio Vero* and *Teuzzone* and Giovanni Bononcini's *Astianatte*. The six parts Handel composed for him, Scipio in *Scipione*, Taxiles in *Alessandro*, Trasimede in *Admeto*, Oronte in *Riccardo Primo*, Medarse in *Siroe* and Alessandro in *Tolomeo*, indicate a narrow compass (*a* to *d''*) and a tessitura similar to Senesino's but with far less brilliance. Owen Swiney described him in 1725 as a tolerable actor and neither a good nor a bad singer. Burney called him 'a singer of no great abilities' and suggested, of one of his arias in *Siroe*, that Handel assigned 'the chief part of the business to the instruments, which, so employed, were better worth hearing than the voice'; but Burney can never have heard Baldi sing. There is a caricature of him by A.M. Zanetti in the Cini collection (*I-Vgc*).

WINTON DEAN

Baldi, João José (*b* Lisbon, 1770; *d* Lisbon, 18 May 1816). Portuguese composer. The son of Carlo Baldi (*d* Lisbon, 1779), a favoured court musician who had immigrated from Italy, he was admitted on 10 January 1781 to the Lisbon Seminário Patriarcal, where his music teachers were Sousa Carvalho, the Lima brothers and José Joaquim dos Santos. In September 1789, having completed his studies, he was named *mestre de capela* of Guarda Cathedral. From this year date his earliest surviving works, two orchestral masses. In 1794 he moved from Guarda to Faro Cathedral and in 1800 returned to Lisbon as second *mestre de capela* of the royal chapel of Bemposta.

From 1805 he wrote a series of spectacular polychoral masses, Vespers and Matins for the royal basilica at Mafra, celebrated for its six widely spaced organs and choirs in its four corners. As late as 1825 his Mafra music produced 'a stupendous and admirable effect'. In 1801 he published his first *modinha* and in 1803 wrote the Grand Mass dedicated to the Conde de Borba that made him famous. In 1805 he began composing for the theatre and in 1806 became first *mestre* of Bemposta and of Lisbon Cathedral. In 1812, while a captain in the militia raised by Beresford, he wrote the music for a patriotic hymn dedicated to Wellington.

An extremely versatile artist who wrote in the reigning Italian manner, he composed a great amount of church music, piano works, songs and stage music, the latter for the Rua dos Condes and Salitre theatres. He ranks with Portugal and Moreira as one of the three best Portuguese composers of his generation.

WORKS

SACRED

For 4vv, orch/org: masses: *P-La*, *Em*, 5 in *EVc*; 2, 1789, *Lf*; 1801, *La*; 1801, *BR-Rem**; 1803, ded. Conde de Borba; 2 Mag, *P-EVcn*; Responsories: St Michael's Matins, 1806, Sacred Heart Matins, 1808, Christmas Matins, 1811, Dec 8 Matins, all *P-La*, 52 in *EVc*; 2 TeD, 1808, 1811, *La*; 7 vesper ps, *La*; 7 vesper ps, *EVc*

Polychoral (male vv, acc. 4–6 org; all at *MP*): 4 masses, separate Credo, Mag, 1807; Matins, 1805; Vespers, 1806; 8 vespers ps

ROBERT STEVENSON

Baldini, Vittorio (*b* Venice; *d* Ferrara, 21 Feb 1618). Italian printer and engraver. He began to publish literary texts in 1578, setting up his printing works opposite the Castello Estense at Ferrara. He seems to have started music publishing in 1582 with a collection of madrigals for five voices by various authors entitled *Il lauro secco*, in which a representative group of madrigalists from Ferrara and other Italian cities paid homage to the beauty and virtuosity of Laura Peverara, a singer from Mantua and lady-in-waiting to the Duchess of Ferrara. Baldini probably acquired the edition from the heirs of Francesco Rossi and Paolo Tortorino. He later printed many collections of madrigals, canzonettas, psalms and motets by such leading composers as Lodovico Agostini, Girolamo Belli and Bonfilio. Between 1594 and 1597 he published several of the most significant works of the *seconda pratica* madrigalists (Luzzaschi, Gesualdo, Fontanelli and Macque).

Baldini also published a number of books on the theory and art of music and the theatre, including F. Patrizi's *La deca istoriale* (1586) and *La deca disputata* (1586); G.B. Aleotti's *Gli artifitiosi et curiosi moti spiritali di Herrone* (1589, the Italian translation, with illustrations, of a basic handbook for stage machinists; see illustration); M.A. Ingegneri's *Della poesia rappresentativa* (1598); and Ercole Bottrigari's *Il melone* (1602/*R*, Monteverdi's reply in his own defence to the attacks of Artusi). Among the most important poetic and theatrical texts that he printed are the descriptive scenarios for intermezzos, tournaments and mock battles staged in melodramatic style at Ferrara from 1600 onwards, for example Guidobaldo Bonarelli della Rovere's *Filli di Sciro* (1607, with scenery and costumes by G.B. Aleotti, engraved by F. Vallegio) and Battista Guarini's *Intermezzi* (various editions, with alterations, 1610, 1612 and 1614).

Daedalus, one of the typographical devices used by Vittorio Baldini: from the 'Registro' (last page) of the second part of G.B. Aleotti's 'Gli artifitiosi et curiosi moti spiritali di Herrone' (Ferrara: Baldini, 1589), 104

In contrast to contemporary Venetian publications, Baldini's works show a deeply cultivated and élitist tendency through the beauty of their graphic lettering, engraved decorations and superb title-pages. He used both wood and metal on fine, azure-coloured paper; his musical publications are among the most interesting of the late 16th century as they include both text and music. Baldini used several different imprints: Ducal Printer until 1597, when the Este family lost the Duchy of Ferrara, thereafter Episcopal or State Printer and Printer to the Academy of the Intrepidi. He used a large number of typographical signs including a bell, a flying Daedalus (see illustration) and the sun. After his death, his daughter Vittoria carried on the printing works until 1622, under the imprint of 'the heirs of Vittorio Baldini'.

G.D. Cucchetti: *La pazzia, favola pastorale* (Ferrara, 1581, later edns to 1623)

ADRIANO CAVICCHI

Baldoni, Tomaso. *See* BOLDON, TOMASO.

Baldovino, Amadeo (*b* Alexandria, 5 Feb 1916). Italian cellist. He spent two three-year periods at the conservatory in Bologna: from 1927 he studied the cello with Camillo Oblach, graduating in 1930, and he returned in 1937 as a composition pupil of Cesare Nordio. His début recital took place in Milan in 1930, and he started a series of international tours the following year with a concerto performance in Berlin: he was welcomed as a sensitive young artist as well as an accomplished technician. His international solo career expanded greatly after World War II, but he later devoted more time to chamber music. He was a founder-member in 1957 of the Italian String Trio; he left in 1962 to replace Libero Lana in the Trio di Trieste. Following Mainardi, he was from 1969 to 1972 professor of the master cello course at the Accademia di S Cecilia, Rome, and subsequently continued to teach there. He played on the 1711 'Mara' Stradivari, formerly the property of John Crosdill and Alessandro Pezze. (*CampbellGC*)

PIERO RATTALINO

Baldrati [Baldradi], **Bartolomeo** (*b* Rimini, *c*1645). Italian ?composer. A Franciscan friar, he was *maestro di cappella* of S Francesco, Rimini, when *Messe a 4 voci a capella* op.1 (Bologna, 1678, 2/1694) was published under his name. A copy (in *I-Bc*) of the first edition, however, bears a manuscript note stating that this music is by Giuseppe da Bagnacavallo (*see* GIUSEPPE TAMBURINI). According to Eitner (*Quellen-Lexikon*) two masses by Baldrati (one for 24 voices) and a few five- and six-part motets survive (in *F-Pn*).

Balducci, Francesco (*b* Palermo, bap. 1 April 1579; *d* Rome, 20 Nov – 31 Dec 1642). Italian poet. Having received a relatively limited education in Palermo, he went before he was 20 to Naples, where he found patronage for his poetry among the aristocracy. He also went to Rome and in 1601 was among the papal troops who opposed the Turks in Hungary. After the campaign he returned to Rome, where he began his period of most intensive literary activity: he worked under the protection of Giovanni Antonio and Paolo Girolamo II Orsini, Cardinals Ludovisi, Scipione Borghese, Orsi, and Antonio

and Maffeo Barberini, among others. He travelled widely in Italy and became a member of various literary academies in Rome, Perugia, Bologna and Palermo. A man of restless and impulsive temperament, he lived an irregular life, which seems to have alternated between extremes of luxury and misery and included a prison term for insolvency. He took holy orders late in life and became a chaplain in the Roman hospital of S Sisto.

During his lifetime one volume of his *Rime* was published (Rome, 1630), and that and another volume of *Rime* appeared posthumously (Rome, 1645–6). Two oratorio texts, *La fede* and *Il trionfo*, were included in the second volume of *Rime* (edns of both in Alaleona: *Storia*, pp.289ff, and of *La fede* only in Pasquetti, 2/1914, pp.207ff, and Schering, appx, pp.viiff). These are the earliest printed works, either literary or musical, in which the term 'oratorio' is used to designate a genre. A modified version of *Il trionfo* was set to music, possibly by Carissimi, as *Oratorio della Santissima Vergine* (ed. in PIISM, 3rd ser., *Oratori*, viii). His many canzonettas, set to music by Orazio Michi and others, played a crucial role in the origins of the chamber cantata.

HOWARD E. SMITHER/R

Balducci, Giuseppe (Antonio Luigi Angelo) (*b* Iesi, 2 May 1796; *d* Malaga, 1845). Italian composer. He received the best training available in the Marches, and at the age of 17 formed his own operatic troupe. He was, however, forced to flee after killing the nephew of the Papal Governor of Iesi in a duel. Reaching Naples, he became music master to the three daughters of a retired field marshal, Raimondo Capece Minutolo, and spent the rest of his life as a member of their household. He died on a business trip to Malaga in 1845.

As an operatic composer, Balducci made his début, after further training in Naples with Zingarelli, with *Il sospetto funesto* (Lent 1820, Fondo), an *opera semiseria* with, unusually, a tragic ending. He followed this with further works, but when *Tazia* (15 January 1826, S Carlo) was sabotaged by a disaffected orchestra for unknown reasons, he retired from the theatre. His only subsequent work performed in public was *Bianca Turenga* (11 August 1838, S Carlo). However he also composed five salon operas, beginning with *Boabdil re di Granata* (1827) and ending with *Il conte di Marsico* (26 February 1839) for the Capece Minutolo daughters and their friends. Unique in Italian opera, these works were composed for women's voices only, generally with accompaniments for six hands at two pianos.

Though Balducci may have lacked the melodic gifts of Donizetti and Bellini, his music is well crafted. Whereas other composers complained of the difficulty of finding new ideas for cabalettas, his final movements are nearly always fresh, spontaneous and effective. The stage revival of his works has so far been confined to New Zealand, where Opera Waikato has staged *I gelosi* (1993), *Il noce di Benevento* (1995) and *Scherzo* (1996).

WORKS

OPERAS

first performed in Naples and autograph MSS at I-Nc unless otherwise stated

For public perf.: Il sospetto funesto (? P. Giannone, ? A.L. Tottola), Fondo, Lent 1820; L'amante virtuoso (G. Schmidt), Fondo, 1 April 1823; Le nozze di Don Desiderio, Nuovo, 8 Nov 1823, no autograph, copy at *Nc*; Riccardo l'intrepido (J. Ferretti), Valle, Rome, 9 Sept 1824; Tazia (L. Ricciuti), S Carlo, 15 Jan 1826; Bianca Turenga (G. Bidera), S Carlo, 11 Aug 1838

For private perf.: Boabdil re di Granata, acc. 2 pf 4 hands, March 1827; I gelosi (G. Tarantino), acc. 2 pf 6 hands, April 1834; Il noce di Benevento, acc. 2 pf 6 hands, wint. 1836–7; Scherzo (G. Campagna), acc. 2 pf 6 hands, male chorus, 5-inst orchestrino in finale, 14 March 1837; Il conte di Marsico (A. Balducci, V. Salvagnoli), acc. 2 pf 6 hands, 26 Feb 1839 (Naples, n.d.), no autograph

JEREMY COMMONS

Balduin, Noel [Noe]. *See* BAULDEWEYN, NOEL.

Baldwin. American firm of instrument makers, predominantly of pianos and organs. It was founded in Cincinnati in 1862 by Dwight Hamilton Baldwin (1821–99). He attended the preparatory department of Oberlin College (1840–42) and was then a minister and school singing teacher in Kentucky and Ohio. Moving to Cincinnati in 1857 to teach music in schools, he also became in 1862 or 1863 a retailer of pianos and organs. D.H. Baldwin & Co. was formed in June 1873 when Lucien Wulsin (1845–1912), a clerk in Baldwin's firm since 1866, became partner. Robert A. Johnson (1838–84) opened a Louisville branch in 1877 and became a partner in 1880. Three more partners joined in 1884: Albert A. van Buren, George W. Armstrong jr (1857–1932), and Clarence Wulsin (1855–97), who ran an Indianapolis branch. Until the late 1880s the firm was one of the largest dealers in keyboard instruments in the Midwest as agent for such makers as Decker, Estey, J. & C. Fischer and Steinway.

In 1889, a subsidiary, the Hamilton Organ Co., Chicago, began to manufacture reed organs, and by 1891 the Baldwin Piano Co., a subsidiary in Cincinnati, was making upright pianos. The company acquired the Ellington Piano Co. (1893) and the Valley Gem (originally the Ohio Valley) Piano Co., founded in 1871 in Ripley, Ohio. John Warren Macy led in the early manufacture, developing a piano that won the Grand Prix at the Paris Exhibition in 1900. Baldwin's death caused some upheaval, ultimately solved when Lucien Wulsin and George Armstrong bought control in July 1903. Wulsin was president until 1912, Armstrong from 1912 to 1926, and Lucien Wulsin jr (1889–1964) from 1926 to 1964.

In the late 1920s, in collaboration with the physics department of the University of Cincinnati, the company

began a research programme in electronics that resulted in the introduction of an electronic organ in 1947 (see BALDWIN ORGAN). Baldwin's director of electronic research, Dr Winston E. Kock, designed the original models, some of which were intended for use in churches. Most Baldwin organs are smaller instruments for the home, many of them 'spinet' organs with two staggered manuals.

In 1965 the firm introduced the model SD-10, a concert grand piano newly designed by Harold Conklin. By the 1970s the parent company, by then under the chairmanship of the founding partner's grandson, Lucien Wulsin (*b* 1916), had expanded into Baldwin United, a large corporation. The music subsidiary, Baldwin Piano & Organ Co., continued to manufacture pianos and electronic organs at factories in Mississippi and Arkansas. In 1963 Baldwin bought Bechstein of Berlin, which retained its own identity and continued to make pianos in its own style.

An experimental concert grand piano with electronically enhanced sound served as a prototype for later, more successful electronic and computerized instruments. After 1960 the company extended its range of electronic instruments to harpsichords, guitars and pianos. Several manufacturing operations, including Gretsch (guitars, drums and amplifiers) and Ode (banjos), were sold in 1980 to Charles Roy of Nashville, Tennessee.

In 1983 Baldwin United filed for bankruptcy after sustaining heavy losses in its insurance business. Baldwin Piano & Organ Co. was bought the following year by some of the company's executives, including Harold Smith, who became president, and R.S. Harrison, who became chairman. Baldwin sold Bechstein in 1987 and in the following year purchased the Wurlitzer Company, which owned the Chickering name. Baldwin's mid-range grands are now named Chickering, and the lower-priced instruments are named Wurlitzer. Most recently, the company has produced a digital reproducing player system, the ConcertMaster, housed in a grand piano, which has multimedia capacities and can download from the Internet. Baldwin is now the largest producer of pianos in the USA, producing 20,000 instruments annually.

CYNTHIA ADAMS HOOVER/EDWIN M. GOOD

Baldwin, Dalton (*b* Summit, NY, 19 Dec 1931). American pianist. He began his formal musical training at the Juilliard School of Music, but gained the BM from the Oberlin College Conservatory. He continued his studies in Paris with Boulanger and Madeleine Lipatti and in 1954 began his long and successful partnership with the baritone Gérard Souzay. Concentrating primarily on the song repertory, Baldwin was coached by such composers as Poulenc, Sibelius, Martin and Barber. He has participated in a number of first performances (notably of Rorem's *War Scenes* in 1969, with Souzay as soloist) and has accompanied such other eminent singers as Elly Ameling, Jessye Norman, Arleen Augér, Marilyn Horne and Frederica Von Stade. Perhaps his finest achievements have been his recordings of the complete songs of Debussy, Fauré, Poulenc, Ravel and Roussel. Baldwin's playing is characterized by a softness of touch and superb legato, which allow him to phrase with the singer; he is supportive without being too subdued.

RICHARD LESUEUR

Baldwin [Baldwine, Baldwyn, Baudewyn, Bawdwine], **John** (*b* before 1560; *d* London, 28 Aug 1615). English singer, composer and music copyist. He was appointed a tenor lay clerk at St George's Chapel, Windsor, in 1575. He became a Gentleman of the Chapel Royal on 20 August 1598, and appears to have left Windsor by 1600. He sang in the Chapel Royal at the funeral of Elizabeth I, the coronation of James I and the funeral of Prince Henry.

Baldwin was the copyist of several important music manuscripts. He preserved much pre-Reformation English church music in the partbooks *GB-Och* 979–83, copied about 1575–81 with later additions (the Tenor part is lacking). His so-called Commonplace Book (*Lbl* R.M.24.d.2; facs. in RMF, viii, 1987), begun about 1586 and largely complete by 25 July 1591 (with additions up to *c*1606), contains a wide variety of music. Baldwin had access to Marenzio's *Madrigali a quattro, cinque e sei voci* (1588) no later than 1591, scoring 13 works from the collection; he also copied a number of three-voice sections from pre-Reformation antiphons as well as complex proportion and hexachord exercises, some of which he ascribed to the 15th-century composer Bedyngham and may well be authentic. Baldwin completed *My Ladye Nevells Booke*, a carefully arranged collection of Byrd's keyboard music, on 11 September 1591, when he was resident in Windsor and Byrd lived nearby in Harlington. The manuscript was probably copied for Rachel, the wife of Sir Edward Nevell, MP for Windsor in 1588–9; it remains in the Neville family, in the collection of the Marquis of Abergavenny. Baldwin also recopied the damaged final section of the Sextus part of the Forrest-Heyther partbooks (*Ob* Arch.F.e.19–24, formerly Mus.Sch.e.376–81) and copied two pieces into Robert Dow's partbooks (*Och* 984–8).

Baldwin's 23 compositions are of indifferent quality, though his nine proportion exercises are of intellectual interest – one presents 28 proportional signatures. His consort music includes two In Nomines (one canonic) and a Browning, which presents the tune successively beginning on B♭, F, C, G and D (twice in canon). His song *In the merry month of May*, dated 1591 in his Commonplace Book, is probably the 'pleasant song of Coridon and Phyllida, made in three parts of purpose' for the visit of Elizabeth I to the Earl of Hertford at Elvetham on 22 September 1591.

ROGER BRAY

Baldwin organ. An electronic organ, many models of which have been manufactured by the Baldwin Piano & Organ Co. since 1946. The original models were designed by Dr Winston E. Kock (1909–82), the company's director of electronic research from 1936. Baldwin organs normally have two manuals and pedals; the earlier models were

mostly church, cinema and concert organs, but the company has subsequently manufactured a wide range of instruments, including many for home use, especially 'spinet' organs in which two shorter manuals are staggered by one octave. Advances in electronic technology around 1970 made possible several new devices that are now widespread: rhythm and 'walking bass' units, arpeggiators, memories and a choice of chord systems. Baldwin introduced microcomputer organs around 1981; current models, like Baldwin's Pianovelle digital pianos, are based on sampled timbres.

HUGH DAVIES

Baldwyn, ?John (*fl c*1450–80). English composer. Two four-voice *Magnificat* settings, each with a compass of 22 notes, are attributed to 'Baldwyn' in the index of the Eton Choirbook (*GB-WRec* 178) and a even-voice *Gaude* by 'M. Bawldwyn' was copied at the College of the Holy Trinity, Tattershall in 1498–9, none of these works survive. A *Dominus* John Baudwyn was made BMus at Cambridge in 1470–71. A John Baldwyn of Cheshunt was scholar at Eton College (*c*1448–1452) and was admitted to King's College, Cambridge, on 7 December 1452, where he was a fellow in the later 1450s. Either or both of these may have been the composer, given the prevalence of compositions by old Etonians in the Eton Choirbook, and given the importance to Eton College of Cambridge as a source of polyphony. The composer may also have been the Sir John Baldwyn who was vicar-choral and chantrist at Wells Cathedral between *c*1486 and *c*1500.

MAGNUS WILLIAMSON

Bâle (Fr.). *See* BASLE.

Balestra, Reimundo. *See* BALLESTRA, REIMUNDO.

Balestrieri, Thomas (*fl* Mantua, *c*1750–80). Italian violin maker. On his labels he called himself a Cremonese, but the surviving instruments were made in Mantua. The pattern and style of the best of his work draws much more from Cremona than from Mantua, and he may well have been trained in the first city before setting up on his own in the second. Some of his instruments show the influence of Camillus Camilli, his contemporary in Mantua. His best violins are of a flat Stradivarian model, giving a powerful sound that makes them sought after as solo instruments. He made a large number of violins and an occasional cello, but few, if any, violas. His varnish was often a dull red-brown colour and wore off easily, though sometimes he used an orange varnish of fine quality. (*LütgendorffGL; VannesE*)

CHARLES BEARE

Baley, Virko (*b* Radekhov, 21 Oct 1938). Americn composer and conductor of Ukrainian birth. He studied at the Los Angeles Conservatory of Music and Art (BA 1960, MM 1962; later the California Institute of the Arts), where his teachers included Earle Voorhies and Morris Ruger; he also studied the piano with Rosina Lhevine and composition with Donald Erb and Mario Davidovsky. He joined the music department at the University of Nevada, Las Vegas in 1970. He has also served as founder-conductor of the Nevada SO (1980–95), music director of the Las Vegas Opera Company (1983–8) and principal guest conductor and music advisor of the Kiev Camerata (from 1995). His scholarly work has established him as an authority on Soviet music.

Although Baley's music frequently refers to Ukrainian sources, his style became increasingly Americanized after 1980. The First Violin Concerto (1987) includes Ukrainian folk elements and exhibits a European polish and mood, but its unusual orchestral textures, rippling with celeste, vibraphone and harpsichord, seem American, as does the energetic drumming of the second movement 'Dies irae' and the muted jazz trumpet of the final 'Agon'. His gradual move away from a mournful, Eastern European, somewhat neo-classical idiom climaxed in *Dreamtime* (1993–5), which includes a Ukrainian *kolomïyka* dance, but reflects new world styles in its ensemble unisons, tuned water goblets and dream-like suspension of time.

KYLE GANN

Balfe, Michael William (*b* Dublin, 15 May 1808; *d* Rowney Abbey, Herts., 20 Oct 1870). Irish composer and singer. The most successful composer of English operas in the 19th century, and the only one whose fame spread throughout Europe, he gained wide international recognition with *The Bohemian Girl*.

1. LIFE. Balfe received his earliest musical instruction from his father, a dancing-master and violinist, and the composer William Rooke. When his father died in January 1823, Balfe went to London and became the articled pupil of C.F. Horn, earning a living as deputy leader of the Drury Lane orchestra. He developed a fine baritone voice and made his stage début at Norwich as Caspar in a bowdlerized version of *Der Freischütz*. In 1825 he went to Rome, where he studied composition with Paer, and then to Milan to study counterpoint with Francesco

Federici and singing with Filippo Galli. That autumn his first stage work, *Il naufragio di La Pérouse*, a *ballo pantomimo serio* designed by Alessandro Sanquirico, was given there at the Teatro della Cannobiana.

During the next four years Balfe pursued his career as an opera singer. He returned to Paris where Cherubini, whose good opinion he had already won en route to Rome, introduced him to Rossini. On hearing Balfe sing 'Largo al factotum', Rossini promised to recommend him to the Théâtre des Italiens, if he would first study for a year with Giulio Bordogni. Balfe agreed, and made his Paris début as Figaro in *Il barbiere di Siviglia* at the Théâtre des Italiens in 1827. After two seasons there he returned to Italy, appearing as Valdeburgo in Bellini's *La straniera* at the Teatro Carolino, Palermo, on 1 January 1830. Towards the end of the carnival season, a dispute between the chorus and the management resulted in his being commissioned to compose a short opera without chorus, *I rivali di se stessi*, which was written and produced in about 20 days. His singing engagements took him next to Piacenza and to Bergamo, where he met and shortly afterwards married the Hungarian singer Lina Roser.

In spring 1831 he was invited to write an opera for the Teatro Fraschini, Pavia, the *farsa giocosa Un avvertimento ai gelosi*. His third opera, the more ambitious *Enrico Quarto al passo della Marna*, was given at the Teatro Carcano, Milan (not La Scala, as is often stated) on 19 February 1833, with himself and his wife in leading roles. Later that year Balfe renewed his friendship with Maria Malibran, whom he had known in Paris. She persuaded the management at La Scala to engage him to sing there with her, and recommended that he return to England, which he did in 1835.

Balfe's position as the most popular native composer in Britain was established overnight in London by the triumph of *The Siege of Rochelle* (1835, Drury Lane) which ran for 73 performances during its first season. Almost equal success attended *The Maid of Artois* (1836, Drury Lane), written for Malibran. Balfe continued his career as a singer, playing Papageno in the first English performance of *Die Zauberflöte* at Drury Lane on 10 March 1838. Later that year he was honoured by a commission for the Italian Opera at Her Majesty's Theatre, which resulted in *Falstaff*, one of his best scores; it was sung there by a star cast which included Giulia Grisi, Emma Albertazzi, Giovanni Rubini, Antonio Tamburini and Luigi Lablache. After this he successfully toured Ireland and the west of England.

Balfe was now determined to become his own manager with a view to establishing English opera on a permanent footing. Even though his backers included Queen Victoria and the Prince Consort, his venture was doomed to failure. He leased the Lyceum Theatre (English Opera House) and brought out his latest work, *Këolanthé* (1841), with his wife making her London début in the title role. This was successful, but receipts dwindled when subsequent works were performed, and eventually he was forced to abandon the project. He informed the audience that he would never again appear before them in the capacity of a manager, and he kept his word.

Disheartened by this reverse, Balfe decided to try his luck in Paris. He had nearly completed *Elfrida* for the Théâtre des Italiens when Grisi, who was to have taken a leading role, announced that she was pregnant and unable

Michael William Balfe: drawing by Daniel Maclise, pencil (National Gallery of Ireland, Dublin)

to take part. Balfe's plans appear to have been frustrated, therefore, for the opera was never finished; but fortunately the librettist Scribe, who attended a concert of his works, offered to collaborate with him on a comic opera, *Le puits d'amour* (1843, Opéra-Comique), which was an instantaneous success. In the meantime Alfred Bunn, who had managed Balfe's earlier successes at Drury Lane, had extricated himself from bankruptcy, and *The Bohemian Girl*, on which Balfe had been working for some years, was produced at Drury Lane on 27 November 1843 with Elizabeth Rainforth and William Harrison in the main roles. It was the greatest triumph of his career, and the only 19th-century British opera to enjoy a genuine international reputation. At Drury Lane it ran for over 100 nights, brought in vast profits for the management and produced a furore which J.W. Davison's harsh review in the *Musical World* did nothing to mitigate.

In 1845 *L'étoile de Séville* was given at the Paris Opéra, where it ran for 15 performances. In 1846 Balfe took over from Michael Costa as conductor of the Italian Opera at Her Majesty's Theatre, remaining until the theatre closed in 1852. During the 1850s he toured extensively abroad, visiting Berlin, Vienna (where Johann Strauss hailed him as the 'King of Melody'), St Petersburg and Trieste (where his opera *Pittore e duca* was unsuccessfully produced in 1854). In 1857 the inception of the Pyne-Harrison Opera Company at the Lyceum provided the impetus for a final period of remarkable creativity. *The Rose of Castille* was the first of a series of operas produced for the company between 1857 and 1863, and probably the most popular, after which the company moved to Covent Garden.

In 1864 Balfe decided to retire to the country, and bought a small estate in Hertfordshire, Rowney Abbey, which his wife succeeded in running profitably. His congenital acute spasmodic asthma troubled him increasingly. He was unable to complete his last opera, *The Knight of the Leopard* (based on Scott's novel *The*

Talisman), on which he bestowed extraordinary care; it was produced posthumously by Costa as *Il talismano* at Drury Lane in 1874. Towards the end of the summer of 1870 he caught cold and his condition gradually deteriorated until he died on 20 October.

2. WORKS. When attempting to evaluate Balfe's works, it should be remembered that two distinct traditions of British opera existed during his lifetime, of which he was only too well aware. The English ballad opera was viewed by the public simply as entertainment, a genre set apart from the more elevated style of 'highbrow' opera. Of Balfe's operas, only *Falstaff* and *Il talismano* belong to the latter category, though it is also notable that he took more trouble over the works for Paris and Italy than for those written for production in London. Throughout his life, Rossini was his mentor to an extent that has hitherto been underestimated: both men possessed the same shrewdness of artistic judgment, the same inexhaustible musical facility, and the same chameleon-like ability to adapt themselves to the situation in hand. In musical terms, the Rossinian influence is most pronounced in the early Italian works, in *Falstaff* and in the English operas written up to 1852. The second most prevalent idiom is French; derived principally from Auber, it finds its most natural expression in *Le puits d'amour*, *Les quatre fils Aymon* and *L'étoile de Séville*, though in this last work, as in some of the later Pyne-Harrison scores, a Meyerbeerian influence is present. Yet the music that made Balfe famous – the ballads which no one surpassed – remains indisputably his own. His operas, and his livelihood, relied on these 'hit' numbers in a manner similar to the 20th-century musical.

Balfe, however, was never less than thoroughly musically literate: the unusual key relationship between the appearances of the second subject in *The Bohemian Girl* overture demonstrates that. His feeling for local colour is especially remarkable in *The Siege of Rochelle*, *The Sicilian Bride* and *The Rose of Castille*. His knowledge of the voice was exceptional: the pyrotechnics of Elvira's Scherzo in *The Rose of Castille* are the work of a composer who understood every aspect of vocal art. His music is never dull, if only because of its rhythmic vitality; when this quality is wedded to striking musical ideas the effect is intoxicating, as, for example, in the quintet 'C'est dit, c'est entendu' from *Les quatre fils Aymon*. The critic Henry Chorley considered this opera to be Balfe's masterpiece, and he was right: of all Balfe's unknown works, it most merits revival. The later operas, such as *Bianca* (1860) and *The Puritan's Daughter* (1861), are more homogeneous in style, but although they are more through-composed, they lack the freshness of inspiration that characterizes their predecessors. In *Il talismano*, Balfe updated his vocabulary to reach a par with middle-period Verdi, but the price paid for stylistic consistency is melodic weakness.

Balfe was no master of characterization, and in his English operas he frequently abused the natural verbal accentuation of his texts, partly, no doubt, because of the speed at which he worked (*Satanella*, for instance, was written in seven weeks). But in his songs it was a different matter: although not averse to altering a poem's shape and design in order to create an effective musical structure (as in Tennyson's *Come into the garden, Maud*, 1857) he treated the words themselves with almost unfailing sensitivity. His melodic genius guaranteed a consistently high level of achievement in his prolific song output: few of his contemporaries could match the finely sculptured vocal line of *Killarney* (1864) or the gentle rhythmic enchantment of *The Sands of Dee* (1859). Best of all are the *Seven Poems by Longfellow* (*c*1855); here, as in the remarkably symphonic late Piano Trio in A major (a work of substance and integrity), he deliberately responded to his critics and proved himself far more than a mere entertainer.

Balfe's music bespeaks his personality: he was the most honest, genial and charming of men. William Harrison recalled that when asked if he ever borrowed from other men's works, he admitted, astonishingly, to stealing snatches of Beethoven: '"Ye can't do better", he said with a beaming face, "than to go to the fountain-head, and come away with a cupful! There are two composers I've never scrupled to borrow from – one's Beethoven, the other's meself!"' (C. Harrison: *Stray Records*, i, London, 1892, p.108).

WORKS

unless otherwise stated, printed works published in London

STAGE

unless otherwise stated, first performed in London, autograph MSS in GB-Lbl and printed works published in vocal score

LDL – *Drury Lane Theatre*

LCG – *Covent Garden Theatre*

Il naufragio di La Pérouse (ballet pantomimo serio), Milan, Cannobiana, aut. 1825)

Atala (after F.R. de Chateaubriand), Paris, between 1826 and 1828, unfinished, lost

I rivali di se stessi (2, A. Alcazar, after C.A.G. Pigault-Lebrun: *Les rivaux d'eux-mêmes*), Palermo, Carolino, ?Feb 1830, lost

Un avvertimento ai gelosi (farsa giocosa, 1, G. Foppa), Pavia, Fraschini, spr. 1831, excerpts (Milan, n.d.), MS lost

Enrico Quarto al passo della Marna (op, 1), Milan, Carcano, 19 Feb 1833, excerpts (Milan, n.d.), MS lost

The Siege of Rochelle (grand op, 2, E. Fitzball, after Comtesse de Genlis:*Le siège de La Rochelle*), LDL, 29 Oct 1835 (1836)

The Maid of Artois (grand serious op, 3, A. Bunn, after A.-F. Prévost:*L'histoire du Chevalier des Grieux et de Manon Lescaut*), LDL, 27 May 1836 (1837)

Adelwina, between 1836 and 1843, inc.

Catherine Grey (grand op, 3, G. Linley), LDL, 27 May 1837 (1837)

Caractacus (historical play, J.R. Planché), LDL, 6 Nov 1837, lost

Joan of Arc (grand op, 3, Fitzball, after R. Southey), LDL, 30 Nov 1837 (1839)

Diadesté, or The Veiled Lady (opéra bouffe, 2, Fitzball, after L. Pillet and Marquis de St Hilaire), LDL, 17 May 1838, 1 song (1838)

Falstaff (ob, 2, S.M. Maggioni), Her Majesty's, 19 July 1838 (?1845)

Elfrida, (Maggioni) begun 1840, inc.

Baliani [Bagliani, Balliani, Basiliani], **Carlo** (*b* ?Milan, *c*1680; *d* Milan, 16 Feb 1747). Italian composer. A Milan Cathedral document of 1714 discloses that he was 34 years old at the time and that he had served for an unspecified period as *maestro di cappella* of S Maria della Passione, Milan. His selection by the cathedral chapter followed a written examination on 7 April 1714 in which he competed against Francesco Scarlatti (Alessandro's brother), A.F. de Messi, a Milanese musician, and G.A. Costa, a Paduan priest active in Rome (whom the cathedral was pressed to appoint by the Austrian court); accepting the recommendations of seven judges (including A.M. Bononcini and G.A. Perti), the chapter appointed Baliani *maestro di cappella* on 13 December 1714.

Except for a single cantata (*Solitudine amata*) and an act of an opera (*Ambletto*, 1719), no secular music by Baliani has come to light. He wrote a considerable quantity of music for the Ambrosian liturgy during his 33 years at Milan Cathedral, now in the cathedral archive (*I-Md*). Most of it is for the Mass and for vesper services (including lucernarium, hymn, post-hymn, psalm, *Magnificat*, psallenda and completorium settings). While the vesper services are often in the concertato style (with orchestral accompaniment), the music for the Mass is generally marked 'pieno' (for choir with organ); Baliani's *a cappella* movements recall the conservative contrapuntal style of contemporaries like Lotti. He avoided the theatrical vocal style.

In a letter of 26 July 1724 to Benedetto Marcello, Baliani praised the contrapuntal art displayed in Marcello's psalm settings, 'in which besides the nobility of the singular ideas by which the music is rendered more lovely, one sees the finest motifs, subjects, answers, imitations and inversions in madrigal style, as well as closing sections and duets both highly tasteful and impressive', devices abundant in Baliani's own music.

Baliani was ill in the summer of 1742 and asked that the cathedral authorities grant him retirement with pay and lodging. Later, however, he resumed his duties as *maestro*, and at the end of 1743 he helped judge new singers for S Maria presso S Celso, a church for which he composed (music in *I-Md*). Although his successor at the cathedral, G.A. Fioroni, favoured more florid solo singing, Baliani's music continued to be performed, and as late as

1783 Francesco Bianchi prepared copies of his works for the choir's use.

WORKS

MSS in I-Md unless otherwise stated

La calunnia delusa (orat, G. Machio), Milan, Chiesa Scala, 23 May 1724, 2 arias extant
Masses: 9 for 4vv, mostly a cappella; 4 for 8vv; 8 copied 1731, vv; 1 for 5vv, orch, *D-Dl* according to Eitner; Requiem, 8vv, orch
Gls: 23 for 8vv, mostly concertata; 3 for 8vv, *F-Pc*
Crs: 1 for 8vv a cappella; 1 for 8vv, org; 1 for 8vv, 2 org; 1 for 8vv, *Pc*
5 Cr–Sanctus, 8vv, mostly with org; 1 Cr–Sanctus, *Pc*; 1 Sanctus–Benedictus, 8vv, org
*c*12 ints, 4vv, some with Post Epistolam and Confractorium; 59 short ints, 8vv, org
*c*10 ants, 4/8vv, 1 for double choir
23 hymns, 1 with lucernarium and post-hymn; 16 hymns, 4vv; 15 hymns, 8vv; 2 hymns, 5vv; 9 hymns, double choir
32 pss, some with Ecce nunc; 42 pss, 8vv, 1 ps, 4vv, most with org; 10 Ecce nunc, 2 for 1v, 5 for 2vv, 1 for 4vv, 2 for 8vv
60 motets: 1 for 1v, 30 for 2vv, 9 for 3vv, 3 for 4vv, 17 for 8vv
4 Lits, 4/8vv; 2 Pater noster, 8vv; 15 Mag, 8vv; miscellaneous Psallenda, Completorium and other vesper items for 2 choirs
Sacred duet, Celorum eia Spiritus, dialogo tra S Michele e Lucifero, S, B

SVEN HANSELL

Baline, Israel. *See* BERLIN, IRVING.

Balino. *See* FABRI, ANNIBALE PIO.

Balissat, Jean (*b* Lausanne, 15 May 1936). Swiss composer and conductor. He attended Lausanne Conservatoire, where he studied harmony and counterpoint (Hans Haug), the piano (Denise Bidal) and the horn (Robert Faller); he also studied at the Geneva Conservatoire (composition and orchestration, André-François Marescotti; conducting, Samuel Baud-Bovy; percussion, Charles Peschier). He has taught composition and orchestration at the conservatories of Fribourg (1972–83), Lausanne (since 1979) and Geneva (since 1986), and between 1960 and 1983 he directed several wind ensembles, including La Landwehr, Fribourg (1972–83). In 1986–90 he was chairman of the Swiss Composers' Union.

His own work as a composer is deeply rooted in the tradition of western Switzerland: central to his output is the type of wind and brass music very popular in the Waadtland area, particularly with amateur performers. Balissat became known to a wider public through his choral and orchestral work *Fête des vignerons* (given its première in Vevey in 1977), which was written for a traditional winegrowers' festival. He is fundamentally opposed to experimentation and avant-garde trends; a number of different, traditional stylistic elements are ranged side by side or confront each other in his orchestral and chamber music, merging in the course of a clearly perceived, often polytonal musical structure. He was awarded the composition prize of the Lausanne Festival in 1982.

PATRICK MÜLLER

Balius y Vila, Jaime (*d* Córdoba, 3 Nov 1822). Spanish composer. He studied music as a choirboy in the Escolanía of Montserrat Abbey and was *maestro de capilla* of Urgel Cathedral by 1780, when he competed unsuccessfully for the same post at Toledo. In October that year he was offered the post of *maestro de capilla* at Burgo de Osma Cathedral; he did not however take it up, as in February 1781 he was appointed *maestro de capilla* in Gerona (possibly his native town), and in 1785 in Córdoba, after a public competition. In 1787 he obtained the same post at the Convento de la Encarnación in Madrid (one of the highest appointments to which a Spanish musician could then aspire), but in 1789 he returned to Córdoba, still as *maestro de capilla*, where he remained until his death.

Balius was one of the leading Spanish composers of his period; his works, comprising masses, psalms, motets, Lamentations, villancicos and other sacred pieces (principal sources: *E-ALB*, *Bc*, *C*, *G*, *GRc*, *MA*), although lacking in imitative counterpoint, are sound in construction and show elegant melody and interesting harmony. Two of his works have been edited by Paulino Capdepón in *La música en el Real Monasterio de la Encarnación en el siglo XVIII* (Madrid, 1997).

JOSÉ LÓPEZ-CALO

Ball. *See* BALLO (1).

Ball, Ernest R. (*b* Cleveland, 21 July 1878; *d* Santa Ana, CA, 3 May 1927). American composer and singer. After studying at the Cleveland School of Music he went to New York, where he became a pianist in vaudeville theatres, and later staff pianist and composer for Witmark. His first success was the ballad *Will you love me in December as you do in May?*, written in 1905 to lyrics by Jimmy Walker. Many of his most popular songs thereafter were composed for the Irish tenors John McCormack and

Chauncey Olcott, with whom he also collaborated. Ball composed some 400 songs, including such standards as *Mother Machree* (1910), *When Irish Eyes are Smiling* (1913), and *A Little Bit of Heaven* (1914). Much of the last decade of his life was spent performing in vaudeville. His work is discussed in J. Burton: 'Honor Roll of Popular Songwriters: Ernest R. Ball', *The Billboard* (14 May 1949).

DALE COCKRELL

Ball, George Thalben. *See* THALBEN-BALL, GEORGE.

Ball, James (*b* 1770; bur. London, 7 Oct 1833). English piano maker, music seller, publisher, printer and organ builder. He worked in Duke Street, Grosvenor Square, London, from 1787 until his death. Domenico Motta joined him briefly to form Motta & Ball about 1794; in 1818 the Post Office London Directory lists the firm as J. Ball and Son. The son must be the Edward Ball who is listed as a piano maker at Duke Street in an 1824 jury roll preserved at Westminster City Archives. James Ball is listed in the 1827 Post Office London Directory as 'Grand cabinet & square Piano Forte maker to his Majesty'. Ball's early five-octave square pianos with the English single action had two hand stops, one for raising the dampers and the other a 'lute' stop. He is best known for his square pianos, but also made cabinet pianos and grands, some of them for the Prince Regent. In 1790 he patented (no.1784) improvements for the square piano including a new under damper, an individual regulating screw for each key and a new music desk, as well as improvements to the English grand action in which the hammers could be removed singly by means of screws. None of these devices was generally adopted, but a five-and-a-half-octave square piano, serial number 120, with a beautifully painted case and a stand, has a most unusual damper mechanism. From 1789 he sometimes printed and sold publications for TEBALDO MONZANI. He died intestate and his estate was administered by his sister. In 1834 it was valued at £5000 but in 1836 his estate was resworn to be under £7000, a large sum.

MARGARET CRANMER

Ball, Michael (*b* Stratford-upon-Avon, 27 June 1963). English popular singer. He studied at the Guildford School of Acting before touring in *Godspell*, later gaining a leading role in the Manchester production of *The New Pirates of Penzance*. He created the role of Marius in the long-running *Les misérables* (1985) in London, introducing the song 'Empty Chairs at Empty Tables', and took over Raoul in *The Phantom of the Opera*. He played Alex in Lloyd Webber's *Aspects of Love* in London (1989) and on Broadway (1990), and so introduced 'Love changes everything', which was arranged to demonstrate Ball's full-bodied top range. The popular success of the number enabled his expansion into the popular field and into concert tours. In 1991 he released his first solo album and the following year represented the UK in the Eurovision song contest with *One Step Out of Time*. His concert repertory has become increasingly wide, and he performed on his 1994 television series with such disparate singers as Tony Bennett, James Brown and Montserrat Caballé. He also played Giorgio in the first London production of Sondheim's *Passion* (1996).

Ballabene [Bellabene], **Gregorio** (*b* Rome, 1720; *d* Rome, *c*1803). Italian composer. In 1746 he was a member of the Congregazione di S Cecilia, and assistant to the *maestro di cappella* Luigi Besci at the church of the Madonna dei Monti. In 1754 he became a member of the Bologna Accademia Filarmonica, having written a five-part fugue on *Generatio haec* as his test piece (in *I-Baf*). In September 1755 he was at Macerata, where he applied for a post. In the libretto to the oratorio *S Francesco di Sales* (1760) he is described as *maestro di cappella* at Gubbio.

As a composer Ballabene followed the tradition of Roman church music in the Palestrina style, differentiating between concertato and *pieno* styles. His fame rests on his mass for 12 four-part choruses, composed in 1774. This work brought him into correspondence with Martini (in *I-Bc*), who praised its contrapuntal mastery, supported its formal approval by the Accademia Filarmonica, and published a *Descrizione e approvazione dei Chirie e Gloria a 48 voci* (Bologna, 1774). It was also praised in a *Lettera di Giuseppe Heiberger ... ad una composizione musicale a 48 voci del Signor Gregorio Ballabene* (Rome, 1774). However, according to Martini, when the mass was performed in Rome in 1777, it was ridiculed by some progressive Roman musicians, who seem to have regarded its colossal construction as outmoded. In 1778 Ballabene, who in these years had Cardinal Albani as his patron, was an unsuccessful candidate for the post of *maestro di cappella* at S Pietro, and in 1779 at Milan Cathedral and S Antonio in Padua. In 1780 he was an examiner of *maestri di cappella* for the Congregazione dei Musici.

SIEGFRIED GMEINWIESER

Ballabile (It.: 'danceable', 'apt for dancing'). A movement, usually in an opera, intended for dancing. In Act 3 of *Macbeth* Verdi termed the song and dance of the witches *ballabile*; the 'Galop con cori' that opens Act 2 of his *Ernani* is a *coro ballabile*; dance divertissements in Meyerbeer's operas are titled 1°, 2° *ballabile* etc. The term

is also used for instrumental pieces of a dance character; the dances in Hans von Bülow's *Carnevale di Milano* are headed 'Ballabili'.

ANDREW PORTER

Ballad (from Lat. *ballare*: 'to dance'). Term used for a short popular song that may contain a narrative element. Scholars take it to signify a relatively concise composition known throughout Europe since the late Middle Ages: it combines narrative, dramatic dialogue and lyrical passages in stanzaic form sung to a rounded tune, and often includes a recurrent refrain. Originally the word referred to dance-songs such as the *carole*, but by the 14th century it had lost that connotation in English and had become a distinctive song type with a narrative core. The word has sometimes been used, mistakenly, as a translation for the medieval French *forme fixe* ballade (*see* BALLADE (i)), and for the 18th- and 19th-century German ballade (see §II below); the latter was partly influenced by the narrative strophic folksong tradition of Britain and Scandinavia (*see also* BALLADE (ii) for instrumental pieces bearing this often confused title, and EPICS for a discussion of longer narrative song forms).

The 'ballad opera', a satirical form of theatrical entertainment based on spoken dialogue and popular tunes of the day, was fashionable for several decades during the early to mid-18th century. Literary ballads which imitated the traditional ballad marked a significant phase of influence during the Romantic period. In the 19th century 'ballad' came to denote a sentimental song cultivated by the middle classes in Britain and North America, while in 20th-century popular culture it has come to refer to a slow, personalized love song or one, such as the 'blues ballad' in North America, in which the narrative element is slender and subordinated to a lyrical mood.

I. Folk and popular balladry. II. The 19th- and 20th-century art form.

I. Folk and popular balladry

1. Concepts. 2. Origin and subject matter. 3. International aspects. 4. Narrative form and style. 5. Tunes. 6. Singers and contexts. 7. Broadside ballads.

1. CONCEPTS. Traditional ballads are studied by a variety of disciplines: area studies, ethnomusicology, folkloristics, anthropology, comparative literature and semiotics. Each of these has to some extent imposed its own modern perspective on the ballad which, as a heterogenous type of song with diverse origins and purpose, has seemed of interest and relevance to their field. Literary scholars have sought comparisons between the traditional, orally transmitted ballad and literary creation, or have traced its influence on individual poems (such as the pastiches by Coleridge, Keats, Wilde or Wordsworth). Folklorists and anthropologists have looked in balladry for signs of 'primitive' thought and communal practice, and semiologists for partially submerged cultural markers. Folk-music scholars and ethnomusicologists have dissected ballad tunes to understand the nature of popular song creation, or studied latterday traditional singers to gauge the role of memory, oral transmission, innovation and context in the performance and communication of ballads.

Generally speaking, the nature and structure of the genre have been the focus of literary analysis since the great 19th-century canonical compilations of traditional texts: scholars such as F.J. Child (1882–98) and Svend Grundtvig (1853–1920) were much preoccupied with identifying ballads by plot type and ordering them in terms of chronology and diffusion. Older ballads such as those they identified have few characters and concentrate on a single incident; they are cast in stanzas with or without a refrain and are sung to a repeated melody that corresponds to the strophic structure. The mood in these ballads is generally stoic and impersonal; the plot may be tragic, romantic, otherworldly, heroic or humorous, while in newer ballads and broadsides the tone becomes personal, partisan or polemical. They are occasionally based on historical events, though the incidents portrayed are often not verifiable. The tune, which raises and intensifies the communicative level of the song, influences the poetics of the line and stanza, as Bronson (1977) has shown, while the refrain, when present, suggests links to dance and, even in modern times, to audience participation.

In the 18th century, when the urban broadside type (which often couched sensational events of the day in ballad stanzas) was coming into its own, scholars began to adopt a new conception of the ballad. Although broadsheets had been a feature of urban life since the 16th century, they and the antiquarian enthusiasm for rural custom had by this time begun to influence scholarly notions of the ballad's social or political purpose. The idea of the ballad crystallized in writings of this period, and the stylistic reworking of ballads by editors and enthusiasts marked an important development in conceptions of the form. This was followed by the great compilations of the 19th century, from those by Walter Scott and William Motherwell to those by Grundtvig and Child, focussing on ballad poetry, while in the 20th century attention shifted to ballad tunes, singers and performance. In one sense this last phase marked a reaction against the idealism with which ballad study was often invested: scholars such as Child were strongly influenced by the idea of the 'popular' as conceived by Herder in the late 18th century, but Child, with some hindsight, saw the ballad evolving from a communal past into a more individualistic genre.

Theories of balladry thus depend to some extent on the collector's conception of the society that produced them. Bishop Percy's wholesale revisions of his manuscript sources, and Scott's and Peter Buchan's reworkings of ballads are familar examples of 'adaptation'. The society from which they were culled was often seen, mistakenly, as rural and homogeneous; ballads did emerge from such a background, but they were also the result of urban poetasters and hacks cobbling together older and newer verse material (usually with the tag 'to the tune of . . .') in salesworthy 'black-letter' (*c*1550–*c*1700) or, later, 'white-letter' broadsheets that had woodcut illustrations and contained news of the day. This material found its way into rural districts through singers, broadsides and chapbooks, in turn influencing these communities. To later singers, though, these ballads were nothing more than the 'old songs' preferred by their community; the term 'ballad', when it signified anything, usually meant a commercial ballad sheet (or 'ballet').

After centuries of disputes over authorship and style, scholars today are less inclined to speculate on the origin, evolution or function of ballads without hard evidence. This caution has also made them less eager to classify definitive 'ballad types' in terms of plot or theme and

more inclined to concentrate on elucidating topics that arise in the course of stanzaic narrative song, whether 'ballads' or not. From a musical point of view, the singing of ballads is a primary feature of the genre: folk-music scholars such as Cecil Sharp devoted much time and effort in pointing to melodic links between British ballad tunes and their counterparts in North America. The idea of 'ballad performance' in newer contexts, such as that of the Folk Revival, has broadened the concept of the genre and its uses still further, and assured it of cultural vitality in the contemporary world (*see also* FOLK MUSIC).

2. ORIGIN AND SUBJECT MATTER. The term 'ballad' has been used in the European literary tradition to refer to the popular or traditional song type that appeared from around the end of the 13th century and was at its height during the 16th and 17th centuries, when ballad singers plied their trade in cities and around village fairs. The ballad originated in the late Middle Ages, when epic and heroic songs served as entertainment, and appears to have flourished initially in conjunction with the rise of a merchant class and the decline of feudalism. Shorter narrative songs were also extant during the feudal period, but the appearance of the ballad as a genre seems to have been closely associated with the fashion for the French CAROLE, both courtly and popular, a dance that flourished from the mid-12th century to the mid-14th. The ballad's connection with dance is suggested by the Latin root *ballare*, and some traditions even today manifest a close association between dance and narrative song, as in the Faeroes or parts of Spain.

The ballad probably emerged as a narrative genre with a dramatic plot from France and the Low Countries at about the same time, spreading in different directions and taking on local characteristics as it evolved. The earliest surviving manuscript version of an English-language ballad is that of *Judas* (Child no.23), which dates from before 1300. There are analogues and parallels to many of the story lines in sagas, romances, lays and wonder tales, but the parallels are not always close or exact. The 'singing bone' motif, for example, is one that has generated both tales and songs in eastern and western Europe. Stanzaic songs probably fulfilled many functions, but became a primary vehicle for celebrating lapidary events such as bloody battles, legendary exploits, family confrontations and tragic love affairs, usually among the upper classes or yeoman class. With the growth of cities after 1500, the minstrel composer of the late medieval period and Renaissance, who entertained in both castle and lowly hostelry, was replaced by the ballad seller, broadside printer and street singer.

The features that mark out the 'classic' ballad – the impersonality of narrative, incremental repetition and recurrence of commonplaces – were noted by Motherwell in 1827. His observations influenced Grundtvig who, in turn, corresponded with Child on the subject matter of traditional ballads and how they might be arranged in an authoritative compilation that would 'close the account' of a genre they considered to be exhausted. Child eventually selected and published 305 ballads, taken mainly from earlier 18th- and 19th-century collections rather than from broadsides, ordered by plot type and printed with multiple variants in chronological sequence. His headnote to each ballad type (e.g. *Edward*, Child no.13) traces the origins and evolution of the song across cultural boundaries. Bronson followed this general scheme in his compendium of ballad airs (1959–72), but ordered the tunes by melodic type. Earlier, Child had gradually arrived at an awareness of the importance of the tunes, and included an appendix of tunes in his compilation.

Much debate has surrounded the Child corpus, and he was later attacked for his criteria of selection and exclusion. Nevertheless, *The English and Scottish Popular Ballads* is still regarded as a central representation of older English-language ballad subject matter: apocryphal legends (*Judas*, *St Stephen and Herod*, *The Cherry-Tree Carol*, *The Carnal and the Crane*, *Dives and Lazarus*, *The Maid and the Palmer*), miracles (*Brown Robyn's Confession*, *Sir Hugh*), outlaw exploits (*Robin Hood*, *Adam Bell*, *Rob Roy*), folk history (*Queen Eleanor's Confession*, *The Battle of Otterburn*, *The Battle of Harlaw*, *The Death of Queen Jane*, *Mary Hamilton*), the feuds of Scottish clans (*Edom o Gordon*, *The Bonny Earl of Murray*, *The Bonnie House of Airlie*, *The Death of Parcy Reed*, *The Baron of Brackley*), border raids (*Dick o the Cow*, *Jock o the Side*), encounters at sea (*Patrick Spens*, *John Dory*, *The Sweet Trinity*, *Henry Martin*, *Captain Ward and the Rainbow*) and humorous domestic strife (*Our Goodman*, *The Wife Wrapped in Wether's Skin*, *Get Up and Bar the Door*). Love, death and sexual relationships predominate in these ballad stories, with a few exceptions such as *Child Waters*, which ends happily. Ballad plots deal frequently with elopement, bride-stealing, adultery and incest but never with homosexual love. Loyalty to a partner often transcends suffering and death, and the symbolic 'rose and briar' motif uniting the lovers in their grave (well known in the Middle Ages) appears in a number of ballads. Riddles, spells and the supernatural are common in the ballad narrative, and humans consort with otherwordly beings (*Thomas Rhymer*, *Tam Lin*, *Hind Etin*, *Clerk Colvill*, *The Great Silkie of Sule Skerry*, *The Queen of Elfland's Nourice*) or revenants (*Sweet William's Ghost*, *The Unquiet Grave*, *Clerk Saunders*, *The Grey Cock*, *The Wife of Usher's Well*). In these encounters, which tend to be more frequent in northern Europe than elsewhere, the ballad imagination is at its most evocative.

In the more pedestrian broadside ballads and later urban tradition, subject matter tends toward the political, satirical and personal. A long tradition, from the 17th century, of composing socially critical ballads exists in Britain and Ireland, and singers were frequently arrested for singing rebel songs. With emigration in the mid-19th century the Irish tradition found its way to the United States with ballads like *Molly Bawn*, in which the heroine, who transforms herself into a swan each evening, is mistakenly shot by her hunter-lover; these supernatural elements tend to be rationalized in North American variants. The 'come-all-ye' type of ballad grew in prominence around this time. Broadsides proliferated in the United States and were at their height between about 1840 and 1880, and these extended the range of topics to include sensational crime (*Naomi Wise*, *Fuller and Warren*, *Pearl Bryan*, *Frankie and Johnny*), criminals' farewells (*Tom Dooley*, *Charles Guiteau*), historical events (*Brave Wolfe*, *Paul Jones*, *The Chesapeake and the Shannon*), disasters (*The Avondale Mine Disaster*, *Casey Jones*, *The Wreck of the Old 97*, *The Ballet of the Boll Weevil*, *The Titanic*), heroes and outlaws (*Brennan on the Moor*, *Captain Kidd*, *The Wild Colonial Boy*, *Sam Bass*, *Jesse James*, *John Henry*, *John Hardy*) and cowboy

topics (*The Streets of Laredo*, *Joe Bowers*, *The Arkansas Traveller*, *The Dying Stockman*). The Australian ballad tradition likewise tells of personal hardship through sentencing to transportation or outlawry (*Jim Jones*, *Van Diemen's Land*, *The Convict Maid*, *Botany Bay*, *The Death of Ned Kelly*).

3. International aspects. The ballad has been known by different names outside the English-speaking world, such as the Scandinavian *vise* and the Hispanic *romance* (ballad) or *romancero* (balladry). In Gaelic-speaking regions of Britain and Ireland the equivalent narrative song tradition was the *laoidh* ('lay'), which usually celebrated the exploits of the legendary Fianna (Fenian warriors) and their leader, Fionn Mac Cumhaill (*see* Bard and Ossian). Examples of Fenian lays, which lack the refrain common in other native song genres and did not accompany dance, have been recorded in recent times, mainly from Hebridean singers. With the plantation of Ireland, British ballads found their way there and a number of texts were translated into Gaelic equivalents (e.g. *An Tighearna Randal*). At another, broader remove, it has been suggested that Irish vision poetry (the *aisling*) influenced North American balladry, in part as a result of the huge emigration from Ireland to the United States in the mid-19th century.

The ballad corpus in France and Germany is markedly lyrical, and has links to the pastourelle and the Romanze respectively. The Danish ballad tradition, which flourished in the later Middle Ages and was written down from the 16th century, often parallels British balladry in subject matter. Northern European ballads in general tend to share elements such as supernatural lovers, whereas central European traditions such as that in Hungary rarely deal with magical practices or such topics as shape-shifting. Scholars (e.g. Liestøl, Nygard, Vargyas) have nevertheless posited generic and thematic links not only among British, Scandinavian and French balladry but also between Hungarian and French ballads, and suggested a further connection between Hungarian ballads, for example, and Siberian heroic epic. The roots of some ballad traditions thus lie far beyond western Europe. And while ballads and epics are constructed on quite different structural principles, there is clear thematic borrowing in many ballad traditions, especially in the Balkans and Spain.

Some ballad plots are widespread: the Low Countries ballad of *Heer Halewijn*, thought by some to derive ultimately from the tale of Judith and Holofernes, is known in English-language tradition as *Lady Isabel and the Elf-Knight* (Child no.4) and in Hungary, for example, as *Anna Molnár*; and the Scottish ballad of *Clerk Colvill* (Child no.42), which recounts the hero's luckless encounter with a mermaid, is rather rare in English-language tradition but the basic story appears in other countries under the titles *Elveskud*, *Riddar Olaf*, *Seigneur Nann*, *Le roi renaud* or *La muerte occultada* ('Death concealed'). The last of these shows an unusual side of the Spanish *romance* tradition, which normally contains few fantastic elements and deals with concrete events with relatively little supernatural interference. Its main concerns are historical or quasi-historical: conflicts between Moors and Christians, for example, or the legendary exploits of warriors such as el Cid. Whether these analogous plots and motifs are direct borrowings or independent compositions has been the object of much research; while some paths of diffusion can be traced, scholars are now concerned less with the historical and geographical origins of ballads and more with their content, function and meaning.

Throughout the Mediterranean countries the division between elaborative epic style and concentrated ballad is normally well defined: the ballad flourishes mainly in northern Italy, for example, while in the south the *cantastorie* tradition, rather like epic singing in the Balkans, expands details of dress, armoury or battles and embellishes these into whole episodes. The dispersal of the Sephardim has resulted in a rich Judeo-Hispanic ballad tradition now found in widely separated areas of the Diaspora. In eastern Europe, the subject matter of Slavic ballad traditions combines fantastic and realistic elements. Pan-Slavic themes sometimes emerge, such as the ballad of the bird-daughter: a mother marries off her daughter but she returns as a bird to tell of her misfortune in marriage. As in other east and south-east European traditions, the ballads of Russia and Ukraine should be distinguished from epic songs (*bilini*, *dumy*) on the one hand and historical songs on the other. In the subject matter of these ballads, as throughout the Slavic world, the individual is pitted against severe social constraints: the maltreated wife never kills her abusive spouse, for example, and matricide would be an impossible act of revenge. The fundamental conflict, as in most balladry, lies in the individual's choice between conforming to social norms or protesting and thereby suffering. The Ukrainian ballad tradition, like several European counterparts in the New World, has found change and renewal among Ukrainian emigrants in Canada.

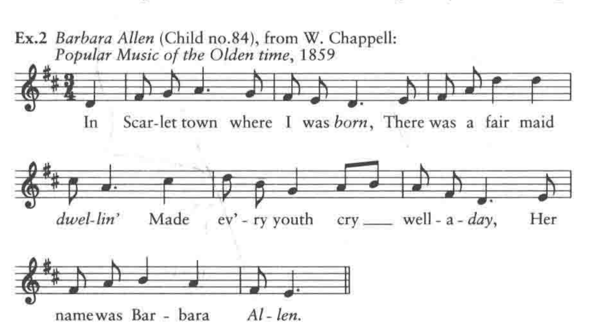
The Spanish and Portuguese *romance* has similarly found its way through outposts such as the Azores or the Canary Islands to Latin America and as far as south-east Asia. The ballad of Hispanic tradition known as *El raptor pordiosero* ('The begging abductor'), for instance, has become *O Cego* ('The blind man') in Brazil through Portuguese versions. A knock on the door provokes the question 'Who is there?'; the knocker replies that he is a blind man, whereupon the unidentified speaker tells a woman to fetch him bread and wine, which the blind man refuses; all he wants is for the woman to show him the way, whereupon he reveals to her that he is not blind, and has disguised himself in order to abduct and marry her. Ballads with such themes spread widely and stimulated newer types of narrative song, occasionally under different names: the *indita* in New Mexico, for example, the *corrido* in Mexico, and the *korido* in the Philippines, which was transmitted from Spain and Mexico during the colonial period (1521–1898). The *indita* ('little Indian girl' or 'song') of the later 19th century in New Mexico is a narrative song on historical, burlesque or even spiritual topics. The *corrido*, found in both the USA and Mexico, has been a productive form for social and historical commentary in the 20th century.

4. Narrative form and style. The older traditional ballads are marked by an essential distillation of plot, character and action or dialogue. Often no more than two people are involved, although a third or others may impinge fatefully on their relationship. Apart from battles or conflict between males the focus is usually on a man and a woman, with dialogue leading to decisive action. As a rule the story is not elaborated through explicit motivation or the description of personae or objects;

rather, the singing pushes the story along relentlessly, leaping or lingering, sketching the story line economically and using the device of incremental repetition as, for example, in *Lady Maisry* (Child no.65B): 'The first horse that he rode upon, He was a raven black . . . The next horse that he rode upon/He was a bonny brown . . . The next horse that he rode upon/He as the milk was white . . .' and so on. The action and dialogue between them bring the ballad drama to a climax. Some ballads consist entirely of dialogue, such as *Edward*, *Lord Randal* and *The Maid Freed from the Gallows*. The impersonality of the narration is offset, to some extent, by the refrains, which underscore not only the archaisms of the form but its participatory nature.

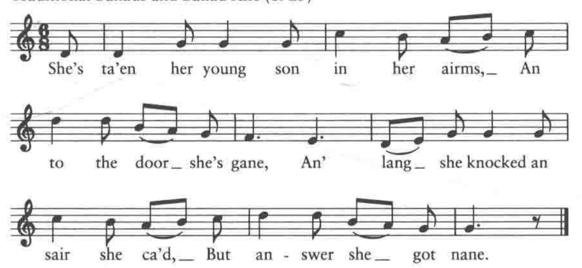
Individual ballad plots are sometimes obliquely related, as in the case of *Edward* (Child no.13), *The Twa Brothers* (Child no.49) and *Lizzie Wan* (Child no.51), though this is rare. Characters are broadly imagined and without complexity. Often they engage each other through confrontation, accusation or challenge of some kind. They are deftly sketched to establish their place in the drama, and any motive is discernible only by means of their speech or actions. They are normally described in commonplaces, such as 'fair lady', 'bonny bride', 'lady gay' or 'false truelove', and their attributes are likewise couched in stereotyped phrases: 'lilywhite breast', 'yellow hair', 'gay gold ring', 'a broad letter'. These commonplaces are not simply fillers, however, since they help to establish the mood and pace of the drama and to stabilize the rhythm and emphasis of the verse line. The verse patterns, usually iambic or trochaic, are also decisively influenced by the shape and rhythm of the tune.

Hispanic ballads are sung in 16-syllable assonant lines divided into hemistichs and Slavic ballads draw on the decasyllabic line, while 'ballad' or 'common' metre in English-language tradition consists of a quatrain of alternating four-stress and three-stress lines (8.6.8.6), the second and fourth having end-rhymes. The stanza may be extended to five, six or eight lines, but it is unusual to find fewer than four lines. The stanza with four-stress lines throughout is also unusual since, in singing, the three-stress lines are lengthened by holding the final syllable as long as a fourth stress so that, melodically, at least, all ballad stanzas consist of four-beat lines. Each line corresponds to a distinct musical phrase. A ballad stanza usually comprises a single unit of meaning, thereby matching a complete statement of the tune. This self-contained structure is important, for syntax and melody combine to discourage the natural emphasis of the words when they are spoken rather than sung. Singing obliterates the accent and subordinates the nominal and adjectival to a broader, more universal telling of the ballad story. A profound ambiguity in the relationship of narrative direction and the singing of the ballad text thus results from the structural tension that emerges in performance.



5. Tunes. Ballads are usually sung solo, though instruments (e.g. fiddle, harp, guitar, banjo or dulcimer) have also been used to accompany singers. The ballad tune, with just one or two notes to a syllable, helps to shape the versification though not the mood of the ballad text. The tune's character, in fact, is sometimes at variance with the tragic tone as in, for example, the lilting 6/8 rhythm and major mode of *Lord Lovel* (Child no.75; ex.1); this ballad has given rise to parodies in the USA where Abraham Lincoln takes the place of Lovel and is

Ex.1 *Lord Lovell* (Child no.75) from D. Scarborough: *A Song Catcher in the Southern Mountains* (New York, 1937)



mocked for his military reverses. In general, though, the tune has a key role to play in the overall rhythm and style of the sung ballad. The main cadence points are at the end of the second and fourth lines, where the normal rhyme of the ballad stanza occurs, and these cadences often (though not always) correspond to a melodic shift from the tonic to the fifth above, as in an English tune for *Barbara Allen* (Child no.84; ex.2), the most widely sung of the British ballads. Some tunes of modal cast, however, are content to repeat the first two phrases, sometimes slightly modified, as in a Scottish tune version for *The Lass of Roch Royal* (Child no.76; ex.3).

The most common phrasal four-line pattern in British ballad tunes is *ABCD*, a non-recurrent form that provides not only the greatest variety of phrase but also the widest space between repetitions. This type accounts for almost half of the 3450 tunes analysed by Bronson (1969, p.153). Its closest rival, *ABCDE*, is not nearly as frequent. In a long ballad the scheme *ABAB* doubles not only the number of repetitions but also their frequency when sung.

Ex.2 *Barbara Allen* (Child no.84), from W. Chappell: *Popular Music of the Olden time*, 1859

ABCA, on the other hand, returns to the opening phrase in cyclical fashion. The 'come-all-ye' type of tune, *ABBA*, juxtaposes inner as well as outer identities. Of tunes with a repeated phrase the pattern *ABAC* is the most often found. Refrains (e.g. 'savoury, sage, rosemary and thyme', 'down a downe, hey downe') force narrative to give way to melody; refrains can consist of a fifth repetitive line, a

Ex.3 *The Lass of Roch Royal* (Child no.76), from G.Grieg: *Last Leaves of* Traditional Ballads and Ballad Airs (1925)

burden between stanzas, or intercalated lines within the stanza.

Because of the skill needed to notate music ballad melodies have been taken down relatively recently; no tune for a Child ballad exists before the 17th century, and a large proportion of notated melodies, whether recorded by phonograph or magnetic tape or transcribed from performance, date from the beginning of the 20th century. Like the editors of texts, 'improving' musical editors have sometimes, like William Christie (1881), tampered with tunes. But ballad tunes are often sturdy enough to have survived in outline for centuries. Some tunes fall into what some have called 'tune families' – that is, groups of tunes that are structurally analogous (e.g. the *Dives and Lazarus* family; see Bayard, 1950; Jackson, 1952; Bronson, 1969). These tunes are 'related' only in the sense of having a comparable tonal structure and not necessarily through direct transmission or borrowing. Although the overall shape of the tune is retained in variant realization, such relationships are based on melodic rather than rhythmic identity.

The modality of ballad tunes is a striking feature of their character since they often rely on structures from before the advent of common-practice harmony in the 17th century. Pentatonic and hexatonic modes are as frequent as heptatonic; the Appalachian and Scottish ballad tunes show a preference for the 'gapped' (pentatonic or hexatonic) forms, while English tradition inclines to the heptatonic forms with a sharp or flattened third and a flattened leading note (Bronson, 1969, pp.155–6). Metre can be two- or three-beat types: in England and Scotland 4/4 predominates, with 6/8 much more common in England, perhaps as a fitting counterpart for iambic metre. But the singer does not always stick rigidly to an isometric formula, and tunes can fall into patterns such as 5/4, or even irregular barring such as 3/2, 9/4, 3/2, 5/4, 4/4. The range of the tunes is usually an octave, but can sometimes extend to a 12th.

6. Singers and contexts. Ballad singers have been the object of both scorn and admiration since at least the 17th century, when the diarist Samuel Pepys 'in perfect pleasure' heard Mrs Knipp sing 'her little Scotch song of "Barbary Allen"'. Later, James Hogg's mother berated Scott for printing, in his *Minstrelsy of the Scottish Border* (1802–3), the texts of ballads that she stressed were meant to be sung. Antiquarians had already shown interest in singers such as Anna Brown (1747–1810), a minister's wife from Aberdeen who from 1783 compiled traditional ballads, some of them with variant texts. The interpretation of these texts has been a matter of controversy, but it seems likely that Mrs Brown did not improvise variants each time she sang them but in fact had learned different versions of the same ballad from her mother and her aunt. Evidence of textual improvisation (as opposed to re-creation) is extremely rare, although examples of ballad tunes sung with free melodic variation have been found: Henry Larcombe, described by Sharp, and the Irish traveller John Reilly (*c*1926–69) both sang in this way.

The matter of ballad singing and repertory was broached in Motherwell's famous study (1827) of Agnes Lyle, a weaver's daughter from Kilbarchan in Ayrshire. While Mrs Brown preferred ballads of magic and romance, Agnes Lyle chose to sing tragic ballads with which she felt a strong sympathy (e.g. *Sheath and Knife*, Child no.16), and would sometimes weep while singing them. It can thus be difficult to separate a singer's choice of repertory or singing of particular ballad stories from their lived experience. In general, women have cultivated ballad singing to a greater degree than men because of their domestic situation. Ballads can overlap with other genres such as work songs, lullabies or laments; in Hungary, for example, women sang ballads in the context of collective weaving and spinning (*see* Lament and Lullaby). Ballads have also been a means for women to highlight their often subjugated role in society.

As a result of changes in the 20th century brought about mainly by technological developments, ballad singers and the ballad genre have again become a focus of interest. The advent of the phonograph in the late 19th century and of the magnetic tape recorder after World War II allowed scholars such as Percy Grainger to record the flowing graces and decorations in ballad singing: Grainger's transcriptions of English singers (1908) capture the nuances of performance. Since 1950, the performance of ballads has increasingly occurred in the context of folk clubs and folk festivals. New ballads continue to be composed and old ones to be reworked. The publication of ballad collections and of sound recordings made by outstanding singers since World War II has led to a fresh appreciation not only of the ballad form but also of the ballad singer's art.

7. Broadside ballads. A special category of ballad was the 'broadside' or 'broadside ballad', originating in the 16th century and so called because in England the texts were customarily printed and circulated on large folio sheets called broadsides. The broadsheet, as a means of conveying news publicly, was also familiar on the continent, as the *Flugblatt* in Germany, *skillingtryck* (shilling print) in Sweden, *marktlied* in the Low Countries and *pliego suelto* in Hispanic countries. Some ballads were published in pamphlets of two or more leaves; these later became known as 'chapbooks'. The European street singer (*Bänkelsänger* in Germany) set up a stall to sell broadsheets relating sensational events, sentimental relationships or socially important matters.

Except for a few years in the 1680s, music was hardly ever printed on a broadside along with a text; sometimes when it was, it was only a decorative pretence, like the notes sprinkled on some Christmas cards, without musical significance. At best, the printed notation served to jog the purchaser's memory, enabling him to select from a body of tunes known principally through the oral tradition. Tunes would be adapted from popular usage of the day, or remodelled to fit newer verses. Ballad singers might have as many as 100 different melodies in their repertory. Familiar tunes could be harnessed for a ballad text by a broadside printer or a street singer; the evidence suggests, too, that the broadside ballad writer may have had a specific tune in mind as he framed his stanza pattern. Many of those tunes have survived only through this tradition or in notated instrumental music (as airs on which sets of variations were written, for example). Others were included in tutors and in such contemporary sources as Playford's *The English Dancing Master* (1651; numerous subsequent editions as *The Dancing Master* in the late 17th and early 18th centuries) and *A Choice Collection of 180 Loyal Songs* (1685). *Wit and Mirth, or Pills to Purge Melancholy* (1699–1700), an anthology by Thomas D'Urfey that grew to six volumes in its final edition (1719–20), contains the words and music to about

1000 songs, many of them also printed as broadsides. Some of the tunes are by identifiable composers, while others are of earlier, anonymous and traditional. These tunes existed in England and parts of the USA in an oral tradition on which the authors of new topical broadside texts could draw. Other broadside tunes came from abroad, for isntance *Chi passa*, The Spanish Pavan and Farinel's Ground.

Around the end of the 17th century the broadside ballad began to face competition in Britain from the single-sheet song, which contained an air engraved with a bass line, a version of the tune in a key suitable for recorder or flute, and a reduced song text. As a result, reprints of ballads no longer included directions of the tune, and new pieces did not specify a tune to which they should be sung. Since the late 18th century such ballads have been an important, if often unrecognized, element in American popular music. Although there is a quite sizable literature on the broadside as a printed literary form, close connecting musical documentation is mostly lacking.

II. The 19th- and 20th-century art form

1. German song. 2. The English sentimental ballad. 3. The ballad in opera.

1. German song. Like the lied, the ballad in German song in its most sophisticated form was the result of changes and developments in literature. The poetic form goes back to the tradition of *Bänkelsang*, in which narrative ditties with primitive accompaniment were performed in public places from a wooden bench as a makeshift podium. The public could buy and take home with them crudely printed versions of the rhymed tales of crime or catastrophe. This vulgar tradition played little or no part in the lofty writings of the Enlightenment, but by the middle of the 18th century poets like Johann Gleim, Ludwig Hölty, the brothers Christian and Friedrich von Stollberg, and G.A. Bürger adopted a popular ballad-like tone in some of their poetry as an alternative to the

dry literary conventions of the time. Usually ballad texts were secular or legendary (on national or supernatural themes); their tone was often tragic, and they tended to idealize primitive life and feeling.

English poetry and the English ballad tradition also played an important part in the development of the German ballad. Thomas Percy's *Reliques of Ancient English Poetry* (1765), which received immediate critical attention in Germany, came to the notice of J.G. Herder in 1771. By 1779 he had published two volumes of *Stimmen der Völker*, which included 24 translations from Percy as well as Goethe's *Der Fischer* and *Heidenröslein*. Schubert later made famous settings of both these poems. Other ballads from the collection which were given musical immortality were *Herr Oluf* (Loewe) and *Edward* (Loewe, Schubert and Brahms). Herder's work was also to influence Bettina and Clemens Brentano, whose *Des Knaben Wunderhorn* was a treasure-trove of ballad material for a later generation of composers. Also of great importance was the influence of one of the greatest British literary controversies of the 18th century. The poeticized prose of 'Ossian' (James Macpherson), often ostensibly translated from Gaelic epic, and published between 1760 and 1765, was similarly disseminated in Germany. The two strains, traditional and literary, blended in the indigenous art ballads of Goethe and Schiller, which are elevated in style and verse form, moral or didactic in tone and have subjects freely derived from classical, oriental or medieval legends.

Although both J.F. Reichardt and C.F. Zelter of the so-called Second Berlin School were to compose extended cantatas for voice and piano, by far the most industrious and influential of ballad composers before Schubert was J.R. Zumsteeg of Stuttgart, who had been a schoolfriend of Schiller. His first published ballad was a setting of Bürger's *Des Pfarrers Tochter von Taubenhain* (1791), issued by Breitkopf & Härtel; a setting of the celebrated ballad *Lenore* followed in 1798. The publisher, no doubt conscious of the fact that Zumsteeg had captured an aspect of the Zeitgeist and cornered the market, encouraged the composer to explore the medium further: seven volumes of *Kleine Balladen und Lieder* (1800–05) consolidated a reputation which remained unassailable until the 1830s. Zumsteeg's achievement was to find a means of freely alternating between recitative and melody so as to heighten the dramatic narrative (often with cunning tempo and key changes) at the same time as giving the conception a sweep and unity that kept the listener's attention over a relatively long time span. The piano writing was imaginative and often gripping by the standards of the contemporary accompanied song. Even more adventurous piano writing was to be found in the work of the Bohemian Václav Tomášek, an important ballad composer who set a number of the Goethe poems later immortalized by Schubert's music; but his *Lenore* (1805), with its 210-bar piano introduction (which can almost stand alone as a piano piece), is his most impressive achievement in the field of the ballad.

Schubert's friend Josef von Spaun related in his memoirs of the composer (1858) that Schubert had 'wanted to modernize Zumsteeg's song form, which appealed very much to him' and that the young Schubert could 'revel in these songs for days on end'. Like an apprentice painter who copies the work of a master, Schubert re-composed a number of Zumsteeg ballads (the first was *Hagars Klage*, 1811), clearly with the older man's music in front of him. Such details as tonality, prosody and even general melodic shape are often similar, but the hand of genius showed itself at every turn, and Schubert out-composed his model to such an extent that the unjust effect of his well-meant homage was to consign Zumsteeg to a footnote in song history. Not that the ballads of Schubert have been sufficiently understood and valued for the remarkable works they often are; while it is true, for example, that the longest of them, *Adelwold und Emma* (1815), suffers from an intolerable text (and consequent musical weak patches), there are many highly imaginative and moving moments in these works. They show that the true nature of Schubert's dramatic gift depended on a scenario with lightning changes of location and dramatic ellipses to be found only in the (as yet uninvented) realm of cinema, or the (as yet undeveloped) lied. The freedom of the best of these ballads suggests Brahms's later image of Schubert as a young god playing with thunderbolts on Mount Olympus. They show how frustrating Schubert must have found it to labour within the conventions of opera; his mind is quicksilver, and when constrained by the discipline of the unities and the proscenium it becomes sluggish. This also suggests that the narrator of a ballad fulfils the same function as a film camera: impartial, ubiquitous, wide-ranging and responsible for the picture as a whole, unlike the personally involved lieder narrator, whose emotions are filtered and focussed in quite another way. It seems that in composing ballads Schubert enjoyed playing the somewhat distanced role of camera operator (also responsible for lighting, costumes and crowd scenes) as opposed to leading man, as in his own lieder productions (where the poet is of course co-director). In whatever style, Schubert is at his best with texts of high quality; in this case it is the Schiller settings that produce much of abiding interest – *Der Taucher* (1812), *Die Bürgschaft* (1815), *Klage der Ceres* (1815–1816) and *Ritter Toggenburg* (1816). Einstein (in *Schubert*, 1951, pp.49–51) was the first to notice that 'the sheer boldness' of the harmonic progressions in *Der Taucher* were far in advance of [Schubert's] time. There is nothing like them until we reach the Wagner of *Tristan* and the *Ring*'. The linking of Schubert's name with Wagner's in this context seems all the more tenable in view of the fact that the ballads were mostly published as part of the *Nachlass* between 1830 and 1850, just at the time when Wagner was forming his mature style. He was himself a ballad composer, both in song (a French setting of Heine's *Die Grenadiere*, 1840) and in opera (e.g. Senta's ballad in *Der fliegende Holländer)*, and time and again can be heard in Schubert's music a prophecy of the Wagnerian narrative line – always on the point of flowering into melody, but rarely doing so in the interests of dramatic continuity. This is neither recitative nor aria, but arioso, poised between the two, which carries the story forward to its next highpoint and creates a genuine sense of tension and release. In this sense, the Wagner operas, some of them based in part on ancient ballad poetry, are perhaps the greatest manifestations of the German ballad tradition. If we hear in Wolf's songs many of Wagner's procedures without the longueurs, the same is surprisingly true of Schubert's ballad writing (as well as a work like the oratorio *Lazarus*), which sometimes sounds at least 50 years ahead of its time. It is also certain that Schubert could never have written a late masterpiece like the Heine

setting *Der Doppelgänger* (1828) without his many hours of ballad apprenticeship earlier in his career, much less earlier works in quasi-ballad style like the through-composed songs *Erlkönig* (1815) and *Der Zwerg* (1822/3).

Also influenced by Zumsteeg was Carl Loewe, who consciously modelled his work on that of the older master. Loewe, one of the very few composers to sing to a professional standard, remains the German ballad composer *pur sang*. Highly educated (he was a Goethe scholar and gifted astronomer), he was less fertile than Schubert by far in terms of musical invention, but was brimming with energy of a simpler, almost more physical kind. That he both sang and played the piano seems an apt combination of talents for this greatest of all-round balladeers. He achieved a highly workable synthesis of Zumsteeg's two styles – either simply strophic and repetitive, or more complex scene- and mood-painting with recitative and arioso sections; this avoids overemphasis whether of verbal repetition or musical depiction. The story is related in direct melody and graphically, if naively, illustrated on the keyboard often with effective use of the higher register. (Despite a certain forthright quality, the piano writing is among the most demanding in the song repertory.) Loewe used what he learnt from Zumsteeg not only to set the poets known to the older composer (Goethe, Herder), but also for the next two generations of ballad poets, Ludwig Uhland, Friedrich Rückert and August von Platen, and their successors, Ferdinand Freiligrath and Theodor Fontane. Most of Loewe's work was published between 1821 and 1868; it is a measure of both the power of his winning formula as a composer, and his limitations as an artist, that there is little sign of change or development in his work during the 50 or so years of his creative life (*see also* SONG CYCLE, §3).

After Loewe the term 'ballad' seems to be far more loosely defined. Because Schubert had absorbed the ballad into the bloodstream of his lieder output, taking what he needed from it to create a hybrid form, later song composers felt able to regard as ballads a number of their lieder that would not have been counted so by singers of Loewe's generation. For example, Schumann composed four sets of *Romanzen und Balladen* without making it clear which songs he considered ballads, and which romances (Brahms later used the same title with similar ambiguity). Of course works like Schumann's *Die Löwenbraut* op.31 no.1 and *Belsatzar* op.57 have many of the characteristics of the true ballad; one is a fantastical animal tale, and the other an elaboration of a biblical story, both familiar areas for ballad poetry. But Schumann, as well as Brahms in songs like *Verrat* op.105 no.5, seems to have lost that element of objectivity and camera-like observation, the '*erzählender Ton*' (narrative tone) that is at the heart of the true ballad. Instead the listener is invited to share in the composer's reaction as if the latter were hearing the ballad for the first time, rather than presenting it as a story he already knows well. In terms of the resulting quality of the music, this may well be having the best of both worlds, but it represented the death of the real ballad tradition; indeed, Schilling (*Encyklopädie*) dates the demise of the form as early as 1835.

Those extended and complex narrative songs of Hugo Wolf which it might be tempting to call ballads (*Der Feuerreiter*, *Die Geister am Mummelsee*, both Mörike, and *Ritter Kurts Brautfahrt*, Goethe) show an encyclopedic knowledge of song history and styles; they bow to the shade of the composer's predecessors – Loewe particularly, to whom Wolf listened with 'höchster Begeisterung' (greatest enthusiasm) – with a conscious sense of amused and ironic reverence. Loewe had included in *Walpurgisnacht*(1821) a quotation from Spohr's *Faust*; in similar fashion, Wolf, in *Ritter Kurts Brautfahrt* (1888), quotes from the music of Karl Goldmark and Adalbert von Goldschmidt in a much less genial spirit of allusion and cross-cultural nodding and winking. One of the dangers of the ballad, with its historical connotations and connections with the ultra-German tradition of the Minnesinger, was that it should come to suggest a type of music-making that was somehow pan-Germanic because free of neurotic or introverted feeling, music-making to exclude foreigners and those from other backgrounds. Something of this revivalist spirit pervades the ballads of the now largely forgotten Martin Plüddemann, whose work was centred in Graz and who attempted to re-establish the hegemony of the ballad in the 1880s and 90s. This mirrored the rise of a new wave of patriotic ballad poetry in the 1890s which was not of the highest quality. Of more lasting significance were the two large ballads for (respectively) baritone and bass, and orchestra (*Herr Oluf*, 1891, and *Die Heinzelmännchen*) of Pfitzner. These looked back to Schumann's cantatas on ballad texts by Uhland and Geibel (*Des Sängers Fluch* and *Vom Pagen und der Königstochter*, both 1852). For better or worse the genre had become orchestral and remained so in the last 19th-century examples (*see* BALLADE (ii)). As a hopeful antidote to the 'entartete Musik' reviled by the Third Reich, there were continuing echoes of an aggressive unification of bad music and poetry to bring the grand old form of the ballad into disrepute; in the 1930s ballad singing was considered by the Nazi regime to be a manly and culturally sound occupation for German baritones (tenors seemed excused largely because Loewe's tessituras favour the lower voices). The critic H.J. Moser at the time was confident of a renascence of German ballad composition which did not come about. But ballad evenings, particularly featuring the works of Loewe, were regularly to be found as a part of music-making in Germany at the end of the 20th century.

2. THE ENGLISH SENTIMENTAL BALLAD. Towards the end of the 18th century English composers began to characterize certain songs (whether published separately or as parts of operas) as 'ballads': they were generally strophic and narrative, like folk ballads, and were inclined to be nostalgic. One of the earliest so named, 'I was, d'ye see, a waterman', was from Charles Dibdin's *The Waterman* (1774). Ballads of this type were a feature of English opera for over a century and can still be traced in Sullivan's Savoy operas. Their form is often stereotyped: each stanza has an introduction giving the first few bars of the main tune, and the tune is then sung, returning near the end of the stanza after an episode in a related key. A ballad was often the most popular number in an opera and was composed with a view to subsequent sale for domestic use; hence the derogatory terms '(music-)shop ballad' and 'drawing-room ballad' came into use. Sometimes ballads were inserted into operas with which they had no connection, as when Mme Vestris introduced C.E. Horn's ballad 'I've been roaming' into an English

adaptation of *Le nozze di Figaro* at Covent Garden in 1828.

In the Victorian period the word began to be used far more loosely to describe almost any kind of sentimental popular song, and a great commercial development of the ballad took place in Britain and the USA. Publishers paid large sums, not to the author or composer of the song (who usually received only a small fee) but to the well-known performer who agreed to sing it at every public appearance for a specified period (hence the term 'royalty ballad'). The singer's name dwarfed the composer's on the garish title-page. The 'ballad concert' became a common form of entertainment: the first was given by Mme Sainton-Dolby on 3 January 1867. The popularity of the ballad stretched far into the 20th century, and the BBC in its early years broadcast ballad concerts. There were many ballads whose sales went into millions, but none perhaps equalled the popularity of 'Home, Sweet Home', composed by Bishop for his opera *Clari* (1823) and publicized by Jenny Lind from 1850 onwards. Many of Stephen Foster's songs belong to the ballad genre.

Since World War II, the word 'ballad' has been used to refer to pop songs with sentimental or narrative texts and (usually) a slow tempo.

3. THE BALLAD IN OPERA. In opera the interpolation of a ballad recounting events that have taken place beyond the action on stage was sometimes used as a means of clarifying the plot. The dramatic impetus afforded by this device drew an enthusiastic response from 19th-century librettists, who used it increasingly as a means of broadening their palette. Unlike the purely narrative *romance* as developed by Rousseau, the operatic ballad often contains an element of the supernatural – a sea monster in Nélusko's 'Adamastor, roi des vagues profondes' (*L'Africaine*), a faery in Mercutio's Queen Mab ballad (Gounod's *Roméo et Juliette*). The significance of its melodramatic content for the development of German romantic opera has not yet been fully charted, but it seems likely to owe much to what Manicke (preface to EDM, xlv, 1970) has called the 'demonic spectre' of Bürger's *Lenore*. The best-known opera ballad is Senta's in *Der fliegende Holländer*, in which Wagner claimed to have encapsulated unconsciously the thematic germ of the whole opera. Other notable examples are Raimbaut's ballad (*Robert le diable*), Finn's ballad (*Ruslan and Lyudmila*), Mrs Page's 'Vom Jäger Herne' (*Die lustigen Weiber von Windsor*) and Varlaam's ballad (*Boris Godunov*).

Ballad, religious. A type of 19th-century American revivalist music; *see* SHAPE-NOTE HYMNODY and SPIRITUAL, §I.

Ballade (i). One of the three *formes fixes* (the others are the rondeau and the virelai) that dominated French song and poetry in the 14th and 15th centuries. In its standard late medieval shape the ballade text falls into three stanzas, sharing the same metrical and rhyme scheme and ending with the same refrain. The music for each stanza follows the overall pattern I–I–II. Approximations to this form can be found in monophonic song in the 12th and 13th centuries, when the distinction between the ballade and the virelai in particular was not completely clear. Indeed, even in the 14th century, Machaut called his virelais 'chansons baladées'.

The word 'ballade' is derived from Provençal *ballada*, from *balar*, to dance; the ballade, rondeau and virelai were in their earliest phase songs for dancing, the most common dances being the *carole*and the *tresche*. One of the most attractive of the few surviving examples in Provençal is the spring song *A l'entrada del temps clar* (ex.1) contained in the 13th-century Chansonnier de St Germain-des-Prés (*F-Pn* fr.20050; *see* SOURCES, MS, fig.25), though it is more likely to be a learned imitation than a genuine piece of folksong. There are five stanzas altogether, each with the characteristic repetition of the first musical section including varied endings for the first- and second-time bars, followed by the second musical section (here occupied entirely by the refrain, though later this normally took up only the last line or so). The musical

form I–I–II, it should be noted, is the commonest form underlying the most important of early medieval song types, the Provençal *canso* and French *chanson d'amour*. These, however, normally had five or more stanzas, no refrain and a final envoi of a few extra lines; they persisted into the 14th and 15th centuries as the *chant royal*, and during that period poets using the ballade form without musical setting frequently borrowed the envoi to close their piece.

The 13th-century French *chanson à refrain* is sometimes close to the ballade, and a few examples with three stanzas only are known, such as *Li louseignolés avrillouz* by the Arras trouvère Guillaume le Vinier, though the versification here is uncharacteristically complex. One source (*GB-Ob* Douce 308) gives 188 examples described as *ballettes*, though sadly they are divorced from their presumed musical setting. These display great flexibility in structure as regards the placing of the refrain, metre, rhyme and the number of stanzas. It is to be noted that the 14th-century Italian BALLATA is akin to the 14th-century virelai in form, not to the ballade. The flexible *ballette* gave way, at the very close of the 13th century, to a more rigid classification, in which ballades retained refrains in the final position, whereas virelais placed them in the initial position.

The earliest known polyphonic settings, composed by Adam de la Halle in the late 13th century, reflect the *ballette* stage. Of his 16 *rondes*, as the sources call them, 14 are clearly in rondeau form, which had taken on its definitive shape much earlier; but two approximate either to the later ballade or to the virelai: no.4, *Fines amouretes ai*, and no.16, *Dieus soit en cheste maison*. If we ignore the initial refrain (C_7–C_7) of this latter piece, it then has ballade-like proportions, though there are only two stanzas. Starting at line 3, it can be represented thus: I(a_5–b_7) I(a_5–b_7) II(b_7–c_5–C_7–C_7).

With the Parisian Jehannot de l'Escurel (*d* 1304) we find that all three forms, ballade, virelai and rondeau, are completely distinct one from another. Jehannot left 32 settings of lyrics of which 15 are ballades, all monophonic. *Amours, que vous ai meffait* is fairly typical in its style and structure: I(a_7–b_7) I(a_7–b_7) II(b_7–c_7–B_7–C_7). The first musical section has the characteristic first-time (OUVERT) and second-time (*clos*) cadences, and the whole melody shows a greater rhythmic freedom than in the work of Adam de la Halle. This was largely due to the greater refinement of a notational system that already had many of the features of Ars Nova notation. Jehannot's ballades display a flexible approach within the general framework. In some stanzas only one line takes up the whole of the first musical section; in others shorter lines come at almost any point in the setting; in others the refrain is two or more lines long. The early 14th-century taste for eight and three syllables to the line was superseded towards the middle of the century by a preference for ten and seven syllables, though many exceptions can be found.

In Guillaume de Machaut's ballades the refrain is normally one line long; and the short line of text, if any, normally opens the second musical section, as in a typical example, *De toutes flours* (bars 1–8, ex.2): I(a_{10}–b_{10}) I(a_{10}–b_{10}) II(c_7–c_{10}–d_{10}–D_{10}). In this piece a number of important developments appear. The most notable are: elaborate melismas, especially on final syllables; frequent use of syncopation; setting for solo voice with accompanying parts that are clearly instrumental; and extension of the

Ex.2

second musical section to give the refrain greater prominence, preceded and closed by a cadence and reiterating material from the finish of the first musical section. Machaut's contribution was above all to standardize the *formes fixes* and to make them popular; however, among the 42 ballades that he set to music are a number that show a continued interest in experimentation. One of these, *Dous amis, oy mon complaint*, has a fairly elaborate metrical structure of a type more often found in the virelai: I(a_7–a_4–a_3–b_7) I(a_7–a_4–a_3–b_7) II(b_4–b_3–a_7) II(b_4–b_3–A_7). The most striking feature here is the repetition of the second musical section as well as of the first; this extension of the normal form is to be found in a number of 14th-century examples, sometimes described as *baladelle*. Machaut's 'double ballade', *Quant Theseus/Ne quier veoir*, is notable for its application to ballade setting of the 13th- and 14th-century motet polytextual technique; here two voices simultaneously sing different texts, though

Ex.3

on the same subject, with the same metre and the same refrain. This idea, too, was taken up in a number of 14th- and 15th-century settings of virelais and rondeaux as well.

The Ars Subtilior of the late 14th century brought no structural advance to the composition of the ballade. But the highly inventive poet-musicians who were fostered in the southern courts of Orthez, Navarre, Barcelona and Avignon – such as Cuvelier, Anthonello de Caserta, Philippus de Caserta, Senleches, Trebor, Solage, Vaillant and Matteo da Perugia – as well as composers in Cyprus, introduced very intricate and subtle rhythmic ideas and often permitted passages of extreme dissonance, while maintaining the setting for the basic forces of voice (mostly in the tenor or countertenor range) and two or three accompanying instruments. Ex.3, bars 15–20 of Philippus de Caserta's *En remirant vo douce pourtraiture*, is typical.

Late 14th-century ballade texts are often in praise of patrons or in celebration of historical events; in the main, however, the ballade was throughout its history the preferred form for the serious love song. Machaut wrote nearly 200 ballades contained in his *La louange des dames* with no musical setting, nearly all on the theme of courtly love. The increasing complexity of musical composition must have been the main contributing factor to the subsequent divorce between poets and musicians; after Machaut no major French poet set his own verses to music, though many, such as Froissart, Deschamps, Christine de Pisan, Chartier, Charles d'Orléans and Villon, continued to use the *formes fixes*, in particular the ballade and the rondeau. In the musical context the ballade receded from favour in the early 15th century when the rondeau became extremely popular. (For a more detailed discussion of the relative popularity of the three principal forms in the 14th and 15th centuries *see* VIRELAI.)

15th-century Burgundian composers nevertheless produced a number of pieces in ballade form. The main innovation, apart from the relative simplicity in style, which was itself a reaction against previous excesses, is the frequent use of a purely instrumental introduction before the entry of the singer(s). Composers such as

Woman singing to a harp, with the opening of the three-voice ballade 'De ce que fol pense' by Phillippe des Molins (Chancellor to the Duke of Berry in 1368): detail of an Arras tapestry, 1420 (Musée des Arts Décoratifs, Paris)

Binchois and Du Fay were able to put their individual stamp on the ballade, as is amply demonstrated by the striking passage in ex.4, from Du Fay's *Resvelliés vous*. This type of song was popular in Italy and was emulated in England, for instance by Walter Frye or Johannes Bedyngham. Later in the 15th century, Dutch and German examples are found, often in Florentine songbooks. Attempts to combine texts and melodies of different national origins generally resulted, however, in the breakdown of the traditional *formes fixes*.

For bibliography *see* CHANSON.

NIGEL WILKINS

Ballade (ii). A term applied to an instrumental (normally piano) piece in a narrative style. It was first used by Chopin (Ballade in G minor op.23, published in 1836 but begun in 1831). He composed four ballades, whose common features are compound metre (6/4 or 6/8) and a structure that is based on thematic metamorphosis governed not so much by formal musical procedures as by a programmatic or literary intention. Full of melodic beauty, harmonic richness and powerful climaxes, they are among his finest achievements. They were said to have been inspired by the ballad poetry of his compatriot Adam Mickiewicz, particularly by his *Świteź* and *Świtezianka*, poems concerning a lake near Nowogródek and a nymph of the lake; but Chopin himself provided no evidence whatever for that belief and probably had no specific ballad or story in mind.

Franck's Ballade op.9 (1844) and Liszt's in D♭ (1845–8) and B minor (1853) follow Chopin's in not being associated with particular literary sources. The earliest such association is in the first of Brahms's Four Ballades op.10 (1854), which bears the heading 'After the Scottish ballad "Edward" in Herder's "Stimmen der Völker"' (Herder's translation of *Edward* had previously been set to music by Loewe and Schubert); but, as Mies suggested, Brahms may have originally planned it as a vocal work in strophic form and converted it into a piano piece while he composed it. Brahms's ballades, attractive examples of his early manner, are distinguishable from Chopin's by their clearer form – usually three-part song form. A strophic form, that most naturally implied by the literary ballad, underlies Grieg's *Ballade in Form von Variationen über eine norwegische Melodie* op.24 (1875–6).

Although instrumental ballades are usually for the piano, among those for other media are Vieuxtemps' Ballade and Polonaise op.38 (*c*1860), for violin with orchestra or piano, Fauré's Ballade op.19 (1881), for piano and orchestra, and several examples, both chamber and orchestral, by Frank Martin. Orchestral ballades (some designated 'ballad') have usually been inspired by literary sources, often well-known poems, for example Dukas' *L'apprenti sorcier* (based on Goethe's *Der Zauberlehrling*), Somervell's *Helen of Kirkconnell* and MacCunn's *The Ship o' the Fiend*. With the orchestral ballade in particular, the distinction between the ballade and its related forms, the rhapsody and the symphonic poem, appears slight.

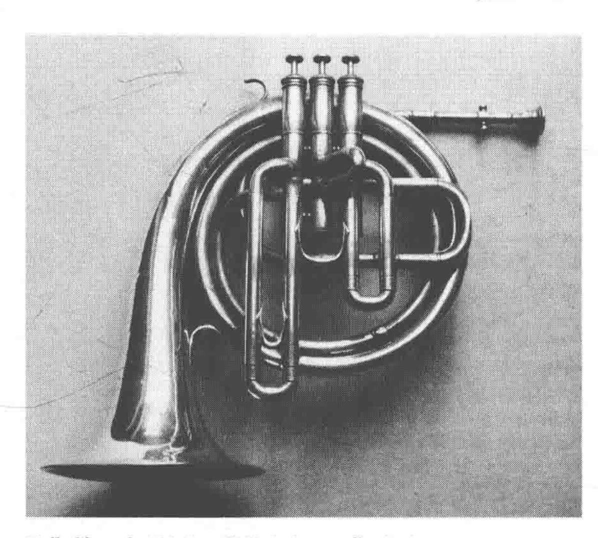
MAURICE J.E. BROWN

Ballad horn. A tenor brass instrument with three valves, circular in shape and pitched in *c* (TRUMPET family). It has a conical bore and a bell about 18 cm in diameter. An amateur's instrument, it was designed to play from songsheets or piano music without transposition.



The ballad horn was introduced by the London maker Henry Distin about 1856. Distin's instruments were made in 'bell-down' (french horn) form (see illustration), but Boosey & Co., who took over the Distin firm in 1868, added a 'bell-up' version and a version pitched an octave higher, which they called the liedhorn. Mouthpieces were funnel-shaped with an 18 mm inner rim diameter. Boosey supplied B♭ crooks with their ballad horns to allow them to be played with other brass instruments in B♭ and E♭, but there is no evidence that the instrument was ever used in brass bands. Similar instruments were made by several other makers, most notably Rudall, Carte & Co., whose 'bell-forward' model was called the 'vocal horn' (Boosey had registered the ballad horn name). Such instruments were very popular and many examples survive.

The Distin and Boosey instruments are very easy blowing and remarkably in tune, even with non-compensating valves. Their tone lies somewhere between that of the french horn and that of the baritone of the brass band, soft and flexible, mellow and lyrical. The last ballad horns were made in the mid-1920s, but their use was revived in the late 20th century in small ensembles of 19th-century brass instruments. Only a single piece published for the instrument has so far come to light: the *Fantaisie originale* (London, 1876) by Carnaud the younger, specified for euphonium, bassoon or ballad horn, with piano. An *Instruction Book for the Concert or Vocal Horn* by G. Tamplini was published *c*1882.

JOHN WEBB

Ballad horn by Distin, c1860 (private collection)

Ballad opera. A distinctively English form in which spoken dialogue alternates with songs set to traditional or popular melodies and sung by the actors themselves. A vogue for the form was sparked by the enormous popularity of John Gay's *The Beggar's Opera* (January 1728) but faded out by the mid-1730s. Some 80 such works were written in these years, but only a handful remained in the repertory. The genre was invented by Gay as a complex vehicle for both harsh and subtle satire; for most of his successors it quickly became little more than a way of padding out farces with popular music.

1. Terminology. 2. Origins, *The Beggar's Opera*. 3. Successors.

1. TERMINOLOGY. The term 'ballad opera' is a misnomer. The works so described are plays (almost always comic, usually farcical) into which a variety of songs have been worked. Fewer than half the songs are actually popular ballads: the sources of the music vary widely, ranging from D'Urfey's *Wit and Mirth, or Pills to Purge Melancholy* to arias from Handel's operas and movements of Italian concertos. Sources have been found in *The English Dancing Master* (1651 and its derivatives), traditional favourites such as *Lilliburlero* and *Tweedside*, and most of the popular composers of the time. Among the acknowledged sources are Thomas Arne, Giovanni Bononcini, Henry Carey, Corelli, Francesco Gasparini, Francesco Geminiani, J.B. Grano, Leveridge and Pepusch; among those identified by later scholars are Blow, Jeremiah Clarke, Giovanni Battista Draghi, John Eccles, Galliard, J.F. Lampe, Locke, Henry Purcell and Weldon. In every instance, however, the music is fitted with new words, and the songs are integrated into the dramatic structure of the play, not simply interpolated as variety or entr'acte entertainment.

2. ORIGINS, 'THE BEGGAR'S OPERA'. The sudden appearance of ballad opera in 1728 remains one of the mysteries of 18th-century theatre history. Late 17th-century English plays were heavily laden with music, and many works included integral songs sung by the actors themselves. But these roles were confined to a few specialists, such as Thomas Doggett and Anne Bracegirdle, and the music was freshly written by mainstream composers. Gay's innovation was twofold: to have all the characters sing as much as they speak, and to use tunes well known to everyone. Such generic precursors as can be found are surprisingly remote in both date and kind – Thomas Duffett's musical travesties of the 1670s and Richard Estcourt's musical farce *Prunella* (1708), a crude satire on Giovanni Bononcini's Italian opera *Camilla* (London première, 1706). Whether Gay was familiar with any of these works is uncertain. He may have known contemporaneous plays of the Théâtre Italien and the Théâtres de la Foire in Paris, which included popular tunes fitted with new verses. The immediate inspiration for *The Beggar's Opera* seems to have been provided by Jonathan Swift, who suggested that Gay write 'a Newgate [prison] Pastoral, among the Whores and Thieves there'. None of this detracts from Gay's originality, for *The Beggar's Opera* was radically new: 'instead of cardboard heroes of antiquity, Gay offered very real modern Londoners; instead of noble sentiments, every crime in the calendar' (Fiske). Today *The Beggar's Opera* is usually performed as a charming period piece, but in 1728 it provoked denunciations for incitement to immorality. More to the point, it confronted the audience with an ironic exaltation of criminals and prostitutes that was in radical contrast to the usual decorum of the 18th-century theatre. This was an innovation in which Gay was not followed by his successors.

As Gay conceived it, ballad opera is a fast-moving satirical drama of low-life characters in which the actors frequently break into song. *The Beggar's Opera* contains 69 songs; they are rarely separated by more than a page of spoken dialogue. The familiarity of the music renders it rich in extra-textual references which could either enhance the emotional impact of the dramatic situation or (more often) render it delightfully preposterous. Gay's snide incongruities between his new words and the old ones are a particular pleasure of the piece. For example, in Act 1 scene ix, Peachum's rather lame attack on the legal profession, 'A fox may steal your hens, sir', was set to Eccles's 'A soldier and a sailor' (from Congreve's *Love for Love*), whose notoriously rude original verses would have added an unspoken barb to Gay's message. By no means all the songs in ballad operas were satirical; for sentimental scenes, Gay often chose similarly sentimental music. Many of his less gifted imitators were insensitive to musical reference and simply searched through the popular collections, especially the volumes of Scotch airs, for any tune that would suit a particular verse, regardless of the character of the music itself.

The Beggar's Opera has often been said to be a savage satire on Italian opera as Handel was producing it at the King's Theatre, Haymarket, in the 1720s; it has even been credited with the demise of the Royal Academy of Music in 1728. Neither claim is true. Gay certainly satirized some of the conventions of *opera seria* and its squabbling performers, but he was by no means hostile to Handel, and the troubles of the Italian opera were not caused by competition from popular English fare. Nonetheless, Gay's allusions probably tickled opera fanciers. In the introduction to *The Beggar's Opera*, the Beggar clearly alludes to the rivalry between the sopranos Faustina and Cuzzoni, for whom Handel in *Alessandro* (1726) had written parts of almost exactly equal weight. Gay's improbable happy ending is also a parody of the perfunctory *lieto fine* of Italian opera. But not all reference was satirical. Macheath's brilliantly dramatic soliloquy in 'the Condemn'd Hold' (Act 3 scene xiii), an unbroken chain of ten airs or snatches of tunes, while ultimately modelled on the mad-song concatenations of Purcell or Eccles, is remarkably similar in style to some of Handel's big accompanied recitatives and uncannily anticipates the mad scene in *Orlando* (1733).

The Beggar's Opera was originally produced at Lincoln's Inn Fields by John Rich after it was refused at Drury Lane. In its first partial season it ran for 62 performances, a total far surpassing any play in the recorded history of the London theatre. As early as summer 1728 it was pirated at the Little Haymarket, and the rival Drury Lane company naturally hastened to commission and produce ballad operas. At first these were, like Gay's original, ambitious three-act 'mainpieces': Charles Johnson's *The Village Opera* (Drury Lane, 1729 – ultimately the basis for Isaac Bickerstaff's pasticcio comic opera, *Love in a Village*, 1762), Ebenezer Forrest's *Momus Turn'd Fabulist* (Lincoln's Inn Fields, 1729), James Ralph's *The Fashionable Lady, or Harlequin's Opera* (Goodman's Fields, 1730), Joseph Mitchell's *Highland Fair* and *The Jovial Crew* (both Drury Lane,

'The Stage Medley': satirical engraving aimed at the taste of the town and its admiration for John Gay's 'The Beggar's Opera' (music arranged by J.C. Pepusch), first performed at Lincoln's Inn Fields Theatre, 29 January 1728; top left are portraits of Lavinia Fenton and Thomas Walker, the first Polly Peachum and Macheath

1731). None of these expensive experiments entered the repertory. *Polly*, Gay's sequel to *The Beggar's Opera*, was suppressed by the Lord Chamberlain in December 1728: Sir Robert Walpole did not fancy having himself impersonated as a pirate who meets a richly deserved end on the gallows and kept it off the boards, although Gay made a small fortune by publishing this rather heavy-handed satire.

3. SUCCESSORS. An enormous variety of ballad operas were produced between 1728 and about 1735. Historical subjects were tried, as in the anonymous *Robin Hood* (1730) and Walter Aston's *The Restauration of King Charles II* (suppressed in 1732 on suspicion of Jacobite implications). John Mottley and Thomas Cooke's *Penelope* (Little Haymarket, 1728) is a delightful little classical spoof: Sergeant Ulysses, who went off to Marlborough's wars, is now living with Circe in Rotterdam, drinking gin; his faithful wife Penelope keeps a London pub and finds herself courted by the local tinker, tailor and butcher. Another such satire is John Breval's *The Rape of Helen* (1733). The best known of this 'classical' group is Gay's posthumous *Achilles* (1733), a rather sodden reprise of the hero-in-petticoats story. Gay never came close to recapturing the charm and bite of his first effort.

With the exception of *The Beggar's Opera*, ballad operas which entered the repertory were all afterpieces, including some which started out as full-length mainpieces. Colley Cibber's *Love in a Riddle* (Drury Lane, 1729) was probably the victim of audience hostility to the author; cut down as *Damon and Phillida*, and produced anonymously at the Little Haymarket the same year, it was long popular. It is a good example of the form's penchant for sentimentalized country low-life and improbable romance plots. Charles Coffey's *The Devil to Pay* (1731) had a disastrous first night in the off season; the songs were cut from 48 to 16 by Theophilus Cibber and the piece became one of the century's most enduring entertainments. Ballad operas of the early 1730s could be as chastely pastoral and moral as George Lillo's *Sylvia* (Lincoln's Inn Fields, 1730) or as essentially lower-class sentimental as Carey's *The Honest Yorkshireman* (Little Haymarket, 1735), but most tend towards the farcical.

The most important practitioner of ballad opera after Gay was Henry Fielding, now remembered largely as a novelist (*Tom Jones*). Yet Fielding was the foremost English dramatist of his time, and among his 30 plays are about ten that can be plausibly classified as ballad opera, though they vary considerably in the amount of music employed. Fielding's first attempt at the form was *The Author's Farce* (Little Haymarket, 1730, radically revised in 1734), a boisterous spoof on Grub Street life and a brazen attack on theatre managers at Drury Lane and Lincoln's Inn Fields. *The Welsh Opera* (Little Haymarket, 1731) is an impudent political allegory that helped get the theatre suppressed: Fielding exhibits King George II, Queen Caroline, the Prince of Wales, Walpole and Pulteney as master, mistress, not-so-hopeful heir and principal servants in the disorganized household of Squire Ap-Shinken, an amiable Welshman whose only wish is peace and quiet in which to smoke and drink. Fielding expanded the work as *The Grub-Street Opera* (a much more dangerous satire), but the authorities closed the Little Haymarket and appear to have bribed Fielding to withdraw the play, although it received a pirate printing. *Don Quixote in England* (written 1728; staged at Drury Lane, 1734) was a failure, a scrappy farce with incidental music. *Deborah, or A Wife for you All* (Drury Lane, March 1733) survived just one night and was not printed. It appears to have been a satire on Handel's oratorio *Deborah*.

Several of Fielding's most lastingly successful plays were part of the series of ballad-opera farces concocted for the popular singer-actress Kitty Clive at Drury Lane: *The Lottery* (1732), *The Mock Doctor* (1732), *The Intriguing Chambermaid* (1734), *An Old Man Taught Wisdom* (1735, usually performed as *The Virgin Unmask'd*), *Eurydice* (1737) and *Miss Lucy in Town* (1742). Except for the last two, all remained theatrical staples throughout the 18th century. *The Lottery* and *The Intriguing Chambermaid* are lightweight musical farce – the latter adapted from Jean François Regnard's *Le retour imprévu* (1700), turning the clever valet into the maid Lettice as a vehicle for Clive. *The Mock Doctor* is a free translation of Molière with just nine songs worked in. *The Virgin Unmask'd* exemplifies Fielding's comic skills: Old Goodwill decides to marry off his silly 15-year-old daughter; she listens to proposals from five boobies (an apothecary, a dancing-master, an Oxford student, a singing-master and a lawyer), accepts three of them – and then elopes with a footman whose fine clothes and elegant *coiffure* have gone to her head. The work offers more ridicule than satire, and Fielding quickly reduced his original 20 songs to 12. It was designed solely to display the talents of Kitty Clive, and both she and her successors found that it worked to perfection.

Fielding's most interesting and ambitious ballad operas are his last two, both of which burlesque Italian opera. Unfortunately the music is lost and the arrangers are unknown. *Eurydice* died in one night, ruined by a footmen's riot at Drury Lane. The piece travesties Orpheus (Stoppelaer) and Eurydice (Clive) as society wastrels from London. Pluto is henpecked; Eurydice tricks Orpheus in order to remain in hell; Orpheus becomes a swipe at Farinelli, the reigning castrato star of the Opera of the Nobility. Nine airs and a 'Grand Dance' and 'Chorus' are included, the airs preceded by 'Recitativo' in English. *Miss Lucy in Town* is a sequel to *The Virgin Unmask'd*. Lord Bawble satirizes Lord Middlesex as director of the opera. Horace Walpole wrote to a friend that 'Mrs Clive mimics the Muscovita [Lord Middlesex's mistress] admirably, and Beard Amorevoli intolerably'. The piece proved quite popular for a season.

Ballad opera was short-lived. *The Beggar's Opera* proved that there was a large, untapped audience in London, and contributed to the establishment of Goodman's Fields Theatre, the increasing use of the Little Haymarket, and the construction of Covent Garden in 1732. Among Gay's successors only Fielding really understood how to use the form to good advantage in several sorts of plays, and in the operatic travesties we find him moving into what must have been newly composed pieces that take us into the realm of burletta. A handful of influential ballad operas continued to be performed throughout the rest of the 18th century, but the later burlettas and English operas of Arne, Dibdin, Storace, the Linleys and others, though often including ballad tunes, bear little resemblance to true ballad opera.

One reason for the relatively brief popularity of the original form is that the quality of the musical performances cannot have been very high. Most of the actors

were not trained singers, although the demands of the genre helped to produce a new generation of actors who possessed the necessary musical skills. The extent to which the singers were accompanied is unknown. The arrangements provided by Pepusch, Carey and Seedo are often crude in the extreme, even eschewing the original (and easily obtainable) basses of the pieces they were arranging. Nor was much care taken to preserve the integrity of 'composed' melodies of Purcell, Handel and others. Nevertheless, the theatres which produced ballad operas maintained fairly large orchestras (a dozen or so, mostly strings), and paylists show that the instrumentalists attended every night. Given the presence of the orchestra, we must presume that it was used.

Only *The Beggar's Opera* is now performed, and just a handful of other ballad operas retain even much historical interest. The form is important, however, for its contribution to the musicalization of the British theatre which is one of its most conspicuous features in the second half of the 18th century.

CURTIS PRICE, ROBERT D. HUME

Ballantine, Edward (*b* Oberlin, OH, 6 Aug 1886; *d* Oak Bluffs, MA, 2 July 1971). American composer. He studied at Harvard University (BA 1907) with Walter Spalding and Frederick Converse, then went to Berlin, where he was a student of Artur Schnabel, Rudolf Ganz and Philippe Rüfer (1907–9). In 1912 he was appointed to the music faculty of Harvard, and remained there until his retirement in 1947. His music, cast in a post-Romantic, tonal and accessible style, is often marked by humour, occasionally by a satirical eclecticism. These traits are most apparent in his best-known pieces, two sets of piano variations on *Mary had a little lamb* (1924, 1943), in which each variation is in the style of a different composer, and in the *Four Lyrical Satires* for voice and piano.

WORKS
(*selective list*)

Stage: The Lotus Eaters (masque, D.W. Streeter), 1907

Orch: Prelude to 'The Delectable Forest', 1914; The Eve of St Agnes, 1917; By a Lake in Russia, 1922; From the Garden of Hellas, 1923

H. WILEY HITCHCOCK/MICHAEL MECKNA

Ballard. French family of music printers and composers. They were important for over 200 years.

(1) **Robert Ballard (i)** (*b* Montreuil-sur-Mer, ?1525–30; *d* Paris, bur. 8 July 1588). The son of Michel Ballard and Colassé Le Roy, he was the founder, along with his cousin Adrian Le Roy, of the printing firm of Le Roy & Ballard. The first document showing their association, by which Le Roy and Ballard received a privilege for printing music from Henri II, is dated 14 August 1551. On 16 February 1553 the partners received the title of music printers to the king (the title held by Attaingnant until his death in late 1551 or 1552). It was reaffirmed in 1568 under Charles IX and in 1594 under Henri IV and was to continue for other members of the family until the mid-18th century.

On 30 October 1559 Ballard married Lucrèce Dugué, who brought him and the firm valuable connections with the musical and political life of the court. Her father Jean Dugué was organist to the king, and Dugué's nephew Pierre was attached to the retinue of the king's brother. Through her mother Perrette Edinthon she was related to Charles Edinthon, lutenist in the king's chamber from 1542 to 1572, and to Jacques Edinthon, lutenist and *valet de chambre* to the king from 1575 to 1590. Since Le Roy also had important connections with court circles and even with Charles IX himself, the influence of the firm at court was assured.

Le Roy, a composer and lutenist of note, was the artistic director of the firm while Ballard seems to have assumed the role of business manager. The two partners worked well together; most transactions, such as the buying of considerable properties outside Paris or contracting for shop repairs, were undertaken jointly. There was nevertheless some independence; for example, one of the rare non-musical works, *Le siège et prinse de Thionville* (1558), bears the name of Ballard alone.

After a three-year break in the firm's production on Ballard's death, Le Roy took up printing again in association with Ballard's widow Lucrèce until his own death in 1598. Le Roy, whose wife had died some time before 1570, was childless, and he left all his share of the property to the widow and heirs of Ballard. Lucrèce carried on the business after Le Roy's death with her son Pierre until 1607, when Pierre began publishing in his own name. Lucrèce was still living in 1611, when a document shows her to have been engaged in settling Le Roy's legacy for her six children.

Its important connections at court, the knowledgeable choice of repertory, the skill in printing and the beauty of its editions gave Le Roy & Ballard a virtual monopoly on music printing in France during the second half of the 16th century. Other printers in Lyons and Paris (including Fezandat, Gorlier and Granjon) issued only occasional musical editions. The firm's most important rival was Nicolas Du Chemin of Paris, who had begun to print music in 1549. Du Chemin was not a musician himself and depended on others to choose and edit the music that he printed. After his editor Claude Goudimel resigned in 1555, he was not able to maintain the brilliant pace

Two facing pages from 'Cinquiesme livre de guiterre' (Paris: Le Roy & Ballard, 1554), showing the voice and guitar parts of Le Roy's 'L'esté chault bouilloit'

established earlier. By about 1560 he was no longer a serious rival.

Between 1551 and 1598 Le Roy & Ballard published more than 3000 works in about 350 known editions. Tablature books for lute and guitar were prominent in the first few years of the firm's production, where Le Roy's expertise was undoubtedly a major asset. But secular vocal music accounts for most of his output, with some 1500 chansons printed and reprinted in a series of 25 *Livres de chansons* between 1552 and 1585 as well as in other collections, and a further 500 or so strophic *airs* (*de cour*) increasingly supplanting the chanson in more than 20 prints between 1571 and 1598. About 650 motets and 500 psalms and other sacred songs appeared in various collections from 1555 onwards, with 52 masses concentrated especially in the years 1557 to 1559. There were 17 books of instrumental music for lute, cistre, mandora and guitar, including four instruction books for these instruments by Le Roy; they contain music by Le Roy himself (see illustration), Pierre Brunet, Gregor Brayssing of Augsburg, Alberto da Ripa and Bálint Bakfark. Two treatises on music theory were published, one in 1582 written by Jean Yssandon and one in 1583 by Le Roy.

The firm also helped to disseminate Italian music in France, with over 200 Italian and some Spanish pieces mostly printed in the last two decades of the century. Many of these were by Lassus, who was a friend of Le

Roy, and was the composer most frequently published by the firm. Le Roy & Ballard played an important part in disseminating his newest works in France and in Europe generally. Others frequently represented in the firm's output were Arcadelt, Certon, Costeley, Goudimel, Janequin, Le Jeune, Maillard and Claudin de Sermisy.

The typographical material was particularly fine. The elaborate woodcut borders on the title-pages, the printer's marks and the 'lettres grises' or historiated woodcut initials in several sizes in the style of Jean Cousin are superb examples of French Renaissance graphic art. At least three sets of punches of music were made by the famous typecutter Guillaume Le Bé (i). Autograph notes of Le Bé cite in 1554–5 a 'musique grosse', in 1559 a 'petite tablature d'épinette sur la moyenne musique' and at an unspecified date in the 1550s a 'grosse tablature d'épinette pour imprimer à deux foys' sold to Le Roy & Ballard (for illustration *see* GANDO). One of the sets of punches for spinet tablature was a sample, according to the notes. No book of spinet music by Le Roy & Ballard is extant, nor is there any mention of any in contemporary sources. (4) Christophe Ballard used the small set in 1678 to print a book of *Airs à 2 et 3 parties de feu monsieur le Camus*, so Le Bé's punches did not go to waste. Robert Granjon cut a set of type for lute tablature for some books he published himself in 1551 and 1552, and then it became the property of Le Roy & Ballard. Both the music types and the 'lettres grises' continued in use unchanged past the mid-18th century.

(2) **Pierre Ballard** (*b* Paris, ?1575–80; *d* Paris, 4 Oct 1639). Music printer, son of (1) Robert Ballard (i). In partnership with his mother he carried on the business after the death of Le Roy. On 25 March 1607 letters-patent from Henri IV officially made him music printer to the king, and henceforth the editions appeared under his name alone. The privilege was renewed by Louis XIII in 1611 and 1633.

An example of one of the many challenges to the power of the house of Ballard over the years occurred after the musician NICOLAS MÉTRU had received a privilege to print music in 1633. Pierre Ballard brought a suit to stop him, and in 1635 the court removed Métru's privilege in exchange for a commitment from Ballard to publish Métru's compositions. On 29 April 1637 Louis XIII issued a decree praising the beauty of the notes and characters of Ballard, which 'far surpass those made in foreign kingdoms and provinces', confirmed the title of royal music printer and stated that no further privileges to print music would be given without Ballard's consent. According to Fournier, Ballard must have granted his consent at times, because there is a record of his having sold matrices of music type called Cicero to Guillaume Le Bé (ii).

Pierre Ballard concentrated on printing *airs de cour* and similar small-scale vocal genres (such as psalms or, from 1627, *chansons pour dancer et pour boire*) by composers associated with the royal court such as Guédron and Antoine (de) Boësset, almost to the exclusion of other forms. He largely ignored instrumental music, such as that of the flourishing school of French lute composers, though he did publish collections by his brother, Robert Ballard (ii), and organ music by Titelouze, as well as providing the music examples for Mersenne's *Harmonie universelle* in 1636–7.

He had eight or ten children; on 8 January 1639 he officially named his son Robert as his heir, with a royal guarantee that the firm's monopoly of music printing would continue. An inventory dated 30 November 1639, mentioned by Gando in 1766, has not been found.

(3) **Robert Ballard (ii)** (*b* ?Paris, *c*1575; *d* after 1649). Lutenist and composer, son of (1) Robert Ballard (i). He apparently never took part in the family business. His father's partner Adrian Le Roy was probably his first lute teacher; after Le Roy's death in 1598 he became a lutenist of some distinction, and by 1600 he was teaching the lute to his landlord's son in lieu of part of his rent. In 1611 he published his first lutebook, and in the following year the regent, Maria de' Medici, employed him as her *maître de luth*; in this capacity he became responsible in September 1612 for the tuition of the young King Louis XIII. In 1615 he was still in Maria's service and performed on the lute in the *Ballet de Madame*; but in the retrenchments of court expenditure of 1618 his salaried position was terminated and he was henceforth paid only as required. Under this arrangement he continued for 16 years to bear the title 'musicien ordinaire du roi' and, although a notarial act of 1640 mentioned him only as 'joueur de luth', he was again designated 'musicien du Roy' in 1650. After that date nothing further is known of him.

Most of his works are ballet music arranged for lute and, apart from their musical value, are important as the only extant portions of several court ballets. His sequences of two or three *chants* in the ballets of 1611 may be seen as early moves in the direction of suite formation, and employ a number of technical effects later to be particularly associated with the sarabande. Partly because he was in a position to ensure that his music survived in a form of which he approved, Robert Ballard may be seen as the outstanding French lutenist at the end of the Renaissance tradition, before the onset of the new style associated with René Mesangeau in the 1620s. His works are almost all in *vieil ton* tuning, with the robust four-part texture and clearly defined melodic contours of dance music. But, particularly in the *doubles* of his courantes, he exploits the low tessitura and unpredictably broken texture of the *style brisé*. His works are the defining model for this phase of French lute music, and the seven pieces published by his brother Pierre in the *Tablature de luth de differents autheurs* (Paris, 1631), among works by younger contemporaries, have a rather old-fashioned appearance in spite of being in a new tuning.

WORKS

all for lute

[Premier livre de luth] (Paris, 1611/*R*) [lacks title-page], ed. A. Souris, S. Spycket and M. Rollin (Paris, 1963, 2/1976)

Diverses piesces mises sur le luth (Paris, 1614), ed. A. Souris and others, *Deuxième livre (1614), et pièces diverses* (Paris, 1964, 2/1976)

Some works in 1603[15], 1610[23], 1631[6], L. de Moy: Le petit bouquet de frise orientale (n.p., 1631), M. Mersenne: *Harmonie universelle* (Paris, 1636–7/*R*; Eng. trans., 1957)

Other works, *CZ-Pu*, *D-Bsb*, *Ngm*, *W*, *GB-Cfm*

(4) **Robert Ballard (iii)** (*b* Paris, *c*1610; *d* Paris, before May 1673). Music printer, son of (2) Pierre Ballard. He received a privilege from Louis XIII dated 24 October 1639 naming him sole printer to the king for music, the first of the Ballards to have exclusivity specified in the title. Independently of his father he had started in business as a bookseller but apparently was not successful, since a

judgment of 16 April 1638 allowed him to postpone paying his creditors for three years. The inheritance from his father immediately relieved him of his financial troubles, and the printing business continued to thrive under his direction.

Early in 1639 the two Jacques de Senlecque, father and son, received a privilege for a new method of printing plainsong. Like his father, Robert continued to guard the firm's music printing monopoly: on 11 February 1640 Robert Ballard brought a suit to prevent them from printing, but the Parlement ruled against him. Robert took the matter up with the king's council, since he did not consider himself, as a member of the king's household, bound by the decisions of the Parlement. A clear decision was never reached, possibly because Louis XIII died in 1643, leaving France to be governed by a regency for the five-year-old Louis XIV. When the younger de Senlecque died in 1660 Ballard offered to buy his punches and matrices from his widow, but the price she set was too high.

Ballard continued to favour secular vocal forms. He abandoned songs with tablature accompaniments after 1643, noting that they did not sell, and published the first French collection of songs with an exclusively continuo accompaniment, Constantijn Huygen's *Pathodia sacra* of 1647. He continued his father's series of *chansons pour dancer et pour boire*, and in 1658 initiated a series of *Livres d'airs de differents autheurs à deux parties* that continued for 30 years. He also expanded the firm's publication of masses, motets and music treatises. Composers prominent in his collections include Henri Du Mont, Bénigne de Bacilly, Mace, Parisot and Lully.

In 1664 the business maintained three presses and engaged three helpers. In 1666 Robert brought in his eldest son (5) Christophe Ballard as helper. On Robert's death the composer Estienne Droüaux wrote a five-voice *De profundis* and a six-voice *Miserere* in his memory.

(5) **Christophe Ballard** (*b* Paris, 12 April 1641; *d* Paris, before 28 May 1715). Music printer, eldest son of (4) Robert Ballard (iii). On 11 May 1673 he was named sole music printer to the king. In anticipation of his own death his father had obtained letters-patent from the king dated 25 October 1672 to assure Christophe's succeeding him in the title. Like his father, he had started independently in business as a bookseller, besides working as a helper in the family firm. His only brother Pierre (ii) (*d* 1703) also printed music for some time, but a court edict of 8 August 1696 ordered him to turn over his supply of music type to Christophe and denied Pierre or his widow the right to print any more music.

A highpoint in the firm's success, equal to that of the 16th century, was reached in about 1700, when the house maintained four presses and employed nine helpers and two apprentices. Almost all the music of the time was printed by Ballard, including the works of Lully, Brossard, Campra, Charpentier, Collasse, the Couperins, Dandrieu, Hotteterre, Lalande, Lebègue, Marais and Montéclair. The *Airs* appeared in a new form as *Airs sérieux et à boire* with basso continuo, issued monthly up to 1715, and Christophe revised some of the firm's earlier *chansons pour dancer et pour boire* as a series of *brunetes*, adapted for contemporary tastes. For the first time since the 16th century the Ballard firm also began to print Italian songs in a series of *Recueils des meilleurs airs italiens* between 1699 and 1708.

The firm had to undergo many expensive suits in this period, among them one against Lully's son, who had tried to reprint his father's music without Ballard's permission. But a more serious threat was the new method of printing music from engraved plates which had come increasingly into use since the last half of the 17th century. The Ballards continued to use the old movable type method invented in the 16th century and the antiquated lozenge-shaped notes that had been cast for Le Roy & Ballard in the 1550s, rarely investing in any new typographical material. In 1713 Leclair and several other musicians obtained privileges to print music from engraved plates. Ballard entered a suit against them but lost; he was considered to have the exclusive right only to print music in the old method.

(6) **Jean-Baptiste-Christophe Ballard** (*b* Paris, *c*1663; *d* Paris, May 1750). Music printer, son of (5) Christophe Ballard and Marie Lamielle. He was established as a master printer and bookseller in the rue Frementelle on 6 June 1694. On his father's death he moved to the Ballard shop in the rue Saint-Jean-de-Beauvais and received his father's title as royal printer for music. He continued the monthly *Airs sérieux et à boire* and flooded the market with various 'Tendresses', 'Parodies', 'Amusements' and 'Menuets chantants', in an attempt to capture a wider audience. He produced monumental editions of the works of Lully, Destouches and Campra and was the publisher of Rameau's *Traité* (1722) and *Nouveau système* (1726). During his later years, as more and more engraved music was issued by others, the prestige and influence of the house of Ballard began to decline.

(7) **Christophe-Jean-François Ballard** (*b* Paris, *c*1701; *d* Paris, 5 Sept 1765). Music printer, son of (6) Jean-Baptiste-Christophe Ballard. He received the royal privilege on the death of his father. He had been active as a bookseller since 1741 and as a printer since 1742. With him the fame and success of the firm ended. A police report described him as 'lazy and untalented'. In the 18th century printing privileges had become less a matter of royal approval than a means to add to the royal treasury. In 1762 a royal decree restricted their period to 15 years and in 1790 they were abolished. The Ballards, equipped with increasingly meaningless privileges, still using lozenge-shaped notes and old-fashioned initial letters from the 16th century, were unwilling or unable to change with the times. A report from a Parlement commission in 1764 said 'the public has been disgusted for a long time with the music of Sieur Ballard'.

After his death, his widow and then his son Pierre-Robert-Christophe (*d* 23 Nov 1812) carried on after a fashion, frequently moving to new locations. In 1800 Ballard was 'printer to the theatres of the Republic and of the arts'. The last of the Ballards was Christophe-Jean-François' grandson, Christophe-Jean-François Ballard (ii) (*d* 16 Oct 1825).

Over the years the Ballard family received many of the royal favours of the *ancien régime*, its members serving as syndics of the booksellers' guild, royal councillors, commercial judges, administrators of charity hospitals and commissioners of artillery. As a special perquisite the Ballard servants were allowed to wear royal livery. Until the declining years of the firm the care in music printing and the beauty of the results were universally praised. The music books of the house of Ballard constitute in

themselves a history of French musical taste over 200 years and with its tight control on the publication of music, the firm played no small part in regulating that taste.

Ballard, Louis W(ayne) [Honganózhe] (*b* Devil's Promenade, OK, 8 July 1931). American composer and music educator of Cherokee Indian, Quapaw Indian, French and Scottish descent. (Honganózhe is a Quapaw name that means 'Grand Eagle'.) He studied at the University of Tulsa (BME 1954, BFA 1954, MM 1962) and had private composition lessons with Milhaud, Castelnuovo-Tedesco, Surinach and Labunski. After teaching in Oklahoma (1954–8), he was appointed director of music and performing arts at the Institute of American Indian Arts, Santa Fe (1962–9). Subsequently, as music programme director for the Bureau of Indian Affairs (1969–79), he developed a bicultural music education programme that earned him a Distinguished Service Award from the Central Office of Education and a citation in the Congressional Record (1975). Ballard has held numerous university appointments and has appeared internationally as a guest conductor and lecturer. Among his honours are National Indian Achievement Awards (1972, 1973, 1976), an honorary doctorate from the College of Santa Fe (1973), the first MacDowell Award for American chamber music (1969), and grants from the Rockefeller Foundation (1969), Ford Foundation (1970) and NEA (1967, 1973, 1977, 1982, 1989). In 1997 he was awarded a Lifetime Musical Achievement Award by First Americans in the Arts.

Ballard's compositional style fuses 20th-century techniques with diverse Amerindian influences. An intimate knowledge of Amerindian culture enables him to create innovative works in many genres that sensitively and respectfully recreate tribal worlds. His compositions have been performed by such prominent organizations as the St Paul Chamber Orchestra, the American Composers Orchestra, the Los Angeles PO, the Tulsa PO and the Harkness Ballet. In 1989 he became the first American composer to have an entire programme dedicated to his music in the newly constructed Beethovenhalle, Bonn.

WORKS

DRAMATIC

Jijogweh, the WitchWater Gull (ballet, after Iroquois Indian myth), 1960, unperf.
Koshare (ballet, choreog. D. Sadler), 1964, Barcelona, 17 May 1966
The Four Moons (ballet, choreog. G. Skibine, R. Jasinski, M. Terekhov, R. Hightower), 1967, Tulsa, OK, 28 Oct 1967
Sacred Ground (film score, dir. R. Jacobs), 1976
The Maid of the Mist and the Thunderbeings (dance score, choreog. R. Trujillo, L. Smith), 1991, Buffalo, NY, 18 Oct 1991
Moontide (The Man who Hated Money) (rock op, 1, L. Ballard), 1992, Norden, 11 April 1994

CHARLOTTE J. FRISBIE

Ballarotti, Francesco (*b* Bergamo, 1660; *d* Bergamo, April 1712). Italian composer. The son of Giuseppe 'il Manzino', a violinist and tenor at S Maria Maggiore, Bergamo, from 1656, he attended the school of the Misericordia Maggiore free of charge from 1705. On 4 September 1691 he was appointed *vicemaestro di cappella* of S Maria Maggiore, and on 12 April 1692 *maestro*, replacing Teodoro Reggiani. He was treated with great respect by the *consorzio* of the Misericordia Maggiore, who granted him permission to be absent from service in S Maria Maggiore whenever necessary. The news of his death was reported in the resolutions of 16 April 1712.

As a composer, he was often called on to help with the composition of music to be performed in Turin, Milan and Cremona. In 1692 he was invited by the Governor of Lodi to stage two works, and in 1699 he was summoned by the Serenissimo of Modena to compose *La caduta dei Decemviri*. His moral operetta *Il merito fortunato* was first performed in honour of Agostino Nani, *grande capitano* of Bergamo. When the work was printed in the same year, the following sentence appeared below a list of the performers: 'The defects of the poetry will be less obvious on stage because of the beauty of the music composed by virtue of Sig. Francesco Ballarotti'.

WORKS

STAGE

Enea in Italia (dramma per musica, 3, G.F. Bussani), Milan, Ducale, 1686, 3 arias *I-MOe*, pubd lib *Bc*, collab. C.A. Lonati and P. Magni
Dialogo musicale fra Nettuno e Bergamo, Bergamo, 1688, pubd lib *BGc*
Il merito fortunato (F. Roncalli), Bergamo, 1691
Ottaviano in Sicilia (dramma per musica, 3), Reggio nell'Emilia, 1692, *MOe**
L'Aiace (dramma per musica, 3, P. d'Averara), Milan, Ducale, 1694, *US-Cn*, collab. Lonati and Magni
Ariovisto [part of Act 3] (dramma per musica, 3, d'Averara), Milan, 1699 [Act 1 by A. Perti, Act 2 and part of Act 3 by Magni]
La caduta dei Decemviri (dramma per musica, 3, S. Stampiglia), Reggio nell'Emilia, Comunità, May 1699
Esione (dramma per musica, 3, d'Averara), Turin, Regio, 1699
Alciade, ovvero L'eroico amore [La violenza d'amore; Act 3] (op tragicomica, 3, M.A. Gasparini), Bergamo, 1709 [Act 1 by F. Gasparini, Act 2 by C.F. Pollarolo]
Il cuor del leone, o sia La stella di prima grandezza (serenata, C. Benaglio), Milan, n.d.

OTHER WORKS

Balletti, arie, gighe, corrente, alemande, sarabande, capricci da camera, 2 vn, vle/spinet, op.1 (Milan, 1681) [1st vn only, and vn of Sonate per camera, a 3, presumably same work, *I-Ms*]
3 arias in Ariette a voce sola con e senza instrumenti e basso continuo, *MOe*
1 aria, 1692[1]
Arias for Arione, Milan, 1694; Aetna festivo (introduttione di ballo), Milan, 1696

SERGIO LATTES/PAOLA PALERMO

Ballata. Italian dance-song, and poetic and musical form, in use from the second half of the 13th century until the 15th century and beyond.

1. Etymology and form. 2. History.

1. Etymology and form. The word, which was synonymous with *danza* in earlier times, refers to the functional origin of the word *ballare* ('to dance'). The first ballata texts survive without music from the second half of the 13th century in the so-called Bolognese *Memoriali*. Dante mentioned the ballata in *De vulgari eloquentia* (II, iii.5, 1304–5), stating that, in contrast to the canzone, it demands a singing dancer. The form is also indicative of the dance-song: it originally consisted of a choral refrain (*ripresa*) and several strophes (*stanze*) performed by a soloist. Moreover, even in the 13th century the oldest ballate were closely linked with the *lauda*. The numerous *laude-contrafacta* of the 14th and 15th centuries are evidence of this link (see Ghisi, 1953). It was in the *lauda*, and in the period of the *dolce stil nuovo*, that the development of the ballata into an artistic lyrical form was completed. The texts are love songs and also often moral aphorisms, in which the choral refrain yields to a solo *ripresa* and the strophes are reduced in length. However, alongside these, popular ballata types survived for a long time (these are still found in Boccaccio and Prudenzani, and are widespread in Quattrocento poetry).

The ballata consists of the following parts: *ripresa*, two (rarely more) symmetrical *piedi* or *mutazioni*, *volta* (equal in length to the *ripresa*) and *ripresa*. The terms 'piedi' and 'volta' were taken over from the canzone. One of the earliest ballate with music (*I-Rvat* 215) is given below. This is a three-strophe ballata piccola (i.e. with a one-line *ripresa* of 11 syllables), and its rhyme scheme is: *A* (*ripresa*), *BB* (two *piedi*), *A* (*volta*), *A* (*ripresa*):

Per tropo fede talor se perìgola!
Non è dolor, nè più mortale spàsemo
Come sença falir cader in biàsemo
El ben se tacie e lo mal pur se cìgola.

(Per tropo fede . . .)

Lasso colui che mai si fidò in fèmena,
Chè l'amor so veneno amaro sèmena,
Onde la morte speso se ne spigola.
(Per tropo fede . . .)
Oimè, ch'Amor m'à posto in cotal ârcere
Onde convienne ognor làgreme spàrçere;
Sì che doglia lo mio cor formìgola.
Per tropo fede talor se perìgola!

In manuscripts only the *ripresa* and the first *piede* are each notated with music. The text of the second *piede* and the *volta* is distributed between the two musical sections (ex.1), or written below the staves as a *residuum*. The question of whether the *ripresa* is to be repeated after every strophe or only at the end cannot be answered with certainty. In contrast to the madrigal, changes of time signature within the ballata are rare.

Alongside the ballata piccola 14th-century theorists described the ballata minima (one-line *ripresa* with seven syllables), the ballata minore (two-line *ripresa*), the ballata mezzana (three-line *ripresa*) and the ballata grande (four-line *ripresa*). In rare cases both *piedi* of the ballata are provided with musical notation. Even more rarely new music is provided for the *volta*.

2. History. Only the texts survive from the early history of the ballata. The music was evidently based on oral tradition. With the rise of the ballata to an art form the first monophonic ballate with music appear in a north Italian manuscript (*I-Rvat* 215). Another manuscript

Ex.1

(*I-Fl* 87) contains five monophonic ballate by Gherardello da Firenze, five by Lorenzo da Firenze and one monophonic piece by Niccolò da Perugia. The first polyphonic ballate appeared in Florence in the 1360s. It is with this development that the form finally reached artistic stature and from that time onward, especially in Florence, but soon also in the Veneto, it remained in the forefront of interest. Jacopo da Bologna's *Nel mio parlar* is the only surviving example of a polyphonic ballata from before 1360; however, judging from its text this piece is a *lauda*. The 141 ballate of Landini (composed between *c*1365 and 1397) offer a good cross-section of the various types of polyphonic ballate: the earlier examples still have many points in common with the madrigal (both voices with text, melismatic style) and the later examples resemble the French chanson (the upper voice only with text, a tendency towards syllabic style, *ouvert* and *clos*, and sometimes identical music at the end of the *ripresa* and *piedi*). The frequent occurrence of ballate with a single strophe of text is an indication of the central role of the music. The aphoristic short ballate of Niccolò da Perugia and Andreas de Florentia are characteristic of Florentine bourgeois culture. In northern Italy, along with the madrigal, the ballata was cultivated by Bartolino da Padova, Ciconia and Zacara da Teramo among others. A particular genre using the ballata's form, the siciliana, flourished in the Veneto at the end of the 14th century (see Pirrotta, 1982, 1984). Works by Du Fay and Arnold de Lantins can be reckoned among the last examples of this specifically Italian form. Only a few ballate by Italian composers from the first half of the 15th century have survived. By the time northern composers settled in Italy the ballata had lost its ancient charm and its distinctive characteristics. While ballate that survive without music can be traced until the end of that century and beyond, pre-eminence in the field of Italian song was passing to the frottola and the *lauda*, both formally related to the ballata.

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Ballestra [Balestra, ?Armbruster], **Reimundo** [Raimundo, Raimundus] (*b* 2nd half of the 16th century; *d* Zabern [now Saverne], Alsace, 11 Oct 1634). Composer, probably German (not Italian, as has sometimes been thought). His name may have been 'Armbruster' (which means 'cross-bow': *balestra* in Italian). Certainly all his surviving writing is in German. He himself said that he received a stipend from the Fuggers, and he studied in Italy and in Germany. He was an instrumentalist at the court of Archduke Ferdinand in Graz from 1602 until 1616, when Archduke Leopold, Bishop of Strasbourg and Passau, a brother of Archduke Ferdinand, appointed him Kapellmeister at his court at Zabern; in 1618 there were 19 singers and instrumentalists under him. He remained in Zabern until his death, although Archduke Leopold became Count of the Tyrol in 1619, took most of his musicians to Innsbruck and in 1625 resigned the see of Strasbourg. In that year Ballestra became organist at the Convent of Our Lady but still spent his last years in financial straits.

All Ballestra's surviving music dates from his years in Graz. He said that his *Sacrae symphoniae* contain 'the musical symphonies [concerted works] and harmonies [choral and polychoral works] composed by me, apart from some *reservata*'. He did not disclose which of his works he thought of as *musica reservata*. Palisca supposed them to be the pieces in which tutti sections are interspersed with solo sections. But since there are also solo parts in his 13-part parody *Magnificat* and in his *Missa con le tronbe*, a likelier candidate is the polytextual eight-part motet *Dux Ferdinandus*, written in homage to Archduke Ferdinand; it is marked as a work 'reserved' for the knowledgeable because of its use of crab canon and series of hexachords recurring ostinato-like in varying rhythms. Ballestra's range embraces Venetian polychoral writing, concertatos for four or fewer solo voices and basso continuo, instrumental canzonas and elaborate counterpoint in the Netherlandish style. His music is sometimes similar in style to that of the Venetian-trained Georg Poss, who was a colleague at Graz.

WORKS

Sacrae symphoniae, liber I, 28 motets, 7, 8, 10, 12vv (Venice, 1611); Magnificat based on Viadana's Judica, Domine, 13vv; 2 canzonas: 1 for 8 insts, 1 for 4 insts ('secondo li Balli tedeschi')
2 motets, solo vv, bc, in Parnassus musicus Ferdinandaeus, 1615[13]
Missa con le tronbe, 16vv, Missa sine nomine, 12vv, 2 Magnificat, 14vv, 20vv, *A-Wn*

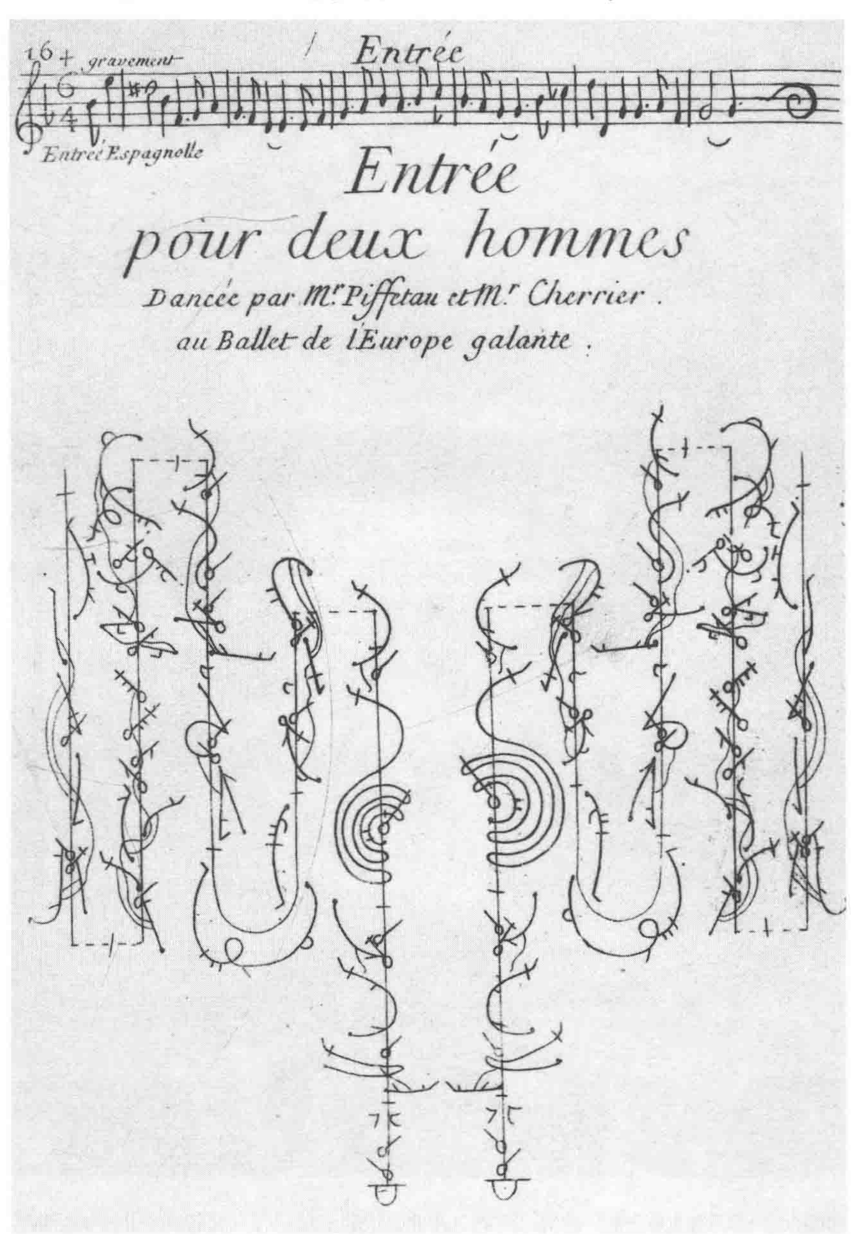
HELLMUT FEDERHOFER

Ballet. A style of theatrical dancing that developed in France during the 17th century, achieved 'classical' status in the 19th century, and today maintains its roots in the past while continuing to evolve. The term also describes a theatrical spectacle, in which use it has a history stretching back to the Middle Ages (*see* DANCE and BALLET DE COUR); as a spectacle, ballet could, in various times and places, include singing as well as dancing. Ballet became institutionalized in Paris in 1672 with the formation of the first permanent professional dance troupe within the newly founded Académie Royale de Musique

(known informally as the Opéra), which occurred during a time when the basic movement vocabulary was becoming codified. For much of its history ballet has been closely tied to opera, both in the types of works in which ballet has appeared and because of the institutional structures that supported it; a number of ballet companies are still attached to opera houses. Starting in the 18th century, however, ballet also began gradually to establish itself as an independent art, one through which a narrative could be communicated without sung texts; since the late 18th century 'ballet' as a genre has usually meant a spectacle accompanied by purely instrumental music, although many operas continued to include ballet. The 20th century saw a shift in emphasis away from story ballets set to newly composed scores towards more abstract works set to pre-existing music not necessarily composed for dancing. Although ballet is primarily a Western art, it is now practised in many parts of the world, where it is sometimes absorbed into local dance traditions.

1. 1670–1800.



(i) The 17th century in France. The founding of the Académie Royale de Danse by Louis XIV in 1661 marks an important landmark in the professionalization of dance, but the actual contributions made by this élite group of 13 dancing-masters to the development of ballet remain obscure. According to Pierre Rameau (*Le maître à danser*, 1725) it was Pierre Beauchamp, the principal choreographer at both the court and the Opéra, who codified the five positions of the feet and set the standard for the developing art; his tenure as ballet-master at the Académie Royale de Musique from its inception by Jean-Baptiste Lully in 1672 generated widespread admiration. Even François Raguenet, defender of Italian opera, admitted (*Parallèle des Italiens et des François*, 1702):

> The Italians themselves will own that no dancers in Europe are equal to ours; the Combatants and Cyclops in *Perseus*, the Tremblers and Smiths in *Isis*, the Unlucky Dreams in *Atys*, and our other entries are originals in their kind, as well as in respect of the *airs* composed by Lully, as of the steps which Beauchamps has adapted to these *airs* . . . No theatre can represent a fight more lively than we see it sometimes expressed in our dances, and, in a word, everything is performed with an unexceptionable nicety.

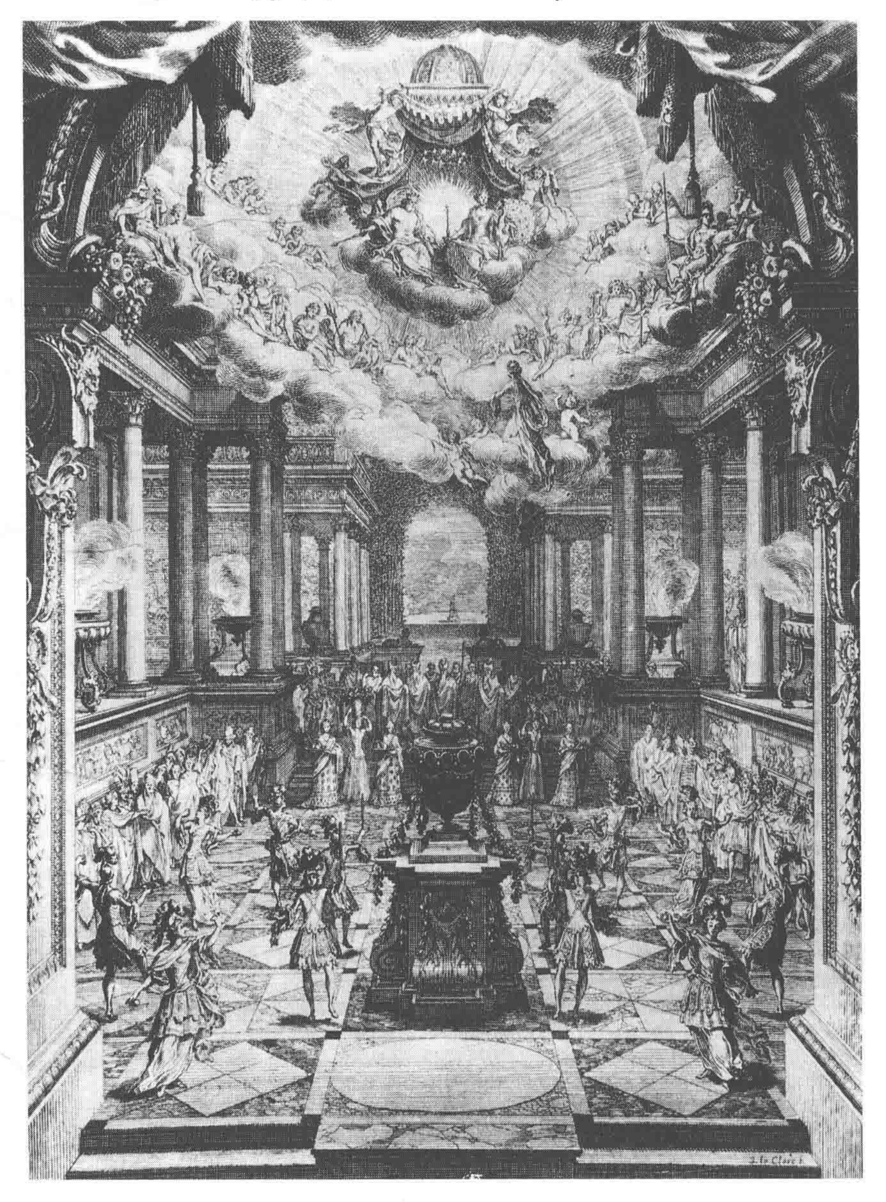
No employment records survive from the early years of the Opéra's existence, but it is nonetheless known that there was at least some overlap between the professional dancers employed at the court and the members of the dance troupe in Paris, including such notables as Hilaire D'Olivet (who also sometimes choreographed for the Opéra), Louis L'Estang and Jean Favier *l'aîné*. Initially the troupe was entirely male; although a number of professional female dancers had appeared at court over the years, women did not dance on the public stage of the Opéra until 1681 when Lully's ballet *Le triomphe de l'Amour* opened in Paris, after receiving its première at court with a cast that had included both professionals and aristocrats. Even after women began joining the troupe, men continued to dance female roles for a number of years until the increasing number of women made that practice unnecessary. By 1704, the first year for which there are employment records for the Opéra, there were ten women and 11 men in the troupe, as well as Louis Guillaume Pécour, who had replaced Beauchamp as *compositeur des ballets* following Lully's death in 1687.

Several solo and duet choreographies that Pécour composed for the stage of the Opéra are preserved in Feuillet notation in two published collections (1704, 1713). These dances show that whereas a basic movement style was still shared by both theatrical and social dancers, the gap between the amateurs and the professionals was widening. Theatrical choreographies make use of a very large vocabulary of steps that are recombined in imaginative ways; they tend to involve many leaps and hops ('la danse haute'), and also to use ornamental steps such as *pas battus* or *ronds de jambe*. When men and women danced together, either as a couple or in a group, they almost always performed the same steps in unison; similarly, both wore shoes with heels (whose heights seem to have varied) and made their rising steps onto partial toe. Theatrical choreographies for couples and for solo women are often quite demanding technically (surviving English choreographies for solo women even more so than the French), but the most virtuoso dances were designed for men alone. In the published collections these include *entrées graves* (in a slow duple metre with stately dotted rhythms), sarabandes, canaries, loures and chaconnes, with such virtuoso steps as *entrechats* or *pirouettes* on one foot with multiple beats that are rarely given to women during this period (fig.1). By way of contrast, the few group theatrical dances that have come down to us, most of them in Favier notation (see Harris-Warrick and Marsh, B1994), suggest that their choreographic interest derived less from the steps and more from the varied patterns the dancers traced on the floor. Both choreographic notations and period engravings reveal how symmetrical the dance figures were: when there is an even number of dancers, half are on each side of the stage; with an odd number, one dancer occupies the centre axis while the others are arranged symmetrically on either side (fig.2).

Within the basic technical parameters, different styles emerged by which choreographers characterized the varying types of dancing roles found in operatic divertissements. In Lully's *tragédies en musique*, the dominant genre on the stage of the Opéra in this period, his principal librettist, Phillippe Quinault, took great care to integrate the divertissement that appeared in each of the five acts into the fabric of the drama, a quality for which he was greatly praised by the 18th-century dance reformers Cahusac and Noverre. Although dancers in Quinault's librettos generally represent unnamed minor characters ('un berger' or 'une magicienne') who appear in only one act, they often serve as the moving bodies for the chorus members who, except when making entrances and exits, generally remain motionless around the perimeter of the stage. In this capacity they make visible through their movements the ideas expressed in the vocal numbers with which the instrumental dances are interleaved (fig.3). Even though dancing occurs primarily during instrumental numbers (and in some choruses, most frequently during the instrumental phrases that alternate with the singing), Lully made the connection between dance and sung text explicit by composing back-to-back pairs of dances and songs or choruses that share key, metre, tempo, and rhythmic and melodic figures. The divertissement from Act 2 of *Thésée* has a typical structure: an instrumental *air*, during which 'Theseus appears, accom-

1. Entrée for two men danced by Piffetau and Cherrier in the Ballet de l'Europe galante: engraving from Louis Guillaume Pécour's 'Recüeil de dances' (Paris, 1704), 164

panied by the populace of Athens, celebrating his victory'; a musically related celebratory chorus; an instrumental dance for old men which is heard twice, before each verse of a musically similar duet for *deux vieillards athéniens* ('Pour le peu de bon temps qui nous reste'); and finally a repetition of the celebratory chorus. Thus the audience is invited to view the dancing as one of several media of expression in the service of the divertissement as a whole, which in turn participates fully in the plot of the opera (the old men here serve as irreverent stand-ins for King Aegeus, who sees Theseus as a threat). Very little of the dancing in Lully's operas deserves to be dismissed as merely 'decorative'; on the contrary, it is allied to fundamental concerns within the works.



The implicit connection between text and movement seen in Lully's operas finds support in 17th-century dance theorists such as Michel de Pure (*Idée des spectacles anciens et nouveaux*, 1668), who described ballet as 'a mute representation, in which the gestures and movements signify what could be expressed through words'. Both he and Claude-François Menestrier (*Des ballets anciens et modernes*, 1682) insisted that the movements of the dancers, like the music to which they move, be appropriate to the characters they represent – that dances for shepherds be distinguishable from dances for kings or for sailors. The Abbé Dubos (*Réflexions critiques sur la poésie et sur la peinture*, 1719), who praised Lully for writing well-characterized music, said of choreography that 'years ago, the fauns, shepherds, peasants, cyclops, and tritons danced pretty near in the same manner; but now the dance is divided into several characters. The artists, if I am not mistaken, reckon 16, and each of these characters has its proper steps, attitudes, and figures upon the stage'. Quinault himself even made distinctions as subtle as

2. *Scene from Lalande's 'Ballet de la jeunesse', Versailles, 1686: engraving*

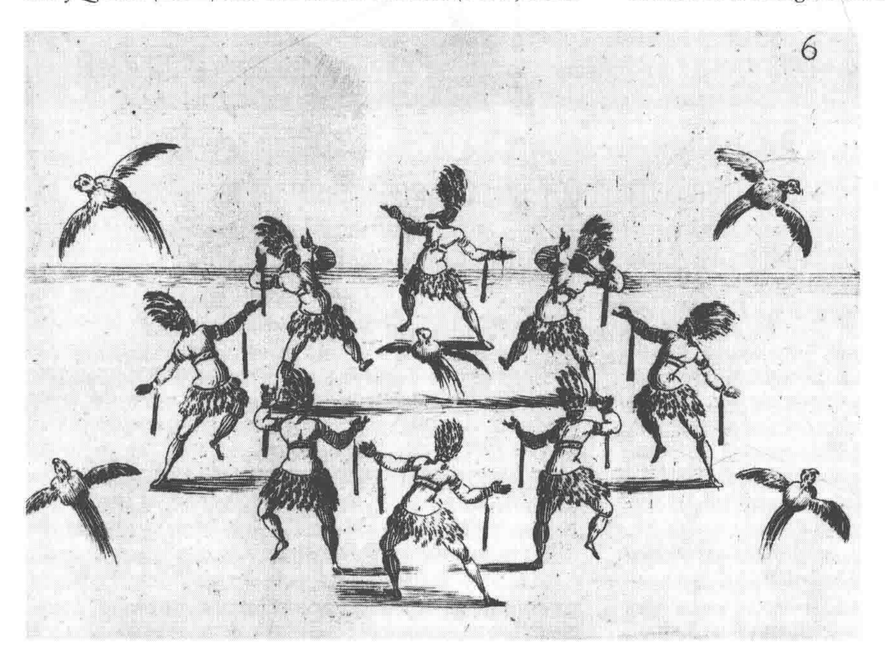
casting two types of shepherds, *bergers* and *pâtres* (see, for example, *Alceste*, Act 5), the latter probably more rustic and less idealized than the former (a convention found in later ballets as well). Distinctions are also implicit in Quinault's librettos between what Cahusac was later to call 'la danse simple', that is, dance that represents dance (such as in the joyful celebrations that conclude many operas), and Cahusac's 'danse figurée' or 'composée', which mimes an action (the *trembleurs* in *Isis*, the battling warriors in *Cadmus et Hermione*). Both types of dance could occur either on earth or in the realm of the *merveilleux*: demons, for example, could dance for joy or they could frighten people. In either case, choreographies for demons and other transgressive characters seem to have mined a vocabulary of grotesque gestures including false positions of the feet, extravagant leaps and distorted arm positions, whereas distinctions between beneficent character types such as shepherds and sailors seem to have relied on more subtle differences in step vocabulary, arm movements, figures and spatial orientation.

Most of Lully's operatic divertissements contain from one to three instrumental dances, although the prologue may include more. The music generally adheres to one of three structures: binary (the most numerous), rondeau (*ABACA*), or the extended variation forms of chaconne and *passacaille*. Most of his dance pieces make use of the full five-part orchestra, although some are set as trios or contain trio episodes. Wind instruments are often employed to enhance characterization: oboes in pastoral scenes, flutes for sacred rites, and trumpets for battles. The enriched orchestration generally extends to the choruses as well, thus giving the divertissements greater aural sumptuousness than the other portions of the opera, which are primarily accompanied by continuo alone. Although Lully included such titled dances as gavottes, minuets, sarabandes and canaries, many are simply called 'entrée' or 'air', followed by the category of characters dancing (e.g. 'Entrée des bergers'); such pieces may or may not conform to an identifiable dance type. Much of Lully's dance music has irregular phrase structures; even

3. Final scene in Act 5 of Lully's 'Isis', Saint Germain-en-Laye, 1677: engraving by Sébastien Leclerc I; members of the chorus line the sides of the stage, while the dancers surround the altar

dance types such as the minuet may have five- or seven-bar phrases. In fact, four- or eight-bar phrases, while not uncommon, are by no means the norm. Although in some instances the irregularities may be a function of dramatic characterization, they are so endemic to Lully's style in so many different dramatic contexts that they do not support facile generalizations about their restriction to comic or grotesque situations.

(ii) The 17th century outside France. Dance also figured prominently in Italian opera, especially in Venice, although it tended to have a looser connection to the plot than in France. In most mid- or late 17th-century Venetian three-act operas the dances were concentrated at the ends of Acts 1 and 2, where they often functioned in the manner of *intermedi*. Many dances were motivated by joyful occasions or by being set in the realm of the supernatural, although some had only tenuous connections with the sung portions of the opera. Many of the same character types appeared on both the French and the Italian stages – nymphs and shepherds, soldiers, demons, or allegorical characters such as dreams – but Venetian opera allowed for more comic roles such as buffoons, cripples or animals than did the French. (Comic roles had been common in the *ballet de cour* but were abandoned in the *tragédie en musique*.) Although the composer of the vocal music sometimes composed the dances, the practice of entrusting the dance music to the choreographer or to a secondary composer probably originated during this period and had become the norm by the 18th century. Only a few dance types are mentioned in Venetian librettos and scores, such as the *corrento*, *passo e mezzo* and *canario*; more often a dance is simply identified as a 'ballo'. As in France, most of the dances have a binary structure. In the last two decades of the 17th century the French style of dancing began to make inroads into Italy, as can be seen not only from the appearance of dance types such as the minuet or *borèa* (bourrée) in opera scores, but also from the composition



of scenes that interleave dances with musically related vocal pieces on the model of the French *divertissement*, as in *Il pastore d'Anfriso* (1695) by Carlo Francesco Pollarolo. With the introduction of the Arcadian reforms at the turn of the century, however, came an increased separation between danced episodes and vocal music; thereafter dancing was generally independent of the plot of the opera and relegated to appearing between the acts.

Apart from Giovanni Battista Balbi, who between 1636 and 1657 worked not only in Venice but in several European courts (including France; fig.4), few of the choreographers from Venetian theatres are known. No choreographic notations preserve the dances from this period, but Italian dancing is reported to have been more athletic than the French, with greater emphasis on dramatic leaps, speed and lightness and more opportunity for mimetic dancing, particularly (although not exclusively) in comic scenes. Gregorio Lambranzi's *Neue und curieuse theatralische Tantz-Schul* (Nuremberg, 1716), a book showing sequential illustrations from several different theatrical dances (for drunk peasants, *commedia* characters, animated statues and the like; fig.5), provides an idea of the movements – some of them quite acrobatic – available to comic and grotesque dancers. At the same time, the brief descriptions accompanying the engravings show that the French technical vocabulary (*pas de bourrée*, *chassés*, various *contretemps* etc.) had by then become international.

Following the restoration of Charles II to the English throne in 1660, a number of French dancers and musicians made their way across the Channel. Although Robert Cambert's attempt to establish a Royal Academy of Music on the French model failed, his production of two operas, *Ariane* and *Pomone*, as well as several other imported entertainments did expose the English to French dancing. Starting in 1673 Thomas Betterton's blending of Lullian balletic practices with English theatrical traditions produced the new genre of semi-opera in works such as Matthew Locke's *Psyche* (1675), Henry Purcell's *The Fairy Queen* (1692) and *The Island Princess* (1699; music by R. Leveridge, D. Purcell and J. Clarke). Although semi-opera died out shortly thereafter, dancing continued to figure as entr'acte entertainment in playhouses such as Drury Lane and Lincoln's Inn Fields, where French styles mingled with *commedia dell'arte*-inflected dancing coming from Italy. Prominent English dancers around the turn of the century included John Weaver, Thomas Caverley and Hester Santlow. The publication in 1706 of two translations of Feuillet's *Chorégraphie* (one by Weaver as *Orchesography*, the other by Paul Siris as *The Art of Dancing*) shows that a market had developed in England for French dancing, as does the publication of a substantial number of notated choreographies between the years 1706 and 1735.

French dancing also took root in northern and central European countries, particularly at courts, such as Dresden and Stockholm, that had political connections with France. Even in cities where Italian opera was established, French dancers and choreographers were often employed to embellish theatrical spectacles. In Hamburg Lully's *Acis et Galatée* was performed at the public opera house in 1689; operas composed there in the following decade by Johann Georg Conradi, Johann Sigismund Kusser and Reinhard Keiser reveal Lully's influence.

(iii) The 18th century. Following Lully's death in 1687, French opera began to change in ways that were to expand the place it accorded to ballet. *L'Europe galante* (1697) by Houdar de Lamotte and André Campra inaugurated a new genre, the *opéra-ballet* (called simply 'ballet' at the time), which gave a larger scope to divertissements than did the *tragédie en musique*, although the plots were still communicated through singing. (Related genres, all involving singing, were labelled variously *ballet-héroïque*, *ballet comique* and *acte de ballet*.) The prologue and three or four acts (usually called 'entrées') each had a separate action but were tied together by an overarching theme: *Les fêtes vénitiennes* (Danchet and Campra, 1710), for example, has acts revolving around love intrigues set in contemporary Venice among,

4. Giovanni Battista Balbi's final ballet for 'La finta pazza' (music by Francesco Sacrati) in which Indians release five parrots, Salle du Petit Bourbon, Paris, 14 December 1645: engraving by V. Spada

by turns, gondoliers, gamblers, spectators at the opera, and guests at a ball (the order and inclusion of acts varied from performance to performance). Thus comic dancing characters such as Arlequin or fortune-telling gypsies, who in Lully's day had been restricted to a few pastiche works such as *Le carnaval, mascarade* (1675), began to make regular appearances on the stage of the Opéra.

At the same time that the *opéra-ballet* was expanding both the amount of dramatic time devoted to dance and the range of characters represented, the *tragédies* also began to increase the number of dances within the divertissements. This tendency can be seen not only in newly composed works (where the librettist Lamotte led the way), but even within operas by Lully, which, when they were revived, acquired more and more dance pieces as time went on. The interpolations, whose music was sometimes borrowed from Lully's ballets but more often newly composed, seem primarily aimed at affording solos or pas de deux for the emerging stars of the dance troupe. The enlargement of the divertissement occurred primarily in scenes that represented *fêtes* of various kinds (both on earth and in magical or mythical realms), and that thus favoured dance for dance's sake; the newly written librettos offered many fewer occasions for mimetic dancing than had Quinault's. This shift in emphasis towards more purely decorative kinds of dancing can be observed in the replacement in many librettos of scene descriptions for the divertissements in favour of the laconic 'On danse' or 'Le divertissement commence'. In addition, purely danced works, such as the choreographed 'symphonies' of Jean-Féry Rebel, were sometimes used to round out an evening at the Opéra: in May 1726, for example, Rebel's *Les caractères de la danse* followed a performance of Lully's *Atys*. The growing profusion of dances did not please all spectators: Campra's *tragédie Achille et Déidamie* (1735) was accused of 'completely drowning the subject in the divertissement', and by 1749 Rémond de Saint-Mard (*Réflexions sur l'opéra*) was complaining that 'too much scope is given to the dances . . . everything is to be danced'.

The number of dancers employed at the Opéra grew to accommodate the demands of the expanded divertissements. By 1738 the troupe included 18 men and 13 women, in 1750 18 men and 24 women. A dance school was established at the Opéra in 1713, with the purpose of training singers and dancers already in the troupe; a school for training children opened in 1779. Early in the century the leading dancers included Jean Balon, Marie-Thérèse Perdou de Subligny, the brothers Dumoulin, Françoise Prévost and Michel Blondi, who also served as choreographer at the Opéra from 1729 until his death in 1739. They were eclipsed in star power (and in salary) by the next generation: Louis Dupré ('le dieu de la danse'), whose long (though interrupted) career at the Opéra spanned the years 1714–51; and two of Prévost's students, Marie Sallé (who made her début at the Opéra in 1727) and Marie-Anne Cupis de Camargo (début in 1726). The two were seen as representing different styles of dance: Sallé was noted for expressivity and finesse (fig.6), Camargo for technical brilliance and agility.

Although no theatrical choreographic notations survive from this period, it appears that ballet technique was growing more virtuoso, especially for women. Because of her adoption of male steps such as *pas battus* and *entrechats*, Voltaire described Camargo as 'the first woman to dance like a man'; her technical innovations drew criticism as well as admiration. The stars of the dance troupe attracted devoted followers who expected to see their favourites prominently featured when they went to the Opéra; that the divertissements favoured solos and pas de deux can often be inferred from the ways the dancers' names and roles are listed in the librettos, although determining which dancers performed in each of the pieces in the score is often difficult. Iconography suggests that couple and group dances retained the symmetrical principles of the previous era, with the dancers doing the same steps in parallel with each other. New dance types – rigaudon, forlane (in Venetian scenes), musette, tambourin, contredanse – appeared on the stage, while traditional ones such as the gavotte, menuet, passepied, sarabande and chaconne remained current; as before, many of the dances simply bear the title of 'entrée' or 'air' in the scores. As dance styles began to crystallize into the three general categories of noble, grotesque and *demi-caractère*, dancers started to specialize; Louis Dupré was seen as the epitome of the *danseur noble*, although he also danced other types of role.

The emphasis on technical brilliance and dance for its own sake found itself at odds throughout this period with a growing desire in some quarters for greater expression, or even for a separation of dance from vocal music. In 1714 in a private performance sponsored by the Duchesse du Maine at her château at Sceaux, two dancers from the Opéra, Balon and Prévost, performed in pantomime the climactic scene from the fourth act of Corneille's tragedy *Les Horaces* in which the Roman Horace kills his sister Camilla. This experiment in representing genuine tragedy through dance remained isolated for many years, but

6. Marie Sallé: engraving by Nicolas de Larmessin III after Nicolas Lancret, 1733

pantomimic dancing had already been a feature of *commedia dell'arte*-inspired performances for some time. Following the example of the Italian comedians working in London, the English dancer and choreographer John Weaver had in 1703 mounted a short pantomimic work, *The Tavern Bilkers*, but in 1717, after having investigated ancient Roman pantomime, he produced at Drury Lane a much more ambitious work, *The Loves of Mars and Venus*. The three principal roles of Mars, Venus and Vulcan were all assigned to dancers – Dupré, Hester Santlow and Weaver himself – and the music (which has not survived) was entirely instrumental. The scenario alternates between two types of scene: those that would have been sung in an opera on the same subject, such as Vulcan's expressions of jealousy (for which Weaver prescribes arm and head gestures appropriate to the reigning emotion), and scenes that resemble operatic divertissements, such as the Pyrrhic dance for the followers of Mars, for which standard dance steps would have been used. Weaver's next such work, *Orpheus and Euridice* (1718), was even more serious, using the version of the myth that ends with Orpheus's dismemberment by the Bacchae, but his last pantomime, *Perseus and Andromeda* (1728), interspersed comic scenes with the mythological ones. Although Weaver's experiments had no immediate imitators in England, Marie Sallé furthered the cause of serious mimetic dancing through two danced entertainments performed in London in 1734, *Bacchus and Ariadne* and *Pygmalion*, in which she attracted notoriety by wearing only a simple muslin dress in the Greek manner with her hair loose, as she danced the story of the statue coming to life.

The competing demands of a dramatically expressive, wordless ballet on the one hand and the more technically driven dance for its own sake on the other, both find expression in the works of Jean-Philippe Rameau, the composer whose operas and ballets dominated the stage of the Paris Opéra in the middle of the century. The divertissements in his *tragédies lyriques* such as *Hippolyte et Aricie* (*c*1733) or *Castor et Pollux* (*c*1737) tend to adhere to the basic outlines of the Lullian model, in which many of the dances are intimately allied to vocal pieces, although several of the divertissements do contain more instrumental dances in a row than would have been found in Lully's works. Some of the *opéras-ballets* (and the shorter *actes de ballet*) include even more extensive danced scenes that approach independence from the surrounding vocal context. In the third entrée ('Les fleurs') of *Les Indes galantes* (*c*1736), the concluding divertissement is introduced as if it were to be a typical celebratory *fête*, but actually consists of an independent narrative in which the flowers in a garden are buffeted by a storm embodied by the North Wind, Borée, only to be rescued by Zéphire; this scene is built over nine consecutive dance pieces (most simply called 'Airs', but including two gavottes) without a single vocal number intervening. The central role, the personified Rose, was created by Marie Sallé, to great acclaim.

Rameau's openness to a more dramatic role for dance was perhaps promoted by his collaborations with Louis de Cahusac, whose book *La danse ancienne et moderne* (1754) reviewed the history of the art with a goal of promoting greater dramatic expressivity in the dance of his own day. Cahusac saw dance as falling into one of two categories: *la danse simple*, which represents only itself and is motivated by joy, and *la danse composée*, 'which by itself forms continuous action'. He felt frustrated by the outstanding abilities of the dancers of his day, whose talents he saw as being wasted through the overuse of *danse simple*: 'the costumes are different, the intentions are always the same'. Although his definition of *danse composée* seems to call for pantomime, his examples of dances he admired sometimes favour emotional expression over narrative content. In the librettos he wrote for several of Rameau's works (*opéras-ballets*, *pastorales-héroïques* and *tragédies*) Cahusac did not go as far towards integrating the dancing with the plot as his writings suggest he might have liked (he undoubtedly met resistance from the conservative institutional practices of the Opéra), but he did frequently build divertissements around what he called 'ballets figurés', whose movements he briefly described in the scene indications. These sometimes call for no more action than the weaving of garlands around the stage, but others have a narrative function. In Act 1 of the *pastorale-héroïque Naïs* (1749) an athletic contest goes through various stages of competition until an athlete arrives who challenges all the others twice; they refuse both of the times, he dances triumphantly and Naïs crowns him the victor. The entire scene is set to an extended chaconne that changes character frequently. In other *ballets figurés* Rameau is similarly responsive to the demands of the choreography, but even in the music he composed to accompany standard *fêtes* his inventiveness in characterizing the dancers' roles remains unsurpassed.

7. *Mlle Puvigné as the statue that comes to life in Rameau's 'Pigmalion', Paris Opéra, 1748; costume design by Louis-René Boquet, pen and ink with wash (Bibliothèque et Musée de l'Opéra, Paris)*

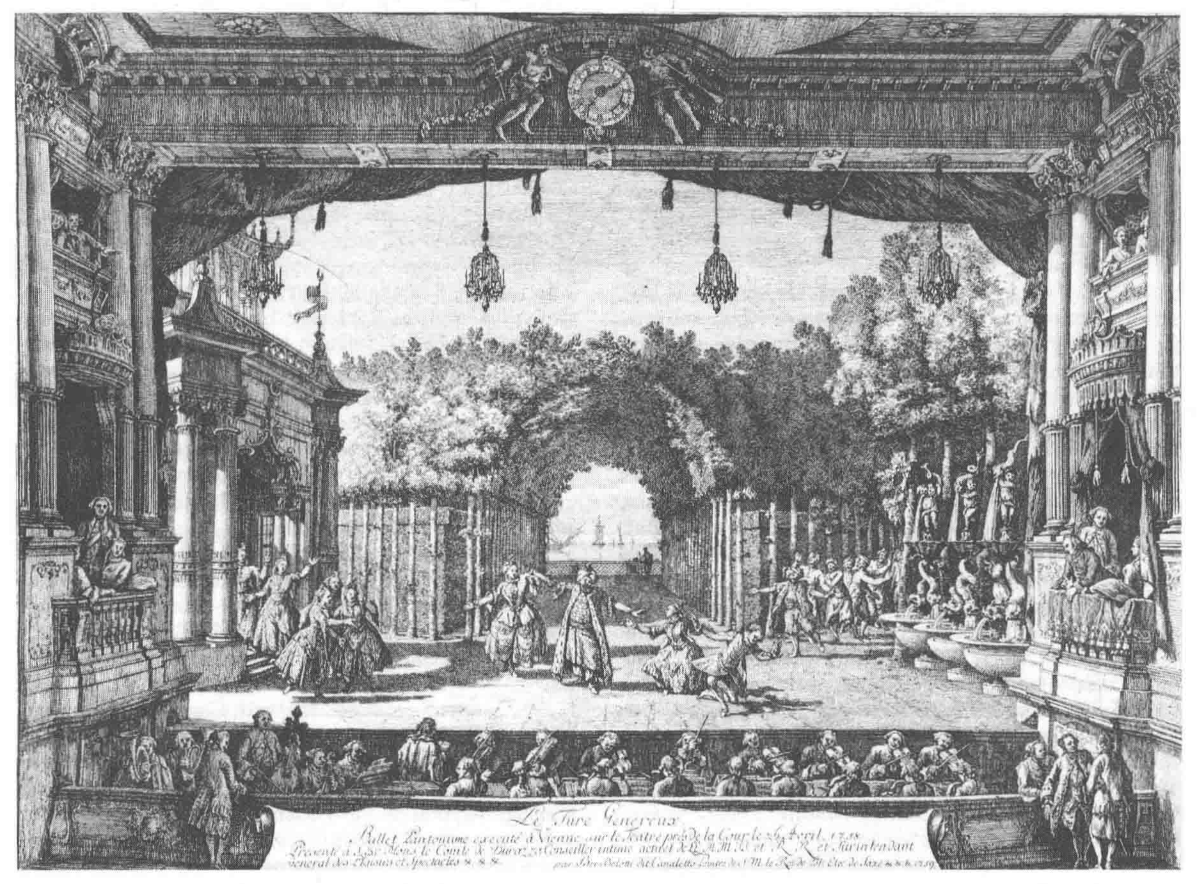
During the same period genuine pantomime ballets began to appear in the Parisian theatres that performed lighter works (*see* PARIS, §IV, 3). According to Desboulmiers (*Histoire du Théâtre de l'Opéra Comique*, 1770), pantomime ballets were mounted at the Opéra-Comique starting in the 1720s, while at the Comédie-Italienne the prolific resident choreographer, Jean-Baptiste François Dehesse, composed not only divertissements for stage works of many types, but more than 50 pantomime ballets between 1738 and 1757 (fig.8). His best-known work, *L'opérateur chinois* (1748, music by Louis-Gabriel Guillemain), features a Chinese seller of patent medicine who has set up shop in the middle of a village fair; a succession of stock characters (an old philosopher, a simpleton with a sore tooth, a ridiculous German baron) involve him in a series of humorous incidents. The libretto, which describes the action scene by scene, divides the cast between dancers, who both mime and dance, and 'performers in the pantomime', who presumably only mime; as in Weaver's works there is a substantial amount of *danse simple* interspersed with the more narrative scenes. The work ends, as was standard in such ballets, with a *contredanse générale*. Dehesse's imaginative choreography was greatly admired in his day, but because he left no theoretical writings his contributions to the development of pantomime ballet have generally been undervalued by historians.

The only known document that preserves theatrical choreographies from this period, the Ferrère Manuscript, dating from 1782 (see Marsh, B1995), mixes various systems for communicating the dances of several comic pantomime ballets: Feuillet notation, sometimes augmented by written commentary; contredanse notation (floor patterns with no notated steps) for the group dances; and sketches with written instructions for the purely pantomimic scenes. The choreography blends dance steps familiar from earlier in the century with more gestural movements and puts rapid changes of movement style to comic effect. Many of Ferrère's solos and duets are technically demanding; the group dances, for six, eight or 12, also require considerable technique. While the ballets are clearly sectional (new movements being signalled by the dancers' entrances and exits as well as by changes in the music), Ferrère also seems interested in sustaining dramatic continuity by keeping the *corps de ballet* on stage when appropriate, and by his fluid transitions from dance to pantomime and back to dance within a movement.

In Italy, the independence of ballet from opera was rarely an issue. Because the already tenuous connections between ballet intermezzos and the acts of the opera that surrounded them had been severed by the start of the 18th century, it was common to find comic dances performed between the acts of an *opera seria*. Although there are isolated instances of Italian operas constructed on a French model, with the dances integrated, usually the ballet and the opera had nothing to do with each other. The separation did not, however, mean that Italian

8. Dehesse's divertissement-pantomime 'La Guinguette', Comédie-Italienne, Paris, 1750: engraving by Pierre-François Basan after Gabriel de Saint-Aubin

audiences had any less appreciation for ballet than did their French counterparts; they simply had different ideas about its role. In fact, the use of vocal intermezzos such as Pergolesi's famous *La serva padrona*, according to Hansell (B1988),



constituted but a short-lived historical parenthesis. For notwithstanding the importance according them in most studies of 18th-century Italian opera, the weight of the evidence proves overwhelmingly that they are properly regarded as the exception rather than the rule. The rule for 200 years, even during the period 1710 to 1735, was that entr'acte entertainments with Italian opera consisted of ballet.

Outside Italy, opera in the Italian manner also tended to reserve dancing for entr'actes, although several of Handel's operas for London (e.g. *Admeto*, 1727, and *Ariodante*, 1735) included dance related to the plot within the acts. Well into the middle of the century, Italian entr'acte ballets tended to present dramatically static vignettes that involved character dancing in rustic or exotic settings, such as *Un villaggio nella Germania co' suoi abitatori occupati in varie opere contadinesche* (1758, Milan) or *La celebre Torre di Nanchino nella Cina* (1757, Rome). Such subjects exploited Italian proclivities for mimetic dancing and allowed opportunities for the aerial, acrobatic styles in which Italian dancers excelled. Gennaro Magri's *Trattato teorico-prattico di ballo* (Naples, 1779), which focusses on the highly developed step vocabulary of the *ballarino grottesco*, is the best surviving source for technical information about this style. Magri, like many other Italian dancers of this period, spent a portion of his career abroad; other international stars included Barbara Campanini, known as 'la Barbarina', whose virtuoso technique and pantomimic abilities created a sensation throughout Europe, and the choreographer Giuseppe Salamoni *père*, generally noted as 'di Vienna' in Italian librettos. At the same time, a look at cast lists shows that a number of French dancers also worked regularly in Italy (Jean-Marie Leclair, ballet-master in Turin before he decided to concentrate on the violin, being one notable example). Before 1740 Italian dance companies tended to have only six or eight dancers, but by the 1760s their numbers increased to around a dozen, and even to 16–18 in Turin. This increase coincided with a shift in interest towards ballets with greater narrative content, such as *La favola di Polifemo con Aci e Galatea* (1748, Milan) or *La scoperta dell'America da Cristoforo Colombo* (1756, Turin). Ballets with mythological plots allowed the fantastic or magical elements that no longer figured in *opera seria* to find a place on Italian stages.

By the mid-century, several choreographers around Europe had become interested in creating pantomime ballets on serious subjects. Vienna, a meeting-ground for artistic trends from Italy, France and central Europe, was an important centre in this regard. Working at both the Burgtheater and the Kärntnertortheater, Franz Hilverding (1710–68) turned away from the 'indecent' comic characters of the Italian theatre first towards 'natural' characters such as Tyroleans or Hungarians and then to mythological subjects. *Psyché* and *Poliphème et Galatée*, both from 1752, may be his earliest independent pantomime ballets. Although Hilverding did not publish

scenarios of his ballets (because, Angiolini was to report later, he believed that the dance spoke for itself), eyewitness descriptions of many of them have been preserved. Music by Joseph Starzer survives for several dozen of his ballets (in Turin and Český Krumlov) and follows a general pattern: an opening sinfonia followed by 10 to 25 instrumental dances, mostly binary and usually untitled beyond the occasional tempo marking. Sometimes music is borrowed from other works, for example the chaconne from Rameau's *Castor et Pollux*. The dance pieces are sufficiently gestural as to allow reasonable hypotheses as to how they fit with the story line (see Brown, B1991), although such identifications are far from straightforward. Like Dehesse, Hilverding left no theoretical writings, but his pupil Angiolini later called his teacher 'the true restorer of the pantomimic art' (fig.9).

Gaspero Angiolini (1731–1803), an Italian dancer who had moved to Vienna in 1754 and inherited Hilverding's position at the Burgtheater when the latter accepted a post at the Russian court in St Petersburg in 1758, went further than his teacher by staging 'a complete dramatic action, upon principles handed down by the ancients' (Brown, B1991, p.288). In his role as choreographer for a repertory company he had to produce not only free-standing ballets but also divertissement dances for operas and plays, and whereas many of his pantomime ballets have mythological, pastoral subjects (*Les amours de Flore et Zéphire*, 1759), others are of a lighter variety (*Le tuteur dupé, ou L'amant statue*, 1761). In fact the three works that he himself saw as landmarks – *Don Juan, ou Le festin de pierre* (1761), *Citera assediata* (1762) and *Sémiramis* (1765) – are no less important for being anomalous in his overall output. (In a pattern that was to become familiar with subsequent pantomime ballets, all three were based on pre-existing works – in this case, two plays and an *opéra comique* that had been performed recently in Vienna; the choreographer could thus count on his audience's familiarity with the stories.) After taking on in *Don Juan* a subject that one spectator characterized as 'extrêmement triste, lugubre et effroyable' (the ballet ends with Don Juan being carried off to the torments of hell by the statue of the murdered Commander), Angiolini decided to move from what he called 'comédie héroïque' to genuine tragedy. 'If there is something of the sublime in dance, it is without doubt a tragic event represented without words and made intelligible through gestures', he wrote in his *Dissertation sur les ballets pantomimes des anciens, pour servir de programme au ballet pantomime tragique de Sémiramis* (Vienna, 1765). After reviewing the precedents in the ancient world for this kind of spectacle, Angiolini turned to practical considerations: for proper effect a tragedy should involve only a few characters, but dancers cannot dance for nearly as long as actors can declaim. Thus a tragic pantomime ballet must be short and to the point; *Sémiramis* should last only 20 minutes. Angiolini did, in fact, reduce the story to its essential elements; although there is a divertissement-like scene in each of the three acts (in Act 3 a group of

9. Scene from Franz Hilverding's pantomime ballet 'Le turc généreux' (music by Joseph Starzer), Burgtheater, Vienna, 1758: etching after Bernardo Bellotto, 1759

subjects brings offerings to the queen), the focus remains on Semiramis and her guilty conscience throughout. The balance between *danse simple* and pantomime thus tilts much more heavily towards the latter than in most other ballets.

The composer for all three ballets – and for many others performed in Vienna during this period – was Christoph Willibald Gluck. The collaboration was apparently a happy one: Angiolini said of Gluck's music for *Don Juan*, 'he has perfectly realized the frightful essence of the action. He has undertaken to express the passions that are in play and the terror that governs the catastrophe. Music is essential to pantomimes; it is the music that speaks, we [dancers] only make gestures'. Gluck and other ballet composers did, in fact, find ways to suggest the words missing from pantomime ballets: a sacred procession in *Sémiramis* is set to a 'cantique' that has the simple melody and block chords of a hymn, and a mysterious inscription that appears on a wall is set to instrumental recitative. And although Gluck's scores are divided into separate numbers (*Sémiramis* has 15), many eschew binary or rondo forms in favour of more flexible (sometimes through-composed) structures that respond to the dramatic context through changes in tempo, level of rhythmic activity, and dynamics. Pieces not infrequently end on the dominant, as a means of making the music continuous. Dances in the divertissement sections of the ballets, on the other hand, still tend to adhere to traditional structures. Music for ballets from the court of Mannheim by composers such as Toeschi and Cannabich show a similar balance between the dramatic and the static.

During the same period, Jean-Georges Noverre (1727–1810) was working towards a similar integration of tragedy and ballet. Given the realities of pursuing an international career in the theatre (he had positions at various times in Paris, Lyons, London, Stuttgart, Vienna and Milan), he had to compose many operatic divertissements of the type he was so eloquently to deplore in his famous *Lettres sur la danse* (1760) and thus was unable to pursue what he was to call 'ballet d'action' as assiduously as he would have liked. He staged his first serious pantomime ballet, *Le jugement de Pâris,* in Lyons in 1751, but found a much more supportive working environment for his theories at the Württemberg court at Stuttgart, where he moved in 1760, just after his book had been published. Of the 20 ballets he created there, *Médée et Jason* (with music by the court composer J.J. Rodolphe, first performed after Act 1 of Jommelli's *Didone abbandonata* in 1763) had the greatest success in generating performances abroad; in 1776, in a restaging by Gaetano Vestris, it became the first independent ballet pantomime to appear on the stage of the Paris Opéra.

Noverre argued that, in order to achieve the expressiveness he desired, dancers needed to remove their masks (generally still worn in Paris at that time) so that their faces could augment the expression of their gestures. In a score dating from the Paris revival of 1804 (in *F-Po*), the actions of one highly fraught confrontation between Medea, Jason and Creusa are cued to rapid and dramatic changes in the music, here an extensive *passacaille*: '[Médée et Créuse] se disputent'; '[Jason] s'efforce de leur faire faire la paix'; 'Médée menace'; 'elle montre son poignard' (fig.10). In the absence of choreographies for any of the serious pantomime ballets it is difficult to gauge whether the mimed gestures replaced or supplemented dance steps. Grimm's reaction to Noverre's ballets (*Correspondance littéraire*, letter of January 1771) is tantalizing but ambiguous: 'There is considerably more walking in them than dancing . . . there is dancing only in great movements of passion, at decisive moments; in the scenes, there is walking in time with the music, but without dancing'. In fact, however, Noverre did allow for dancing by building into his ballet pantomimes typical divertissements (*Médée et Jason* contains dances for the wedding festivities and an infernal scene in which Médée conjures up evil spirits) in which the key roles were assigned to noted soloists. He thus took as his model a structure analogous to sung, not spoken French tragedy – one that, like a *tragédie lyrique*, balanced narrative against moments of visual spectacle.

Noverre's fluency with the written word, demonstrated not only in his *Lettres sur la danse*, which went through several editions, but also in his pamphlet war with Angiolini, helped spread his reformist ideas all over Europe and has given him a place in dance history out of proportion to his actual accomplishments as a choreographer. Although it is true that dancers who had performed in his productions in Stuttgart and Vienna restaged many of his ballets in cities throughout Europe, Noverre was later to complain that these productions did not accurately represent his vision. In fact, he felt at the end of his life that his reach had exceeded his grasp; his most notable failure was in Paris, where his position as *maître de ballet* at the Opéra lasted only three years (1776–9, although his appointment did not officially end until 1781). Parisian audiences found his serious ballets such as *Les Horaces* unsuitable subjects for dancing, although they appreciated such lighter works as *Les fêtes chinoises* and *Les petits riens* (to a score composed partly by Mozart). His successor Maximilien Gardel generally preferred lighthearted subjects, such as *La chercheuse d'esprit* (1777) and *Ninette à la cour* (1778), or sentimental ones such as *Le déserteur* (1788); these three ballets, like many others, were based on well-known *opéras comiques*. Mythological subjects of the pastoral variety also remained in vogue (fig.11), even during the Revolutionary period, as witnessed by the popularity of such works as *Psyché* (1790) and *Le jugement de Pâris*(1794), both of which remained in the repertory of the Opéra for over three decades. (Dancers did participate in politically motivated works such as Gossec's *L'offrande à la liberté* (1792) and *Le triomphe de la République*, 1793.) *La fille mal gardée*, mounted by Jean Dauberval in Bordeaux only days before the fall of the Bastille in 1789, still receives occasional performances.

Whereas some of the music for pantomime ballets was newly composed, in Paris many ballet scores were cobbled together out of a wide variety of pre-existing pieces, both vocal and instrumental. Pierre Gardel's *Télémaque*, which received its première at the Paris Opéra in 1790, contains part of a violin concerto by Giornovichi, passages from Grétry's *opéra comique Richard Coeur-de-Lion*, symphonic excerpts from Haydn, and dances composed by Gossec for Gluck's *Iphigénie en Tauride*, in addition to pieces by Lully, Paisiello, Pleyel, Piccinni and others, all stitched together by the ostensible composer of the score, Ernest Louis Müller. Familiar vocal *airs* were often quoted instrumentally in order to suggest to the audience words otherwise absent from the mute ballet; the opening bars of Gluck's 'Che farò senza Euridice'/'J'ai perdu mon

10. Scene from Gaetano Vestris's version of Noverre's ballet en action 'Médée et Jason', King's Theatre, London, 1781: etching by Francesco Bartolozzi after ? Nathaniel Dance; the dancers are (from left to right) Giovanna Baccelli, Vestris and Mme Simonet

Euridice' from *Orfeo/Orphée* appear in more than one pantomime ballet score. Furthermore, the surviving musical sources of French pantomime ballets often show radical differences as to what music was performed from one revival to the next, suggesting that the concept of the 'work' may have resided more in the scenario than in the score. Both in pantomime ballets and in ballets within operas from the second half of the century, fewer of the individual pieces bear generic dance designations than had been the case earlier; sometimes a familiar dance type is clearly discernible in the rhythmic and melodic contours, but often a piece is labelled only with a tempo marking because it does not adhere to the traditional binary or rondo structures of earlier dance music. Despite the loss of a substantial amount of the ballet music from the 18th century, a good deal has survived and awaits serious study.

By the last decades of the 18th century, the public's appetite for ballet had resulted in a dramatic growth in the dance troupes: Italian opera houses generally employed 35 to 40 dancers, Stockholm reached a height of 71 in 1786, while the Paris Opéra had 92 dancers in 1770. Dancers tended more and more towards specialized training; Italian librettos even categorized them as *ballerini seri*, *di mezzo carattere* or *grotteschi*. Despite the persistence of strong local and national traditions (the French and the Italian being the dominant schools), the end of the century saw a growing internationalization of ballet styles. The leading dancers and choreographers pursued their careers across Europe, taking with them not only works and dancing styles, but also theatrical practices borrowed from each other. In St Petersburg the dance troupe which had been led by the Italians Gasparo Angiolini (who had worked many years in Vienna) and Giuseppe Canziani was taken over by the French-trained Charles Le Picq in 1786. The Stockholm opera, like many others around Europe, employed both French and Italian dancers, in addition to locals. Costume reforms initiated in the 1790s by Salvatore Viganò featuring loose neoclassic dress and either open-toe sandals or flat, flexible slippers soon spread throughout Europe and helped open the way for the technical innovations of the 19th century. Even the Paris Opéra was not immune to influences from abroad: although the longstanding French practice of

11. Pastoral pas de trois danced by Jean Dauberval, Marie Allard and Marie-Madeleine Guimard, Paris Opéra, 1779: engraving by Pierre Leleu

integrating dance into the plot of the opera remained in place, individual works sometimes edged towards Italian practices by replacing the traditional internal divertissement with a quasi-independent pantomime ballet at the end of an act. Another point of contact between the two traditions can be observed in the practice of using a long, celebratory *fête* to conclude many operas; in Italy this was the one danced scene that sometimes bore connections to the plot, whereas in France, where celebratory divertissements had traditionally involved both dancing and singing, the final chorus sometimes disappeared in favour of a purely danced conclusion.

Although by the end of the century pantomime ballet was firmly established as an independent genre, ballet still remained a fundamental part of opera, especially, but no means exclusively, in France. *Opéra comique* and other similar genres, not to mention much spoken theatre, routinely incorporated dance. Moreover, the same institutional structures supported both opera and ballet; audiences throughout Europe were to continue to encounter opera and ballet together, in the same houses and on the same evenings, for many decades to come.

2. 19TH CENTURY. In ballet the terms 'classical' and 'romantic' are chronologically reversed from their musical usage, the romantic style in ballet having preceded the classical.

(i) The transition to romantic ballet, 1800–30. In composing his music for *Die Geschöpfe des Prometheus* (1801) in the form of an overture and 16 numbers, Beethoven wrote for a *ballet en action* derived from Noverre's principles, which in the 18th century had ended the ballet's subservience to opera and made it an independent theatrical art. *Prometheus* was created for the Vienna court theatre (originally as *Gli uomini di Prometeo*) by SALVATORE VIGANÒ (1769–1821), a Neapolitan who often composed the music as well as the scenarios for his ballets; in place of static mime interspersed with dancing, he developed a type of expressive mime-dance based on individual character (fig.12), and the dramatic use of a *corps de ballet*, especially after he became ballet-master at La Scala in 1811. His achievements paved the way for Carlo Blasis (?1795–1878), whose treatises on the technique of dance (*Traité élémentaire*, 1820; *Code of Terpsichore*, 1828) first codified the methods on which the teaching of classical ballet is still based.

Beethoven's ballet score was an exception to the usual musical practice at this time of a hurriedly assembled

12. Salvatore and Maria Viganò dancing the pas de deux, their first great Viennese success: drawing by Johann Gottfried Schadow, pen and ink with wash, 1793 (Kupferstichkabinett, Berlin)

patchwork by a musician on the theatre staff (those at the Paris Opéra included Rodolphe Kreutzer, the dedicatee of Beethoven's Sonata op.47). It was normal to incorporate melodies from well-known operas or songs whose words would relate to the stage action at a given point; and original music, mostly confined to the set dances, was written in a facile style to fit the choreographer's preconception of rhythm and structure. Similar conditions prevailed in Russia, where Charles-Louis Didelot (1767–1837), a pupil of Dauberval and Noverre, spent two influential periods at St Petersburg, during 1801–12 and 1816–30. However, he is credited with having paid more attention to music than most choreographers of his time, and demanded a corresponding musicality from his dancers; he frequently worked with the composer Catterino Cavos, and Soviet research (by Gozenpud and Rabinovich; see Roslavleva, C1966) suggests that Cavos was musically more successful with his ballets than his operas precisely because they were composed to a preconceived structure supplied to him.

The prevailing situation was engagingly described in memoirs published by V.A. Duvernoy in 1903:

> Once the plan of the piece and the dances were arranged, the musician was called in. The ballet-master indicated the rhythms he had laid down, the steps he had arranged, the number of bars which each variation must contain – in short, the music was arranged to fit the dances. And the musician docilely improvised, so to speak, and often in the ballet-master's room, all that was asked of him. You can guess how alert his pen had to be, and how quick his imagination. No sooner was a scene written or a *pas* arranged than they were rehearsed with a violin, a single violin, as the only accompaniment ... Even after having done all the ballet-master required, the composer had to pay heed to the advice of his principal interpreters. So he had to have much talent, or at least great facility, to satisfy so many exigencies, and, I would add, a certain amount of philosophy.

Nevertheless, attempts were made from about 1820 to compose more homogeneous scores for ballet, especially in the work of Jean Schneitzhöffer, the second chorus master at the Paris Opéra, and his superior Hérold, whose score for a new version of *La fille mal gardée* (1828) remains the musical basis for present-day productions. Hérold's successor was Halévy, and his score (1830) for a *Manon Lescaut* ballet by Jean Aumer (1774–1833) is thought to have been the first to use melody to identify character; it earned the grudging admiration of Meyerbeer for its skilled use of musical allusions to suggest period. The function of the scenario writer began to be separated from that of choreographer from about 1827, when Scribe anonymously provided a scenario for Aumer's *La somnambule*, with music by Hérold, while from her début at Vienna in 1822 Marie Taglioni was preparing to bring about the revolution in theatrical dance that became the romantic ballet.

(ii) The romantic ballet and its influence. The ideal embodiment of the romantic image was Marie Taglioni (1804–84), who reflected in her dancing the spirit that infused the literature of Scott and Hugo and the music of Berlioz and Chopin. Her frail physique was schooled relentlessly by her father, the ballet-master Filippo Taglioni (1777–1871), to develop a style distinguished by lightness, grace and modesty, by the use of point-shoes for artistic effect, and by unusual elevation and delicacy on landing. Her freer, more graceful movement, enhanced by a new style of costume with a diaphanous, bell-shaped skirt and fitted bodice, gave a fresh purpose to the art of dance in the theatre (fig.13). It enabled it to become more

13. Marie Taglioni: lithograph by James Henry Lynch after Alfred Edward Chalon, 1830s

poetic and imaginative, an art of illusion rather than illustration. The style was inaugurated by *La sylphide*, staged by Filippo Taglioni for his daughter at the Paris Opéra in 1832. This had a scenario credited to the tenor Adolphe Nourrit, with whom Marie had appeared the year before in Meyerbeer's *Robert le diable*, when she led the ballet of spectral nuns which constituted one of the opera's most novel expressive scenes. (see fig.17 below)

La sylphide reflected the romantic ideal in its theme of a tragically unattainable love, and its combination of the exotic and the supernatural: a Scottish setting and an ethereal being who appears and vanishes with the illusion of flight, which Taglioni was perfectly trained to suggest. Her style of dancing was a creative triumph which has haunted the art of ballet ever since; it not only displaced the male as the dominant figure and established the supremacy of the ballerina for almost a century, but it also required that composers should emphasize the lightness and grace of the ballerina more than the ballet's drama and situation, which is partly why much of the century's ballet music is essentially feminine in character. Taglioni's production of *La sylphide*, with music by Schneitzhöffer, carried the seeds of romantic ballet to Russia when Taglioni first danced there in 1837, but a version choreographed by Auguste Bournonville (1805–79) at Copenhagen in 1836 – the version that has survived – had a new score by H.S. Løvenskjold.

The obverse of the romantic image in dance was personified by Fanny Elssler (1810–84), a Viennese of strong dramatic character and virtuoso technique. If Taglioni was a spirit of the air, Elssler was the child of the earth, excelling in colourful character dances in which a theatrical presentation was given to such folkdances as

14. Fanny Elssler dancing the Spanish cachucha: lithograph by Nathaniel T. Currier, 1840

the Spanish *cachucha* (fig.14) and the Polish krakowiak. Elssler first triumphed in Paris in Jean Coralli's (1779–1854) ballet *Le diable boiteux* (1836) with music by Casimir Gide, and while Taglioni continued to suggest ethereal illusion in other ballets by her father, such as *La fille du Danube* (1836) and *L'ombre* (1839), Elssler dazzled with her virtuosity in *La gypsy* and *La tarentule* (both 1839). From 1840 she toured the USA for two years and achieved an artistic and financial success then unparalleled in American theatrical history, although there European ballet remained a sterile import which failed to stimulate any native dance activity in the theatre until the 20th century.

While Elssler was in the USA and Taglioni was in Russia, the Paris Opéra was conquered by a new ballerina who arrived from Naples by way of Milan: Carlotta Grisi (1819–99), a cousin of the celebrated singers Giuditta and Giulia Grisi. Carlotta was the discovery of Jules Perrot (1810–92), who had partnered Taglioni and turned to choreography when the male dancer became virtually eclipsed. A combination of talents which came together at an opportune moment comprised Perrot and Coralli as choreographers, Théophile Gautier who brought poetry to the writing of a scenario, and Adolphe Adam who extended the expressive character of ballet music: the result was *Giselle*, which had its première at the Opéra in 1841 (fig.15). In its contrast between the realistic peasants of the first act and the disembodied spirits of the second, the need for the ballerina to unite the essential characteristics of each, and the skill of Adam in an incipient use of leitmotifs and musical reminiscence for dramatic effect, *Giselle* represents the romantic ballet at its peak.

Perrot first made London an important centre for ballet during the 1840s, when he worked for six years at Her Majesty's Theatre under Benjamin Lumley's management. Perrot staged *Giselle* for Grisi (whom he had married) and went on to create some of the finest romantic ballets in *Ondine* (1843), *La Esmeralda* (1844), *Catarina* and *Lalla Rookh* (both 1846). These united the dramatic, the supernatural and the exotic in true *ballets d'action* where the choreography created sympathetic characters and carried the narrative forward without superfluous virtuosity, even if the music composed for each of them by Cesare Pugni did little more than embroider the rhythm and reinforce the expressive mood. Perrot also staged

15. Carlotta Grisi and Jules Perrot as Giselle and Albrecht in the first scene of Adam's 'Giselle': engraving, c1842

divertissements to display the finest dancers of the time, culminating in *Pas de quatre* (1845; fig.16), in which Lumley succeeded in presenting four divas simultaneously: Taglioni, Grisi, the Italian Fanny Cerrito (1817–1909) and the Danish Lucile Grahn (1819–1907).

Grahn represented another important centre of romantic ballet in Copenhagen, where Auguste Bournonville returned in 1830 from his studies with Vestris in Paris to direct the Danish Court Ballet (later the Royal Danish Ballet) for the next 47 years. As well as his own version of *La sylphide*, which he staged in 1836 for Grahn on the model of Taglioni's Paris version, Bournonville created more than 50 ballets of different types for his Danish company, which continued independently of theatrical fashion elsewhere; by maintaining the prestige of the male dancer on a par with the ballerina he distinguished the Danish school of ballet from all others in Europe. Bournonville's musical interests (which included the operas of Mozart and Wagner) encouraged native composers to provide original and homogeneous scores for his ballets. Two days before his death in 1879 he witnessed the début of Hans Beck, a dancer who carried the Bournonville ballet style into the mid-20th century with a continuity of tradition unparalleled elsewhere in Europe.

In Russia the foundations laid by Didelot up to 1829 were receptive to the French romantic influences brought first by Taglioni in *La sylphide* to St Petersburg in 1837. She continued to appear there each year to 1842, and Elssler, Grisi, Cerrito and Grahn went there in her wake, dancing the ballets most closely associated with them. These included *Giselle*, which established Yelena Andreyanova (1819–57) as the first Russian romantic ballerina at St Petersburg; her Moscow counterpart was Yekaterina Sankovskaya (1816–78), who danced *La sylphide* and followed Andreyanova in *Giselle*, Elssler in *La Esmeralda* and Taglioni in *La fille du Danube*. Sankovskaya also choreographed her own production of *Le diable à quatre* in Moscow four years before Perrot staged it in St Petersburg; Perrot went there when London's interest in ballet declined after Jenny Lind's operatic successes, and remained as ballet-master until 1859, when he was succeeded by Arthur Saint-Léon, a virile dancer and Cerrito's husband until they separated in 1851. Saint-Léon had only modest success in Russia except for *The Little Hump-Backed Horse*, one of the first ballets on a specifically Russian folk story which, in spite of the limited musical interest of Pugni's score, supplemented by themes borrowed from Rossini (*Tancredi* in particular), remained in the repertory for many years after its 1864 première (20th-century productions by other choreographers continued to use the Pugni music until a new score was composed by Shchedrin for performance in 1960). The native Russian element in ballet was consolidated by *The Fern* (1867), with choreography by Sergey Sokolov, a pupil of Saint-Léon, and music by Yury Gelber, first violin and conductor of the Bol'shoy Theatre orchestra, and led directly to later balletic triumphs in association with Tchaikovsky.

(iii) Ballet in opera. Throughout the 19th century ballet retained a connection with opera, chiefly when composers incorporated dance scenes to diversify weightier emotional matters. Weber anticipated some elements of *La sylphide* by more than 20 years in his early opera *Silvana* (1810), in which his mostly mute heroine embodies the romantic woodland spirit and expresses herself in dance. Weber evoked a strong flavour of Spanish dance in his music for *Preciosa*; he added a newly composed pas de cinq to *Euryanthe* in 1825 for its Berlin production, to please Friedrich Wilhelm III of Prussia; and *Oberon* has enchanting dances woven into the musical fabric. In Russia, Glinka was an admirer of ballet who took lessons in his youth, and whose knowledge of ballet and folkdance is reflected in dance scenes which grow out of the dramatic action, notably in *A Life for the Tsar* (1836) and *Ruslan and Lyudmila* (1842). By the 1820s ballet had become a necessary element of all productions at the Paris Opéra, where Rossini, after interpolating dance movements from other sources in his earlier operas, provided two extensive dance sequences in *Guillaume Tell* (1829), in which Marie Taglioni first danced the well-known Tyrolean Dance.

Meyerbeer incorporated ballet to more than decorative purpose in *Robert le diable* (1831), his ballet of the spectral nuns serving to tempt the hero from the path of honour (fig.17), but in his later operas such as *Les Huguenots*, *L'étoile du nord* and *L'Africaine* his ballet sequences were more in the nature of divertissements, as were those Donizetti added to *Les martyrs* (the French version of *Poliuto*) or to *La favorite* and *Dom Sébastien*. Verdi's adaptations for the Paris Opéra are particularly interesting in this respect; he added a ballet to *I Lombardi* when it was staged there as *Jérusalem*; he composed a ballet of the Four Seasons as an original element in *Les vêpres siciliennes*; he added Spanish-gypsy dances when *Il trovatore* became *Le trouvère* (including one based on the theme of the Anvil Chorus); he summoned Hecate and the witches to dance in *Macbeth*; and he equipped the Paris production of *Don Carlos* with 'La Pérégrina: ballet de la reine' (fig.18). He resisted blandishments to add a

ballet to *Rigoletto*, but in 1894 provided a divertissement for *Otello*, his last music for the theatre.

With the decline of romantic ballet as an artistic entity after about 1850, ballets became more and more an excuse for vulgar display by individual performers or for varying degrees of elaborate spectacle. The entrenched position in Paris within ten years is illustrated by the episode of the ballet Wagner was required to add to *Tannhäuser*: he placed it at the start of Act 1 whereupon part of the audience, having arrived too late to witness it, created a disturbance that wrecked the opera's prospects. French composers such as Berlioz, Gounod and Massenet took care to safeguard themselves by making due provision for ballet in their operas; others alternated between operas and ballets as complementary entertainments. When Grétry's *Zémire et Azor* became a ballet in 1824, Schneitzhöffer retained much of the original music in his transcription, but when Auber turned his *Marco Spada* opera of 1852 into a ballet on the same subject five years later, he constructed a quite different score using themes from *Fra Diavolo* and his other operas.

Adam worked successfully in both genres, as did his pupil Delibes, who was responsible for two scores that raised the standard of ballet music at a time when the art itself was in decline in western Europe. The first of these was *Coppélia* (1870), originally choreographed in Paris by Saint-Léon, in which Delibes extended Adam's device of associating themes with characters. The lack of difference in musical manner between the male and female dances in *Coppélia* is explained by the fact that the male had been so far relegated that his leading role was then, and for many years subsequently, danced by a female *en travestie*. Delibes further developed the leitmotif device in *Sylvia* (1876), and Tchaikovsky came to know and admire the music to fruitful purpose, but none of the original choreography, by Louis Mérante (1828–87), has survived.

(iv) The classical ballet in Russia to 1900. Tchaikovsky once described his music for *Swan Lake* as 'poor stuff compared with *Sylvia*', but it was his score which, by treating ballet as a subject worthy of musical imagination, set new standards for the role of music in classical ballet and achieved one of its enduring masterworks. *Swan Lake* had its origins in a domestic entertainment by the children and friends of Tchaikovsky's sister, performed at their home probably about 1871. It was extended to a four-act ballet on a commission in 1875–6 from the directorate of the Imperial Theatres, and was first performed at the Bol'shoy Theatre, Moscow, in 1877, with Pelagia Karpakova in the dual leading role of Odette-Odile. Nobody was credited with a scenario for *Swan Lake* in the original programme, but the folk story seems to have been given theatrical form by the Bol'shoy Theatre director Vladimir Begichev and the dancer Vasily Heltzor, in collaboration with Tchaikovsky and the ballet-master Julius Reisinger (who was responsible for the first choreography). The ballet achieved a modest success in spite of difficulties presented by the stronger and more organic musical element, and choreography that hardly matched the level of musical invention. A Russian dance at the first performance, and a full-scale pas de deux at the fifth, were added by Tchaikovsky at the request of the ballerinas concerned.

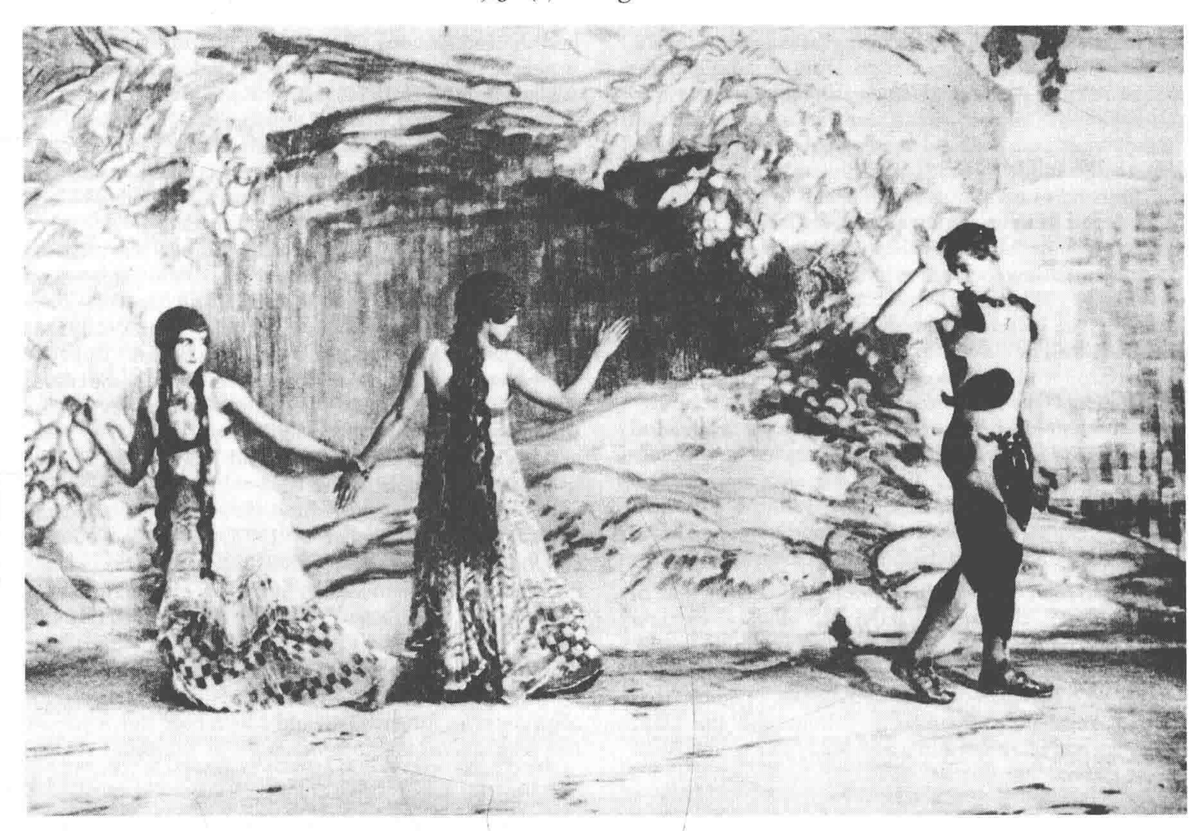
Nikolay Kashkin, who made the first piano transcription of *Swan Lake*, later recalled that the ballet 'held its place on the stage until the scenery was worn out ... Not only the décor became ragged, but the musical score suffered more and more until nearly a third was exchanged with music from other ballets, and not necessarily good ones'. In progressively more mutilated form the ballet continued in the Bol'shoy Theatre repertory through the new choreographic version made by Joseph Hansen in 1880 until it was eventually dropped in 1883. It then remained unperformed until after Tchaikovsky's death when an entirely new version was mounted at St Petersburg in the wake of the greater successes of *The Sleeping Beauty* (1890) and *The Nutcracker* (1892).

Meanwhile in 1869 the Russian imperial ballet had come under the despotic control of Marius Petipa (1818–1910), a French-born ballet-master and choreographer whose brother, Lucien, was *premier danseur* at the Paris Opéra, and whose father, Jean, had taught at the Russian Imperial Academy of Dancing. Building on the existing foundations, Petipa created 46 original ballets in Russia which raised the style to a peak of spectacular grandeur; the best of them continued to influence the course of classical ballet and its teaching throughout the 20th century. Petipa had already toured in France, Spain and the USA; he first went to St Petersburg in 1847 and was *premier danseur* until 1858 when he became second ballet-master under Saint-Léon. In this capacity he staged his first important ballet in 1862, the three-act *Pharaoh's Daughter*, with music by the ubiquitous Pugni, who at that time had the official post of staff ballet composer to the Imperial Theatres. Petipa's mixture of *pas d'action* stemming from Perrot's dramatic principles, with exotic divertissements, fantastic processions and multiple apotheoses, not necessarily germane to the narrative, constituted the first *ballet à grand spectacle*, a type that dominated Russian ballet for the rest of the century. *The Sleeping Beauty* remains the most celebrated example, more of Petipa's choreography having survived from this than from any other, but scenes and pas de deux by him have been handed down from the 1895 revision of *Swan Lake*, from *Don Quixote* (1869) and *La bayadère* (1877) with music by Minkus, and from the 1899 revision of *Le corsaire*.

The composition of *The Sleeping Beauty*, described by Stravinsky as 'the convincing example of Tchaikovsky's great creative power', was brought about by Ivan Vsevolozhsky, director of the Imperial Theatres, who abolished the post of staff ballet composer and engaged composers of more distinction. Vsevolozhsky prepared the scenario and designs, while Petipa mapped out in detail a sequence of dances which, far from being a hindrance to musical composition (as some commentaries have suggested), proved a practical help to Tchaikovsky, whose enthusiastic collaboration resulted in the supreme example of 19th-century classical ballet. It was first performed at the Mariinsky Theatre, St Petersburg, in 1890, and remains a cornerstone of the classical ballet repertory.

Two years later Vsevolozhsky brought Tchaikovsky and Petipa together again for *The Nutcracker*, which was to form part of a double bill with Tchaikovsky's one-act opera *Iolanta*, but Petipa had not progressed very far before illness compelled him to yield the choreography to his assistant, Lev Ivanov (1834–1901), who alone was named on the posters for the first production at St Petersburg in 1892 (fig.19). Ivanov was further responsible for a new version of Act 2 of *Swan Lake*, mounted as

19. Snowflakes from Tchaikovsky's 'The Nutcracker', Mariinsky Theatre, St Petersburg, 1892



a memorial to Tchaikovsky after the composer's death in 1893, which led to the full new production in 1895 by Petipa and Ivanov together, from which most later versions of the ballet have stemmed. The scenario for this was modified by Tchaikovsky's brother, Modest, and the alterations made in the musical sequence to meet Petipa's requirements have continued to bedevil most productions of the ballet.

Ivanov worked so much in the shadow of Petipa, mostly revising older ballets, that the transitory nature of unrecorded choreography has denied him much posthumous fame, but he was a talented (though untrained) musician, and the known share of his contribution to *Swan Lake*, still preserved in the familiar Act 2, shows him to have been a much more musical choreographer than Petipa. Besides *The Nutcracker*, Soviet historians also single out Ivanov's original choreography of the Polovtsian Dances in the first production (1890) of Borodin's *Prince Igor*, but at the end of his life Ivanov had to petition the Imperial Theatres for financial assistance, on the strength of 50 years' service, and he died in poverty. Petipa, however, recovered from his illness to collaborate fruitfully in *Raymonda* (1896–7) and *The Seasons* (1899) with Glazunov, whose symphonic aspirations sadly curtailed his evident talent for ballet. A change in the administration of the Imperial Theatres soon after and the failure of Koreschenko's *The Magic Mirror* brought about Petipa's retirement. His legacy was a repertory and a style on which others could build, and an ensemble of dancers and a school of training which represented an investment for the future; Sergey Diaghilev was one of the first to profit from it.

3. 20TH CENTURY: CLASSICAL. In balletic usage the term 'classical' continues to define old and new works performed in a style derived from the Franco-Russian *danse de l'école*, in contrast with 'modern dance' (see §4) which commonly refers to the freer style derived in the USA from Isadora Duncan, Ruth St Denis and particularly Martha Graham, and in Europe from Rudolf von Laban, Mary Wigman and Kurt Jooss.

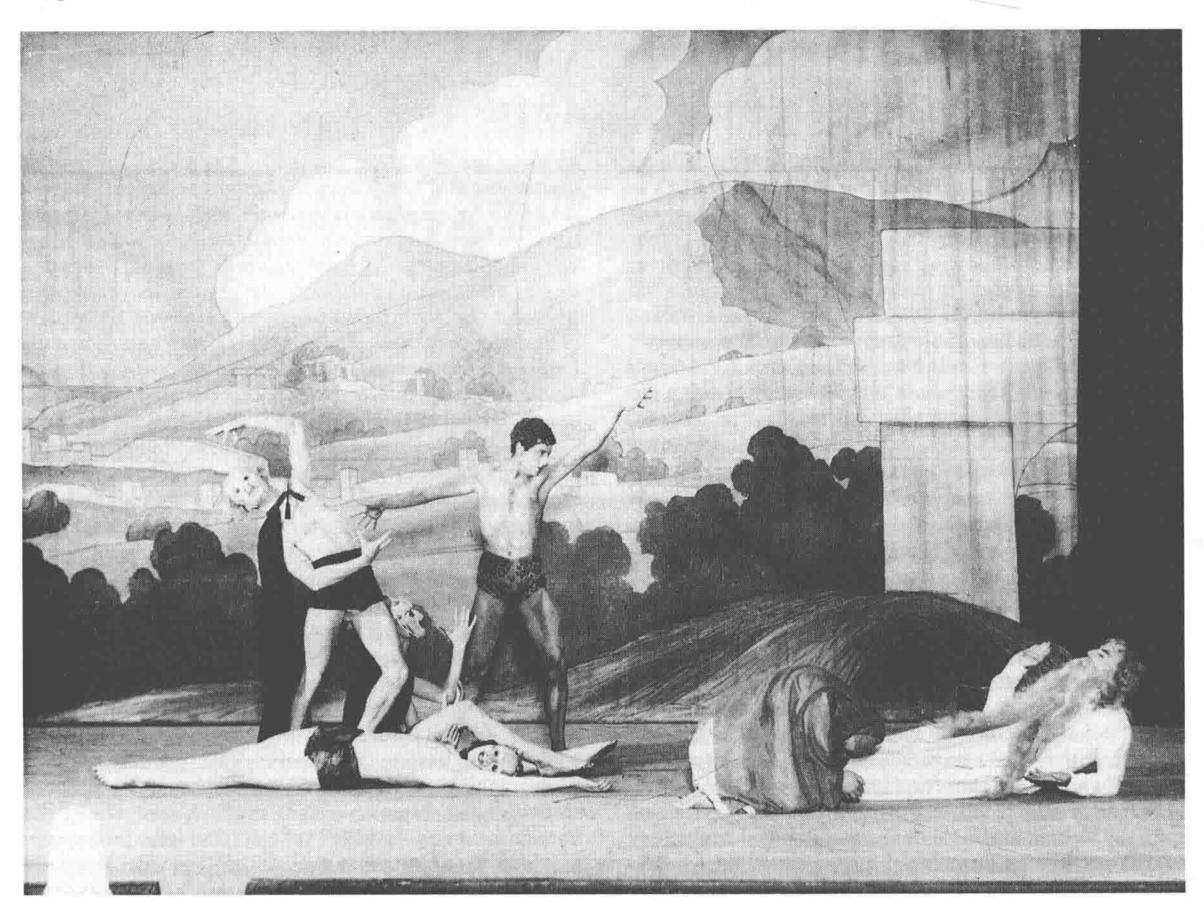
(i) Diaghilev and the Russian exiles to 1930. Sergey Diaghilev (1872–1929), whose touch of genius changed the face and fortune of classical dance within five years and determined its 20th-century course in the West, could neither choreograph nor compose, but was originally concerned with disseminating Russian art in all its manifestations. He first organized exhibitions of visual art in Paris and then planned a production there of Borodin's *Prince Igor* with a Russian company (1909); financial reasons caused this to be restricted to a presentation of Act 2 only, and consequently the Russian dancers in the scene of the Polovtsian Dances captured as much as if not more attention than the singers. Diaghilev realized that Russian ballet could be even more successful in the West than Russian opera.

His second Paris season (1909) accordingly presented for the first time the 'Ballets Russes de Serge Diaghilev' in

20. Vaclav Nizhinsky (right, also the choreographer) and the nymphs in Debussy's 'L'après-midi d'un faune', designed by Léon Bakst: photograph from the 'Illustrated London News' (22 February 1913)

a repertory almost entirely choreographed by Mikhail Fokine (1880–1942), including the Polovtsian Dances as a separate item. Prompted by what he had seen of the American modern dancer Isadora Duncan, Fokine's other works in this and following years initiated a new trend in the use of pre-existing music, not necessarily composed with dancing in mind. At first he used such music in three different ways: as an anthology of works by one composer, of which the most famous example is the orchestrated Chopin anthology first made in 1909 for *Les sylphides* (originally *Chopiniana*, a title still retained in Russia), which was followed by similar Schumann anthologies for *Le carnaval* (1910) and *Papillons* (1914); a miscellany of works by different composers for the same ballet, as in *Cleopatra* (1909), which used music by Arensky, Glazunov, Glinka, Musorgsky, Rimsky-Korsakov, Taneyev and Tcherepnin; or the association of a new balletic narrative or theme with a single work, as in *Sheherazade* (1910), where Rimsky-Korsakov's music was matched to a story different from that which prompted his composition. Diaghilev soon realized that musical integrity was no less important to dance than choreography and visual character, and the second of these categories was quickly discarded; the others have continued to furnish a wide variety of musical means for dance.

Diaghilev also continued the 19th-century practice of specially written music for dance and engaged composers of true promise or distinction, most notably Stravinsky, whose three pre-1914 Diaghilev commissions, *The Firebird* (1910), *Petrushka* (1911) and *The Rite of Spring* (1913), first brought him international fame. In that period Diaghilev also engaged Debussy (*L'après-midi d'un faune* and *Jeux*), Ravel (*Daphnis et Chloé*), Florent Schmitt (*La tragédie de Salomé*) and Richard Strauss (*Josephslegende*). From 1917 until Diaghilev's death these were supplemented by Satie (*Parade*), Falla (*El sombrero de tres picos*), Poulenc (*Les biches*), Auric (*Les fâcheux*), Milhaud (*Le train bleu*), Sauguet (*La chatte*), Prokofiev (*The Steel Step* and *The Prodigal Son*) and Constant Lambert (*Romeo and Juliet*), while the production of *Apollon musagète* (1928) initiated the partnership between Balanchine and Stravinsky which had far-reaching consequences for classical dance in the following decades. Diaghilev's policy towards composers confirmed his belief that music could and should have an organic and not merely decorative part in the theatrical conception.



The choreographic interest of Diaghilev's company centred successively on Fokine, Leonid Massine (1896–1979) and George Balanchine (1904–83), and to a lesser extent on the dancer Vaclav Nizhinsky (1888–1950), who was responsible for the first choreography of *L'après-midi d'un faune* (fig.20), *Jeux* and *The Rite of Spring* in versions forgotten until the last named was reconstructed in 1988, and his sister Bronislava Nizhinska (1890–1972) who created, among other works, *The Wedding* and *Les biches*, which continue to be performed in her original choreography. A member of Diaghilev's company at the outset was Anna Pavlova (1881–1931), who broke with him after his first Paris season, formed her own company (mostly English in origin) in 1914 and began the world tours that continued until her death. She spread the interest in classical ballet in many countries where it was

a complete novelty, but her inferior taste in music (using that of Aphons Czibulka, Drigo, Paul Lincke and the slighter works of more distinguished names) was also responsible for a widespread and persistent belief that 'ballet music' was confined to works of a trivial nature.

With the sudden death of Diaghilev in 1929 and the disbandment of his company, the conditions became ripe for the establishment of a tradition of classical dance on a more permanent basis in Britain, the USA and elsewhere. Companies calling themselves 'Ballets Russes', or versions of that title, continued to be active and their confused identities are described in detail elsewhere (Lynham, D1947); the first of them, the Ballet Russe de Monte Carlo, produced the so-called 'symphonic ballets' by Massine, of which *Choreartium* (1933), to Brahms's Symphony no.4, occasioned something of a musical scandal but was much admired when revived by Birmingham Royal Ballet in 1991. (It was not, however, the first ballet to make use of a pre-composed symphony; Aleksandr Gorsky (see §iii below) had choreographed Glazunov's Fifth Symphony at the Bol'shoy Theatre in 1915.)

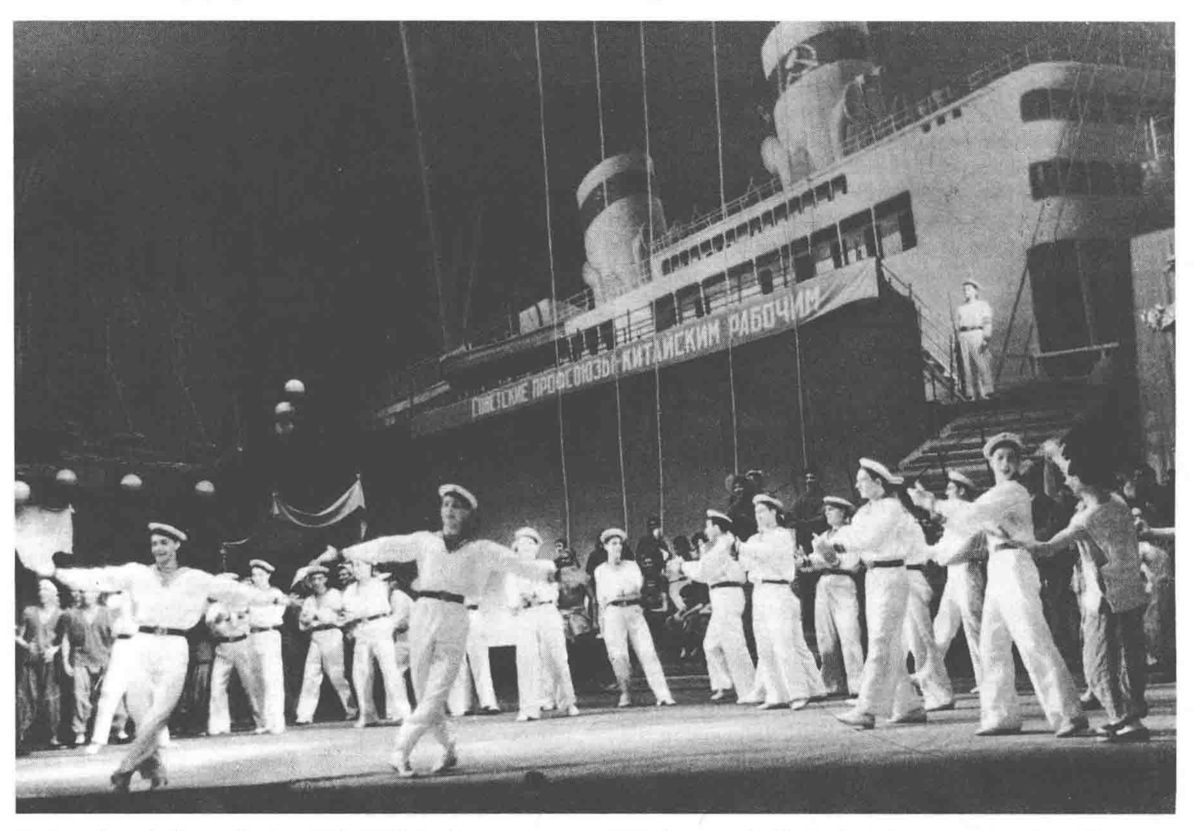
(ii) Britain, the USA and elsewhere. A direct outcome of the Diaghilev company's activities, and of its first production in the West of Petipa's St Petersburg classic *The Sleeping Beauty* (Alhambra Theatre, London, 1921), was the establishment of classical dance on a regular basis through resident companies in Britain and the USA. Diaghilev had recruited and trained the three women who laid the foundations of classical ballet in Britain: Marie Rambert (1888–1982), Ninette de Valois (*b* 1898) and Alicia Markova (*b* 1910). Marie Rambert began teaching in London in 1920, and in 1926 founded Ballet Rambert, renamed Rambert Dance Company in 1987. Ninette de Valois became associated with Lilian Baylis at the Old Vic from 1926, and from 1931 at Sadler's Wells Theatre, where the Vic-Wells Ballet formed by de Valois was the basis of the Royal Ballet. Alicia Markova was the first British prima ballerina and set the high professional standards that both the Rambert and the Vic-Wells companies aimed at from the outset; she later (1935–8) toured Britain with the Markova-Dolin Ballet.

Operating on Diaghilev's principles as far as she could, de Valois staged classics from the notebooks of the Russian régisseur Nikolay Sergeyev (*Giselle*, *The Nutcracker* and *Swan Lake* in 1934 and *The Sleeping Beauty* in 1939), and supplemented these with works of her own and others by Frederick Ashton (1904–88), who became a resident choreographer in 1935. Where possible, a collaboration was sought with British composers, including Vaughan Williams (*Job*, 1931; fig.21), Walton (*Façade*, 1931), Geoffrey Toye (*The Haunted Ballroom*, 1935), Gavin Gordon (*The Rake's Progress*, 1935), and Bliss (*Checkmate*, 1937), while Constant Lambert as musical director made arrangements of music by such composers as Auber, Liszt and Meyerbeer (for Ashton's *Les rendezvous*, *Apparitions* and *Les patineurs* respec-

21. Scene from the first production of Vaughan Williams's 'Job', Cambridge Theatre, London, 1931, choreographed by Ninette de Valois, with Anton Dolin (centre) as Satan

tively), and of Boyce for de Valois' *The Prospect before Us*. The company became known as Sadler's Wells Ballet in the late 1930s, after Markova left in 1935 to form her own company with Anton Dolin; Margot Fonteyn (1919–91) succeeded Markova in the ballerina roles, having begun dancing with the company in 1934. During World War II it was based at the New Theatre, London; it reopened Covent Garden in 1946 with *The Sleeping Beauty* and became the resident company there, receiving the royal charter in 1956. A second company, Sadler's Wells Theatre Ballet (at first Sadler's Wells Opera Ballet), was formed at Sadler's Wells Theatre in 1946, and subsequently became the touring echelon of the Royal Ballet. In 1976 it returned to its former base and was officially renamed Sadler's Wells Royal Ballet. From 1990 it was based in Birmingham (as Birmingham Royal Ballet) with its own director and administration.

Rambert's sphere of operation was more circumscribed, her company never acquiring a regular base for performance, but it complemented that of de Valois by consistently acting as a forcing-house for choreographic talent. Having brought to light Frederick Ashton, whose first ballet, *A Tragedy of Fashion*, to music by Eugene Goossens, inaugurated the Rambert dancers' first appearance (Lyric Theatre, Hammersmith, 1926), Rambert subsequently developed the talents of Antony Tudor (who became a significant influence on classical dance in the USA), Walter Gore, Andrée Howard and Frank Staff, followed in the postwar period by several more, notably Norman Morrice and Christopher Bruce. Rambert encouraged a broad-minded and relatively adventurous approach to music which enabled Tudor to create *The Planets* (to part of Holst's suite, 1934) and *Dark Elegies* (to Mahler's *Kindertotenlieder*, 1937), and which also ranged from Schubert (Howard's *Death and the Maiden*, 1937) to Poulenc, Honegger and Prokofiev before World War II.



Meanwhile Balanchine, who worked in Copenhagen, Paris and London for short periods after the Diaghilev company disbanded, was approached in 1933 with a plan to establish a base for classical dance in New York, to parallel developments in modern dance, and he opened the School of American Ballet there the next year. From it there appeared, as opportunity and funds allowed, a succession of companies including the American Ballet, Ballet Caravan and Ballet Society, and a growing team of dancers trained in Balanchine's style (which he extended to numerous Broadway and film assignments in the 1930s and 40s). These activities brought about American subjects for dance and the participation of American composers; an example is Eugene Loring's *Billy the Kid* with music by Copland, first staged by Ballet Caravan in 1938. Ballet Society, formed in 1946, was in due course invited to make its home at New York City Center, where it became the foundation of the New York City Ballet in 1948 and where it continued to flourish until it was installed at the New York State Theater in Lincoln Center in 1964.

Other major companies to establish the classical tradition in the USA include the San Francisco Ballet (from 1937) and the American Ballet Theatre, originally formed at New York City Center in 1940, with which Tudor became closely associated from the outset, and whose later notable choreographers include Jerome Robbins. From the 1950s classical companies of varying standards proliferated in large cities and regional areas. In Canada a modest ballet school opened at Winnipeg in 1938, became a professional company from 1949 and received a royal charter in 1953 as the Royal Winnipeg Ballet. It was followed by the National Ballet of Canada based in Toronto (1951) and Les Grands Ballets Canadiens, based in Montreal (1952).

In Europe the once supreme Paris Opéra Ballet declined into the doldrums, from which it was partly lifted by a former Diaghilev principal Serge Lifar (1905–86); it regained much of its old prestige under the direction of Rudolf Nureyev (1938–93). However, the Paris-based company Les Ballets Suédois was influential in experimental work (1920–25), as was Les Ballets des Champs-Elysées in maintaining the Paris Opéra tradition in the period 1945–50. In Copenhagen the Royal Danish Ballet continued on its course undisturbed by the rest of the balletic world and unaffected by Diaghilev (except for brief visits from Fokine in 1925 and Balanchine in 1930), and was rediscovered internationally after 1945 as the repository of the Bournonville style and method, virtually unchanged for a century. More recently, under Flemming Flindt (*b* 1936), the Danish company has sought to maintain a balance between the Bournonville tradition and new developments in classical dance, notably commissioning original music from Maxwell Davies for Flindst's two-act ballets *Salome* (1978) and *Caroline Mathilde* (1991). Flindt left in 1978 to form his own independent company and was succeeded by former principal dancer Hemming Kronstam, and then in 1996 by Maina Gielgud, the first woman to direct the company and the first non-Dane for 180 years. But she found the position untenable and left after one year.

(iii) The USSR: a continuing tradition. Between the retirement of Petipa from St Petersburg in 1903 and the revolution of 1917, the focus of classical ballet moved to Moscow, where Aleksandr Gorsky (1871–1924) was appointed ballet-master at the Bol'shoy Theatre in 1900. He staged new versions of several Petipa ballets, including five progressive versions of *Swan Lake*, making them more dramatic and less formal; he was the first choreographer to make use of a pre-existing symphony for dance (Glazunov's Symphony no.5, 1915); and he introduced *The Nutcracker* to Moscow in 1919. His style of dance-drama was found to accord with the new Soviet aims for classical dance after 1917 when, instead of being swept away as a symbol of imperial decadence (as many activists wanted), it was defended by the first Soviet Commissar of Enlightenment, Anatol Lunacharsky, as a national asset that deserved to be made worthy of the proletariat.

With the classical tradition preserved and nurtured by outstanding teachers such as Agrippina Vaganova in Leningrad and Vasily Tikhomirov in Moscow, the new Soviet ballet passed swiftly through a phase of post-Revolutionary experiment to cultivate a new harvest in the classical tradition. Tikhomirov was the joint choreographer with Lev Lashchilin of the first successful 'socialist ballet', Glier's *The Red Poppy* (1927; fig.22), which established socialist realism as a balletic theme and which is still in the repertory. *The Golden Age* (1930) was a fiercer but more controversial satire on capitalist principles, with music that helped to make Shostakovich more widely known; one of its choreographers, Vasily Vainonen (1898–1964), went on to create in *The Fire of Paris* (to Asaf'yev's pastiche of 18th-century French music, 1932) the emotional human drama against a

22. Scene from the first production of Glier's 'The Red Poppy', Moscow, 1927, choreographed by Vasily Tikhomirov and Lev Lashchilin

revolutionary political background which continued to be a prominent theme in Soviet ballet.

Gorsky's naturalistic style of dance-drama reached its peak in the work of Leonid Lavrovsky (1905–67), who began choreography in the 1930s at Leningrad where the former imperial company now took its name from the Kirov Theatre (formerly the Mariinsky Theatre). Lavrovsky's *Romeo and Juliet* in 1940 to Prokofiev's score (the first version was by Vanya Psota at Brno in 1938) was his major achievement; he also choreographed *The Stone Flower* in 1954 to Prokofiev's last ballet score, after the composer's death. Lavrovsky's counterpart and predecessor at Moscow was Rostislav Zakharov (1907–84), whose ballets *The Fountain of Bakhchisaray* (1933, music by Asaf'yev) was the first of several on Pushkin subjects. He also choreographed the first version of *Cinderella* (1945) to Prokofiev's other major ballet score, when the title role was taken by the most celebrated of Vaganova's pupils and the outstanding Soviet ballerina of the mid-20th century, Galina Ulanova (1910–98).

A later version of *Cinderella* in 1964 had choreography by Konstantin Sergeyev (1910–92), another Leningrad dancer who had earlier made the first ballet on race relations in *The Path of Thunder* (1958), with music by Karayev and based on a novel by the South African writer Peter Abrahams. The classic tragedy of *Spartacus*, with music by Khachaturian, has furnished successive ballets by Igor Moyseyev (1958), Leonid Jacobsen (1966) and in 1968 by Yury Grigorovich, who became director of the Bol'shoy Ballet in 1964, remaining in the post until his resignation in 1995. His productions have modified naturalistic dance-drama by reasserting the supremacy of the classical style, but used with more freedom of imagination, as in his versions of *Swan Lake* and *The Nutcracker*.

The Lavrovsky production of *Romeo and Juliet*, led by Ulanova and Yury Zhdanov, opened the Bol'shoy Ballet's first season at Covent Garden in 1956 and initiated an influence on classical dance in the West which was continued in later tours by the Bol'shoy and Kirov companies (the latter first appeared at Covent Garden in 1961). Ulanova's embodiment of a total commitment to a dramatic role, with musical phrasing to heighten emotional expression, and a technique that was broader in outline and more impassioned in character than that attempted by Western dancers, brought about a new focus of style in classical dance, as did Soviet dancers who left the USSR to settle and work in the West, notably Rudolf Nureyev, Natalia Makarova and Mikhail Barïshnikov. The underlying conservatism of music in Soviet dance, however, has been less fruitful elsewhere.

With the advent of political and economic reform (*perestroika*) promoted from 1985 under the government leadership of Mikhail Gorbachev, leading to the disintegration of the USSR, the major state ballet companies found themselves confronted by artistic and economic problems. Subsidies were reduced, and the greater freedom of the individual allowed more dancers to seek lucrative engagements in the West, chiefly as guest artists for limited seasons. However, some obtained full-time contracts, such as Irek Mukhamedov from the Bol'shoy Ballet who joined London's Royal Ballet as a principal from 1990. A state of flux on the Russian ballet scene left standards in decline, and a season by the Bol'shoy Ballet

in London in 1993 was so poorly received and adversely reviewed that a planned return the next year had to be cancelled for lack of public response. The company's artistic director of 30 years, the despotic Yury Nikolaiyevich Grigorovich (*b* 1927), described in some quarters as a 'Soviet fossil', was forced to resign in 1995, and was replaced by Vladimir Victorovich Vasiliyev (*b* 1940), a former dancer and a fierce critic of Grigorovich. From the company's summer season in London in 1999 it appeared that standards were improving, although the repertory and musical character were still stagnant. Similarly in St Petersburg, the Kirov Ballet director of 20 years, Oleg Mikhailovich Vinogradov (*b* 1937) resigned in 1997, and control was taken by the conductor Valery Gergiyev, artistic director of the Kirov Opera, assisted by a committee of ballet advisers including principal dancers.

(iv) Main trends since 1945. From being concentrated in a few centres and touring companies, classical dance in the latter part of the 20th century became an element of national or civic cultural prestige throughout the world. Whether funded from government, commercial or private sources, full-time companies devoted wholly or mainly to classical dance are active in almost all European countries, Russia and neighbouring republics, the Middle East, North and South America, Cuba, China, Japan, Australasia and South Africa. In many countries two or more companies perform in direct or complementary competition, and it has become a regular practice for tours to be made from one country to another on a continuing basis of cultural exchange, a practice virtually initiated by the successful visit of Sadler's Wells Ballet from Covent Garden to New York in 1949 and repeated for many successive years until costs became prohibitive.

Classical companies involve larger numbers of dancers than their modern-dance counterparts, and their success depends fundamentally on at least one resident choreographer or director whose works give the company a corporate personality, and on schools of ballet where teachers of distinction can provide, year by year, a flow of intensively trained young talent to the professional companies. Basic repertories generally include at least one of the five main 'classics': the three Tchaikovsky ballets, *Giselle* and *Coppélia*, to which a *Romeo and Juliet* (Prokofiev) is often added. These are supplemented by the works of the resident choreographers and others, who may be invited to produce their more successful ballets in other countries. Some choreographers work in peripatetic fashion for any company wishing to engage them, and works from the Diaghilev repertory continue to be revived after more than 50 years. Forms of notation have enabled older works to be re-produced, and new systems of notation ('choreology') can provide a more lasting record of new works, although it is frequently felt that productions staged from notation alone lack the personality their creators would have given them.

The 'dance explosion' of the 1970s and 80s was a world phenomenon, helping in Britain to raise the profile of dance as an art and an entertainment in both professional and community contexts. The fragments of fallout from this explosion of activity have tended to coalesce into numerous small groups, usually of a modern or postmodern character, who come together in performance for a few days, weeks or months, at the behest of any self-styled choreographer who can obtain public funding, commercial sponsors or a mixture of both, and whose awareness of music is often limited to 'staining the background' with sound, usually on tape and sometimes electro-acoustic.

There are, of course, honourable exceptions, whose choreographic work has reflected an understanding of the creative contribution that music can make to a dance conception and has thus encouraged more composers to realize that new music for dance can bring, as well as artistic fulfilment, more financial reward through repeated performances than much concert work can offer. Financial constraints usually limit new work, whether in the classical or modern category, to single-act length of from 15 to 60 minutes. A large national company may stage four to eight such works a year, unless some special occasion enables the number to be increased; the most memorable example was New York City Ballet's tribute to Stravinsky (1972), when 31 ballets to his music (of which 20 were entirely new works) were staged within a week by Balanchine and six other choreographers.

In postwar economic conditions the full-evening ballet with music specially composed, the most usual kind of work a century earlier, became very rare. The first three-act score by a British composer was Britten's *The Prince of the Pagodas* (1957), created by John Cranko (1927–73) for the Royal Ballet at Covent Garden; others of musical distinction have been Henze's *Undine* (1958) for Ashton and the Royal Ballet, and three ballets by Peter Darrell (1929–87): *Sun into Darkness* (1966; music by Malcolm Williamson) for Western Theatre Ballet; and *Beauty and the Beast* (1969; music by Thea Musgrave) and *Mary, Queen of Scots* (1975; music by John McCabe), both for Scottish Ballet. Original scores for David Bintley's *Hobson's Choice* (Sadler's Wells Royal Ballet, 1989) and *Far from the Madding Crowd* (Birmingham Royal Ballet, 1996) were composed by Paul Reade (1943–97).

Other full-length ballets have been staged to pre-existing music. Some have tried to remodel 19th-century prototypes with new arrangements of the music as well as new choreography, such as *Don Quixote* (Minkus, arranged by Lanchbery), *La fille mal gardée* (Hérold, arranged by Lanchbery; fig.23), and *Beatrix* (Adam, arranged by Horovitz). Various musical compromises have enabled operas and operettas to furnish balletic subjects: Cranko's *Onegin* (1965) for the Stuttgart Ballet and Kenneth MacMillan's *Manon* (1974) for the Royal Ballet use anthologies of smaller works by Tchaikovsky and Massenet respectively, unconnected with the operas of either, but Darrell's *The Tales of Hoffmann* (1972), *Cinderella* (1979) and *Carmen* (1985) for Scottish Ballet, and Ronald Hynd's *The Merry Widow* (1975) for the Australian Ballet, are based on transcriptions of the opera scores by Offenbach, Rossini, Bizet and Lehár. Music may occasionally be derived from more than one composer within the same ballet, as in MacMillan's *Anastasia* (1971), where Martinů is preceded by Tchaikovsky to point up the difference in time between pre- and post-Revolutionary Russia, or the awkward and less justified juxtapositions of Haydn and Joseph Lamb's ragtime in Twyla Tharp's *Push Comes to Shove* (1976), and of Ravel and Christopher Rouse in Lila York's *Sanctum* (1997), both works by American choreographers.

Thus music for classical dance is a flexible matter. Most new ballets use pre-existing music, ranging from a single work to an anthology. Massine's 'symphonic' ballets of the 1930s have had little direct influence, and Roland

23. Scene from the Royal Ballet's production of 'La fille mal gardée' (Hérold, arranged Lanchbery), Covent Garden, London, 1960, choreographed by Frederick Ashton and designed by Osbert Lancaster, with Alexander Grant as Alain

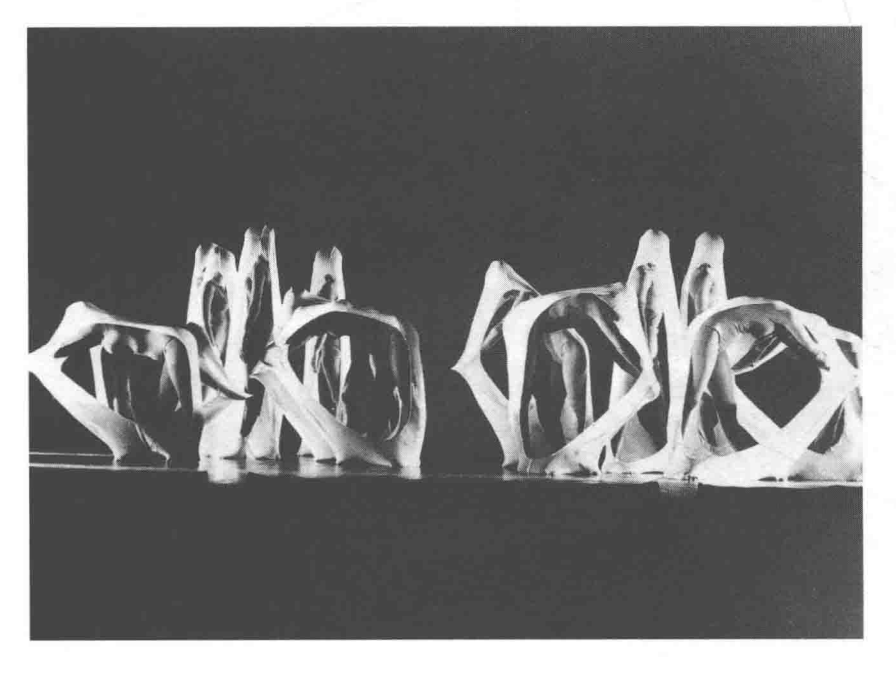
Petit's matching of a dramatic narrative to Bach's Passacaglia in C minor (three times repeated) in *Le jeune homme et la mort* (1946) was controversial, but it can reasonably be claimed that Ashton's *Symphonic Variations* (1946, to César Franck) constitutes one of his choreographic masterworks, no less an achievement than his *Enigma Variations* (1968) or MacMillan's *The Song of the Earth* (1965). Narrative associations have tended to become tenuous or have been discarded, not least in the later works of the long and fruitful association of Balanchine and Stravinsky from *Apollon musagète* (1928) to *Duo concertant* (1972); their collaboration includes in *Agon* (1957) and *Movements* (1963) what many regard as the deepest interpenetration of music and dance ever achieved. With or without new music, Stravinsky's dictum holds good: 'Choreography must realize its own form, one independent of the musical form though measured to the musical unit. Its construction will be based on whatever correspondences the choreographer may invent, but it must not seek merely to duplicate the line and beat of the music' (*Memories and Commentaries*).

Where pre-existing music is used, the effect of the resulting ballet is governed by a single crucial principle: that the level of choreographic imagination should never be less than that of the music. A ballet (or a modern dance) can be better than its music, but it can never afford to be worse. Sometimes a ballet can legitimately and successfully change a musical conception, as was achieved by Fokine with Rimsky-Korsakov in *Sheherazade* (1910) and by Darrell in setting a digest of *Othello* (1973) to the first movement alone of Liszt's *Faust Symphony*. Occasionally a musical work engages the attentions of several different choreographers independently, as happened in the 1960s with Berio's *Sinfonia* and in the early 1970s with George Crumb's *Ancient Voices of Children*.

However, the plethora of small-scale, mostly modern or postmodern dance work found in most European countries and North America, and greatly fostered in Britain by the Arts Councils in a policy of encouraging the wider dissemination of dance in the community, unsupported by either the knowledge or the resources to involve a creative contribution from music, has served mainly to demonstrate the rarity of true choreographic talent. It is a remarkable generation that produces more than two or three new choreographers of distinction anywhere and, while dancers generally were becoming increasingly expert in technical proficiency, choreographers in the 1990s were finding more and more difficulty in keeping pace with them, much less inventing new ways to challenge them and entertain their audiences.

Three factors militate against the more frequent use of specially composed music for dance: the cost of copying,

commission fee, extra rehearsal and performing rights; the time taken to compose a score, generally longer than it takes to compose choreography and often longer than production schedules can allow; and the contrasting approaches of the two forms of creative work: the choreographer creates in fragments, discarding and building, while the ballet composer, unlike his 19th-century counterpart, usually begins with a total concept and fills in the detail. Nevertheless, the responsive collaboration of choreographer and composer remains the best means to dance creation, as the ideal 'perfect analogous concord between what we see and what we hear' recommended by Blasis in the early 19th century.



4. MODERN DANCE. The term 'modern', or 'contemporary', dance is applied to any of the styles and techniques of theatrical dancing, intended for independent presentation, that grew up during the 20th century as an alternative to the strict disciplines of classical ballet. In America its pioneers were Isadora Duncan (1878–1927), who took ancient Greek art as her inspiration, and Ruth St Denis (1877–1968), who modelled her work primarily on Eastern sources. Duncan's influence was worldwide as a result of her many tours, and the impression she made on Fokine during a visit to Russia particularly influenced the course of classical ballet. Her revealing costumes, flimsy draperies and bare feet were regarded as daring, but introduced a valuable reform of dance costumes in general (for illustration *see* DUNCAN, ISADORA). Musically her great innovation was the use of any score that inspired her; she danced to symphonies by Beethoven, Schubert and Tchaikovsky, and appeared at the Bayreuth Festival in 1904 in some of her interpretations of Wagner's music. Previously dancing had been largely confined to inferior music, and the greater freedom of choice she introduced gave the opportunity for many subsequent developments. Her personal qualities as a performer inspired in many others an interest in dance, but although she devoted much time to founding dance schools for children, the direct influence of her technique remains curiously limited.

In 1915 St Denis and her dance partner Ted Shawn (1891–1972) – a successful propagandist against the misconception that dancing was an effeminate career for men – formed a school, known from 1917 as Denishawn, which produced most of the next generation of American modern dancers. Prominent among them were Doris Humphrey, who devised means of teaching the art of choreography, Charles Weidman, who pioneered specifically American themes, and Martha Graham (1894–1991). It was Graham more than anyone else who successfully devised a technique of modern dance that could be taught as the basis for the dancer's own personal use in different styles. The aim of modern dance has always been expression rather than display, with a consequent emphasis on innovation and a personal style, but the success of the Graham School in New York

24. *Martha Graham and her company in Louis Horst's 'Primitive Mysteries', New York, 1931*

25. London Contemporary Dance Theatre in 'Continuum', London, 1977, choreographed by Micha Bergese (also dancing), with Linda Gibbs, Patrick Harding-Irmer and Sallie Estep

26. Alwin Nikolais Dance Theatre in 'Sanctum', New York, 1964, choreographed and designed by Alwin Nikolais

(founded 1941) prevented the ill-informed charge (analogous to attacks made on modern painters) that modern dancers' style stemmed merely from lack of technique. Graham's own ballets, often based on mythological or psychological subjects, have a theatrical power that established her internationally as the leading modern dancer of her generation and helped to popularize modern dance where it had formerly been resisted (fig.24).

Graham's pupils and partners often went on to form their own companies and soon demonstrated that the technical training they had in common was no bar to strikingly individual development. Among them Merce Cunningham (*b* 1919), in collaboration with his musical director John Cage and artistic directors Robert Rauschenberg and Jasper Johns, had the greatest influence, pioneering a dissociation of music and dance in which, though presented concurrently, each aimed at self-sufficiency instead of the dance taking its rhythms and structure from the music (*see* CAGE, JOHN, fig.2). Cage and some of his fellow musicians greatly affected the course of American modern dance, not only by their collaboration with Cunningham but also by their participation in the many and often completely anarchic dance experiments that took place in Judson Memorial Church, New York. In return, the musicians benefited through their scores having earlier and more frequent performances than if they had waited for concert presentation, and they were heard by an audience in sympathy with radical experiment.

In pre-war Europe modern dance was most successful in Germany, where RUDOLF VON LABAN (1897–1958) and Mary Wigman (1886–1973) were the leading exponents. Laban's pupil Kurt Jooss (1901–79, active in the 1920s in Münster and Essen) created the most successful single work of the German school, *The Green Table* (1932, Paris), with a specially written score for two pianos by F.A. Cohen; because of its perennially relevant theme of anger at political machinations leading to war, this has entered the repertories of several companies, including some based on classical ballet technique. Jooss fled from the Nazis and spent many years in England; he re-founded his school in Essen in 1949, but after the war the slightly heavy style with which he was associated became less popular in central Europe. In Britain it was the success of visiting companies from the USA that revived interest in modern dance and led to the foundation of new companies, of which the London Contemporary Dance Theatre became the most flourishing, under the direction of another of Graham's former partners, Robert Cohan (fig.25).

In spite of increased interest among European dancers and audiences, most innovations in modern dance have continued to come from its American practitioners. Paul Taylor (*b* 1930) developed fresh qualities of humour and lyricism in a form previously tending to be a little dry, and Alwin Nikolais's imaginative use of lighting won much admiration. Nikolais (*b* 1912) also composed his own music, with the aid of a synthesizer, and some other modern-dance choreographers have made their own accompaniments, generally using either percussion or magnetic tape; modern dance has been associated with the full spectrum of contemporary music of all qualities.

The many experimental approaches to both modern and classical dance among the youngest generation of choreographers calls into question the future of both forms. A considerable overlap has developed between the two styles, which at one time regarded each other with hostile caution. The Nederlands Dans Theater pioneered a style combining elements of both forms, and in Britain the established Ballet Rambert was reorganized on similar lines. Some of the best choreographers, led by Glen Tetley (*b* 1926) from the USA, who trained and performed in both styles, now work in a way that could lead to classical and modern dance becoming historical, joint precursors of a new kind of dance combining the brilliance of one, the expressiveness of the other and fresh elements inspired by new developments in theatre and music.

REBECCA HARRIS-WARRICK (1), NOËL GOODWIN(2, 3), JOHN PERCIVAL (4)

Ballet de cour (Fr.). A type of ballet popular at the French court during the reigns of Henry III, Henry IV, Louis XIII and Louis XIV. It borrowed elements from the earlier *entremets* (pantomimes accompanied by choruses and dances) in vogue at the courts of Burgundy, from the elaborate (though often chaotic) *fêtes* of the Valois kings and from the mascheratas and *intermedi* imported from Italy.

Its components were normally *récits* (*see* RÉCIT), *vers* (rhymed verses found in the libretto), entrées (*see* ENTRÉE) and a concluding *grand ballet* (a forerunner of the operatic finale) danced by the *grands seigneurs* and, at least once each year, by the king himself. All ballets resulted from the collaboration of a royal patron who determined the subject and the distribution of labour, poets for the *vers* and *récits*, at least two composers responsible for vocal and instrumental music and a machinist. Detailed descriptions of the *mise en scène*, the *vers* (often containing indiscreet references to royal dancers) and the identification of the dancers themselves were published in librettos (*livrets*) distributed to the spectators before the performance.

Early essays in the genre were the *Paradis d'amour* of 1572 (text by Ronsard) and the *Ballet polonais* of 1573 (commissioned from Balthasar de Beaujoyeux by Catherine de' Medici to honour the Polish ambassadors; fig.1), which was described by Brantôme in his memoirs (*Oeuvres Complètes*, Paris, 1823) as 'le plus beau ballet qui fust jamais faict au monde'. More important was *Circé, ou le Balet comique de la Royne*, performed at the Petit Bourbon palace on 15 October 1581 as part of the festivities celebrating the marriage of the Duke of Joyeuse and the queen's sister, Marguerite de Vaudemont. This work has the distinction of being the first *ballet de cour* in which poetry (by La Chesnaye and possibly D'Aubigny), music (by Jacques Salmon and Lambert de Beaulieu), décor (by Jacques Patin) and dance combine to support a single dramatic action: the destruction of the power of the enchantress Circe in order to re-establish harmony, reason and order in the realm. Thus, at its inception, the *ballet de cour* was a political tool of the

1. *'Ballet polonais', devised by Balthasar de Beaujoyeux, Tuileries, Paris, 1573: woodcut from Jean Dorat's 'Magnificentissimi spectaculi' (1573)*

monarchy, a means of domesticating the nobility and of preserving the king's centralized power and control.

By virtue of its dramatic unity, perhaps inspired by the humanistic precepts of Baïf's Académie de Poésie et de Musique, *Circé* has long been considered the first French work to give 'some idea of the musical theatre' (d'Aquin de Château-Lyon). It stands first in the long list of precursors of the *tragédie lyrique*. Beaujoyeux, who had been chosen by Catherine de' Medici to develop the ballet's master plan, wrote in the preface to the Ballard score of 1582 that *Circé* was an 'invention moderne' in which the word 'comique' described a work with the dramatic unity of a comedy.

The structural significance of *Circé* apparently had little effect on the following generation of those responsible for the *ballet de cour*. Their works, based largely on 'mascarades à l'italienne', included unrelated entrées of colourful and grotesque characters. Titles such as *Ballets des foux* (1596), *Ballet des barbiers* (1598), *Ballet des garçons de taverne* (1603), *Ballet des bouteilles et des dames* (1607) and *Ballet des paysans et des grenouilles* (1607) show a preoccupation with burlesque elements at the turn of the century.

Not until 1609 with the *Ballet de la reyne* (*vers* by Malherbe) or 1610 with the *Ballet d'Alcine* was there a return to the unified dramatic action established 29 years before by Beaujoyeux. This type of ballet, labelled 'ballet mélodramatique', remained popular for about a decade.

At its best in such works as the *Ballet de la délivrance de Renaud* (1617), the *Ballet de l'aventure de Tancrède en la forêt enchantée* (1619) and the *Ballet de Psyché* (1619), it was a convincing dramatic spectacle which could have led to French opera long before Lully's *Cadmus*. About 1620 Michel Henry, a violinist of the Chambre du Roi, copied an important collection of ballet music. The music is not extant, but the list enumerates 117 ballets, 96 of which were performed between 1597 and 1618. M.-F. Christout (1992) has identified 392 court ballets performed between 1572 and 1671 by title, year, specific date and place, thereby documenting the popularity of the genre.

In 1621, with the death of the Duc de Luynes, Louis XIII's favourite patron of the ballet, the *ballet mélodramatique* was superseded by the *ballet à entrées* which, under the aegis of the Duke of Nemours, was a choreographic spectacle of many parts, each with its own subject matter and characters, relating in only a general way to a collective idea expressed in the title. In the *Grand bal de la Douairière de Billebahaut* (1626), for example, the four corners of the world each send delegates to the ball (fig.2); each has its own ballet preceded by *récits* and including several entrées.

Saint-Hubert classified *ballets de cour* by their length in *La manière de composer et faire réussir les ballets* (1641): a 'ballet royal' ordinarily contained 30 entrées, a 'beau ballet' had at least 20 entrées and a 'petit ballet' had 10 to 12 entrées. The vocal music included choruses and polyphonic *airs*, as well as solo *récits*. These *airs* were provided by the most important composers of the genre, including Pierre Guédron, Antoine Boësset and Etienne Moulinié. Boësset, for example, contributed more than 70 polyphonic *airs* and solo *récits* to 25 different *ballets de cour* (Durosoir, 240–49). From the late 16th century to the death of Lully in 1687, court ballets were performed in Paris at the Grande Salle of the Louvre, the Grand Salon of the Palais des Tuileries, the Palais Royal, the Hôtel de Ville, and, until its destruction in 1660, at the Salle du Petit Bourbon (between the church of St Germain-l'Auxerrois and the Louvre). Outside Paris, performances took place at the royal châteaux at Compiègne, Fontainebleau, Chantilly, Vincennes, Saint Germain-en-Laye and Chambord.

Louis XIV danced for the first time as a boy of 13 in the *Ballet de Cassandre* (1651), the ballet in which Isaac de Benserade made his début as a poet of superior literary talents. Two years later the young Florentine Lully found himself on stage dancing next to the king in the *Ballet de la nuit*. It was in the *ballet de cour* that Lully learnt to differentiate between the styles of his native and adopted lands. From 1654 to 1671 he provided music for 16 court ballets. His own private orchestra, the Petits Violons, made its first appearance in the *Ballet de la galantérie du temps* (1656, music lost). In 1657 Lully composed all the instrumental music for the *Ballet de l'amour malade* and in 1658 all the instrumental music and much of the vocal music for the *Ballet d'Alcidiane*. The overture to this ballet bears the classical stamp of all subsequent French overtures. In his dances Lully quickly assimilated the long heritage of French dances and introduced new dances (especially 'airs de vitesse'). By degrees, purely musical features of the ballet began to usurp the position of the dance. The close liaison between the *Ballet des muses* (1666) and the later *tragédie lyrique* was recognized by Brossard, who wrote: 'it is this ballet [*Les muses*] that gave the idea of composing operas in French' (*Catalogue des livres de musique*, 1724). Brossard must have been referring here to the pre-eminence of vocal *airs*, ensembles and choruses in the *Ballet des muses* rather than to any organizational principle, because this ballet best illustrates the improvisatory nature of the *ballet de cour*. From its first performance on 2 December 1666 to its final one on 19 February 1667 it went through six stages of

2. Design for the 'Entrée de Mahomet et ses docteurs' from the 'Grand bal de la Douairière de Billebahaut': pen and ink with colour wash, 1626 (F-Pn)

development. New material was constantly added, seemingly on a trial-and-error basis, to render this ballet 'encore plus agréable'. By 14 February its boundaries had been stretched to include two of Molière's *comédies-ballets*, *La pastorale comique* and *Le Sicilien*.

The *ballet de cour* afforded Lully a ten-year apprenticeship that helped prepare him for the creation of the *tragédie en musique*. According to Le Cerf de la Viéville, Lully modelled his operatic recitative on the intonation of Racine's mistress, the actress Mme Champmeslé, who performed at the Hôtel de Bourgogne. Yet even before her earliest triumphs, Lully had introduced into his court ballets the predominantly anapaestic rhythmic organization and the division of the alexandrine into hemistichs that characterize French recitative (e.g. 'Arreste malheureux', *Ballet des muses*). Although many of the *airs* in Lully's ballets are clearly modelled on the contemporaneous French *airs de cour*, Lully introduced a type of binary *air* that was to assume pride of place in the *tragédie lyrique*. This is the so-called extended binary *air* (*ABB'*) of Italian origin, an early example of which is found in the *Ballet des arts* of 1662 ('Bel art qui retardez').

Lully, who had assimilated the long tradition of French dances, introduced many new 'airs de vitesse' into court ballets. Bourrées and minuets became the most widely used dances; courantes and galliards became rare. The 'Chaconne des Maures', which concludes the *Ballet d'Alcidiane*, already assumed the grand proportions and structural significance of the chaconnes that were to be found in Lully's operas. The choral finale to the prologue of the *Ballet des muses* expresses the same sentiments found in later operatic prologues: 'Rien n'est si doux que de vivre à la cour de Louis, le plus parfait des rois'. The pompous music that Lully wrote for this text consolidated a tradition and remained the supreme gesture of official adoration throughout the *grand siècle*.

The *ballet de cour* suffered an eclipse when Louis XIV ceased dancing (1670) and when Lully moved it closer to opera with his *Triomphe de l'amour* (1681; fig.3) and his *Temple de la paix* (1685). The Parfaict brothers were hard pressed to find a proper category for so mixed a genre as *Le triomphe de l'amour*. In their manuscript *Histoire de l'Académie royale de musique* (*c*1741), they wrote: 'Properly speaking, it is neither an opera nor a ballet but a collection of entrées mixed with *récits*'. The 20 entrées, in fact, contain 16 *récits*, which exceeds by far the number in any other *ballet de cour*. The *Ballet de la jeunesse* (1686) and the *Palais de Flore* (1689), both by Lalande, synthesize opera and ballet and resemble the Lully ballets of the 1680s in this respect.

The *ballet de cour* enjoyed a brief revival in the early 18th century when the young Louis XV and his *seigneurs* danced at the Tuileries in *L'inconnu* (1720, music by Lalande), *Les folies de Cardenio* (1720, music by Lalande) and *Les élémens* (1721, music by Destouches and Lalande) – works that owe as much to opera as the *ballet de cour*. In 1729 the *Ballet du Parnasse* (fragments from Collin de Blamont, Lully, Campra, Destouches and Mouret) was danced at Versailles to celebrate the birth of the dauphin. By 1754, however, Cahusac stated that it was a 'genre which no longer exists' (*La danse ancienne et moderne*). At the Jesuit Collège Louis-le-Grand, its form was maintained up to 1761 (when the Jesuits were expelled from France) as part of the ceremony marking the end of each scholastic year.

JAMES R. ANTHONY

Ballet du XXème Siècle. Company founded in BRUSSELS in 1960.

Ballet-héroïque (Fr.). A type of French OPÉRA-BALLET during the reign of Louis XV, distinguished by having as its principal characters heroic, noble figures, often from antiquity, classical gods and goddesses, or exotic personages, rather than the comic bourgeois and tender heroines of other *opéras-ballets*. It also differs from the contemporary *tragédie en musique* in that the events portrayed are generally festive and gay, not dramatic and terrifying. While dance, of course, remains prominent, in some works there is greater use of vocal music than in other *opéras-ballets*.

The term is first used in the libretto of Fuzelier's *Les festes grecques et romaines*, set by Collin de Blamont (1723). Among the most famous examples are those by Rameau, beginning with *Les Indes galantes* (1735). The last successful *ballet-héroïque* performed at the Paris Opéra was E.J. Floquet's *L'union de l'Amour et des arts* (1773). The term was occasionally applied to a single entrée in an *opéra-ballet* (for example, to *Euthyme et Lyris* by L.-B. Desormery in 1776).

For bibliography *see* OPÉRA-BALLET.

Ballett. *See* BALLETTO.

Balletti, Bernardino (*fl* Piacenza, 1554). Italian lutenist and composer. He is known only from his lutebook *Intabolatura de lauto . . . di varie sorte de balli . . . libro primo* (Venice, 1554; ed. G. Lefkoff, *Five Sixteenth Century Venetian Lute Books*, Washington DC, 1960). The dedication to Conte Honorio Scotto was signed in Piacenza. Most of the 14 pieces in the volume are familiar Italian dance forms: there are two paduana and saltarello pairs, a work based on the romanesca (*La favorita*), and two pieces on the *bergamasca* harmonic formula (I–IV–V–I). The first of these, *Il sgazzotte*, is an independent work, but the second is a 'represe' for *La moretta* and is a striking piece of more than 50 virtuoso variations. Several dances (*La rocha il fuso*, *Ciel turchino* and *Non ti partir da me*) use popular song melodies; *Non ti partir* appeared later as *Ti parti cor mio caro* in a villotta by Filippo Azzaiola (RISM 1557[18]; both works ed. in L.H. Moe: *Dance Music in Printed Italian Lute Tablatures from 1507 to 1611*, diss., Harvard U., 1956). The pieces form three suites (nos.1–4, 5–9 and 10–14), the third with a short chordal *tocata* to test the tuning of the lute. (*BrownI*)

JEANETTE B. HOLLAND/ARTHUR J. NESS

Balletto (It.; Fr. *ballet*; Eng. ballett). An Italian dance of the 16th and 17th centuries, occasionally called 'bal' or 'ballo'. There seem to be three periods of development, two instrumental and one vocal: for lute during the second half of the 16th century; for voice from 1591 to about 1623; and for chamber ensemble from about 1616 to the end of the 17th century.

The term 'balletto' was also applied at the same time in a more general sense. It was used as early as 1581 by Fabritio Caroso as a heading for some of the choreographies published in *Il ballarino*, and Cesare Negri (*Le gratie d'amore*, 1602) used it alongside the apparently similar 'ballo' and 'brando' as a title for his created social and theatrical dances (*see* BALLO). In Barbetta's *Intavolatura di liuto* (1585) 'balletto' indicates a dance from a foreign country. Some late 16th-century references use the word 'balletto' for theatrical or dramatic dances that would have been called 'ballets' in France (see A. Solerti: *Gli albori del melodramma*, 1904–5/R, iii, 277ff; the commonest usage in modern Italian is as a translation for the French 'ballet'). In the 17th century the word was sometimes used by musicians to mean simply 'dance', as in Montesardo's *Nuova inventione d'intavolatura per sonare li balletti* (1606). This article, however, is concerned with the instrumental and vocal development of the specific dance called 'balletto' as it originated in Italy and spread to England and Germany.

1. Instrumental. 2. Vocal.

1. INSTRUMENTAL. The Italian instrumental balletto appeared from about 1561 to 1599 (mainly for lute) and from 1616 to 1700 (for chamber ensemble). During the second half of the 16th century, 'bal', 'ballo' or 'balletto' was a generic name in Italy for various foreign dances, such as the *bal boemo*, *ballo francese* and *baletto polaco*. Barbetta in 1585 referred to them collectively as 'baletti de diverse nationi'. The most numerous were those indicating Germanic origin: the *bal todescho* (in the

lutebooks of Gorzanis of 1561, 1563 and 1564), the 'todescha' or 'tedescha' (Mainerio's ensemble collection of 1578), *balo todesco* (Gorzanis, 1579), *baletto todesco* (Barbetta, 1585), *ballo tedesco* (Terzi, 1593) and finally *ballo* or *balletto alemano* (Terzi, 1599). Similar terminology continued in the guitar books of the first half of the 17th century. Some of the earlier chamber examples are also entitled 'balletto alemano' (Biagio Marini, 1617, 1626 and 1655, Farina, 1627, and Gandini, 1655). During the second half of the 17th century such pieces were called simply 'balletto' (or occasionally 'ballo'), and the non-German types (for example, a *balletto francese* of 1692 by Corelli) occurred very rarely.

A *balletto alemano* in Terzi's 1599 book is based on an earlier *baletto todesco* by Barbetta, thus suggesting that the sources from 1561 to 1599, in spite of changing terminology, represent a unified Italian development of the native German dance called 'tantz', 'tanz', or 'dantz' in 16th-century German lute and keyboard tablatures. Furthermore, the three pieces designated 'tedescha' or 'todescha' in Mainerio's volume of 1578 were each called 'almande' in Phalèse's collection of 1583, thus revealing some sort of connection between the Italian balletto and the Franco-Flemish allemande. It is difficult to assess the influence on the Italian instrumental balletto exerted by two other forms using the same name: first the French ballet, which began during the 1570s and later produced lute pieces entitled simply 'ballet' (Besard, 1603 and 1617, Ballard, 1611 and 1614, Vallet and Fuhrmann, 1615); and second, the vocal ballettos beginning with those of Gastoldi, whose 1594 book of three-voice examples also includes intabulations for lute.

Curiously, vocal ballettos seem to have appeared mainly between about 1591 and 1623, thus filling the gap, as it were, between the 16th-century lute and 17th-century chamber developments. Earlier, Mainerio's balli (1578), though without text, were, according to the title-page of the book, 'accommodati per cantar et sonar'. A number of sources from the early 17th century contain both vocal and instrumental examples. Antonio Brunelli's *Scherzi, arie, canzonette, e madrigali, libro terzo* (1616) includes two vocal ballettos that are each followed by 'il medesimo ballo per sonare solo senza cantare', as well as an 'altro ballo per sonare solo senza cantare' for which no vocal version is given. Benedetto Sanseverino, in *Il primo libro d'intavolatura per la chitarra alla spagnuola* (1622), printed four chordal examples, one of which has a text. The *Terzo scherzo delle ariose vaghezze* of Carlo Milanuzzi (1623) contains 12 ballettos for solo voice and continuo, as well as seven for guitar alone. As late as 1639 Martino Pesenti presented 'correnti, gagliarde, & balletti da cantar, & da sonar'.

A few instrumental ballettos appeared for keyboard, by Picchi (1621), Frescobaldi (1627 and 1637), Pesenti (1635, 1639, 1641 and 1645) and Bernardo Storace (1664) and by anonymous composers in manuscript sources (such as the *I-Rvat* Chigi *MSS* ed. in CEKM, xxxii/2 and *US-LAum* manuscripts, formerly 51/1); and for the five-course guitar, by Calvi (1646) and Granata (1646, 1659 and 1680). Most Italian instrumental ballettos of the 17th century, however, occur in some 70 publications for continuo chamber groups. The earliest are the books of Marini (1617, 1620 and 1626), Lorenzo Allegri (1618) and Farina (1626, 1627 and 1628). Marini was the first of them to use the word 'balletti' in the title of a book (in 1626). In a collection of 1667 G.B. Vitali made a distinction between *balletti per ballare* and *balletti per camera*. In 1666 he entitled a book *Correnti e balletti da camera*; Giuseppe Torelli in 1686 used the title *Concerto da camera*, B.G. Laurenti in 1691 *Sonate per camera*, Giorgio Buoni in 1693 *Allettamenti per camera*. The balletto thus became firmly established in Italy above all as a chamber-music form.

The balletto sometimes occurred, especially before 1675, as a separate dance, either singly or with as many as 12 in succession. It was occasionally coupled with another dance, usually a corrente; Marini in 1626 used the same musical material for each. Although generally the opening dance of a pair, the balletto occasionally appeared as the second movement (Gasparo Zanetti, 1645, and Cazzati, 1651 and 1660). It is associated with two or more dances in suites by Brunelli (1616), Allegri (1618) and Cazzati (1651) and in most sources from 1677 to the end of the century. Usually the balletto is the opening dance of a suite, followed by a corrente, *sarabanda*, *giga* or other dances. In suites from later in the century an introductory movement without dance associations precedes the opening balletto.

The balletto almost always consists of two repeated sections, each with a variable number of bars. Occasionally the initial statement of the music is followed by variations (Fantini, 1638, Marini, 1655, and the keyboard works of Frescobaldi, 1627, and Storace, 1664). Later examples also include a *piano* marking at the end to indicate a *petite reprise*, the exact repetition of several bars of music (Torelli, 1686, and G.B. Brevi, 1693); Domenico Gabrielli's ballettos (1684) sometimes have such a repeat at the end of both sections. The balletto is usually in duple metre but may be in triple metre (as with Fantini, 1638, or Cazzati, 1660). The music has a simple, homophonic, tuneful quality, with short, animated rhythmic motifs, repeated notes and immediately appealing melodic patterns (as in ex.1, a brief ballo that follows an aria).

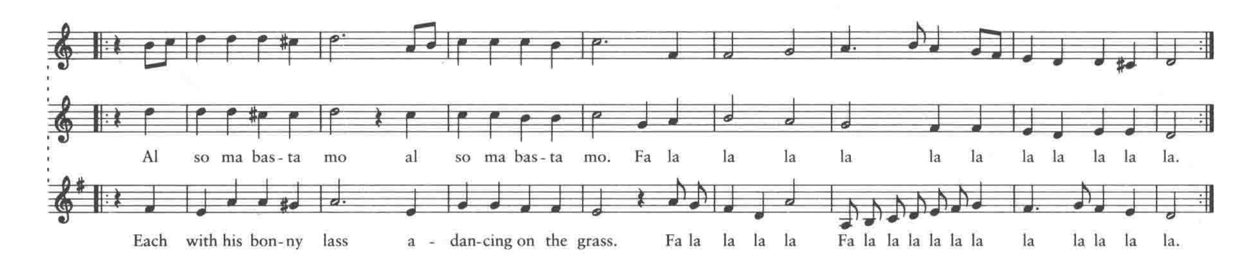
Tempo markings vary widely. Brunelli in 1616 marked a ballo *grave*; Marini in 1655 indicated *allegro* and Cazzati in 1660 *adagio*. Pirro Albergati (1682) marked two ballettos *largo* and three *allegro* or *spiritoso*. Gabrielli (1684) indicated *largo* for five, *allegro* for five, *adagio* for one and *presto* for one. Salvatore Mazzella (1689) included an example in which the opening section is *largo* and the second section *presto* and another such piece which returns to *largo* at the end. Laurenti (1691), Brevi (1693) and Buoni (1693) all indicated *allegro* or *presto*. Italian composers seem to have been far less concerned with uniformity of tempo than the French, for they also subjected other dances to wide tempo variation.

The allemanda, which is likewise *largo* or *presto* in these sources, bears a close relationship to the balletto. Each is in duple metre, and each occupies the position as first dance in a suite. Often, however, both dances appeared in the same collection, usually in different suites (Torelli, Laurenti, Brevi) but sometimes coupled together, as in Gabrielli's balletto with *sua alemanda*. It is difficult to perceive any musical differences between the balletto and the allemanda as they appear in these late 17th-century suites.

Instrumental ballettos also occurred in other countries, especially Germany, where the earliest examples appeared in 1617 in the collections of the Englishmen Thomas

Ex.1 *Maurizio Cazzati: Trattenimenti per camera* (Bologna, 1660)
Ballo dell'Aria

Simpson and William Brade. These were followed by other examples, usually entitled 'ballet', by composers such as Widmann, Peuerl, Johann Schop (i), Hammerschmidt, Vierdanck, Nicolaus Bleyer, Drese, Rosenmüller, Rubert, J.R. Ahle, Lüder Knop, Hans Hake, Esaias Reusner (ii), Löwe von Eisenach, J.H. Schmelzer, Biber, Pezel, Meister and J.C.F. Fischer. Purely instrumental examples of the form had been preceded earlier in Germany by vocal pieces which, under the influence of Gastoldi, could often be played on instruments as well as sung.



2. VOCAL. Both Morley and Praetorius (*Syntagma musicum*, iii, 1618, pp.18–19) considered the Mantuan composer G.G. Gastoldi to have invented the vocal balletto as a musical genre with his publication in 1591 of the *Balletti a cinque voci con li suoi versi per cantare, sonare, & ballare* (ed. in Le pupitre, x, 1968). These works enjoyed great popularity, being reprinted many times in Italy and northern Europe up to the mid-17th century. In most of his ballettos Gastoldi set strophic texts in a homophonic texture, with sections of nonsense syllables ('fa-la', 'na-na', 'li-rum') interpolated at the ends of couplets or tercets. Nearly all consist of two repeated strains (*AABB*) and the nonsense syllables, sometimes set contrapuntally, act as a refrain at the end of each section. The songs are syllabic and rather repetitious, the strophic form limiting the opportunities to depict the content of the verses, and all are highly rhythmic. It is likely that Gastoldi's songs were originally part of a costumed dance, perhaps performed at the theatrically active Mantuan court or at an academy; the title-page states that they were for 'singing, playing and dancing'. Each has a descriptive title (e.g. *L'innamorato*, *Il premiato*, *Caccia d'Amore*) on which the text (but not the music) elaborates, and several texts suggest the kind of costuming or dance that might have been used (as in *Amor vittorioso*: 'Tutti venite armati, O forti miei soldata, fa-la-la', etc.). The order of texts in the collection suggests that it follows that of a performance, opening with an *Introduttione a i balletti* exhorting the listener to enjoy the delights of the mythical 'Cucagna', 'ove chi più lavora men guadagna' ('where the more one works the less one earns') by dancing, singing and playing, and concluding in the dialogue-like *Concerto de pastori* for eight voices, with a conventional reference to the returning golden age. The six-voice *Mascherata di cacciatori*, more complex than the usual simple form and style of the ballettos, is the only piece that shows any musical reflection of the presumed spectacle.

Gastoldi's later collection, *Balletti a tre voci* (1594), also opens with an exhortation to sing and dance, but it does not seem to represent the music of a particular event as the five-voice collection does. Neither the descriptive titles nor the texts present an obvious performing order. Like the five-voice ballettos, these consist of two or three repeated strains in a simple homophonic texture and a strongly rhythmic style; the phrasing of several immediately suggests particular dance types (e.g. *La Cortegiana*, 'La mia amorosa bella', has the characteristic three- and six-bar phrases of a branle). Only the last balletto in the set uses nonsense syllables, and then only at the end of the second strain.

Vocal ballettos continued to be written in Italy during the 17th century, often in madrigal comedies and particularly by Banchieri and Orazio Vecchi, usually retaining the villanella- or canzonetta-like style of Gastoldi. Some, notably those in Gioseffo Biffi's *Della ricreatione di Posilipo* (1606), Francesco Lambardi's *Canzonette a tre … libro terzo* (1616) and Sigismondo d'India's *Le musiche e balli a quatro* (1621), can be traced to choreographed dances performed at court festivities. D'India's multi-movement ballettos originated as entertainments at the wedding of the Duke of Savoy in 1621, when they were performed by a boy soprano soloist accompanied by 'violino tiorba', 'basso di violone' and 'clavicembalo'. Like the ballettos of Gastoldi and Vecchi, they consist of two repeated strains of chordal, highly rhythmic music cast in regular phrases. Their original conception as music for one voice with instrumental accompaniment may be seen in the rhythmic independence of the upper part, and d'India's habitual concern for detailed text setting occasionally enlivens the otherwise almost utilitarian style. The publication of d'India's solo ballettos with texts to all parts, and with specific indications of passages to be rendered by one voice with instruments, testifies to the continuing Italian use of published ballettos as light vocal household music. His informative description of the appropriate performing practice for his pieces, printed at the end of the book, is justified with the remark that they represented an unusual style in Italy ('si tratta di stile inusitato in Italia'), suggesting, in view of the book's dedication to the Duke of Savoy's mother-in-law, Maria de' Medici, Queen of France, that the spectacle represented by the collection was related to the nascent *ballet de cour*.

Gastoldi's first set of ballettos enjoyed enormous popularity north of the Alps, spawning imitations in Germany (H.L. Hassler's *Lustgarten neuer teutscher Gesäng, Balletti*, 1601) and England, where the ballett as cultivated and transformed by Morley and Weelkes produced a small repertory of enduringly popular vocal music. Morley's *Balletts to Five Voyces* (1595, published

in both English and Italian) deliberately imitated the structure of Gastoldi's five-voice collection, replacing the *Introduttione* with a madrigal and the concluding *Concerto de pastori* with an echo dialogue (the seven-voice *Phillis, I faine wold die now*), the only English work of its kind; each ballett is a free parody of an existing Italian balletto, canzonetta or villanella. Morley's seven parodies of Gastoldi ballettos are fairly close to their models, as a comparison of *Sing wee and chaunt it* with *A lieta vita* clearly shows; the English version is metrically re-arranged and boasts a considerably more sophisticated texture, particularly in the inevitable 'fa-la' sections. More interesting are Morley's adaptations into the ballett form of canzonettas by Croce, Ferretti, Marenzio and Vecchi; by inserting 'fa-la' sections at the ends of the two couplets of Marenzio's *Le rose fronde e fiori*, Morley stretched his model to twice its length and regularized the phrasing, creating a quite new work in *Those dainty daffadillies*. Ex.2 compares the superius of Morley's *Now is the month of maying* with that of its presumed model, a balletto by Vecchi (*So ben mi c'ha bon tempo*, *Selva di varie ricreatione*, 1595), and that accompanying a pavan-derived choreography for the tune published by Cesare Negri (*Le gratie d'amore*, 1602, pp.222–3), revealing how far afield Morley's melodic inventiveness and clear harmonic thinking led him in even so simple a work.

Although Morley knew the tradition of dancing to such songs (to which he referred in *A Plaine and Easie Introduction to Practicall Musicke*), it is now generally assumed that neither his balletts nor those of his English successors were intended for dancing, hence their greater attention to musical and textual refinements. Weelkes's balletts (*Balletts and Madrigals to Five Voyces*, 1598) were clearly influenced more by Morley than by Gastoldi, for the often brilliant counterpoint and expressive text-setting owe little to the Italian form. *Welcome sweet pleasure* and *To shorten winter's sadness* are straightforward enough to have accompanied a dance, but *Hark all ye lovely saints* and *Lady, your eye my love enforceth*, and also *I love, and have my love regarded*, are transformed into vocal chamber music by eliding contrapuntal phrases and, in particular, by madrigalian devices that render both rhythms and phrasing erratic. The six balletts Henry Youll included in his *Canzonets to Three Voyces* (1608) follow Weelkes's and Morley's example to some extent, for example in the use of strict canon in *In the merry month of May* and *Now the country lasses hie them*, but his balletts are more regular in form than those of the better-known composers. Other early 17th-century composers of the English ballett include Greaves, Pilkington, Tomkins and John Hilton (ii).

Balliani, Carlo. *See* BALIANI, CARLO.

Ballière de Laisement [Delaisement], **(Charles-Louis-) Denis** (*b* Paris, 9 May 1729; *d* Rouen, 8 Nov 1800). French composer and theorist. He combined the surnames of his father (Ballière) and mother (Delaisement) in an aristocratic form. After receiving the maître ès arts from the University of Paris in 1746, he settled in Rouen. A pharmacist and chemist by profession, he took an active scholarly interest in many subjects and was acquainted with Rousseau, Voltaire and other well-known contemporaries. In 1754 he was elected to the Rouen Academy, where he later became vice-president and wrote many works on literature, philology and various sciences. In the 1750s he wrote librettos for several light stage works produced in Rouen and Paris; most of the music

(vaudevilles and melodies from serious operas) was unnotated, though the notated *airs* in *Zéphire et Flore* may be his. In his *Théorie de la musique* (Paris, 1764) he developed a system based on the harmonic series of the hunting-horn; a similar system, evidently unknown to him, had been presented by G.A. Sorge in 1741. The *Théorie* had some followers (notably Canon Jamard and Abbé Feytou) and won Rousseau's praise, but was harshly criticized by later theorists, in particular J.-B. de La Borde.

WORKS

unless otherwise stated, all are opéras comiques in 1 act, with libretto by Ballière de Laisement

Les fêtes de l'hymen, ou La rose (A. Piron), ?Rouen, ?*c*1746
Deucalion et Pyrrha (parodie), ?1751
Le rossignol, Rouen, 8 Oct 1751
Zéphire et Flore, Paris, Opéra-Comique (Foire St Germain), 14 Feb 1754 (Paris, ?1754)
Le retour de printemps (pastorale), Rouen, 13 March 1755
La guirlande, Rouen, 24 March 1757

Balliett, Whitney (L.) (*b* New York, 17 April 1926). American writer on jazz and broadcaster. After graduating from Cornell University (BA 1951) he joined the staff of the *New Yorker*. For the *Saturday Review* (1953–7) and then for the *New Yorker* he contributed reviews of jazz concerts, recordings and books, as well as interviews with jazz musicians; many of these articles have been reprinted in a continuing series of books. He has also published poetry. In 1957 he conceived the idea and was adviser for a television programme, 'The Sound of Jazz', broadcast live by CBS. Balliett's writings are eloquent and highly stylized. His interviews portray his subjects with dignity, and his reviews often create effects that parallel those of the music being discussed. At his best, in an assessment of style or a description of an improvisation, Balliett has provided insights more penetrating than many formal musical analyses.

BARRY KERNFELD

Ballif, Claude (André François) (*b* Paris, 22 May 1924). French composer and theorist. Born into an intellectual family (his uncle, Fr Festugière, was a Greek scholar and a member of the Institut), he decided at the age of 16 to make his career in music and entered the Bordeaux Conservatoire as a pupil of J.-F. Vaubourgoin; later he studied at the Paris Conservatoire with Noël Gallon, Aubin and Messiaen. In 1951 he went to Berlin where, as a pupil of Blacher and Rufer, he became familiar with the music of the Second Viennese School, and where he studied musicology with Stuckenschmidt. Ballif had already made a reputation as the composer of *Cendres*(1946) for percussion when, in 1953, he completed his theoretical work *Introduction à la métatonalité*, published in 1956 with a foreword by the aesthetician Etienne Souriau. In 1955 Ballif won the first prize for composition at the Geneva International Competition, and he lectured at the French Institutes of Berlin (1955–7) and Hamburg (1957–8). Returning to Paris in 1959, he joined the ORTF Groupe de Recherches Musicales; he was professor of analysis and of the history of music at the Ecole Normale de Musique, Paris (1963–4), and professor of music education, and later of analysis, at the Reims Conservatoire (from 1965). In 1968 he participated in the founding of the University of Paris VIII and directed its music department until the following year. Alongside this teaching activity, he has pursued fundamental research into the philosophy of music: a stimulating book on Berlioz was published in 1968, and a symposium on 'ultrachromatic' music, edited by Ballif, appeared in 1972. Ballif was appointed professor of analysis at the Paris Conservatoire in 1971. His class, which welcomed painters and architects as often as composers, soon grew famous at the same time as his music. A succession of honours and distinctions in the course of a few years underlined his success. He received the Honegger prize in 1974, the Florent Schmitt prize (awarded by the Institut) in 1975, the Grand Prix de la Ville de Paris in 1980. In 1979 his collection of *Voyage de mon oreille*, ten essays summarizing his ideas on the ethics and aesthetics of composition was published. He was appointed professor of composition at the Paris Conservatoire in 1982, and in 1984 the Paris Festival Estival was dedicated to his music. In the same year he was appointed to the Ordre des Arts et des Lettres, on the occasion of the première of his opera *Dracoula*, and he signed an exclusive contract with the publisher Durand. Another book, *Economie musicale*, appeared in 1988: it contains the essence of Ballif's ideas about the education and training of composers, developing a course of lectures he had given ten years earlier at McGill University. He retired in 1990, but further courses of lectures, more music and more honours followed: already an Officer of the Ordre du Mérite, he was appointed Commander in 1994.

The chief characteristic of Ballif's work is his avoidance of conventional musical systems in favour of his own 'metatonality', which he sees as an enlargement of tonality in contrast with the evasion of tonality represented by atonal music. Ballif's metatonality is founded on a scale of 11 notes, and his musical discourse avoids the tonal disorientation of atonality, since the missing pitch suffices to give the music suggestions of tonality, while at the same time implying the presence of the total chromatic. In this way Ballif hopes to have systematized the 'free atonality' of Schoenberg at the period of *Erwartung*. A sense of direction is achieved through the employment of a basic pitch to underpin each large section.

Ballif's metatonal procedures allow an extreme fluidity of detail, a tenuity of structure and great delicacy in the use of timbre. Sometimes the melody is quite simple, as in *Phrases sur le souffle* and *Chapelet*, and Ballif has always preferred straightforward forms, although small-scale dissymmetries may be deployed with subtle finesse (cf *A cor et à cri* and *Ceci et cela*). In the *Imaginaires*, a series of pieces each for seven instruments, the harmony is limited to a single interval within each work; in the vocal music this sobriety is allied with a contained violence, particularly in the slow vocalises or the heavy irregular tread of sound blocks, as at the close of *Phrases sur le*

souffle. Although Ballif has allowed the operation of chance into his music, this has not compromised the characteristic directed development: his *Passe-temps* for piano consists of assortable sections, but the use of underlying pitches assures the perception of direction, and the piece has none of the fractured quality of Stockhausen's comparable *Klavierstück XI*.

In Ballif's orchestral works there is an attempt to incorporate the sounds of the environment, an attempt that may be seen as a development from Cage's work of the 1950s and a parallel of the latter's ensemble pieces of the early 1970s (e.g. *Cheap Imitation*), although the means are quite different. The incorporation proceeds through the orchestral mimicking of natural sounds, and these synthetic interruptions are perceived as affecting the progress of the work; the music is no longer opposed to nature but contains, and is illuminated by, the external, just as the experience of an architectural interior is dependent on light from the outside.

In the 1950s Ballif was at least as passionate as Cage in his admiration for Satie and Webern, but not for the same reasons. What fascinated Ballif were Satie's understatement and Webern's economy of means, and he immediately subjected them to analytical study. Taking their different courses, however, Cage and Ballif ran into the same problem: atonality. Ballif conceived metatonality while seeking to dissipate the ambiguities bestowed on atonality by early Schoenberg. In the preface to Michèle Tosi's 1996 monograph on Ballif, the composer Costin Miereanu describes Ballif as the 'first of the pan-serialists'. In fact, like Schoenbergian 'pantonality', metatonality could be considered another name for Lou Harrison's 'proto-tonality', identified by Cage.

Ballif adopted an uncomfortable position as a composer, seeking a style of composition that would allow him to avoid the 'weightlessnesses' linked to the suspension of harmony; he found himself almost alone in the search, somewhere between tonality and atonality but above all not letting himself be deflected by the 'neo-serial' current predominant in the France of the time and it took fierce tenacity to stay on course and preserve his independence.

WORKS

STAGE

Mon Faust (incid music, P. Valéry), 1958; Vitrine (incid music), 1960; La musique d'Erich Zahn (incid music, H.P. Lovecraft), 1964; Alice aux pays des merveilles (incid music, L. Carroll), 1965; Les Troyennes (incid music, J.-P. Sartre), 1967; Dracoula (nocturne lyrique, 2, V. Stephan), op.58, 1982–4; Il suffit d'un peu d'air (farce lyrique, 4 tableaux, R. Tremblay), op.65, 1991

ORCHESTRAL

La vie du monde qui vient, sym. mystique, op.11, 8 solo vv, 5 choirs, orch, 1953, rev. 1972–3; Lovecraft, op.13, 1955; Voyage de mon oreille, op.20, 1957; Fantasio, op.21, 1957; Ceci et cela, op.26, 1959, rev. 1965; Fantasio grandioso, op.21a, 1962; A cor et à cri, op.39, 1962; Conc. symphonique no.1, op.49 no.1, cl, orch, 1976; Conc. symphonique no.2, op.49 no.2, vn, orch, 1984; Conc. symphonique no.3 'Le jouet du jeu', ob, orch, 1988; La transfiguration de l'univers, op.67, 1993; Praeludia for la transfiguration de l'univers, 2 Brass Qnt, org, 1997; Conc. symphonique no.4, op.49/4, fl, orch, 1999; Au Clair de la lune bleue, op.75, orch, 1999

DANIEL CHARLES

Balling, Michael (*b* Würzburg-Heidingsfeld, 28 Aug 1866; *d* Darmstadt, 1 Sept 1925). German conductor. He trained as a violist and played in the opera orchestras of Mainz and Schwerin. After touring Australia and New Zealand (1892–5) he went to England in 1895 as musical director of Frank Benson's Shakespearean company. The following year he returned to Germany and played in the orchestra at the Bayreuth Festival. Here his conducting talents were discovered by Felix Mottl and Cosima Wagner and he acted as an assistant for the festivals of 1896, 1899, 1901 and 1902. After posts in Hamburg, Lübeck and Breslau, Balling succeeded Mottl in 1903 as musical director in Karlsruhe. He was a regular conductor at Bayreuth (1904–14, 1924–5), conducting the *Ring*, *Parsifal* and *Tristan*, and in 1905 gave the first performance in Barcelona of *Die Meistersinger*. In 1910 he conducted the first *Ring* performances in Scotland; and in 1911 he succeeded Hans Richter as conductor of the Hallé Orchestra, with which he gave memorable performances of such large-scale works as Berlioz's *Te Deum*, Liszt's *Faust Symphony* and Mahler's First Symphony. He was in Bayreuth at the outbreak of war in August 1914 and never resumed his Manchester post. From 1912 he was editor for Breitkopf & Härtel of a projected critical Wagner edition. His final post was as musical director in Darmstadt (1919–25). In 1908 he married the widow of Hermann Levi.

CHRISTOPHER FIFIELD

Ballioni, Girolamo. *See* BAGLIONI, GIROLAMO.

Ballis, Oliviero (*b* ?Crema; *d* Ceneda, 24 March 1616). Italian composer, singer and priest. He had been appointed priest and contralto singer at Padua Cathedral on 5 May 1577 and he served there for more than 20 years in various capacities. He was an unsuccessful candidate for the post of *maestro di cappella* at the cathedral in 1580, but served as a substitute in the post, being the most senior member of the choir, after Costanzo Porta's dismissal and until the election of G.B. Mosto (from May to December 1595), and again during the latter's absence and after his death until the election of Lelio Bertani (from March 1596 to November 1598). He had various disputes with the new *maestro* in April 1600. The following year, on the recommendation of Bishop Leonardo Mocenigo, he was elected *maestro di cappella* of Ceneda Cathedral, a post which he held, despite new disputes with a local canon, until his death. During these final years he published his *Sacri hymni*, which are characterized by a solemn antiphonal style.

LELAND EARL BARTHOLOMEW/FRANCO COLUSSI

Ballo (It.: 'dance', 'ball'; Fr. *bal*; Sp. *baile*; Ger. *Ball*, *Tanz*). (1) A generic term meaning a social gathering for the purpose of or with the emphasis on dancing.

Although the verb 'ballare', the noun 'ballatio' and related terms can be traced back to classical antiquity (for the complex etymology see Aeppli), the noun 'ballo' did not appear until the late Middle Ages. French narrators and chroniclers of the 12th and 13th centuries used it, together with 'danserie', to indicate a dance activity in the most general sense. Writers of the Italian Renaissance period from Boccaccio to Castiglione reported 'gran balli' for every festive occasion, and this meaning has remained unchanged throughout the history of social dancing at all levels (court, town and country), becoming more specific as time progressed and as distinctions were made according to occasions, places and dress: public dances (*balli pubblici, bals publics*); court balls (*balli di corte, Hof-Ball, Grand bal du Roi*) for invited guests of rank; balls at famous opera houses (Budapest, London, Milan, Paris, Vienna); and masked and costume balls.

(2) A choreography of varying elaborateness invented by a professional dancing-master and performed either at a social gathering or on the stage.

From the 13th century a distinction was made between the ballo (or *bal*) and other types of dance, indicating that the term had a specific choreographic meaning whose precise nature, known to the contemporaries, now eludes scholars (e.g. 'Danses, *baus* et caroles veissiez commencier', *Adenès li Rois: li roumans de Berte aus grans piés*, ed. A. Scheler, Brussels, 1874, p.12, l.302). Andrea da Tempo (*Trattato delle rime volgari*, 1332) testified to the existence of balli in the round ('cantantur in rotunditate choreae sive balli'), while the Italian *trescone* (a rustic dance) ends with a pantomimic sequence called 'il ballo' (Ungarelli, 64ff). All types of entertainers (e.g. jongleurs, *Spielleute*) contributed to the invention and development of these balli, but it was not until the advent of the professional choreographers of the early 15th century that the ballo assumed a definite shape. On the basis of the extensive information given in the dance instruction books of Domenico da Piacenza, Antonio Cornazano and Guglielmo Ebreo da Pesaro, the 15th-century court ballo can be defined. It was a dance piece created by a professional artist for a specified number of performers,

Italian ?ballo: detail from the 'Story of Antiochus and Stratonice' attributed to the Stratonice Master, cassone panel, c1470s (Henry E. Huntington Library and Art Gallery, San Marino, CA)

composed of a sequence of choreographic events (*misure*) based on the four common musical metres (bassadanza, saltarello, quadernaria and piva; *see* SALTARELLO), using all the *movimenti naturali* (particularly the various forms of *salto* – leaps, hops, jumps) and the embellishing *movimenti accidentali*, and ranging from purely ornamental dances to highly dramatic, narrative creations. (The three most explicitly pantomimic choreographies of the known 15th-century repertory are called ballettos; *see* BALLETTO, §1.)

Whether they are for couples, or *alla fila*, or in the round, all balli follow the same structural pattern: they begin with an intrada (usually a saltarello or a piva pattern, occasionally a quadernaria), followed by the ballo proper and ending with either a repeat of the entire dance or a reprise of the intrada during which one set of performers moves out of the centre of the ballroom to make room for the next. (The same sequence, called 'Intrada', 'Figuren', 'Retrajecte', was described by Michael Praetorius, 1618, p.19.) Where musical accompaniment is given, its single melodic line (labelled 'in canto' or 'in canto da sonare') follows and supports the choreographic configurations in the minutest detail.

During the next century of its history, culminating in the choreographic works of Fabritio Caroso (1581) and Cesare Negri (1602), the main characteristics of the social ballo remained essentially the same: it was a performance piece to be danced by well-trained amateurs; it still consisted of sections, although these had grown larger, lending the ballo as a whole a suite-like dimension. Pavans, *pavaniglie* and bassas replaced the old bassadanza and quadernaria metres; *gagliarde*, cascardas, *tordiglioni* and canaries replaced the piva and saltarello. In the 18th century minuets and contredanses were occasionally called balli (Gennaro Magri, *Trattato del ballo nobile*, 1779), but by this time the specific connotation of the term had been lost.

Outside the repertory for the courtly ballroom the ballo figured prominently in the theatrical entertainments of the 1600s; *intermedi*, early operas and even plays all featured at least one extensive dance-number of this name; Monteverdi's *Ballo delle ingrate* is centred on a large dance-suite. As the professional performer replaced the courtly amateur, the term 'ballo' gradually gave way to 'balletto'; both had been used interchangeably up to about 1600.

(3) A musical composition inspired by or directly related to the art of dancing.

Until the beginning of the 16th century compositions called 'ballo' rarely appeared in purely musical sources. Dance pieces, wherever they did occur, were either given their specific titles (e.g. 'estampie', 'danse royale', 'ballata', 'moresca') or text incipits, depending on whether they came from an instrumental or a vocal tradition. Collections of balli began to appear around 1520 and by the middle of the century most used the term in their title: *Intabolatura nova di varie sorte de balli da sonare per arpichordi* (1551), Bendusi's *Opera nova de balli* (1553), *Intavolatura de liuto di varie sorte di balli* (1554) and Mainerio's *Primo libro de balli* (1578). In all these collections the term 'ballo' covers a variety of fashionable dances: pavans, galliards, branles, saltarellos and canaries for instrumental performance or, less frequently, 'da cantare e sonare' (Bendusi). Balli also occur in more general collections of music such as the organ tablatures of Jakob Paix (1583). Most of these dances are short compositions with evenly balanced phrases, clear rhythmic patterns and comparatively simple harmonies. Frequently sections in contrasting metres were inserted or added at the end, apparently reflecting the suite-like structure of balli in contemporary dance manuals (e.g. those of Caroso and Negri).

Some 17th-century sources contain music for multi-movement balli that were actually presented as court entertainments (Lorenzo Allegri's *Il primo libro delle musiche*, 1618, for example, contains eight complete balli performed at the Medici court between 1608 and 1615); the term 'ballo' was also often applied to the first dance in a group. Such opening dances were formal introductory numbers followed by a series of dances presented in much the same order as they would have had in the ballroom. Thus Antonio Brunelli's 'Balletto a cinque' (in *Scherzi, arie, canzonette, e madrigali, libro terzo*, 1616) presents the dances in the order *ballo grave*, *gagliarda*, corrente; B.G. Laurenti's *12 suonate per camera a violino*, op.1 (1691) in the order *introdutione*, ballo, corrente, *minuetto*; and Cazzati's *Trattenimento per camera* (1660) in the order aria, ballo, corrente. In 18th-century instrumental music the term 'ballo' was used only occasionally to indicate the dance-like character of a composition.

INGRID BRAINARD

Ballou, Esther (Williamson) (*b* Elmira, NY, 17 July 1915; *d* Chichester, England, 12 March 1973). American composer, pianist and educationist. She studied the piano and the organ as a child and graduated from Bennington College, Vermont (1937), Mills College (1938) and the Juilliard School (1943); at Bennington she took composition lessons from Otto Luening, and at Juilliard from Bernard Wagenaar and privately from Wallingford Riegger. While in California she composed ballets for Louise Kloepper and José Limón and toured nationally as a pianist with various dance companies. During the 1940s she taught at Juilliard and from 1955 at the American University, Washington, DC. During her subsequent career as an educationist she put forward experimental methods for theory teaching at college level. Her music, according to her own description, 'tends towards classicism in that it stresses clarity of design and directness of expression'. Among a broad range of compositions are her *Accompaniments for Modern Dance Technique* (1933–7), which were used by such pioneers of the modern dance movement as Martha Hill, Doris Humphrey and Bessie Schoenberg. In 1963 she became the first American woman composer to have a work (the Capriccio for violin and piano) given its first performance at the White House, and in 1964 she received the honorary doctorate from Hood College, Maryland. Her manuscripts, which include a pedagogical text, *Creative Explorations of Musical Elements* (1971), are in the Special Collections Department of the American University Library, Washington, DC.

JAMES R. HEINTZE

Balmer, Luc (*b* Munich, 13 July 1898; *d* Berne, 1 March 1996). Swiss conductor and composer. Son of the painter Wilhelm Balmer, he studied from 1915 until 1919 at the Basle Conservatory with Hans Huber, Ernst Levy and Egon Petri. From 1921 to 1922 he studied composition with Busoni in Berlin. From 1924 he taught the piano and music theory at the Berne Conservatory. His career as a conductor began at the Lucerne Kursaal (1928–32); then for a short time he was with the Stadttheater in Berne (1934–5). He conducted the Berne symphony concerts (1935–41) and was conductor of the subscription concerts of the Bernische Musikgesellschaft (1941–64). In 1938 he became music advisor to Radio Berne. He was an exceptionally versatile conductor, but his performances of late Romantic works, particularly Bruckner and Reger, were specially notable. His compositions include an opera *Die drei gefoppten Ehemänner* (Berne, 1969), a concertino for piano (1960) and for cello (1962), three string quartets and vocal music.

JÜRG STENZL

Balmer & Weber Music House. American firm of music publishers. Charles Balmer (*b* Mühlhausen, 21 Sept 1817; *d* St Louis, 15 Dec 1892) and Carl Heinrich Weber (*b* Koblenz, 3 March 1819; *d* Denver, 6 Sept 1892) left Germany for the USA in the 1830s; Balmer became an organist and conductor, Weber a cellist, and their early compositions were published in the eastern USA. In 1848 they entered into partnership and opened a shop in St Louis, publishing a variety of popular marches and various piano pieces including Balmer's own arrangements of popular titles. Charles Balmer was so prolific that he adopted a number of pseudonyms, including Charles Remlab, T. van Berg, Alphonse Leduc, Charles Lange, Henry Werner, August Schumann, T. Mayer and F.B. Ryder. Gradually the firm absorbed most of its competitors including Nathaniel Phillips, James & J.R. Phillips, H.A. Sherburne, H. Pilcher & Sons, W.M. Harlow, Cardella & Co. and Compton & Doan; by the end of the century it had an exceptionally large and flourishing business.

After the death of the partners, the business was managed by a company in which the Balmer family predominated. Lack of efficient direction and the rise of Kunkel Brothers, Shattinger and Thiebes-Stierlin caused the business to deteriorate, and in 1907 the catalogue was sold to Leo Feist of New York. He attempted to ship the sheet music to New York down the Mississippi, but the vessel foundered off the coast of New Jersey and its cargo sank.

ERNST C. KROHN

Bal'mont, Konstantin Dmitriyevich (*b* Gumnishchi, Ivanov district, 3/15 June 1867; *d* Noisy-le-grand, near Paris, 23 Dec 1942). Russian poet and translator. He was perhaps the most prominent poet of the symbolist movement in Russia. In the late 1890s he made translations into Russian of works by a number of poets, including Shelley, which were later used by many composers in the early years of the next century. For Bal'mont, Symbolism was primarily a poetry of hidden meaning transmitted by allusion, feeling, sound and musical aspects of verse. His works of the early 1900s see him concerned with pantheistic and mystical themes; his interest in theosophy stemmed from reading the writings of Madame Blavatsky, as did that of Skryabin, whose own poetic text which accompanied his *Poème de l'extase* is considered to be very reminiscent of Bal'mont's *Budem kak solntse*. It was probably Bal'mont's friendship with Skryabin which lead many Russian composers to pay attention to his work: the young Stravinsky, for a time infatuated with Skryabin's late works, set Bal'mont's words in his *Zvezdoliki* (Obukhov also used the same poem in 1913), while Rachmaninoff, Prokofiev, Roslavets and Myaskovsky were likewise attracted to Bal'mont's sensuous, exotic and often ecstatic verses. Bal'mont made specific allusion to Skryabin's work in his *Svetozvuk v prirode i svetozvukaya simfoniya Skryabina* ('Light-sound in nature and Skryabin's light-sound symphony') of 1917 in which he ponders the nature of synaesthesia.

JONATHAN POWELL

Balo [bala, balafou, balafon]. A gourd-resonated frame XYLOPHONE of the Manding peoples of West Africa, found in the Gambia, Senegal, Guinea-Bissau, Guinea, Mali and northern Côte d'Ivoire. Possibly the earliest reference to the instrument is that of Ibn Baṭṭūṭa, who visited the court of Mali in 1352 and saw an instrument 'made from reeds, and provided with gourds below them'. In 1620, the British gold-prospector Richard Jobson described the *ballards*, the principal instrument of the Gambia, as having 17 keys with gourds suspended beneath them from iron rods. The player used a beater in each hand, the end of which was covered with 'soft stuff', and the instrument was played to accompany dancing. In the 1790s, Mungo Park described the Mandingo *balafou* as having 20 hardwood keys with 'shells of gourds hung underneath to increase the sound'.

The contemporary instrument has 17 to 19 keys strung together on a frame with a gourd resonator beneath each. The keys are from 27·5 to 40 cm long, 2·5 to 4 cm wide and less than 2·5 cm deep; the undersides and ends are thinned for tuning. The instrument is tuned to an apparent

Balo (gourd-resonated xylophone) played by an itinerant musician, Dori, Upper Volta, 1956

equitonal heptatonic scale and has an approximate range of 2·5 octaves. It is played exclusively by professional male musicians and is used to accompany praisesongs; its repertory is almost identical to that of the *kora*, which has largely replaced the *balo* in Senegal and the Gambia (*see* KORA). Players use a rubber-tipped beater in each hand and sometimes have bells strapped to their wrists.

The *balo* may be played on its own or in pairs, in which case one instrument provides the basic melody (*kumbengo*) while the other incorporates melodic variation and ornamentation (*birimintingo*). This is especially common in the Guinea tradition. In Mali the *balo* is considered one of the most prestigious instruments of the professional musician and often accompanies the recitation of epic songs such as *Sunjata*. In the Gambia, the *balo* is played today by only a few families since it was overshadowed by the *kora* early in the 20th century. Nevertheless, much of the *kora* and *konting* repertory, as well as several playing techniques such as damping of notes, derive from the *balo*.

The term *bala* is used by the Kpelle people of Liberia for a free-key log xylophone with four to seven wooden keys resting on banana stems. The instrument is played with beaters of soft wood or raffia midriff and, like the cognate Mano *balau* and Gio *blande*, is used by boys on rice-farms for bird-scaring or signalling. Among the neighbouring Gbunde people it is known as *kipelevelegu* and among the Sapa as *gbwilebo*. The term *balafon*, used for the frame xylophone, was probably introduced by European travellers (from the Greek root 'phono'), since its use is mainly confined to early European literature.

K.A. GOURLAY, LUCY DURÁN

Balox, Johannes (*fl* late 13th century). Theorist. Only the content of his treatise (*CoussemakerS*, i, pp.292–6 and *CSM*, xxxiv (1987), 11–21) and the character of the manuscript containing it (*F-Pn* lat.15128) point to the late 13th century. 'Gaudent brevitate moderni', the opening sentence, is a common beginning for treatises of the time, and the title *Abbreviatio magistri Franconis a[uctore] Johanne dicto Baloce* indicates a dependence on Franco of Cologne.

Johannes gave Franco's new principles for notating rhythm, elucidating the note symbols and their plicas and the ligatures. Change in the basic duration of each symbol is achieved by its position in the perfection: in this context, Johannes made more of the *divisio modi* for preventing such changes. The rule concerning perfection of a long before a long is stated, although not found in Franco. Franco's five – rather than six – rhythmic modes are reproduced; but unlike Franco, Johannes gave no real examples to illustrate them. Anonymus 2 and 3 (of *CoussemakerS*, i, pp.303–19, 319–27) were virtually identical but appended extra chapters on other topics.

ANDREW HUGHES

Balsach, Llorenç (*b* Sabadell, 16 Apr 1953). Catalan composer. He began his musical education at the Barcelona Conservatory, studying harmony and composition with Carles Guinovart and Josep Soler Sardà, among others. While pursuing a degree in mathematics at the Autonomous University of Barcelona, he experimented with electronic music under the guidance of Brncic. He also attended Petrassi's composition seminars in Italy.

Balsach's musical output comprises two periods. In the first, under the influence of Cage's ideas, he attempted to break down the barrier between musical sounds and noise, explored unconventional means of playing standard instruments, used electronic instruments and mixed taped with live sounds. For example, his *Suite gàstrica* (1979) and *El cant de les artèries* (1979) use traditional instruments to mimic gastrointestinal sounds and the flow of arteries respectively.

Balsach's second creative period relied on more conventional musical procedures, including an unabashedly tonal language. For example, *Visions grotesques* (1992) is a succession of musical images or 'visions' exploring a wide range of orchestral colour, from full orchestra to string quartet. Each 'vision' is an independent and complete piece in itself, but a recurring chromatic motif stated each time by a different instrument creates a sense of prolonged structural unity.

Notwithstanding their variety, Balsach's works are always permeated by a detached, ironic attitude evident in his Satie-like titles, which furnish his music with specific images (visual, tactile and so forth), but privilege above all the concept of 'play'. This playfulness gives his music its postmodern character.

ANTONI PIZÀ

Balsam, Artur (*b* Warsaw, 8 Feb 1906; *d* New York, 1 Sept 1994). American pianist of Polish birth. He studied in Łódź, where he made his début at the age of 12, and at the Berlin Hochschule für Musik. He received first prize in the International Piano Competition in Berlin in 1930, and then won the Mendelssohn Prize in 1931. He first toured North America in 1932 with Yehudi Menuhin, and settled there after Hitler came to power in Germany in 1933. He gave numerous recitals after 1918 and made many appearances with orchestras (including a series of six Mozart concertos for the BBC during the 1956 Mozart bicentenary); but he was most celebrated as an ensemble pianist who combined sensibility and a capacity for listening with strength of personality. Balsam recorded about 250 works in the solo and chamber literature, including all Haydn's and Mozart's music for solo piano, all Mozart's sonatas for violin and piano (with Oscar Shumsky), and all Beethoven's sonatas with violin and cello (with Joseph Fuchs and Zara Nelsova). His partners in concert, and often on recordings, also included Francescatti, Goldberg, Rostropovich, Szigeti, Totenberg, Milstein, David Oistrakh and Leonid Kogan. In 1960 he joined the Albeneri Trio (which then became the Balsam-Krolf-Helfetz Trio) in place of Erich Itor Kahn. He was a distinguished teacher at the Eastman School of Music, Boston University, the Manhattan School of Music and the Philadelphia Academy of Music; he led summer courses from 1956 to 1992 at Kneisel Hall in Blue Hill, Maine. Murray Perahia was one his pupils. Balsam also edited and composed cadenzas for Mozart's piano concertos K37, 39–41, 175 and 238.

MICHAEL STEINBERG/R

Balsamino, Simone (*b* Urbino; *fl* 1591–6; *d* ?Venice, ?1607). Italian composer, poet and instrument inventor. A connection with Urbino is suggested by the dedications to the Della Rovere family of his two surviving publications; his book of madrigals further includes a preface addressed to 'miei Signori & Patriotti' of Urbino. He was *maestro di cappella* at Venice Cathedral (S Pietro di Castello) from 1591 until at least 1596. His whereabouts after 1596 are unknown; a notice in a necrology from S Maria Formosa, Venice, may refer to his death in 1607.

Balsamino is the author of a tragicomedy, *La perla* (Venice, 1596), which draws heavily on Tasso's *Aminta*. He may have intended portions of the drama to be sung: one scene closes with a parody of the poem *Ancor che col partir*, famous for its setting by Rore. His only music publication, a book of six-part madrigals (Venice, 1594; ed. A. Chegai: *Le 'Novellette a sei voci' di Simone Balsamino*, Florence, 1993), also owes a debt to Tasso's *Aminta*. The book consists of 20 madrigals, 17 of which are settings of excerpts from Tasso's play. The first 16 are tonally unified and set a dialogue between Tirsi and Aminta (2.iii); the remaining, unrelated madrigal sets a long monologue of Satiro (2.i). These two excerpts are of different dramatic types, and this is reflected in their musical treatment: the dialogue divides the six voices into two three-voice groups, while Satiro's monologue is set in a chordal recitative style, bearing the indication 'Da cantarsi senza battute e pause'. In his preface, Balsamino asserted that his madrigals had been performed, like certain *commedie armoniche*, in the square in front of the ducal palace in Urbino. Balsamino's work considerably influenced the *Aminta musicale* of Erasmo Marotta (Venice, 1600) which, in fact, includes direct musical quotations from Balsamino's book.

The preface to the madrigal book also includes a reference to an instrument of Balsamino's own design: the 'cetarissima', which he claimed combined the virtues of the lute and guitar in a single instrument.

LORENZO BIANCONI/ANDREA CHEGAI/R

Balsys, Eduardas (*b* Mykolaïv, Ukraine, 20 Dec 1919; *d* Drushininkai, Lithuania, 3 Nov 1984). Lithuanian composer. Balsys grew up in Klaipėda (Memel), completing in 1939 his studies at the Lithuanian Gymnasium, where he had his first musical education, played in a wind ensemble, and began composing. He served as a school teacher in Kretinga (1941–5) and then studied composition at the State Conservatory in Vilnius with Antanas Račiūnas (1945–50), later studying at the Leningrad Conservatory in Voloshinov's masterclass (1950–53). From 1953 until his death Balsys lectured in composition and orchestration at the Lithuanian State Conservatory, becoming head of the composition department in 1960 and professor in 1969. He was president of the Lithuanian Composers' Union (1962–71). His pupils included Benjaminas Gorbulskis, Algirdas Martainaitis and Vidmantas Bartulis. He was awarded the Lithuanian State Prize in 1960 and 1974.

The style of Balsys is closely linked to the Romantic and folkloristic traditions in Lithuanian music; he was one of the first to extend and deepen these traditions. His work can be divided into three periods. Until 1958 he wrote within the context of the Soviet musical aesthetic of the time, quoting folk music, preferring traditional forms, giving melody a dominant role, and following the harmonic system of major and minor keys. With his Second Violin Concerto (1958), Balsys began to treat traditional material in a different way: motifs were freely reworked, achieving independence from the character of the original model; he attempted to synthesize contemporary means of expression. In harmony, Balsys then went beyond the traditional structure of thirds and used polytonal devices. In his final creative phase (1965–84), his music became polystylistic. Characteristics of the works of this period are expressionistic features and the use of the 12-tone technique; this Balsys often employed freely, sometimes interspersing tonal episodes.

WORKS

Stage: Eglė, žalčių karalienė [Eglė, the Queen of the Snakes] (ballet, 4, after S. Nėris and folk tales), Vilnius, 1960; Kelionė į Tilžę [The Journey to Tilzę] (op, 2, after H. Sudermann), Vilnius, 1980

Vocal: Nelieskite mėlyno gaublio [No Sign of Life on the Blue Globe] (orat, V. Palčinskaitė), solo vv, children's chorus, 2 pf, db, perc, 1969; Saulę nešantis [Sun Bearer] (cant., E. Mieželaitis), S, chorus, org, perc, 1972; 80 choruses; 13 songs, 1v, pf

Chbr and solo inst: Pf Sonata, 1948; Herojinė poema [Heroic Poem], orch, 1953; Str Qt, 1953; 2 vn concs., 1954, 1958; Dramatinės freskos, vn, pf, orch, 1965; Sym.-Conc., org, ww, gui, perc, 1977; Jūros atspindžiai [The Sparkling Sea], str, 1981; Portretai, orch, 1983; Conc., vn, 1984; incid music for 15 films and 10 plays

Baltimore. American city, the largest city in Maryland. Its musical history can be traced to the American Revolutionary period. First settled in 1662, Baltimore became a town in 1730. By 1800 its population of more than 26,000 was larger than that of the state's capital, Annapolis. As early as 1784 concerts in the city were advertised in the press. These early programmes were of great diversity, including works by Bach, Dittersdorf, Haydn, Kočzwara, Pleyel, Viotti and Vanhal, as well as by immigrant musicians Alexander Reinagle and Raynor Taylor who were resident in Baltimore.

In 1794, a year after establishing a music shop in Philadelphia, Joseph Carr and his sons Thomas and Benjamin inaugurated a similar enterprise in Baltimore. The first publication of the Star Spangled Banner in sheet music form was by Thomas Carr in November 1814. Following the demise of Thomas Carr's business in 1821, other publications, notably by the firms of Arthur Clifton (*fl* ?1823), George Willig (1823–1910), John Cole (1821–38), Frederick Benteen (1839–55), Miller and Beecham (1853–73), James Boswell (1835–59), Samuel Carusi (1839–44), W.C. Peters (1844–52) and G. Fred Kranz (1910–*c*1960), made Baltimore a major centre of music publishing. A significant factor in the success of a number of these firms was the presence in Baltimore of the early American lithography firm of A. Hoen & Co., who supplied illustrated covers for numerous Baltimore imprints. Several of the Baltimore music publishing firms were taken over by the Boston firm of Oliver Ditson in the late 19th century.

1. ORCHESTRAS. The first orchestra of professional musicians in Baltimore was the Peabody Orchestra in 1866. Under the direction of James Monroe Deems, Lucian Southard and Asger Hamerik the orchestra gave the premières of works by American composers and the American premières of numerous European works, especially those from Hamerik's native Denmark. The Peabody Orchestra ceased in 1896. Ross Jungnickel organized the first Baltimore Symphony Orchestra, which gave its first season in 1890.

Following the demise of Jungnickel's orchestra in 1899, the Florestan Club, an élite group of local musicians and music lovers (including H.L. Mencken), made plans to found the city's first resident orchestra. In 1916 Baltimore became the first city in the USA to found an orchestra on a municipal appropriation. The first conductor of the new Baltimore SO, Gustav Strube, remained in the post until 1930. Subsequent directors of the orchestra were George Siemonn (1930–35), Ernest Schelling (1935–7), Werner Janssen (1937–9) and Howard Barlow (1939–42). This orchestra played its last concert in 1942. The same year Reginald Stewart, also director of the Peabody Conservatory, devised a plan for the reorganization of the Baltimore SO. Stewart attracted superior musicians by offering them faculty appointments at the Peabody Conservatory, an arrangement based on Mendelssohn's direction of the Leipzig Conservatory and the Gewandhaus Orchestra. Although Stewart was the only one to have held both positions, the relationship between the Baltimore SO and the Peabody Conservatory faculty remains strong. Subsequent conductors have included Massimo Freccia (1952–9), Peter Herman Adler (1959–68), Brian Priestman (1968–9), Sergiu Comissiona (1968–84), D.J. Zinman (1985–98) and Yury Temirkanov (since 1999).

Under the inspiration of A. Jack Thomas, the conductors Charles L. Harris and later W. Llewellyn Wilson led the Baltimore Colored SO and Chorus in concerts from 1929 until a bitter musicians' strike in 1939 closed the orchestra. The Baltimore Women's String SO played from 1936 to 1940 under the direction of Stephen Deak and Wolfgang Martin.

2. EDUCATIONAL INSTITUTIONS, LIBRARIES. The Peabody Conservatory, founded on 12 February 1857, is technically the oldest conservatory in the USA, although it did not actually offer instruction until 1868. As part of the Peabody Institute of the City of Baltimore, the conservatory was endowed by George Peabody, one of America's earliest philanthropists. The Institute included provision for an extensive library, well furnished in every department of knowledge, a gallery of art and an Academy of Music (which became the Peabody Conservatory of Music in 1872).

The conservatory's first director was the New England educator Lucian Southard (1868–70) followed by the Danish-born composer and conductor and student of

Berlioz, Asger Hamerik (1871–98), Harold Randolph (1898–1927), Otto Ortmann (1928–41), Reginald Stewart (1941–58), Peter Mennin (1958–62), Charles Kent (1963–7), Richard Franko Goldman (1968–77), Elliot Galkin (1977–82), Robert O. Pierce (1982–95) and Robert Sirota (since 1995). In 1977 the Peabody Conservatory was affiliated with the Johns Hopkins University and in 1983 became a school of the university. It is now known as the Peabody Institute of the Johns Hopkins University.

There are about two dozen other institutions of higher education in Baltimore and its environs. Goucher College, Morgan State University and Towson State University are among those that offer not only music courses but also distinguished concert series. One local body, the Baltimore Chamber Music Society, sponsored a controversial series of concerts consisting almost entirely of 20th-century music. Founded in 1950 by composer Hugo Weisgall and philanthropist Randolph Rothschild, the society has also commissioned a number of important works. Two important adjuncts to Baltimore's musical life are the Arthur Friedheim Library and the archives of the Peabody Institute at the Peabody Conservatory of Music and the Maryland Historical Society. Both collections offer extensive primary source materials for the study of Baltimore's musical life. The Lester S. Levy Collection at Johns Hopkins's Milton S. Eisenhower Library includes one of the most important collections of American sheet music (approximately 40,000 items).

3. OPERA. Music theatre in Baltimore can trace its beginnings from 1772 with a performance of Milton's *Comus* in a stable by Lewis Hallam's travelling American Company. The first resident theatrical company, Thomas Wall and Adam Lindsay's Maryland Company of Comedians, built Baltimore's first theatre in 1781 and performed there until 1785. A resurgence of Hallam's Old American Company and a series of local companies provided sporadic theatrical, musical and circus entertainment during the 1780s and early 1790s. Thomas Wignell and Alexander Reinagle's Philadelphia Company dominated the last decade of the 18th century, offering substantial seasons of plays, interludes and afterpieces in their newly constructed Holliday Street Theater. From the turn of the century to the Civil War, Baltimore hosted a variety of resident and touring companies in both the Holliday Street Theater and the Front Street Theatre. After the Civil War, a new 'theatre district' sprang up in Baltimore and included the Concordia Opera House (1865–91), Ford's Grand Opera House (1871–1964) and the Academy of Music (1875–1927). All featured a variety of theatrical entertainments, with Ford's hosting at least 24 opera companies performing over 90 different works. With the rise of the New York Theatrical Syndicate around the turn of the century, Baltimore faded as a major stop for touring opera troupes. Local efforts to establish an opera company resulted in the creation of Eugene Martinet's Baltimore Civic Opera Company in 1932. As early as the 1940–41 season, Martinet was able to enlist the help of the soprano Rosa Ponselle, who served as artistic director until 1979. In 1970 the company was renamed the Baltimore Opera Company.

4. CONCERT ORGANIZATIONS, HALLS. With many inhabitants of British and German extraction, Baltimore has enjoyed a rich choral tradition. 19th-century choral organizations included the Liederkranz (1836–1900), the Germania Männerchor (1856–1929) and the Baltimore Oratorio Society (1881–1900). In the 20th century the Bach Choir, the Handel Society, the Choral Arts Society and the Baltimore Symphony Chorus maintained this tradition. The latter three continue to give distinguished readings of the choral classics, and the Choral Arts Society encourages the creation of new choral works with an annual competition.

Baltimore has six outstanding concert halls, all aesthetically pleasing and acoustically effective. The Lyric, constructed in 1894, is modelled on the Neues Gewandhaus in Leipzig. After extensive renovation in 1980–81, the theatre (cap. 2683) was reopened in 1982. In the same year, the Joseph Meyerhoff Symphony Hall (cap. 2467) was opened as the permanent home of the Baltimore SO. Designed by Pietro Belluschi, the hall is named after one of the city's most generous philanthropists. A second hall named after Meyerhoff, the Joseph and Rebecca Meyerhoff Auditorium (cap. 363), opened in 1982 at the Baltimore Museum of Art and is the home of the Baltimore Chamber Music Society concerts. The Kraushaar Auditorium at Goucher College, again designed by Belluschi, opened in 1962 (cap. 995). The Shriver Hall (cap. 1100) of the Johns Hopkins University is the site of a distinguished chamber music series. Opened in 1866, the Miriam A. Friedberg Concert Hall (cap. 800) at the Peabody Institute is the oldest of the existing halls; it underwent extensive renovation in 1983.

ELLIOTT W. GALKIN/N. QUIST

Baltin, Aleksandr Aleksandrovich (*b* Moscow, 2 Jan 1931). Russian composer and pianist. He graduated from the Moscow State Conservatory in 1956 having studied composition under E. Messner and the piano under V. Belov. He was deputy chief editor of the journal *Muzïka* (1963–8), and was president of the council of experts of the Ministry of Culture (1990–92). He is a member of the Composers' Union, and in 1984 he became an Honoured Artist of Russia. He works in a variety of genres. Among his most significant works are the opera *Knyaz' Mïshkin* ('Prince Mïshkin') based on Dostoyevsky's novel *The Idiot*, the oratorio *Spustya stolet'ya* ('Centuries Later') after Michelangelo, a scene from the Gospels entitled *Magdalina* for mezzo soprano and orchestra, four symphonies, numerous concertos (including three for piano), in addition to chamber works and song cycles.

The roots of Baltin's style lie within the Russian tradition; he nonetheless maintains an individual approach to the genre in which he is working. In the oratorio *Spustya stolet'ya* a symphonic breadth is combined with detailed writing reminiscent of chamber music and a laconic mode of expression; within the Romantic framework of the Second Piano Concerto variety is obtained by fusing the principles of cantus firmus, Beethovenian contrast, and monothematism. Baltin is attracted to the concerto as a genre that combines real virtuosity and philosophical profundity. In his works, lyrical and dramatic materials are freely fused with the grotesque and scherzo elements. The composer is particularly restrained in his thematic construction and scoring; Baltin's language – aligned to the so-called new simplicity – is set within a tonal framework.

Baltin's music is heard regularly at the annual Moscow Autumn festival. From the 1950s to the 1970s Baltin regularly appeared as a concert pianist.

WORKS

Op: Knyaz' Mïshkin [Prince Mïshkin] (A. Baltin, after F. Dostoyevsky), 1984

Vocal-orch: Spustya stolet'ya [Centuries Later] (orat., M. Buonarroti), solo vv, chorus, orch, 1975; Magdalina (B. Pasternak), Mez, orch, 1990

ALLA VLADIMIROVNA GRIGOR'YEVA

Baltsa, Agnes (*b* Lefkas, 19 Nov 1944). Greek mezzo-soprano. She studied in Athens, Munich and Frankfurt, where she made her début in 1968 as Cherubino. In 1969 she sang Octavian at the Vienna Staatsoper and the following year appeared at the Deutsche Oper, Berlin, and the Salzburg Festival. Baltsa made her American début in 1971 at Houston as Carmen, and first sang at La Scala in 1974 as Dorabella. She made her Covent Garden début in 1976 as Cherubino and first sang at the Metropolitan in 1979 as Octavian, returning as Carmen. Her repertory includes roles by Rossini, Bellini and Donizetti, as well as Orpheus, Sextus, Eboli, Azucena, Dido (*Les Troyens*), Herodias (*Salome*), Delilah and Charlotte. A powerful singing actress, Baltsa has sometimes sacrificed beauty of tone to dramatic effect; but she has brought a rare visceral excitement to a role like Carmen. She is also an admired interpreter of the mezzo part in Verdi's Requiem, which she recorded with both Karajan and Muti.

ELIZABETH FORBES

Baltzar, Thomas (*b* Lübeck, ?1631; *d* London, 27 July 1663). German violinist and composer. He came from a family of Lübeck musicians: his father, David (*d* 1647), his grandfather, Hinrik Thomas, his great-grandfather, Hinrik, and his brothers Joachim and David were all musicians there. According to the English scientist Samuel Hartlib, Baltzar studied with Johann Schop (i), and he is recorded at the Swedish court in 1653. He probably returned home in summer 1654, after Queen Christina's abdication, and was briefly appointed a Lübeck Ratslutenist at the beginning of 1655. He travelled to England later in the year, where he remained until his death.

Baltzar caused a sensation in England. John Evelyn heard him at Roger L'Estrange's London house on 4 March 1656, and wrote that he 'plaid on that single Instrument a full Consort, so as the rest, flung-downe their Instruments, as acknowledging a victory'. Baltzar was in London in September 1656 to play in Davenant's *The Siege of Rhodes*, though Anthony Wood wrote that he spent about two years with Sir Anthony Cope at Hanwell House near Banbury. Presumably he was living there when he made his famous visits to William Ellis's Oxford music meetings in summer 1658. Wood compared him several times with the English violinist Davis Mell, who 'play'd farr sweeter than Baltsar, yet Baltsar's hand was more quick and could run it insensibly to the end of the finger-board'. Mell was also in Oxford in 1658, and their divisions on *John, come kiss me now*, printed in Playford's *The Division Violin* (1684/*R*), probably record some sort of playing contest. They show that Mell was no match for Baltzar, as a composer as well as a player.

Baltzar probably returned to London at the Restoration, and was given a new place in the King's Private Music by a warrant dated 23 December 1661, back-dated to Michaelmas at the high salary of £110 a year. His appointment brought the number of violins in the group to three, and it was surely for them that he wrote his C major suite, probably the earliest English piece for three violins. A painting at Nostell Priory appears to show him in the company of his Private Music colleagues, including John Banister (i) and the harpist Charles Evans (*d* 1687). According to Burney, Baltzar died on 24 July 1663; he was buried in Westminster Abbey three days later. At first, Wood thought he had died of 'the french pox and other distempers', but subsequently wrote that 'being much admired by all lovers of musick, his company was therefore desired; and company, especially musicall company, delighting in drinking, made him drink more than ordinary which brought him to his grave'.

Unfortunately little of Baltzar's music survives. He introduced English violinists to high positions, elaborate chordal writing, and scordatura. Playford published three unaccompanied pieces in *The Division Violin*, and a number of others apparently by Baltzar are in manuscript (*GB-Ob* Mus. Sch. F.573). Some are arrangements of lyra viol pieces by Jenkins and others, which suggests that he based his chordal idiom on English viol music, rather than on German violin music. His suites for two violins and bass are fine examples of a conservative Anglo–German idiom, though his masterpiece is the grand, extended suite in C major, one of the finest pieces in the three-violin repertory.

WORKS

PETER HOLMAN

Bal y Gay, Jesús (*b* Lugo, 23 June 1905; *d* Madrid, 3 March 1993). Spanish musicologist and composer. He had private piano lessons in Lugo (under the auspices of the Real Conservatorio of Madrid), and took his degree at the Instituto General y Técnico (Lugo, 1921). He was a founder (1924) of the arts journal *Ronsel* (published in Lugo), for which he wrote his early essays on music and poetry. While serving in the Spanish infantry at Compostela he participated in the Seminario de Estudios Gallegos (1926–8); on his return to Madrid he joined the musicology and folklore section of the Centro de Estudios Históricos under Ramón Menéndez Pidal, and undertook fieldwork in Extremadura and Galicia, the latter with Eduardo Martínez Torner. J.B. Trend invited him to serve as reader in Spanish literature at the University of Cambridge (1935–8), where he also studied privately with Edward Dent and J. Wolff. Owing to his strong Republican sympathies, he began his long voluntary exile in Mexico, where he pursued his own research supported by the Mexican Government (1938–40); he worked at the Casa de México (1940–42), and when it became the Colegio de México (1942) he was appointed lecturer in music there. After working as a freelance journalist, primarily for the British Propaganda Office in Mexico (1943–9), he joined and directed (1949–65) the musicology section of the Instituto Nacional de Bellas Artes under Carlos Chávez. He served as music critic of the daily paper *El universal* (1940–51), taught music appreciation at the Universidad Nacional Autónoma (1958–64), also directing the music section of its radio station (1957–64), and was a founder-member of and a major contributor to *Nuestra música* (1945–50). Upon his return to Spain in 1965, he resumed his lecturing, writing and compositional activities. His published compositions include the Serenade for strings (1949), Clarinet Sonata (1953) and Concerto grosso (1965); his writings include studies and editions of Spanish folksongs.

In 1933 Bal y Gay married the pianist and composer Rosa García Ascot (*b* Madrid, 8 April 1908), a pupil of Granados (1914–16) and Falla (1916–31). Accompanied by Falla, she played the soloist's part in the first performance of the two-piano version of his *Noches en los jardines de España* (1921) at the Salle Gaveaux, Paris. She made a successful career as a concert pianist, specializing in Falla's works in Spain and, after 1935, in England and Mexico. Her compositions include an orchestral suite and numerous chamber works.

ISRAEL J. KATZ

Balyozov, Rumen (*b* Sofia, 6 Sept 1949). Bulgarian composer. He studied at the Bulgarian State Conservatory (1971–6), then worked as a cellist in the Symphony Orchestra of Bulgarian Radio and Television. Balyozov came to prominence as a composer in the 1970s and 80s. Drawing on the aesthetics of Cage and Kagel, he sought to embody the idea of music as the illumination of the intellect in his works, which include elements of self-irony, games, paradoxes and a sense of the absurd. Moral and ethical issues determine the themes of the stage works. In *Kogato kublite ne spyat* ('When Dolls are not Asleep') Balyozov imaginatively evokes the world of fairy tales. In *Zelenata igra* ('The Green Game') contemporary social issues are dealt with alongside more universal human questions; music is the medium by which the text and visual aspects of the work are linked.

WORKS
(*selective list*)

STAGE

Malkiyat Prints [The Little Prince], 1975 (TV op, R. Balyozov, after A. de Saint-Exupéry)

MAGDALENA MANOLOVA

Balzac, Honoré de (*b* Tours, 20 May 1799; *d* Paris, 21 Aug 1850). French writer. Music is one of the subjects treated in *La comédie humaine*, especially in *Gambara* (1837) and *Massimilla Doni* (1839); but although the names of musicians abound in the novels (among them Cimarosa, Pergolesi, Bellini, Rossini, Handel, Bach, Mozart and Beethoven) there are many fewer reflections on music, Balzac having acknowledged his lack of musical competence in the preface to *Massimilla Doni*. Yet music had for him an importance greater than might be supposed, as is evident from his work and his correspondence: to his beloved *étrangère* he wrote 'Beethoven is the only man who has made me feel jealousy. There is in that man a divine power' (*Lettres à l'étrangère*, 14 November 1837). Clearly not only music but certain individual composers had for Balzac a sovereign importance. In distinguishing the sphere of creative sensibility (for a long time uncertain in Balzac) from the sphere of intelligence and culture, it may be suggested that he was less a man who chanced to discover music than a writer who gradually discovered his true way through music.

In Balzac's relationship with music, the period 1833–7 is, after that of his youth, of the greatest importance. It was then that he wrote most about music, in both his correspondence and his musical novels; this was also the period when he acquired, from 1833 onwards through his contact with the 'monde', a certain musical culture. There was the 'loge infernale' at the Opéra and the concerts at the Austrian Embassy or the Conservatoire; there were the personal contacts with Berlioz, Auber, Jakob Strunz, Liszt and Rossini. For the most part, the effect on him seemed small, the attachment light. Beethoven, whose Fifth Symphony he heard on 27 April 1834, at that stage left him cold. Similarly, the Beethovenism of Berlioz and Liszt seems scarcely to have affected him.

Indeed, in his correspondence between 1833 and 1837, Balzac mentioned only Italians, while in his works music is introduced in the form of memoranda prepared by Strunz for use in *Gambara* and *Massimilla Doni*, with the works cited there matching public taste – *Mosè*, *Robert le diable*, *Les Huguenots*, *Il matrimonio segreto*, *I puritani*, Pergolesi's *Stabat mater*. Yet this taste for grand opera, Italian singing and virtuosity was not merely superficial. It is essential to recognize that the feeling for the absolute in Balzac led him to love Italian art in his own way, that Rossini and Mozart were related to a literary project that reached maturity only with his recognition of Beethoven. He took notice of music only to the extent that he found it passionate, what Hegel called the 'symbol of the inward'. This explains his numerous allusions to *Don Giovanni* and his love of the passionate effect of 'Mi manca la voce' in *Mosè*. Rossini was for Balzac 'the composer who has conveyed the greatest human passion in the art of music': Eugénie Grandet and Raphaël (in *La peau de chagrin*, 1831) had Mozart for their confidant and pored over 'les divines pages de Rossini, Cimarosa, Zingarelli'. The missing name is that of Beethoven, whom Balzac saw as his second self, in whom the absolute was wholly accepted and given worthy expression. Around 1834, at the time when Balzac was hesitating between the novel of manners and the philosophical novel, his taste for Rossini and Mozart as 'passionate' composers reflected the tendency of Romanticism to retain its connection with the gaudiness of worldly fashion. Yet in the period 1837–42, when his literary plans became fixed on the concept of the spiritual threatened by the material, and of the social explained by the philosophical, Mozart and Rossini were relegated to a purely decorative role or disappeared altogether in favour of Beethoven, the pure artist *par excellence*.

The concept of the artist plays a key role in his writing. The spirit which possesses the artist is conquered by money: for example, the two musicians Pons and Schmucke are tricked by speculators. These defeats of the spirit, this overthrowing of art by reality, form a kind of obsession with Balzac. His most precise formulation of it is in *Gambara* and *Massimilla Doni*, but it is also to be found in *La peau de chagrin*, *Béatrix* (1839), *Birotteau* (1837) and *Le cousin Pons* (1847), always in some manner connected to music. Balzac's readings of E.T.A. Hoffmann between 1833 and 1839 persuaded him that music was the supreme region of the absolute; this in turn enabled him to discover in Beethoven, above all in the concept of a struggle waged against fate, an artistic project comparable to his own.

It is evident that although Balzac was friendly with musicians, and acquired a veneer of musical culture, these contacts affected him less than his relationship with music itself. The art was to play a revelatory part in his discovery of his own self; these concepts, German, Romantic and musical, played a crucial part in his thought and helped to shape the ideas which inform the entire *Comédie humaine*. Liszt told Balzac: 'I need listeners like you, and in the absence of listeners, in the plural, I need you, in the singular'.

The most important settings of Balzac include five operas: Nouguès, *L'auberge rouge* (1910); Waltershausen, *Oberst Chabert* (or *Le colonel Chabert*) (1912); Levadé, *La peau de chagrin* (1929); Schoeck, *Massimilla Doni* (1937); Françaix, *Apostrophe* (musical comedy,

1940). Shostakovich wrote incidental music to a play based on *La comédie humaine* (1934), Milhaud to *Le faiseur* (1935). Rossini promised to set a poem inspired by Mme Hanska, but seems not to have done so.

FRANCIS CLAUDON

Balzano [Balsano], **Giuseppe** (*b* Valletta, 9 Sept 1616; *d* Mdina, 23 Feb 1700). Maltese composer. Ordained priest in Catania in 1640, he became *maestro di cappella* of Mdina Cathedral in 1661. He held the post until his retirement in 1699 except for two interruptions (1665–9 and 1673–4) when he might have travelled to Naples for further musical studies. His *Beatus Vir* of 1652 is the oldest dated extant composition by a named Maltese composer. He was a prolific composer: an inventory of about 1707 lists 180 sacred vocal compositions, including 18 masses, 64 psalms (some for vespers), 32 hymns, *Responsorii dei morti*, 2 dialogues and 32 motets. Most have parts for basso continuo, some have added violins, and one, unusually, uses timpani. The few works that survive reveal a high degree of technical competence, both in current practices and in 16th-century polyphony. Illustrative melismatic flourishes obtain strong textual images and the virtuoso exploitation of the solo voice reveals dramatic and enriching textures.

Balzano's younger brother, Domenico (*b* Valletta, 24 Sept 1632; *d* Mdina, 9 Dec 1707), succeeded him at Mdina Cathedral, holding the post until his death.

JOSEPH VELLA BONDIN

Bambaataa, Afrika. *See* AFRIKA BAMBAATAA.

Bamberg. Town in Bavaria, Germany. From the early 11th century to the early 19th the bishop of Bamberg was entitled to the rank of Prince of the Holy Roman Empire. Although vocal music was mentioned in the earliest accounts of the cathedral (founded in 1012), the institution of a song school in 1192 by Bishop Otto II was the beginning of the town's musical significance, as indicated by the extant Bamberg Manuscript, which contains about 100 13th-century motets. A succession of Kantors – the best known being Leopold von Schweinschaupten (*d* 1357) – and chaplains superintended the musical life of the town and surrounding area. The 15th-century composers Heinrich Finck and Johannes Frosch were natives of Bamberg. The music theorist Ulrich Burchard, author of *Hortulus musices* (1514), was a court chaplain there. Conservative principles in church music were maintained during the Reformation and Counter-Reformation through such works as the *Kurtzer Ausszug der Christlichen und Catholischen Geseng* (1575) and the *Catholische Gesangbuch* (1628), and through the teaching in the seminary for priests (founded 1586) and the Jesuit Gymnasium (1613). The most influential musicians in Bamberg during the 17th century (during which the Stadtpfeiferei achieved greater recognition) were Johann Degen, court chaplain, and George Arnold, court organist.

In the 18th century a process of secularization began, encouraged by Prince-Bishop Adam Friedrich von Seinsheim, who ruled Bamberg from 1757 to 1779. He employed as music director Tartini's pupil Fracassini, who reinvigorated the court orchestra, produced operas at the Seehof palace and introduced symphony concerts. Operas and concerts took place from 1788 in the 'Zum schwarzen Adler', where Andreas Bäuml, successor to Fracassini, introduced the public and the court to the operas of Grétry, Paisiello and Mozart, as well as to popular Singspiele. In 1781 the court orchestra comprised 16 strings, two oboes, a bassoon and two horns; it was enlarged to symphonic proportions in 1796. Meanwhile church music had reached a low ebb and worshippers in the cathedral were regaled with symphonies, bravura operatic arias and the occasional *Tusch* (a Bamberg speciality – cheerful music for wind instruments). The subsequent restoration of standards in Catholic church music owed much to the Cecilian movement and the establishment in Bamberg in 1868 of the Allgemeiner Deutscher Cäcilienverein.

Between 1808 and 1813 E.T.A. Hoffmann was active at the theatre (built 1802) in various capacities: as composer of the melodrama *Dirna*, the opera *Der Trunk der Unsterblichkeit* (to a libretto by Count Julius von Soden, director of the theatre) and other works, as music director, and as scenery artist. One of his colleagues was Weber's stepbrother Edmund. Hoffmann's *Aurora*, although composed for Bamberg in 1811, had its first performance there only in 1933. His attempts to control the orchestra were rarely successful, and he made uncomplimentary references to Bamberg in his diaries and in *Kreisleriana*, saying that the time he spent there was 'the worst of all bad times'. He was, nonetheless, commemorated by a statue and his house was preserved.

In 1820 the Bamberger Musikverein was founded, resulting in increased music-making; it was reconstituted in 1872 and still gives chamber music concerts. A number of other societies subsequently grew up including the

Oratorienchor (founded 1835), also still active, and a town music school was established. At the end of the 19th century cathedral music was reorganized by Karl Cohen. After World War II the town's reputation was spread by the Bamberg SO, formed in 1946 from the Prague Deutsche Philharmonie, which had been founded in Prague in 1939 and left there in 1945. The orchestra's permanent conductors have been Keilberth (1940–45, 1949–68), Herbert Albert (1947–8) and G.L. Jochum (1948–9), Eugen Jochum (1968–73), James Loughrun (1978–83), Witold Rowicki (1983–5) and Horst Stein (from 1985). Concerts are frequently given in the cathedral and the Lutheran church of St Stephan. Musica Cantorey Bamberg, founded in 1969 and directed by Gerhard Weinzierl, cultivates the works of Bamberg composers including Georg Arnold (1621–76), Georg Mengel (*c*1600–67) and Johann Bach (1657–1701).

Among important organ builders in Bamberg were, in the 17th century, Johann Laubinger, in the 18th Johann Wilhelm Hoffmann and in the 19th Justus Karl Hansen, who were all responsible for alterations to the cathedral organ. The Neupert family were active piano and harpsichord makers in Bamberg from 1928.

PERCY M. YOUNG

Bambini, Felice (*b* Bologna, *c*1743; *d* ?after 1787). French composer and harpsichordist of Italian origin. He was the son of the impressario Eustachio Bambini (*b* Pesaro, 1697; *d* Pesaro, 1770). He went to Paris in July 1752 at the same time as the company of Bouffons directed by his father. Jean-Jacques Rousseau mentioned him in the *Lettre sur la musique française*, drawing a favourable comparison between his light manner of playing the continuo (usually in two parts) and the stiff style of the Opéra's harpsichordist. La Borde added that Bambini composed 'several *ariettes* for addition to the *intermèdes* performed at the time'. He stayed in Paris after the departure of the Italian company and studied with André-Jean Rigade. The music of his principal opera, *Nicaise*, is relatively rudimentary and more reminiscent of the Italian intermezzos of the 1740s and 50s than the more elaborate *opéras comiques* of Duni, Monsigny and Philidor. After the failure of *Nicaise* no more of Bambini's works were performed at the Comédie-Italienne, and during the 1780s he had to be content with the modest Théâtre des Beaujolais.

MICHEL NOIRAY

Bambuco. The national dance of Colombia. It is said to have been the favourite of Símon Bolívar, Colombia's independence leader (1824). Early references identify it with the BUNDE, a dance of African origin. In the 19th century Colombian national composers wrote *bambucos* and *pasillos*, leading popular music into a 'golden age'. Originally a serenading song for the solo voice, the modern *bambuco* is most often sung in duet or parallel 3rds, with strummed accompaniment on *tiple* (small 12-string guitar), guitar and *bandola* (flat-backed lute). A courting or pursuit dance, characterized by delicate toe-dancing by both male and female, it has a specific choreography with variations, involving eight possible basic steps: (i) *invitación*: invitation to the dance; (ii) *ochos*: dancing in a figure-of-eight pattern; (iii) *codos*: dancing with elbows touching; (iv) *coquetos*: 'flirtatious' steps when the man attempts to steal a kiss from the woman; (v) *perseguida*: dancing in a circle, the man pursues the woman; (vi) *pañuelo*: handkerchief waving while dancing; (vii) *arrodillada*: the woman dances in a circle around the kneeling man; (viii) *abrazo*: the man places his right hand on the woman's waist, dances her back to her original starting position. The song texts, often regarded as melancholy, use an octosyllabic *décima* verse or other poetic form, frequently with descending melodies and dramatic modulations through predominantly minor keys, oscillating hemiola rhythms 3/4, 6/8. Texts typically revolve around archetypal subjects often with a gendered chauvinistic viewpoint, including the extolling of a woman's beauty, her desirability, idyllic love, the pain of thwarted love, pride in being Colombian or coming from a particular region. Other texts comment on current events, make philosophical statements about everyday life and the struggles of the peasantry and people. Social change since the late 1940s has inspired certain *bambucos de protesta*. Examination of choreography, song texts, vocal styles, instrumentation and musical function shows a degree of inherent Hispanic influence. The urban *bambuco* has rural counterparts called the *sanjuanero* and the *rajaleña* which exhibit more pronounced African traits. It shares many features with the Chilean *cueca* and the Peruvian *marinera*.

WILLIAM GRADANTE/R

Bamert, Matthias (*b* Ersigen, 5 July 1942). Swiss conductor and composer. He studied the oboe, chamber music and composition at the Conservatoire Nationale Supérieure in Paris, and attended masterclasses by Boulez and Maderna at the Darmstadt summer course in 1965. He was principal oboe in the Salzburg Mozarteum Orchestra (1965–9), and worked as assistant to Szell in Cleveland

(1969–70) and Stokowski at the American SO (1970–71) before spending seven years as resident conductor of the Cleveland Orchestra. He was principal conductor of the Basle RSO (1977–83), principal guest conductor of the Scottish National Orchestra (1985–90) and artistic director of the London Mozart Players (1993–2000). Renowned for his wide repertory and command of contemporary scores, Bamert has conducted world premières of works by Takemitsu, Denisov, Erb, Casken, Rihm, Turnage and others. He has also done much to popularize music by Frank Martin, Parry, Korngold and Gerhard, both in concert and on disc, and with the London Mozart Players has recorded an enterprising series of little-known symphonies by contemporaries of Mozart. As artistic diretor of the Lucerne Festival (1992–8), he strengthened its thematic content while widening its appeal. His compositions, predominantly for orchestra, include a Concertino for english horn, string orchestra and piano (1966), *Septuria Lunaris* (1970), *Rheology* (1970), *Mantrajana* (1971), *Once upon an Orchestra* for narrator, 12 dancers and orchestra (1975), *Ol-Okun* (1976), *Keepsake* (1979) and *Circus Parade* for narrator and orchestra (1979).

ANDREW CLARK

Bamfi [Banfi, Banfo], **Alfonso** (*b* ?Milan; *fl* 1641–55). Italian composer and organist. He may have come from a Milanese family whose members included a lutenist, Giulio Banfi. In 1641 he succeeded G.B. Cima as *maestro di cappella* of Como Cathedral, but he had to leave in 1643, when the cathedral ran into economic difficulties. Later he was *maestro di cappella* and organist of the collegiate church at Domodossola (not at Reggio nell'Emilia as stated by Fétis). He was there when he published his only known music, *Selva de sacri, et ariosi concerti a 1–4 voci con una messa brevissima, Magnificat, Salve regina e Lettanie della BVM con il basso continuo* (Milan, 1655). The *concerti* are concertato motets and are in fact called motets in a note at the end of the volume. They are well-wrought pieces, elaborately ornamented and with numerous time changes.

GIUSEPPE VECCHI

Bampton, Rose (Elizabeth) (*b* Lakewood, nr Cleveland, OH, 28 Nov 1908). American mezzo-soprano, later soprano. She studied at the Curtis Institute, made her début in 1929 at Chatauqua as Siébel (*Faust*), and then sang secondary roles with the Philadelphia Grand Opera. She made her Metropolitan début in 1932 as Laura (*La Gioconda*), and sang as a mezzo until 1937, when she made her soprano début as Leonora (*Il trovatore*); other roles included Aida and Amneris (in the same season), Donna Anna, Alcestis, Elisabeth, Elsa, Sieglinde and Kundry. She appeared at Covent Garden (1937) as Amneris; in Chicago (1937–46), where her roles included Maddalena de Coigny; at the Teatro Colón, Buenos Aires (1942–8), where she sang the Marschallin, and Daphne in the South American première of Strauss's opera; and in San Francisco (1949). Bampton had a strong, though not particularly individual, voice, and her sovereign musicianship was admired by Toscanini, for whom she recorded Leonore in *Fidelio*. Many of her Metropolitan broadcasts are preserved on disc, notably an exciting Donna Anna under Walter in 1942 (see P. Jackson: *Saturday Afternoons at the Old Met*, New York, 1992), as is a performance of *Gurrelieder* with Stokowski.

MAX DE SCHAUENSEE/ALAN BLYTH

Ban, Joan Albert [Bannius, Joannes Albertus] (*b* Haarlem, 1597 or 1598; *d* Haarlem, 27 July 1644). Dutch theorist and composer. He came from a patrician family, entered the priesthood in Haarlem and became a canon in 1628. As a musician he was entirely self-educated. He studied theoretical works from Pythagoras to Zarlino and, dissatisfied, turned to his prominent contemporaries – among them Constantijn Huygens, Mersenne, G.B. Doni and Descartes – for assistance. Although much is made of a song-writing competition between Ban and Antoine Boësset staged by Mersenne in 1640, in which it was a foregone conclusion that Boësset should win, Ban was unaffected by his loss (see Walker). In many of his letters he declared that music must be practised under strict and demonstrable rules and not left to individual arbitrary taste: it must not mask the natural delivery of a text but rather reinforce it. In this light his praise of, and familiarity with, contemporary Italian music is not remarkable; but it is typical of his 'monodic approach' that, although aware of the usefulness of modulation, he recognized neither the musical value nor the expressive power of dissonance.

Ban spent 20 years developing his system of *musica flexanima* ('zielroerende zang': 'soul-moving singing'), wherein the text was expressed musically by means of specific intervals, harmonics and rhythms. The practical application of these theories is found in the ten three-part songs of his *Zangh-bloemzel* (Amsterdam, 1642). He did not complete his theoretical treatise *Zangh-bericht*, though he appended a short summary of it to the *Zangh-bloemzel* and issued a more developed version (*Kort sangh-bericht*) a year later. Ban was also interested in the problem of tuning: he even went so far as to publish a diagram of Mersenne's 18-note clavier, calling it his 'perfect clavier' ('volmaekte klaeuwier'; see illustration). However, neither this keyboard, with its adaption of Mersenne's symbols for the various extra sharps and flats, nor his attempt at a wholly Dutch musical terminology, was accepted by his contemporaries.

Ban's 'volmaekte klaeuwier': diagram from 'Kort sangh-bericht' (Amsterdam: Matthysz, 1643)

RANDALL H. TOLLEFSEN

Banān, Qolāmhoseyn (*b* Tehran, 1911; *d* Tehran, 1986). Persian singer. He came from an aristocratic background and was raised in a family circle frequented by literati and musicians. His father played the *tār* and his mother the piano; Banān learnt the rudiments of both instruments in childhood. He had voice lessons from his early teen years and by his mid-20s he had established a high reputation as a singer with a marked command of the *radif* and a sound knowledge of the Persian classical poetry on which Persian vocal music heavily relies.

In the 1930s Banān was drawn into the circle of progressive musicians led by Ali Naqi Vaziri, becoming closely associated with two of Vaziri's leading disciples, Ruhollāh Khāleqi and Abolhasan Sabā. He participated in concerts organized by the Vaziri group as the lead singer, specializing in performances of new *tasnif* compositions. His fame spread after his radio engagements began in 1942.

By the 1950s Banān was the most highly regarded male singer in Persia. Recordings of his radio broadcasts and his published disc recordings are models of refinement in singing. His versatility in vocal renditions of the classical repertory of *dastgāh*s and particularly his tasteful presentation of modern compositions in Persian modes have been admired by connoisseurs and the general public alike. Contrary to the high vocal register cultivated by most male singers, Banān had a relatively low-pitched voice with a graceful, mellow and relaxed tone. He was also active as a voice teacher at the Conservatory of National Music in Tehran.

HORMOZ FARHAT

Banaster [Banastir, Banastre], **Gilbert** (*b* ?London, *c*1430; *d* London, between 19 Aug and 10 Sept 1487). English composer. He may have been a choirboy with the Chapel Royal: his father Henry Banaster, who died in 1456, was a Yeoman of the Royal Household. He became a Gentleman of the Chapel Royal in 1468 and Master of the Choristers in 1478. His will dated 19 August 1487 shows evidence of substantial investment in land and property. His corrodies were distributed among the members of the Royal Household on 10 September in that year. Apart from his musical compositions a poem, *The Miracles of St Thomas*, has survived.

Banaster's compositions consist of a setting of the hymn *Exsultet caelum laudibus* and a two-voice Mass respond, *Alleluia: Laudate pueri* (both in *GB-Cmc* Pepys 1236); a three-voice carol, *My feerfull dreme* in the Fayrfax manuscript (*Lbl* Add.5465); and the five-voice antiphon *O Maria et Elizabeth* in the Eton Choirbook. The carol is perhaps the most interesting piece because it displays a more modern syllabic style with much use of imitation (its refrain is in *NOHM*, iii, p.346). The syllabic element is also notable in *O Maria et Elizabeth* (MB, xi, no.28) and was probably used because the text is rather long and unfamiliar. The antiphon may have been composed to commemorate the pregnancy of Elizabeth, wife of Henry VII, who gave birth to Prince Arthur on 10 September 1486.

JOHN CALDWELL/JONATHAN HALL

Banchieri, Adriano [Tomaso] (*b* Bologna, 3 Sept 1568; *d* Bologna, 1634). Italian composer, organist, theorist and writer. He was one of the most versatile figures in the Italian music of his day and is of particular interest as a theorist.

1. LIFE. Banchieri entered the Olivetan order of Benedictine monks in 1587, officially becoming a novice and receiving the name Adriano in 1589; he completed his solemn vows in 1590. He was a pupil of Gioseffo Guami, under whom he certainly developed much of his skill as an organist and composer. During his first years as a monk he worked at various houses of his order: in 1592 he was at the monastery of SS Bartolomeo e Ponziano, Lucca, in 1593 at S Benedetto, Siena; in 1594 he returned to the vicinity of Bologna to the monastery of S Michele in Bosco, where in 1596 he assumed the duties of organist. From 1600 to 1604 he was organist of S Maria in Regola at Imola. In 1604 he was sent to the monastery of S Pietro at Gubbio, where he met Girolamo Diruta and heard one of the great organs of Italy (built by Quemar Vincenzo), which he described in his *Conclusioni nel suono dell'organo* (1609). In 1605 he was at S Elena, Venice, and in 1606 at S Maria in Organo, Verona. He dedicated a new organ at Monte Oliveto Maggiore Abbey, the mother house of the Olivetan order, in 1607. He was in Milan at the monastery of S Vittore in 1610 during the celebration of the canonization of S Carlo Borromeo. In 1609 he returned to S Michele in Bosco, where he remained until just before his death.

In 1615 he helped to found the Accademia dei Floridi, the first such society in Bologna; his name in it was 'Il Dissonante'. The academy, which Monteverdi visited in 1620, met at S Michele in Bosco and was the immediate forerunner of the Accademia dei Filomusi. Banchieri received the honorary title of Abate Benemerito in 1618. Because of ill-health he moved to the monastery of S Bernardo, Bologna, in 1634 and in the same year he died there of apoplexy.

2. WORKS. Banchieri's sacred music includes psalms for the Offices (especially Vespers), masses and motets. The psalms are variously in relatively traditional polyphonic styles and in the more up-to-date concertato manner. His 12 extant masses all reveal an adherence to the principles of the Council of Trent. The texts are clearly presented with rather simple counterpoint and a great deal of chordal setting. Musically they demonstrate nearly all the styles of composition used in the early 17th century. There is some variation among the masses in the formal divisions of the Ordinary text, with most variety appearing in the Credo; all but three of the masses substitute a motet for the Benedictus. Banchieri's other published motets

Adriano Banchieri: engraving, 1609, from his 'Cartella musicale' (Venice: Vincenti, 1614)

appear not only under that designation but on the title-pages of later volumes in particular as 'concerti', 'pensieri' and 'dialoghi'. They include polyphonic pieces for two four-part choirs (*Concerti ecclesiastici*, 1595, including one of the earliest appearances of a separate instrumental bass part), duets with continuo (*Dialoghi, concerti, sinfonie, e canzoni*) and monodic pieces (*Terzo libro di nuovi pensieri ecclesiastici*, 1613). Organ masses and other liturgical and non-liturgical works for organ are found in various editions of *L'organo suonarino* (1605).

Although there is evidence that some early pieces are lost, Banchieri acknowledged in his own numbering of his works only the 12 secular volumes that survive. He seems to have written most of the texts himself and made some use of dialect in them. These volumes include six books of canzonettas for three voices, each containing some 20 textually related pieces which often employ the plots of the *commedia dell'arte*. Among these is his most famous, widely performed and frequently published work, *La pazzia senile* (1598), based on the amorous adventures of the *commedia dell'arte* character Pantaloon. This is a madrigal comedy in the Vecchi tradition, and two of the other three-voice books belong to this genre, *Il metamorfosi musicale* (1601) and *Prudenza giovenile* (1607) (called *Saviezza giovenile* in its second edition): *see also* MADRIGAL COMEDY. The other six books, which include comparable entertainment works, are basically for five voices (though they contain a few for smaller forces); the individual pieces in the earlier collections are called madrigals. The last three books include a continuo: the music becomes less polyphonic as groups of fewer than five voices are employed in conjunction with the bass, which takes on an individual role and displays melodic characteristics of its own. The subtitles of these last three books offer some clue to the changing character of the music; as well as vocal pieces *Il virtuoso ritrovo academico* (1626) contains canzonas specifically for violins. The subject matter of these 12 collections, especially those for five voices, also includes the pastoral stories of Greek mythology (*Il zabaione musicale*, 1604) and the presentation of a single idea (in *Vivezze di flora e primavera*, 1622, each madrigal adds to the general idea of nature reawakening in spring). Banchieri was also a pioneer in writing canzonas and fantasias for instrumental ensemble, which are evidently original works for the medium and not arrangements of vocal pieces.

Banchieri's writings about music deal almost exclusively with compositional and performing practice; the *Conclusioni* is exceptional in that it contains extended passages of theoretical speculation. It is also the only text which wholeheartedly embraces the 12- or even 14-mode systems of Glarean and Zarlino; his other writings, notably *L'organo suonarino*, discuss the traditional and more practical 8-mode system. In *Cartella musicale* (1614) Banchieri merged the 8 psalm tones and the 12 modes into a system of 8 'psalm tone keys' that was widely adopted in 17th-century theory and compositions (*see* MODE, §III, 5 (ii)). In *L'organo suonarino* he described the realization of bass figures, gave instruction for accompanying liturgical chant and provided bass parts for many chants: in the second edition he gave specific organ registrations. He was one of the first to expand the solmization system from a hexachord by adding the variable seventh step *ba* (B♭) and *bi* (B♮). This process is outlined in *Cartella musicale*, a large and interesting work in several parts, each of which was evidently published separately, with separate title-pages. The work also includes descriptions of the metrical beat as implied by a bar-line, and of the modern tie (*legatura moderna*): examples of ties are found in the *Terzo libro di nuovi pensieri ecclesiastici*. A short table of vocal ornaments is also given in *Cartella musicale*. Banchieri was one of the first composers to use dynamic marks; an example is found in the concerto *Ego dormio* in the *Terzo libro di nuovi pensieri ecclesiastici*.

Banchieri also wrote extensively outside music, including several popular works that were often reprinted and translated. His earliest such work, *La nobilità dell'asino*, written under the pseudonym Attabalippa dal Peru, appeared in English as *The Nobility of the Ass* (London, 1595) three years after it first appeared in Italy. His usual pseudonym was Camillo Scaliggeri dalla Fratta, under which all his other literary works not identified by his own name appeared. He wrote several books on the dialects found in the vicinity of Bologna and edited and reprinted a book by Giovanni Zanti on the architecture of Bologna.

WORKS

Edition: *A. Banchieri: Opera omnia*, ed. I. Vecchi, AntMI, *Monumenta bononiensa*, xii (1963–) [V]

SACRED

published in Venice unless otherwise stated

Concerti ecclesiastici, 8vv, bc (org) (1595); 2 in V

Salmi ... i Vespri di tutte le feste, e solennità dell'anno, e nel fine 2 cantici della BVM, 5vv (1598)

Messa solenne, dentrovi variati concerti all'introito, graduale, offertorio, levatione e comunione, et nel fine l'hinno degli gloriosissimi SS Ambrogio et Agostino ... libro III, 8vv (1599); 2 ed. in Wernli

Eclesiastiche sinfonie, dette canzoni in aria francese, per sonare, et cantare, 4vv, bc (org), op.16 (1607); ed. in Bowman
Gemelli armonici ... parto 21, 2vv, bc (org) (1609, enlarged, rev. 2/1622)
Vezzo di perle musicali modernamente conteste alla regia sposa effigiata nella sacra cantica, 1–2vv/insts, bc (org), op.23 (1610); ed. M.G. Genesi (Piacenza, 1992)
Secondo libro di nuovi pensieri ecclesiastici, 2vv/insts (Milan, 1611), lost
Terzo libro di nuovi pensieri ecclesiastici, 1–2vv, bc (hpd/theorbo/arpichittarone/org), op.35 (Bologna, 1613[5]/*R*1969 in BMB, xl); 1 ed. in Kirkendale
Salmi da recitarsi à battuta larga, et nel fine 3 variate armonie sopra il Magnificat, 4vv, bc (org), op.33 (1613)
Due ripieni in applauso musicale, 8vv/insts, bc (org) (Bologna, 1614)
Sacra armonia, 4vv, bc (org), op.41 (1619)
Primo libro delle messe e motetti, 3vv, bc (org) (1620) [incl. inst pieces]; 1 mass and 1 sonata ed. in Kirkendale
Dialoghi, concerti, sinfonie, e canzoni, 2vv, bc (org), op.48 (1625, enlarged 2/1629); see Mischiati, 152
Other sacred works, 1616[2], 1617[24], 1620[2], 1622[2], 1623[2], 1624[2], 1626[2], 1626[3], 1626[4], 1627[1], 1627[2], 1628[2], 1628[3] (according to Mischiati)

SECULAR

Canzonette, novamente, sotto diversi capricci, composte ... Hora prima di recreatione, 3vv (Venice, 1597); 2 ed. in Wernli
La pazzia senile: ragionamenti vaghi, et dilettevoli ... libro II, 3vv (Venice, 1598, rev. 2/1599); ed. in AMI, iv (n.d.) and in Capolavori polifonici del secolo XVI, vi (Rome, 1955); 2 intermedii in V
Il studio dilettevole ... con vaghi argomenti e spassevoli intermedii fioriti dal Amfiparnasso ... del Horatio Vechi, 3vv (Milan, 1600) [title taken from 2/1603]
Il metamorfosi musicale: 4° libro delle canzonette ... con spassevoli trattenimenti, diviso in epilogati, e vaghi discorsi, 3vv (Venice, 1601, rev. 2/1606); V
Il zabaione musicale: inventione boscareccia, et 1° libro di madrigali, 5vv (Milan, 1604); ed. P. Mecarelli (Florence, 1987)
Barca di Venetia per Padova ... libro II de madrigali, 5vv, op.12 (Venice, 1605, rev. 2/1623 with bc (spinet/chit) ad lib); ed. in Capolavori polifonici del secolo XVI, ix (Rome, 1969)
Virtuoso ridotto tra signori, e dame ... una nuova comedia detta Prudenza giovenile, 5° libro degli terzetti, op.15 (Milan, 1607, rev. 2/1628 as Saviezza giovenile, 3vv, bc (spinet), op.1); 2/1628 ed. R. Allorto (Milan, 1956)
Festino nella sera del giovedi grasso avanti cena, genio al 3° libro madrigalesco, 5vv, op.18 (Venice, 1608); ed. E. Enrico (Norman, OK, 1981)
Tirsi, Fili e Clori ... il 6°, et ultimo libro delle canzonette, 3vv (Venice, 1614)
Vivezze di flora e primavera, 5vv, bc (spinet/chit), op.44 (Venice, 1622); ed. in Capolavori polifonici del secolo XVI, xii (Rome, 1971)
Il virtuoso ritrovo academico ... 1–5vv/insts, bc, op.49 (Venice, 1626) [incl. canzonas, 2 vn]; see Mischiati, 152; 1 ed. in Kirkendale; 2 ed. in Wernli
Trattenimenti da villa ... up to 5vv, bc (chit) (Venice, 1630); 1 ed. in Kirkendale
Works in 1607[20], 1609[33], 1615[3]; 3 works, 4vv, in A. Banchieri: *La nobilissima anzi asinissima compagnia* (Vicenza, 1597), ed. in Wernli; 4 works, 4vv, in A. Banchieri: *Il donativo di 4 asinissimi personaggi, et insieme 6 servitori d'essi* (Milan, 1598); 1 work, 6vv, in A. Banchieri: *La nobiltà dell'asino* (Venice, 3/1599), ed. in Wernli

INSTRUMENTAL

Canzoni alla francese, a 4 ... in fine una battaglia, 8[vv] e 2 concerti fatti sopra Lieto godea ... libro II (Venice, 1596); V
[21] Fantasie, overo Canzoni alla francese, a 4, bc (org, other insts) (Venice, 1603); incl. some works from Canzoni (1596); ed. in IIM, xviii (1995)
Moderna armonia di canzoni alla francese, a 1–2, bc (org/hpd), con l'aggiunta in fine di 2 fantasie, a 4, et uno Magnificat, 4vv, op.26 (Venice, 1612); 1 ed. in Venetian Instrumental Music c. 1600, xv (London, 1977)
Other vocal and inst works in *A-Wm*, *B-Br*, *D-Bsb*, *Mbs*, *GB-Lbl*, *I-CARcc*, *PL-GD*, *WRu* (all according to Mischiati)

THEORETICAL WORKS
only those on music

Cartella, overo Regole utilissime à quelli che desiderano imparare il canto figurato ... divise in 2 parti (Venice, 1601; rev. 2/1610; rev. 3/1614 as *Cartella musicale*, Eng. trans., 1981; rev. 4/1615 as *La cartellina musicale*, op.35; rev. 5/1623 as *La banchierina, overo Cartella picciola del canto figurato*) [various subdivisions of 1 or more of the edns are: *Brevi documenti musicali*; *Brevi et primi documenti musicali*; *Duo in contrapunto sopra ut, re, mi, fa, sol, la*; *Altri documenti musicali nel canto fermo*; *Duo spartiti al contrapunto*; *Canoni musicali*, 4vv; *Moderna practica musicale*, op.37; *Cartelle semplici*; *Indice delle opere musicali date in luce*]; vocal ornaments repr. in *Musica practica, sive Instructio pro Symphoniacis* (Nuremberg, 1642); 1 work from rev. 5/1623 repr. in *Synopsis musica*, ed. WILLIAM S. MAY (with FRANS WIERING)

Banci, Giovanni (*fl* 1619). Italian composer. The only information about him – that he came from Argenta and worked in Bologna – appears on the title-page of his one extant publication: *Il primo libro de sacri concerti . . . et . . . le litanie della BVM* (Venice, 1619). He was typical of many modest church composers in northern Italy in the early 17th century who wrote competently in the new

concertato style for smaller church choirs, using both up-to-date duet and trio textures and also more conventional four- and five-part ones. (J. Roche: *North Italian Church Music in the Age of Monteverdi*, Oxford, 1984)

JEROME ROCHE

Bancquart, Alain (*b* Dieppe, 20 June 1934). French composer and viola player. He studied the viola, chamber music and composition (with Milhaud) at the Paris Conservatoire (1952–9). He became principal viola in the Orchestre National de France (1962–73), where he was later artistic director (1975–6). He was made principal music inspector at the Ministry of Culture and Communication (1977) and became responsible for producing the programmes *Perspectives du XXème siècle* on Radio France (1977–84). He was appointed professor of composition at the Paris Conservatoire in 1984. In 1986 he received the *Grand Prix National de la Musique* and the following year the *Grand Prix de la Musique Symphonique* awarded by SACEM.

From the start he adopted a rigorously serial, atonal language, later (from 1968) making systematic use of quarter tones, defective modes and non-octaves. His lyrical temperament expresses itself above all in chamber and orchestral forms, in concert works and in five symphonies of great breadth. His inspiration frequently comes from poetry, as in *Les cinq dits de Jean-Claude Renard* (1987), and a mystical impression is evident in his work, particularly his vast fifth symphony *Partage de Midi* (1992), after Paul Claudel's play.

MICHEL RIGONI

Baniera, Antonio. *See* BAGNIERA, ANTONIO.

Band (i) (Fr. *bande*; Ger. *Kapelle*; It., Sp. *banda*). An instrumental ensemble. This article deals exclusively with Western uses of the term 'band'.

I. Introduction. II. History to 1800. III. Mixed wind bands. IV. Brass bands. V. Jazz bands. VI. Rock bands.

I. Introduction

The word 'band' has many applications in music, more or less precise. In a general sense, it may refer to almost any ensemble of instruments. When used without qualification it commonly applies to a group of musicians playing combinations of brass and percussion instruments (a brass band; see §IV below) or woodwind, brass and percussion (e.g. a wind band, a circus band or a symphonic or concert band; see §III below). The '24 violons' of Louis XIV were called 'la grande bande' to distinguish them from Lully's 'petits violons', and Charles II's similar ensemble was known as 'the king's band'. By extension, 'band' came to mean orchestra in colloquial British usage: the two terms can also be used interchangeably. In Europe the wind and percussion band is descended from the 'high' or 'loud' groups (*see* ALTA (i); and see §II (a) below) of the medieval period and from the civic waits or the *Stadtpfeifer*, who generally performed outdoors and therefore used predominantly loud brass and percussion instruments. Bands were often mobile, had a vernacular appeal (they usually performed lighter forms of music, often to a non-paying audience; as such they have also served as useful propaganda tools, or at least assisted in promoting nationalistic or patriotic fervour), and were often associated with specific military or civic duties and were thus uniformed. The ORCHESTRA, on the other hand, is descended from the medieval 'low' or 'soft' instruments (strings and softer wind instruments), and usually plays indoors. It was originally associated with the church or the nobility, and later with formal concerts of more 'serious' and sophisticated music for which audiences paid.

'Band' is often qualified by the dominating instrument or family of instruments, as in brass band, HORN BAND, STEEL BAND, accordion band (piano accordions of various sizes with percussion instruments), banjo band, pipe band (bagpipes and drums), fife and drum band, and flute band (a marching band of flutes and percussion found particularly in Northern Ireland). In a JUG BAND or a WASHBOARD BAND the eponymous instrument plays an integrated part in the musical texture rather than a dominant role.

Bands may also be named according to their function rather than their constitution (although mixed wind bands are often misleadingly described as 'military bands' whether they have a military role or not), as in the dance band, the theatre band (or 'pit band', if it plays in the theatre pit), the marching band and the showband. The stage band is a group of musicians playing either on stage or behind the scenes; a familiar example is the band in Mozart's *Don Giovanni* (1787), and many instances may be found in French and Italian operas by Meyerbeer, Spontini, Verdi and his successors. In Italy it is called 'banda', as is also sometimes the brass section – or the brass and percussion together – of an orchestra.

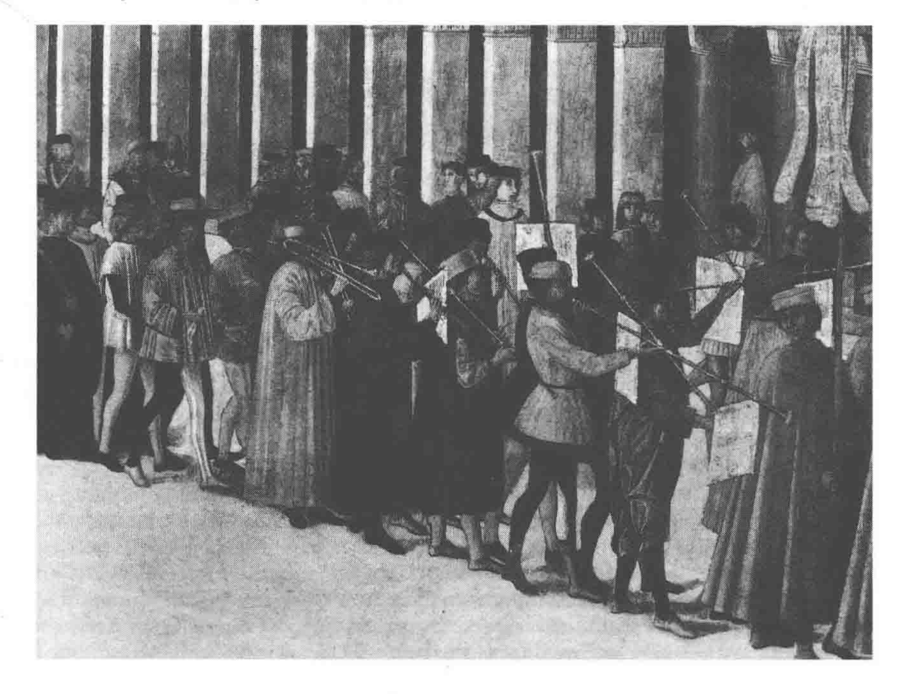
Bands may also be named according to, or in a way that associates them with, the style of music that they play, as in jazz band and big band (related to the dance band; see §V below), pop, skiffle, rock and folk bands (see §VI below). During the 20th century the words 'band' and 'group' have often been used synonymously in popular culture.

See also MARCH and MILITARY MUSIC.

II. History to 1800

1. Before 1600. 2. 1600–1800: (i) Military music (ii) Harmonie (iii) Civic and church bands.

1. BEFORE 1600. The earliest wind bands in Europe were well established by the 13th century; they were similar to those of the Near East, consisting of shawms, trumpets and drums (*see* NAQQĀRAKHĀNA). By about 1400 the trumpets and drums had split off into separate ceremonial ensembles (fig.1). Early in the 15th century a slide instrument was added to the shawms, and the ensemble, consisting of three or four musicians (one or two shawms, bombard and trombone), quickly developed (by 1475) a highly sophisticated performance tradition (fig.2). This was the group of choice for dancing, processions, banquets and other secular ritual occasions



1. Mounted trumpeters and kettledrum players: woodcuts by Hans Burgkmair I from the 'Triumphzug Maximilians', c1516–18

(*see* ALTA (i)). By the late 15th century it was a preferred ensemble throughout Europe, as every major court and important city patronized one. Courtly ensembles were engaged from the beginning exclusively for their musical capabilities, as was also the case in many German cities where the musicians were known as *Stadtpfeiferei* ('town pipers'; *see* STADTPFEIFER). In many regions, however, city bands initially combined a watchman function with their musical duties, which was reflected in such names as 'waits' in England and *wachters* in the Low Countries (*see* WAIT. The watch function was dropped almost everywhere by the late 15th century, although the bands continued to perform from church and city towers. Soon after 1500 some shawm-based ensembles expanded to six or even eight performers, and at the same time these musicians were expected to command a wider range of instrumental doublings, including cornetti, crumhorns and recorders. Musical demands also expanded, as wind players increasingly joined singers in all manner of performances, including those within church services (*see* PERFORMING PRACTICE, §I, 4). In the early 16th century the ensemble reached an artistic peak with musicians such as Tromboncino and Susato, whose careers were rooted in the wind band tradition. By about 1550 a new fashion for string instruments (especially the violin) began to mount a challenge, and by late in the 16th century the artistic position of winds began to decline. The decline was gradual, however, and until the early 17th century leading chapel masters and composers (such as Hans Leo Hassler) continued to be associated with wind bands.

See also SHAWM.

2. 1600–1800.

(i) Military music. Musicians in the army of the German Empire were usually supplied by a guild of trumpeters and kettledrummers which had certain privileges. Towards the end of the Thirty Years War (1646) the Brandenburg Dragoon Guards had a band of shawms (two treble and one tenor, with a dulcian for the bass) and drums. Under Louis XIV bands were organized in the French army after the model of those in the German regiments. With the development of the new French *hautbois* (oboe) around the middle of the century, the French bands, probably gradually, adopted the new instrument; by 1665 each company of *Mousquetaires* had three *hautbois*, and the number soon increased to four, including a tenor instrument (possibly at first a *cromorne*, later a *taille de hautbois*; *see* OBOE §I, 2(ii)) and a dulcian or bassoon. Many of the marches and *airs* written for them by Lully, Philidor *l'aîné*, Martin Hotteterre and others are preserved in the manuscripts of the Philidor Collection under the title *Partition de plusieurs marches et batteries de tambour tant françoises qu'étrangères avec les airs de fifre et de hautbois a 3 et 4 parties* (*F-Pn* Rés. F.671; see ex.1). The use in this period of the word 'hautbois' for both the shawm and the new instrument makes it sometimes difficult to determine which instruments were intended, and it is unclear how long shawms or transitional instruments remained in use in the French

2. Musicians playing trombones, shawms and trumpets: detail from 'Procession of the True Cross in the Piazza S Marco' by Gentile Bellini, 1496 (Galleria dell'Accademia, Venice)

Ex.1 *L'assemblée* (*F-Pn*; printed in Kastner, 1848)

army and elsewhere. Many of the pieces in the *Partition de plusieurs marches*could be played by either shawms or oboes. The bassoon appears to have replaced the one-piece dulcian by the end of the century.

The new *hautbois* soon spread, through military and diplomatic contact, across Europe. Johann Philipp Krieger's *Lustige Feld-Music* of 1704 is an early German example of music for the new ensemble of French *hautbois*. Krieger advised certain doublings of the four parts in the open air, and by the end of the 17th century such bands often had six members: a band of six young 'Hautboisten', led by a French musician who trained and directed them, played at Zeitz castle in 1698 and was sent to Vienna at the request of the Habsburg court in 1700. Hans Friedrich von Fleming noted in 1726 that bands of French *hautbois* consisted of six instruments – two trebles, two *tailles* and two bassoons – 'because the [French] *hautbois* were not as loud, but sounded much sweeter, than the shawms' (Fleming, p.181). The combination of three treble *hautbois*, a tenor and two bassoons was also common. By 1720 the tenor instruments had been replaced by horns in many bands in central Europe: such ensembles are depicted in engravings from the period, including one from Leipzig dated 1720 (with three treble *hautbois*, two horns and a bassoon), and music for woodwinds and horns had begun to appear (the earliest dated work is a *Marche* by J.G.C. Störl for pairs of oboes, horns and bassoons, dated 1711). Some bands had a trumpet instead of horns; Fleming considered this combination characteristically English. In Prussia, a trumpet was added to the wind sextet. Bands of *Hautboisten* played for marching; they also played morning and evening before the residence of the commander and when the commander entertained (then they might sometimes play string instruments). As well, they provided music for processions and other public ceremonies (*see* FESTIVAL, §2). A collection of music assembled between about 1712 and 1725 with pieces scored for two or three oboes, *taille* and bassoon or for three oboes, trumpet and bassoon (most with two bassoon parts) survives as the *Sonsfeldische Musikaliensammlung* (*D-HRD* Fü3741a). The *Douze grands hautbois* of the French court still consisted solely of double-reed instruments in 1722, when they played for the coronation of Louis XV (*see* OBOE, fig.4). Elsewhere in Europe bands had become somewhat larger by the middle of the century with the doubling of the upper parts, and ensembles of eight or ten musicians were not unusual. Also about the middle of the century, clarinets began to be used in place of, or as a supplement to, the oboes. An engraving published in London in 1753 depicts a band of two oboes, two clarinets, two horns and two bassoons preceding a company of grenadiers (fig.3) and in 1762 the Swiss Guards in France were authorized to have a band consisting of four each of oboes, clarinets, horns and bassoons. In 1763 Frederick the Great stipulated that Prussian army bands should consist of two oboes, two clarinets, two horns and two bassoons. However, bands of six players in which the treble instruments were either oboes or clarinets remained common, and many musicians played both. There were also bands of other combinations: the grenadier company in Salzburg had a band of two clarinets, two fifes and two drums in 1766 (*see also* FELDMUSIK).

At the Restoration in England the band of the King's Life Guards consisted of trumpets and kettledrums, but the practice of using the 'hautboy' as a military instrument was soon imported from France: oboes were appointed to the Horse Grenadier Guards in 1678 and to the Foot Guards in 1684–5. The fife, use of which had been discontinued during the period of the Commonwealth, reappeared in the British army in the mid-18th century. The cavalry was still normally restricted to trumpets and kettledrums, although some regiments adopted fifes and drums for unmounted playing. Horns were usual in British army bands by mid-century. Handel wrote marches and other pieces for two oboes, two horns and basso (and also two marches for trumpet, two oboes and basso). His 'Grand Overture of Warlike Instruments', or *Music for the Royal Fireworks* (1749) is scored for an expanded version of the ensemble, with the addition of kettledrums. Clarinets were in general use after the middle of the century; the common scoring for two clarinets, two horns and bassoon is exemplified by J.C. Bach's four *Military Pieces* (the bassoon part may often have been doubled). In 1762 an ensemble was brought from Germany to serve as the 'Royal Artillery Band': it consisted of 'eight men, who must also be capable to play upon the violoncello, bass, violin and flute as other common instruments' and was provided with two trumpets, two horns, two bassoons and 'four hautbois or clarinets' (Farmer, C(i)1904, p.36). A perhaps not uncommon arrangement was described by Richard Hind in *The Discipline of the Light Horse* (London, 1778, pp.206–7): 'in the year 1764 . . . each troop [had] one trumpet, who when they are dismounted, form[ed] a band of music, consisting of two French horns, two clarinetts and two bassoons'.

3. *Band of two oboes, two clarinets, two horns and two bassoons: engraving, 1753 (National Army Museum, London)*

European musical traditions, including bands, were taken to North America by colonists and military units. Bands took an important role in musical life there and distinct customs soon developed (see §III, 4 below).

An important development during the 18th century was the adoption by European military bands (and orchestras) of 'Turkish' or 'janissary' music (*see* JANISSARY MUSIC). In a miniature from the early 18th century (fig.4) a Turkish *mehter* (military band) is shown playing *boru* (trumpet), *zil* (cymbals), *davul* (cylindrical drum played on one side with a drumstick, on the other with a switch of twigs) and *kös* (large kettledrums). Such ensembles might also include the *zurna* (shawm) and *nakkare* (small kettledrums). The bands of the Sultan of Turkey's elite troops (the janissaries) made a great impression on the European armies during the wars of the 17th century and the first half of the 18th. The Sultan presented a band to Augustus II of Poland (reigned 1697–1733) and an imitation of Turkish music was performed at the Court of Empress Anne of Russia in 1739. A Turkish band had been added to the Austrian Commander Freiherr von Trenck's troop by 1741, and in the War of the Austrian Succession (1740–48) the French Marshal de Saxe's Uhlans adopted this music too. Prussian regiments used janissary instruments and later engaged Turkish musicians to play them. Around the mid-18th century European bands began to add 'Turkish' instruments, first a large bass drum, later cymbals and triangle. The Turkish crescent was added at the end of the century. Some percussionists were Moors or black; they were dressed in an exotic manner and used extravagant gestures. By the 1780s a 'Turkish band' in Europe was usually one of European instruments with added percussion and a piccolo; a band reported in Vienna in 1796 included oboes, bassoons, horns and clarinets, a trumpet, a triangle, a piccolo, a very large drum, an ordinary drum and a pair of cymbals (Schönfeld, *Jahrbuch der Tonkünst in Wien und Prag*, Vienna, 1796, p.98). This band was not engaged in military duties, but rather played outdoor concerts in the summer. British bands often added a tambourine. The janissary influence remained visible at the end of the 20th century in the tiger- and leopard-skin aprons used by bass drummers and in their elaborate drumstick flourishes, while the shape of the marching band's bell-lyra recalled the Turkish crescent.

Towards the end of the 18th century military bands added more instruments, partly because the increase of percussion under the influence of janissary music made it necessary, for purposes of audibility, to increase the wind as well. More clarinets were added: there were six in the Grenadier Guards in 1794 and in the bands provided from 1795 in France by the Conservatoire Nationale de Musique (founded as the Ecole de Musique de la Garde Nationale by Bernard Sarrette in 1792 to supply the need for military musicians). New instruments came into use: a Divertimento written by Thomas Attwood in collaboration with Pleyel and Storace was scored for pairs of clarinets, basset-horns, horns and bassoons with serpent. An arrangement of J.C. Bach's Overture to *Lucio Silla*copied by Henry Pick in about 1800 includes parts for two flutes, two oboes, three clarinets, two horns, two trumpets, two bassoons, serpent and alto and tenor trombones; some of his other arrangements include parts for side drum. French bands grew larger and more varied during the Revolution. Catel's *Ouverture militaire*, for example, includes parts for two *petites flûtes*, two flutes, two clarinets, two trumpets, two horns, three trombones, two bassoons, serpent and timpani. By about 1810 the larger European military bands had reached their present size (Table 1), having further increased the number of clarinets and added small clarinets and in Germany often basset-horns; the brass instruments regularly included trombones while extra pairs of horns and trumpets made different crookings simultaneously available. In England the serpent was supported by the bass horn and in the German lands by the double bassoon (ex.2). A typical French infantry band of 1809 consisted of piccolo, E♭ clarinet, six to eight B♭ clarinets, two bassoons, two horns, trumpet, two or three trombones, one or two

4. March of the mehter (military band) with (from left to right) six boru (trumpets), six pairs of zil (cymbals), eight davul (cylindrical drums) and in the background three pairs of kös (kettledrums): miniature from the 'Sūrnūma' ('Book of Festivals') of Ahmed III, c1720 (TR-Itks III.A.3593, f.172r)

serpents, side drum, bass drum, cymbals and *pavillon chinois* (Turkish crescent).

(ii) Harmonie. From the end of the 17th century bands of *hautbois* often did double duty, playing military music and for outdoor festivals as required, but also playing indoors for court events, either as an independent ensemble or as part of an orchestra. The eight *hautbois* of the *Mousquetaires* played for divertissements, water parties, balls and other events at the French court. Two horn players appointed to the Württemberg court in 1713 were expected to play both in the orchestra and in the regimental band. When the Treaty of Utrecht brought peace in 1713, the band was employed for baptisms, balls, church services and carnival, and accompanied members of the royal family on their travels. Later in the century, contracts for the wind players hired by the Esterházy court in 1761 indicate that they too performed both military and court duty. It was from such groups that the 'Harmonien' developed; the term was applied both to groups of wind instruments employed by the aristocracy (and others) and to small military bands. The size of *Harmonie* ensembles ranged from two instruments to above 20 (21 were required for a special piece by Georg Druschetzky, performed for the coronation ceremonies for Leopold II in Pressburg in 1790), but most had between five and nine instruments, most commonly in

three or four groups – horns and bassoons, with either oboes or clarinets or both – and in pairs (sometimes there was a single bassoon part, played by two bassoons). Flutes, english horns and basset-horns were also occasionally used and a double bass or double bassoon was sometimes added (especially towards the end of the 18th century). *Harmonie* bands played at the Concert Spirituel in Paris in the 1760s and 1770s, and Mozart's Serenade in B♭ K361/370*a* for 12 wind instruments and double bass was performed at a public concert in Vienna in 1784. Although *Harmonien* were supported primarily by aristocrats, similar ensembles played in the streets and for less exalted patrons. Mozart's Serenade in E♭ K375 (1781), originally written for an ensemble of clarinets, horns and bassoons, was played in the street (the composer commended the players' performance); it was reworked the following year for pairs of oboes, clarinets, horns and bassoons, perhaps with one of the aristocratic ensembles in mind. The latter combination was popularized by Emperor Joseph II in Vienna in the 1780s. His ensemble was made up of the best wind players of the day, and played a repertory consisting primarily of opera transcriptions. Many *Harmonien* had been disbanded by the end of the 18th century, but some remained active well into the 19th (*see* HARMONIEMUSIK).

(iii) Civic and church bands. Bands of musicians continued to form part of the civic establishment throughout the 17th and 18th centuries and into the 19th. They performed civic duties, such as sounding Retreat, and played for celebrations, processions and church services, public and private balls, parties and concerts. To match the wide variety of duties assigned to him the town musician required skill on several instruments (including string instruments: see, for example, the account of a town musician's training in Quantz's *Lebenslauf*) and a wide repertory, including signal pieces, dance pieces, conversation music and, in the 18th century, sinfonias and concertos (*see also* STADTPFEIFER). Some town musicians were retired regimental musicians; others came from families in which the profession was traditional. In their competition with other musical organizations, such as the guild of trumpeters and kettledrummers, the town bands had acquired certain rights and privileges governing, for example, where and when they might play. By the end of the 18th century, however, the social structures that supported this order were disappearing and with them the bands of all-purpose musicians: most bands in Germany had disappeared by the 1790s, and in England many were dissolved at the time of the Napoleonic wars. In France new types of bands sprang up to fill in music the ideals of the new Revolutionary order. Gossec became conductor of the Corps de Musique de la Garde Nationale (with Sarrette) and wrote fervently Revolutionary music for it, beginning with a *Te Deum* performed on 14 July 1790 by a band of over 300 woodwind and brass instruments, serpents and violas, with 300 drums and a chorus of as many as 1000 (violas were not used in subsequent outdoor works). Similar works as well as purely instrumental pieces by Gossec, Méhul and Grétry were performed on state occasions by bands of between 30 and 70 wind players, together with drums.

In Russia a unique type of band was established in 1751 by J.A. Mareš: it consisted of an ensemble of hunting horns ranging from 30 cm to 2 metres in length, each able to play only one or two notes; horn bands of up to 22 players visited Western Europe in 1817 and 1833 and sets of the instruments were exhibited in Vienna as late as 1892 (see HORN BAND). Similar bands of about 13 players were known in Bohemia and Saxony.

In England by about 1740 the singing of the choir had begun to be accompanied in parish churches – which usually had no organ – by an instrument or two, such as a bassoon or bass viol on the bass part and occasionally an oboe to double the melody (the tenor part) an octave higher. By about 1770 'church bands' included singers and two to five or six instrumentalists. Their music was sometimes known as GALLERY MUSIC because they often performed from a specially built gallery. The instrumentalists were an integral part of the ensemble, supporting the vocal lines and leading the singers. Before the turn of the century double reeds predominated (bassoon, oboe and occasionally *vox humana*), but after about 1800 string instruments (bass viol, cello, violin) were more usual, supplemented by clarinets and, later, brass instruments such as keyed bugles, cornopeans and ophicleides. The instrumentation was never standardized, but depended on local resources. Some bands remained active into the 20th century, but most had been replaced by reed organs or barrel organs by the middle of the 19th (*see also* PSALMODY (ii), §I and fig.2).

An ensemble of double-reed instruments, known as the HAUTBOIS D'EGLISE, was used for a similar purpose – to accompany the singing of Lutheran chorales – in Protestant Switzerland between about 1760 and 1810. The instruments included two *dessus de musette*, oboes, recorders or flutes on the upper parts, a *basse de musette* to play the tenor and a *basson d'amour*.

III. Mixed wind bands

1. Terminology. 2. Military bands. 3. Civilian bands. 4. American wind bands. 5. Repertory.

1. TERMINOLOGY. The term 'military band' dates from the late 18th century and denoted at that time a regimental band consisting of woodwind, brass and percussion instruments. During the following century it came to be applied as well to civilian bands of similar constitution. With the growth of civilian wind bands for all sorts of activities (outdoor entertainment, marching etc.) the epithet 'military' became increasingly inappropriate; the more general 'mixed wind band' is accordingly used here to define the whole group of bands, 'military band' being reserved for a mixed wind band maintained by the armed forces. The words used in other languages as equivalents for 'military band' support a more general designation since many of them make no reference to a specific military function: Fr. *bande*, *harmonie*; Ger. *Blaskapelle*, *Blasorchester*, *(Militär-)Musikkorps*; It. *banda*, *corpo di musica*; Sp. *banda*. A wind ensemble is distinguished from a wind band in having one player to each part.

2. MILITARY BANDS. The band of the Garde Républicaine, among the first of the new, larger bands founded immediately after the French Revolution, set the pattern for the 19th century. A new concept, that of the symphonic wind band, in which groups of like instruments serve in sections analogous to those of the orchestra, began to gain prominence; the new ensemble is apparent in works such as Beethoven's March WoO24 of 1816. The instrumentation of bands evolved separately in different regions, but all came to conform to the new concept (see Table 1). The development of valved brass instruments by both

Stölzel and Blühmel early in the second decade of the 19th century was of overwhelming importance, allowing the entire range of brass instruments to play chromatically.

Infantry bandmasters in Germany and Britain have from the onset of the valve era, out of conservative feeling and practical consideration, generally kept to the well-balanced instrumentation advocated by military journals of the mid-19th century (exemplified in England by C. Boosé's *Military Journal* from *c*1845). As shown in ex.2, this consists of a contemporary orchestral wind and percussion group augmented to fulfil band requirements and filled out with a few extra instruments. Saxophones, invented for the band, were first used in French infantry bands about 1845. The treble is led by cornets, flugelhorns or trumpets and the bass is supplied by valved basses; a string bass is often added in concert performance. The only other instrument foreign to the orchestra is the euphonium, which helps with nearly everything prominent in the tenor and bass registers.

In Austria, the new style of military band, with choirs of woodwind instruments and brass, the clarinets predominating, is mentioned in documents from 1800 onwards. A report of the *Hofkriegsrat* to Emperor Franz I (20 September 1820) draws attention to the large size of some ensembles – 50 to 60 men – and their expensive and 'unmilitary' dress, all due to the officers' desire for prestige and magnificence. Two years later the emperor decreed that infantry bands be limited to 34 men apiece and regimental staff bands to ten. The combination was determined by individual bandmasters. Wind instruments with keys and brass instruments with valves were adopted early in Austria: the *Allgemeine Schule für die Militärmusik* (Vienna, 1845) confirms that trumpets, flugelhorns, horns and even trombones had changed to valves by this time. Table 2 shows the composition of Austrian military bands in 1820 and 1845. The band of Fahrbach's *Organizzazione* is a typical Austrian infantry band, with a large clarinet section, trumpets of different sizes, and the soft-sounding flugelhorns and euphonium. The army Kapellmeister Andreas Leonhardt (1800–66) introduced far-reaching reforms in Austro-Hungarian military music with his *Systemisierung der Militär-Musikbanden* of 1851. The strength of each band was increased to 60 men and the bands of the infantry, cavalry and jäger were made similar. These ensembles remained largely unchanged until World War I. Leonhardt's reforms were influential in the USA and Japan, and above all in Prussia.

In Prussia soon after 1800 different ensembles were assigned to different branches of the military: trumpet corps to the cavalry; horn bands to the jäger; and mixed wind bands to the infantry (ten 'Hoboisten', or military bandsmen), the grenadiers (18 men) and the guards (24 men). In 1816 line regiments were permitted to expand to 30 members, and Prussian bands developed in a similar way to the French and Austrian ensembles, with woodwind and chromatic brass instruments complemented by percussion instruments from janissary music. Wilhelm Wieprecht (1802–72), director of music of the corps of guards from 1838, was in contact with Leonhardt, and reformed the military bands of Prussia after the Austrian model. Wieprecht played a leading role in the development of new valved brass instruments including the *Tenorhorn* (*Bass-Flügelhorn*), the *Tenorbasshorn* in B♭, the *Sopran-* and *Altkornett* and the *Bass-Tuba*. He specialized in large-scale concerts: in Lüneburg in 1843 he conducted

the entire musical corps of the 10th Deutsches Bundesarmeekorps, comprising over 1000 bandsmen. Wieprecht's ideal ensemble consisted of two flutes, two oboes, 11 clarinets, two *Tenorhörner*, euphonium, two tenor trombones, bass trombone, four *Bombardons* (tubas), two bassoons and two double bassoons, four trumpets, two soprano and two alto cornets, four horns, drums, cymbals, triangle and Turkish crescent. In Prussia, as elsewhere, military bands undertook a variety of musical and cultural tasks, bringing the army into contact with the civilian population. The repertory included music for military use, original works for military band and transcriptions of the latest music. Table 3 shows the instrumentation of European military bands in the mid-19th century.

The instrumentation of the military bands at a competition at the Paris Exposition of 1867 provides a useful survey of the state of European military bands of the time (Table 4). The Prussian band, however, consisted of the combined musical corps of the Prussian guards; the band of the Garde de Paris was made up of professional musicians recruited from the theatres. The first prize was shared by Austria (band of the 73rd Infantry Regiment), Prussia and the Garde de Paris. Table 5 shows the instruments used in late 19th-century bands.

In 1873 a course to train bandmasters was set up at the Musikhochschule in Berlin. In the following decades Berlin became a centre for the training of military bandmasters, not only for Prussia and other German states, but also for some non-European countries such as Japan. Around 1900 there were some 560 military bands in Germany with 23–40 musicians in each, but after World War I there remained only 140 military bands,

each with 27–37 members: civil wind music had mostly disappeared also. Military bands frequently played concerts consisting of marches and arrangements by Wieprecht and others of his generation. With the rise of National Socialism military music came to be regarded as an important tool, and many new bands were formed. Between 1935 and 1945 the band of the Luftwaffe occupied a special position: it followed the band of the US Air Force in including a larger woodwind section than usual, and its Inspector of Music Hans-Felix Husadel (1897–1964) commissioned new works from leading German composers. With the founding of the two German states in 1949 there were two separate military music organizations. In the DDR the Ministry of Defense had a band of 72 and each corps had a band for marching and for concerts. The literature was restricted mostly to new works and arrangements of workers' songs. Each corps also had a big band for dancing. The Luftwaffe band became the model for the new Bundeswehr music corps of the Federal Republic of Germany after 1956. From the 1950s there were bands for the border guards (four), the army (13), the air force (four) and the navy (two); at first each band had about 50 members, but the number was increased to 60 in 1958. There were also specialized ensembles, including a ceremonial ensemble (founded 1959) and a big band (founded 1969). In 1998 the military music of Germany consisted of one staff band, 21 bands attached to various army, navy and air force divisions, a training band and a big band.

French military bands in the 19th century included *orchestres d'harmonie* of woodwind, brass and percussion instruments; fanfare bands of brass instruments, saxophones and percussion; and the cavalry trumpet corps of brass instruments and timpani. Instrumentation was strongly influenced by the many new wind instruments developed during the 19th century by makers such as Adolphe Sax. Infantry bands of the 1830s were organized on an extravagant scale: they included full woodwind and the classic brass, strengthened by cornets, keyed bugles, alto ophicleides or clavicors, and bass ophicleides (the first edition of Kastner's *Cours d'instrumentation*, 1839, includes an example in score). The addition of a 'bande turque' made a colourful effect. However, bands were soon 'improved' by the mass of very efficient saxhorns and flugelhorns with which Sax and others smothered the old nucleus, producing a densely homogenous, somewhat bland sonority; saxhorns were widely adopted by French bands following a reorganization in 1845. Leading bands were expanded for concert performance by adding every sort of woodwind instrument, and even in some cases two desks of cellos to warm the lower register. The French model, which grew to enormous proportions, was largely followed in Italy and Spain as well. A peculiarity of French marching music is the *clairon* march, in which horn calls alternate with the band. At the end of the 20th century the Musique de l'Air of Paris was one of the leading professional wind bands in Europe.

A 'military music class' was founded at Kneller Hall in Twickenham in 1857. In 1865 it became the Royal Military School of Music. Its influence on music may be traced in the growth and improvement of the Royal

Artillery Band: in 1857 the band was doubled from 40 to 80 players, and in 1887, at 93 strong, it became the largest band in the service. British army musical directors were often civilians, and mostly foreigners. (It was the proliferation of non-military, foreign bandmasters, together with the need to regulate and standardize British service bands, that stimulated the setting up of Kneller Hall). From about 1860 bandmasters were ranked as First Class Staff Sergeants and from 1881 they were allowed to be promoted to Warrant Officers; later still they could be commissioned. By 1876 there remained only 35 civilian bandmasters in British army bands.

British military bands were standardized at a conference held at Kneller Hall in 1921: the tenor horn was abandoned and saxophones added, a trend already apparent somewhat earlier in works such as K.J. Alford's march *Colonel Bogey* (1914; ex.3). The instrumentation then established remained in force at the end of the century (for specifications of British bands in the 1980s, see *GroveI*, 'Band (i)', Table 4). The bagpipe tradition has been maintained by the Army School of Piping, founded in 1910. The RAF School of Music, whose first Organizing Director of Music Walford Davies composed the famous *March Past*, was founded in 1918. Bands have long been

associated with services such as the fire brigade and the police in Britain; the band of the Metropolitan Police was formed in 1927. At the end of the 20th century the United Kingdom supported 16 military staff bands 35–50 musicians strong and 53 regimental bands with 21–35 musicians in each.

The problem of discrepancies in pitch between bands was overcome in Britain by the issue to all regiments in 1858 of a standard B♭ tuning fork, which introduced the 'high Philharmonic pitch'. European military bands adopted the recommendations of the Paris conference of tuning standards of 1885 (Habla, C1990).

In Switzerland, where many outstanding municipal bands were initially conducted by German military bandmasters, military music was confined to militia bands and *Rekrutenspiele*. Only with the founding of the *Schweizer Armeespiel* in 1960 did that country acquire a professional military wind band. The Netherlands and Belgium, at first influenced by France and Germany, went their own way from the 1950s and by the end of the century had begun to extend their influence outwards through their excellent music publishing firms (Molenaar, Tierolff, de Haske) and composers. Important bands have included the *Grand orchestre d'harmonie des guides*, founded in 1832 as the Belgian royal musical ensemble; the Royal Military Band of Belgium; the Marine Band of the Royal Navy of the Netherlands (founded 1864); and the *Kapel van de Koninklijke Luchtmacht* (founded 1945). The *Musique militaire grand ducale* of Luxembourg enjoys a high reputation. In the Irish Republic Wilhelm Fritz Brase, a former German military bandmaster, founded the army music school, serving as its director from 1932 to 1940. At the end of the century there were four military musical ensembles in Ireland with 33–44 musicians each. In Spain, military music in the 19th century was influenced by France; the *Real Cuerpo de Alaberderos* was regarded as the finest military band there between 1875 and 1931. At the end of the 20th century the music corps of the Royal Guard was considered the leading ensemble; like the municipal bands of Madrid, Barcelona and Valencia, it includes cellos and double basses. The Scandinavian countries developed variants on the Prussian, French and English models. Bands there are usually small: the band of the Royal Danish Lifeguards has 35 members and three further Danish bands have 16 members each. The largest band is that of the Norwegian Royal Guard, with 60 members; the staff band has 28 members and the six regional bands have 21 musicians each. The situation is much the same in Sweden (fig.5) and Finland, where there are semi-professional bands of

Ex.3 K.J. Alford: *March: 'Colonel Bogey'* (London, 1914)

national service personnel. Only the band of the Swedish Navy is entirely professional.

An independent Italian development began with Alessandro Vessella (1860–1929), director of the *Banda municipale di Roma* from 1885 to 1924. He standardized the scoring of small, medium and large bands and wrote a treatise on instrumentation, *Studi di strumentazione per banda* (Milan, 1954). From the 1920s most Italian wind bands followed his model in scoring and repertory.

With the exception of the HORN BAND, military music in 19th-century Russia was influenced by the Prussian model. In 1873 Rimsky-Korsakov was appointed Inspector of Naval Bands and worked to improve standards. After the Revolution of 1917 Russian military music

5. Swedish wind band, Karlskrona, led by drum-major: (from left to right) front row, slide trombone, clarinet, bell-lyra, clarinet, slide trombone; second row, piccolo, clarinet, euphonium, clarinet, valve trombone; third row, alto saxophone, sousaphone, two french horns; fourth row, trumpets; back row, snare drum, cymbals, bass drum

broke away from the Western model. Semyon Aleksandrovich Chernetsky (1881–1950) was appointed Inspector of Music for Soviet bands in 1924; he reorganized the training of military bandsmen and encouraged the composition of new music. In 1935 he established the wind band of the Soviet Ministry of Defence to serve as an example for other military bands; it included tenor horns but had no bassoons or saxophones. Works written for this ensemble include Myaskovsky's Symphony no.19, op.46 (1939) and *Dramatic Overture* (1942), and marches by Prokofiev and Khachaturian. States formerly part of the Soviet Union (e.g. Ukraine, Belarus, Kazakhstan) or in the Soviet orbit paid particular attention to military music in the late 20th century. Poland, Slovakia, the Czech Republic, Hungary, Romania and Bulgaria have preserved their own traditions while the Baltic states and Slovenia were, at the end of the century, striking out on new paths of their own.

In some countries financial concerns resulted in retrenchment during the final decades of the century. In Belgium, for example, a number of bands were decommissioned when it was decided that only a single band for each corps would be supported.

3. Civilian bands. The 19th century saw a steady increase in large civic bands in continental Europe. French civilian music was divided into the brass band with saxophones (*fanfare*) and the wind, percussion and brass band (*harmonie*). In 1850 the *Banda Municipal* of Barcelona was dissolved, but later reformed with 40 players associated with the School of Music. The *Banda Communale di Roma*, founded with 40 members in 1871, doubled in size on the appointment of Alessandro Vessella as its director in 1885; it is typical of the 'banda municipale' of a major Italian city, with its brilliant tone colour, excellent players and repertory of orchestral and opera transcriptions. The following list of instruments specified in a 'transcrizione libera' (1927) of Puccini's *Turandot* illustrates the maximum instrumentation found in such bands:

Ottavino; 2 Flauti; 2 Oboi; Corno inglese; 2 Clarinetti piccoli in La♭; 2 Clarinetti piccoli in Mi♭; Clarinetti soprani in Si♭ I.; Clarinetti soprani in Si♭ II.; Clarinetti contralti in Mi♭; Clarinetti bassi in Si♭; Sarrussofono baritono in Mi♭; Sarrusofono basso in Si♭; Saxofono soprano in Si♭; 2 Saxofoni contralti in Mi♭; Saxofoni tenori in Si♭; Saxofono baritono in Mi♭; Saxofono basso in Si♭; Sarrussofono contrabasso; Contrabasso ad ancia; Contrabassi a corda; 4 Corni in Fa; 2 Cornette in Si♭; 2 Trombe in Fa; 2 Trombe in Si♭ basso; 2 Tromboni tenore; Trombone basso in Fa; Trombone contrabasso in Si♭; Timpani; Triangolo–Tamburo; G.C. Piatti–Tam-tam; Glockenspiel–Xilofono; Xilofono basso–Gong Chinesi; Celeste; 2 Flicorni sopranini in Mi♭; 2 Flicorni soprani in Si♭; 2 Flicorni contralti in Mi♭; 2 Flicorni tenori in Si♭; 2 Flicorni baritoni in Si♭; 2 Flicorni bassi in Si♭; 2 Flicorni bassi gravi in Fa-Mi♭; 2 Flicorni contrabassi in Si♭.

(*Contrabasso ad ancia*; a double reed instrument of brass, different from the sarrusophones which in this example replace bassoons; *Flicorni*; generic title covering flugelhorns, alto and tenor horns, baritone and the brass basses; the deeper trombones are valved, sometimes the tenors as well; *G.C. Piatti*: one player, cymbal attached to the bass drum.)

80 players became a common size for municipal bands in southern Europe and Latin America. The Portuguese *Banda da Guarda Nacional* had 60 members by 1901.

In many towns and cities of southern Europe the tendency towards the large ensemble continued. Until 1981 Venice maintained such a band, which played in the Piazza S Marco. Large *bandas municipales* were still thriving in Spain at the end of the 20th century, and in major cities these were made up of professional players; in addition there were many cultural societies that supported bands. An annual contest, which became international in 1982, has been held in Valencia since 1886 during the Gran Feria in July.

In the Benelux countries and Switzerland there are many amateur bands, mostly mixed wind bands, but also brass bands. There are also many in Scandinavia, in Germany, and in central and eastern Europe. Bands have tended not to have fixed instrumentation: Spanish bands often include cellos; in Scandinavia, Belgium and the Benelux countries bands follow the British model sometimes adding trumpets; in Germany and elsewhere in central Europe flugelhorns and *Tenorhörner* (*Bass-Flügelhörner*) are employed; in Italy, Austria and parts of central Europe the small E♭ clarinet is often seen; in Eastern Europe and France saxhorns may be used.

In the final decade of the 20th century national pride in countries newly freed from Soviet domination led to the revival of popular local traditions, including bands. In Lithuania, for example, the Symphonic Wind Band of the Ministry of Internal Affairs, which had been disbanded in 1944, was restored in 1989, and an Association of Lithuanian Wind Instrument Players was formed in 1993 to improve the skills of its members and to promote Lithuanian music.

4. AMERICAN WIND BANDS. European musical customs and traditions were brought to North America by the colonists. In American military organizations, as in European ones, a distinction was made between 'field music' and the 'band of music'. The former consisted primarily of a snare drum, with a fife, bagpipe or other instrument added wherever available to provide melody. It was used mainly for functional purposes – to set the cadence for marching men and to beat warnings, orders and signals – and normally provided the camp duty calls that regulated the field or garrison. The band of music, on the other hand, served ceremonial and social functions.

The earliest reference to a 'band of musick' in North America is a newspaper account of the celebrations for the accession of George I of England in New York in 1714 where it is stated that the governor and the regular forces marched 'with Hoboys and Trumpets before them'. By the 1750s the term 'band of musick' appears frequently in connection with parades and civic ceremonies. British regimental bands (normally *Harmoniemusik* ensembles) gave concerts in New York, Boston, Philadelphia and Canadian garrison towns before the American Revolution, and residents were quick to form bands of their own. Both British and American regiments supported bands during the Revolutionary War, and performances were frequent. The 3rd and 4th Continental artillery regiments had bands as early as 1777; both served until the end of the Revolution and achieved exceptional reputations. In post-Revolutionary USA, bands welcomed George Washington in almost every village and city that he visited on his grand tour in 1789. Taverns, coffeehouses, theatres, and pleasure gardens all featured bands performing medleys, selections from popular stage works, battle pieces, transcriptions of orchestral works, original compositions, marches and patriotic songs (for examples of the music, see Camus, C(ii)1992).

The Militia Act of 1792, by which every able-bodied adult white male was required to perform military service

6. Band of the 3rd New Hampshire Regiment at Hiltonhead, South Carolina, 1862

for at least two 'muster days' each year, greatly promoted the development of bands. A further impetus was supplied by the regular meetings, for drill and ceremonies, of élite organizations. No military, civic, festive or holiday occasion was complete without music, and bands were organized to provide it; these were usually attached to militia units, and, while retaining their civilian status, the bandsmen normally wore uniforms. Tutors such as Timothy Olmstead's *Martial Music* (1807) began to appear in print. Other Revolutionary War bandmasters active into the Federal period included Philip Roth and John Hiwell, the former Inspector of Music in the Continental Army. New leaders, such as Peter von Hagen, James Hewitt and Gottlieb Graupner, came from Europe.

Widespread interest in Turkish (janissary) music in America at the beginning of the 19th century brought the bass drum and cymbals into the band and the field music. Combined performances of the two groups became more frequent, and the snare drum soon became an integral part of the band. Further changes to *Harmoniemusik* in the Federal period included new keys on the woodwind instruments and the addition of the piccolo, bass clarinet, trombone, bass horn and serpent. William Webb's *Grand Military Divertimentos* were published for an ensemble including these newly-added instruments (Table 6, 1828). Another new instrument, the KEYED BUGLE, became popular in New York through the performances of Richard Willis, who within a year of his arrival from Dublin in 1816 became the first teacher of music and leader of the band at the US Military Academy at West Point. Other virtuosos on the keyed bugle included Frank [Francis] Johnson in Philadelphia and Edward [Ned] Kendall in Boston. Keyed bass horns and ophicleides were also added, and bands continued to increase in size. By 1832 US Army infantry regiments had bands consisting of 15 to 24 members, a size emulated by militia bands. In that year, however, infantry bands were limited to ten privates and a chief musician, a drastic reduction that led to the elimination of woodwind instruments in favour of the new and versatile valved brass instruments. Beginning in 1834, many, but not all, bands changed to all-brass combinations (see §IV, ii, below). The 7th Regiment Band, a 42-piece woodwind and brass ensemble led first by Joseph Noll, later by Claudio S. Grafulla, achieved a reputation for excellence surpassed only by that of the all-brass Dodworth Band.

Bands proliferated during the Civil War: Bufkin estimated conservatively that the Union Army had 500 bands and 9000 players besides the two field musicians assigned to each company. These bands provided music for military and civilian ceremonies and entertained the soldiers; bandsmen also served as medical corpsmen during battle. Many civilian and militia bands enlisted as a body in the new volunteer regiments. While most conformed to regulations, some (supported, as in the past, by the officers), exceeded their authorized strength and dressed in elaborate uniforms. The 24th Massachusetts Volunteer Infantry had 20 drummers, 12 buglers, and a 36-piece mixed wind band led by PATRICK S. GILMORE. Other prominent civilian bandmasters who, with their bands, served in the war included Grafulla, Harvey Dodworth, E.B. Flagg, Thomas Coates and Walter Dignam. Gustavus W. Ingalls enlisted a band of 22 men in the 3rd New Hampshire Regiment (fig.6), and their Port Royal Band Books are a primary source for instrumentation and repertory of the period (Table 6, 1863). Eight members of the Salem (North Carolina) Brass Band enlisted in the 26th North Carolina Regiment, and their story (Hall, C(ii)1963) is typical of the experiences of many bands serving on both sides of the conflict. In 1862 Congress ordered the discharge of the three or four regimental bands per brigade, and authorized instead a brigade band of 16 musicians, with a leader and an assistant.

Due mainly to the influence of Gilmore, brass bands gradually disappeared following the Civil War. Gilmore arrived in the USA from Ireland in 1849 and a few years later became leader of the Salem Brass Band. In 1859 he established Gilmore's Band. He later organized and trained all the bands of the state of Massachusetts and organized the music for large-scale events such as the National Peace Jubilee of 1869, and the even larger World Peace Jubilee of 1872, both in Boston. In 1873 he assumed the leadership of the band of the 22nd New York Regiment, and established it as the finest professional band in the country. A skilled promoter, he attracted large audiences by adept programming and by engaging such outstanding soloists as the cornettists Matthew Arbuckle, Alessandro Liberati, Herman Bellstedt and Jules Levy, the saxophonist E.A. Lefèbre, the trombonist Frederick Neil Innes, the euphonium player Joseph Raffayolo, and the sopranos Emma Thursby, Eugenie Pappenheim and Lillian Nordica. The 22nd Regiment Band normally had a complement of 66 musicians (Table 6, 1878), far exceeding the limits imposed by military regulations at the time. During the 1880s they worked year-round: in summer at Manhattan Beach, in winter at the 22nd Regiment armory and Gilmore's Garden (P.T. Barnum's Hippodrome) in New York, and in autumn and spring on tour. At this time there were only four major professional symphony orchestras in the USA, none of which had a full season; as a result the finest musicians sought employment with Gilmore. His band inspired others to reintroduce the woodwind instruments and to raise their level of performance and improve their repertory. Other bandmasters active at the time included Grafulla, Carlo Cappa, David Wallis Reeves, the former Gilmore's Band soloists Arbuckle, Innes and Liberati, the cornettist R.B. Hall and, in Canada, Ernest Lavigne and Joseph Vézina.

In 1889 *Harper's Weekly* estimated that there were more than 10,000 'military' bands active in the USA. In many western communities the local military post band provided the only music available. Many bands were associated with local militia units but, though uniformed, retained their civilian status. Professional and amateur bands appeared at military and civilian ceremonies and parades, concerts, amusement parks, seaside resorts, county and state fairs, and national and international expositions. Their repertory ranged from the ever popular marches, songs, waltzes and novelties to the classical standards of the day. Many North Americans had their first, and usually only, exposure to the music of Mozart, Beethoven, Rossini, Verdi, Liszt and Wagner through these bands. Opera selections and variations were performed by leading soloists, and even grand operas were staged.

While large bands were conducted, smaller ones were frequently led by their solo cornet player, as in the days of brass bands. Consequently the solo cornet part in printed arrangements usually served as the conductor's

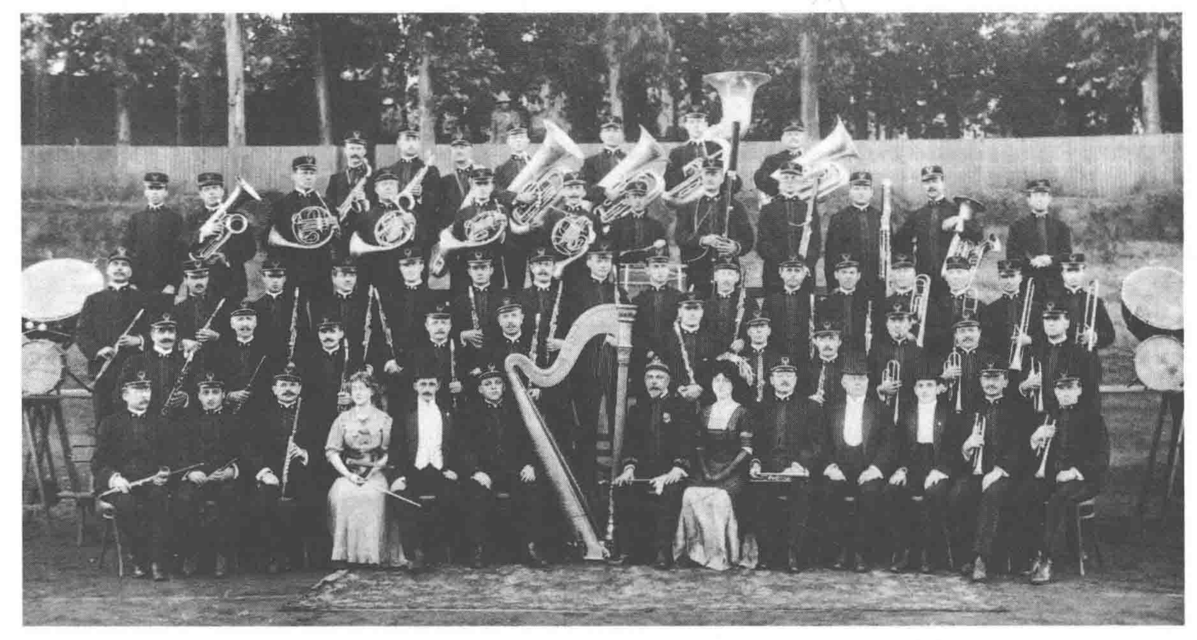
cue sheet. Carl Fischer of New York was one of the first firms to publish band music with printed parts for each instrument, and to include a two- or three-line conductor's score. The firm engaged many outstanding editors, among them Louis-Philippe Laurendeau, Frank H. Losey, Vincent F. Safranek, Theodore Moses Tobani and Mayhew Lester Lake, many of whose arrangements are still performed. Thomas H. Rollinson prepared many arrangements during his 40 years with Ditson. Later important publishers of band music included Charles L. Barnhouse, John Church, Harry Coleman, Henry Fillmore, George F. Briegel and several bandmasters who issued their own music, such as Jean Missud, Fred Jewell and Karl L. King.

The most important figure in the golden age of American band music was JOHN PHILIP SOUSA, who formed his own band in 1892. An astute showman, a fine composer and an excellent musician, he engaged the finest available players for each position, and attracted such outstanding soloists as the cornet player Herbert L. Clarke, the trombonist Arthur Pryor, euphonium players Simone Mantia and Joseph DeLuca, the violinist Maud Powell and the sopranos Estelle Liebling and Majorie Moody. He experimented with his band's instrumentation and gradually increased its membership (Table 6, 1900). From 1892 until his death in 1932 he made regular tours, including four in Europe (1900, 1901, 1903 and 1905),



and a world tour (1910–11; fig.7). A typical Sousa programme listed about nine titles, ranging from his own suites and marches to novelties, solos, orchestral transcriptions and opera selections. After each scheduled work he normally added one or two encores, usually his own marches.

Other major figures of the period included such veterans as Cappa, Missud, Francesco Fanciulli, Thomas Brooke, Monroe Althouse and Victor Herbert; soloists from Sousa's band who went on to form bands of their own (Liberati, Clarke, Bohumir Kryl, Frank Simon, Pryor, Mantia, Herman Bellstedt and Eugene LaBarre); and bandmasters such as Giuseppe Creatore, Patrick Conway, Edwin Franko Goldman, Innes and Canadians Jean-Josaphat Gagnier and Charles O'Neill who organized new professional ensembles. Since women were not admitted to the professional bands except as violin, soprano or harp soloists, they formed bands of their own, such as Helen May Butler's Ladies Brass Band (fig.8).

Besides the professional bands there were thousands of amateur ensembles: civic bands, bands sponsored by fraternal and sororal organizations, industrial bands, the many brass bands of the Salvation Army and, after World War I, Legion and veterans' bands. A town band was a mark of social status: 'a town without its brass band is as much in need of sympathy as a church without a choir. The spirit of a place is recognized in its band' (Dana, C(ii)1878). Many civic bands still in existence date from pre-war times, including the Allentown (Pennsylvania) Band (founded 1828), the Repasz Band (Williamsport, Pennsylvania, 1831) and the Newmarket Band (Ontario, 1843). To train musicians for these bands, many schools were established, such as Hale A. VanderCook's College of Music (Chicago, 1909) and Innes's Correspondence School of Music (Denver, 1921, later Conn National School of Music, Chicago, 1923). There were also bands with specialized styles and repertories such as circus bands (which invariably played everything at much faster 'circus' tempos) and the New Orleans bands, which absorbed black American and Creole influences. Often associated with benevolent societies, these bands provided music for club functions and funerals. Since at least the 18th century bands traditionally played a solemn march on their way to the cemetery, but a brisk quickstep, usually 'Merry Men Home from the Grave' on their return. The New Orleans musicians began improvising on tunes (such as the spiritual 'When the saints go marching in'), and developed an early form of jazz. There were many permanent black ensembles at the end of the 19th century, including the Excelsior, Onward, Eureka, Tuxedo and St Bernard brass bands, and many leading jazz instrumentalists gained their first experiences in these groups. As bandmaster of the 369th US Infantry Regiment Band serving in France during World War I, James Reese Europe brought jazz to European audiences for the first time.

Although Sousa continued to draw enthusiastic crowds, the popularity of bands declined after World War I, in the face of competition from radio, recordings and motion pictures. After his death in 1932 the focus shifted to education, a side of the movement that had been growing in the background since the second quarter of the 19th century. Music education in the schools in the 19th century had concentrated on vocal music, but there was a school band as early as 1836 in Canada, many in the USA by 1848, and there were bands all over the latter by the end of the century. Harvard and Yale had bands by about 1827, and other universities soon followed their example. After the Civil War there were bands based on the military model and attached to Officers Training Corps at nearly all educational institutions. Military ceremonies, political rallies, parades, dedications, outdoor festivities and sporting events were all enlivened by the music of these bands, which played popular overtures and medleys, spirited marches and school songs.

The participation of bands at sporting events became increasingly important, and by the end of the century pre-game and half-time football performances were common.

8. Helen May Butler and her Ladies Brass Band, 1910

With the addition of woodwind instruments, the bands increased in size and were organized more often like professional rather than military ensembles. Professional bandmasters, such as Conway at Cornell University (1895–1908) and Gustav Bruder at Ohio State University (1896–1929), soon replaced student directors. Albert Austin Harding sought to give the University of Illinois Band a symphonic sound by making greater use of woodwind instruments (and in greater variety) and using french horns instead of alto (tenor) horns. Since arrangements for such a band did not exist, he made almost 150 transcriptions of orchestral works for it. The artistic standard of the University of Illinois Band soon equalled that of the best professionals bands, and Harding's work was widely emulated.

World War I brought a renewed interest in military bands, and mobilization fostered an expanded musical instrument industry. American regimental bands compared unfavourably with their European counterparts in size and instrumentation until their membership was increased from 20 to 48 (Table 6, 1918) and greater emphasis placed on thorough musical training. Many members of army bands became band directors in public schools on their return to civilian life, class instruction in band and orchestral instruments having begun to receive support from school officials by the close of the war.

To stimulate demand musical instrument manufacturers organized the first national school band contest, in Chicago in June 1923. Response to such contests was so great that by 1937 the National School Band Association, organized in 1926 to administer the contests, had formed ten regional organizations. By 1941 there were 562 bands (33,398 students) participating, besides the many bands eliminated at district level. Canada had a similar growth, beginning in 1932 when Charles Frederick Thiele founded the Waterloo (Ontario) Band Festival.

Marching bands, now separated from the Officers Training Corps, benefited from the popularity of intercollegiate football. Larger bands were needed to fill the huge stadiums built between the two worlds wars. The University of Illinois Band under Harding is generally credited with being the first to play opening fanfares from the goal line, and to form a block 'I' while marching down the field. Many others soon followed its example and began to form patterns on the field.

During this period measures were taken to raise the musicianship of symphonic and marching bands. As early as 1919 Harding had invited school band directors to observe his rehearsals at the University of Illinois and to discuss specific problems and repertory; in 1930 he began a series of influential band clinics. The American Bandmasters Association was organized in 1929, and the College Band Directors National Association (CBDNA) in 1941. The latter aimed to conduct acoustical and tonal research, improve the musicianship of college band directors, and develop a standard instrumentation (Table

6, 1960), a concept later rejected as too restrictive; it also commissioned original band music. The Canadian Bandmasters Association (later the Canadian Band Directors Association) was founded in 1931.

World War II curtailed the school band movement, but returning veterans inspired its revival in Canada and the USA. Many new works were commissioned by E.F. Goldman (from such composers as Thomson, Piston, Mennin, Persichetti, Creston, Morton Gould and Robert Russell Bennett) and through the League of Composers and the American Bandmasters Association. Marching bands emphasized brass and percussion more and more as football half-time shows developed into elaborate pageants with bands reaching immense proportions and marching with ever higher and faster steps. Symphonic bands also increased in size (Table 6, 1948). In reaction to such developments, Frederick Fennell formed the Eastman Symphonic Wind Ensemble in 1952 (Table 6, 1952). This ensemble originally provided a pool of 45–50 players for composers, and concerts have included works ranging from chamber-sized compositions to large scale works with one player per part, from Renaissance wind music to avant-garde compositions. From 1965 the ensemble was directed by Donald Hunsberger. Symphonic bands and wind ensembles continue to flourish in schools, colleges and universities (fig.9); a 1973 survey counted some 50,000 secondary-school bands in the USA, with 2000 at institutions of higher education. By 1990 Canada had more than 5000 band directors.

Professional bands of the postwar era included the Goldman Band (Table 6, 1946), which remained active until 1980 and commissioned new works from composers such as Bergsma, Giannini and Douglas Moore, and the Detroit Concert Band, founded by Leonard B. Smith in 1946 and still active at the beginning of the 21st century. In 1956 the Ostwald Uniform Company established an award for the best band composition submitted each year to a jury of the American Bandmasters Association; winners have included James Barnes, John Barnes Chance, James Curnow, David Holsinger, Anthony Iannaccone, Robert Jager, Karl Kroeger, Timothy Mahr, Martin Mailman, Ron Nelson, Roger Nixon, Fisher Tull, Clifton Williams and Dana Wilson.

In the military, reductions in the number and size of bands continued. The World War II division band of 56 players (Table 6, 1944) replaced as many as ten regimental bands; the division or post band of the 1980s was a 40-piece multipurpose musical unit (Table 6, 1986). Following reorganization in 1994, Canada maintained four Regular Force Professional Brass & Reed bands (Table 6, 1994) The special bands of the US armed services and the service academies (such as the US Army Band and the US Military Academy Band) may have more than 140 players, choristers and support personnel, and remain the country's leading professional wind ensembles. Community bands enjoyed a revival at the end of the 20th century and some of the 2000 and more adult bands in the USA have achieved a professional level of playing. Many bands have been in existence for more than a century, and some famous names of the past have been revived: the 26th North Carolina and 1st Wisconsin Brigade bands were resurrected in the early 1960s for the Civil War Centennial, and the 3rd and 4th Continental Artillery bands for the Bicentennial in 1976. The American Band of Providence and the Great Western Band of St Paul are only two of the many bands that have taken on new life, and are again entertaining the citizens of their communities in the traditional manner.

5. Repertory. Outside the major centres, music in the 19th century was provided to a great extent by local bands, who played an important role in the dissemination of music of all kinds. Besides marches, much of the repertory of both military and civic bands throughout the century consisted of arrangements or transcriptions of overtures, symphonies, operas and oratorios by composers including Beethoven, Weber, Rossini, Liszt, Verdi, Tchaikovsky, Brahms and Bruckner. Arias were performed by solo instruments while the remainder of the band took the part of the orchestra (a style of arrangement used also by *Harmonie* bands of the late 18th century), and each melody was introduced by a cadenza from the instrument about to be heard as a soloist. Composers encouraged the practice of transcription as it helped to disseminate their works: Wagner, for example, appointed Artur Seidel to make wind band arrangements of his latest compositions, and Rossini and Liszt asked bandmasters to arrange their works. Notable works originally composed for band include Mendelssohn's Overture op.24, first written for the spa orchestra at Bad Doberan in 1824 (in 1838 the composer re-set the work for a larger band), Wagner's *Trauermusik* for the funeral of Weber (1844),

9. Indiana University Symphonic Band, conducted by Ray E. Cramer, 1996

Meyerbeer's *Fackeltänze* (1842–58), Grieg's *Trauermarsch zum Andenken an Richard Nordaak* (1866, rev. 1878; considered by Goldman to be 'one of the grandest works composed for band'), Saint-Saëns's march *Orient et occident* 1869, and Rimsky-Korsakov's Concerto for trombone and military band (1877), Variations for oboe and military band (1878) and *Conzertstück* for clarinet and military band (1878). In France, celebrations of the anniversary of the Revolution have inspired leading composers to write for the large *orchestre d'harmonie*. Outstanding works have included Reicha's *Musique pour célébrer la mémoire des grandes hommes* (?1809–15), Berlioz's *Grande symphonie funèbre et triomphale* (1840) and Florent Schmitt's *Dionysiaques* (1914–25). Saint-Saëns, Caplet, Ibert, Auric, Milhaud, Roussel, Koechlin, Honegger, Henry Lazarus, Ida Gotkovsky and Désiré Dondeyne have also contributed such works. A special development in Germany and Austria was music for male choir with wind band: works for this combination were written by Schubert, Weber, Mendelssohn (*An die Künstler* op.68, 1846), Schumann, Liszt and Bruckner (see W. Suppan, C(i)1983, and Kinder, C(i)1995). There were also works in more popular styles such as waltzes and novelty pieces. In 1861 Queen Victoria wrote in her diary: 'as we approached the Cavalry, they began to play one of dearest Mama's marches, which they did again in marching past.' The Duchess of Kent was only one of several royal composers of marches.

To meet the growing demand for wind band music specialist publishing houses were founded, including Louis Oertel in Hanover (1861), Bellmann and Thümer in Dresden (1866) and Boosé in London (1845). Their publications began to replace the handwritten music previously used, also helping to standardize the make-up and instrumentation of the bands.

Percy Grainger's *Hill-Song no.2* (1907), *Irish Tune from County Derry* (1917) and *Lincolnshire Posy* (1940), Holst's Suites in E♭ (1909) and F (1911), and Gordon Jacob's *William Byrd Suite* (1924) set new standards in original music for mixed wind band, with Holst, especially, establishing a new idiomatic style of band writing. Much of the music of this 'English group', is marked by the use of melodic material derived from folk songs or inspired by traditional music, and pre-Romantic harmonic structures with polyphonic features. There is a perceptible tendency to give a greater melodic role to the brass instruments, liberating them from their old roles of supporting the woodwind in tutti sections and providing fanfare-like flourishes.

The works of the English group were certainly known to Hindemith when he invited composers to write wind band works for the Donaueschingen Festival of 1926. Hindemith composed his *Konzertmusik* op.41 for this festival and other works included Ernst Pepping's *Kleine Serenade*, Krenek's *Drei lustige Märsche*, Ernst Toch's *Spiel* and Hans Gál's *Promenandenmusik*. While the tonal language of these works is modern, Hindemith's piece is based on a folk song (*Prinz Eugen, der edle Ritter*) and those by Toch and Gál achieve a folk-like effect. Hindemith's idea of *Gebrauchsmusik* (his own term) was not at first successful in central Europe, but the works by Hindemith, Toch and Krenek were taken up in the USA, to where the three composers had emigrated during World War II. After the war these works became popular in Europe as well.

American commissions for works for wind band were received by Schoenberg (Theme and Variations, 1943), Hindemith (Symphony in B♭, 1951) and Krenek (*Dream Sequence*, 1975). Other works popular in the USA have included Stravinsky's Symphonies of Wind Instruments (1920) and Concerto for piano and wind (1924), Martinů's Concertino for cello and wind ensemble (1924), Weill's Concerto for violin and wind band (1924) and Milhaud's *Suite française* (1944).

After World War II American influence made itself felt in Europe in scoring and instrumentation, in serious and light music. The pioneering achievements of Grainger, Holst and Hindemith might thus be said to have returned to Europe by way of the USA. Composers have included Franz Kinzl, Herbert König, Armin Suppan, Sepp Tanzer and Sepp Thaler in Austria; Jacqueline Fonteyn and André Waignein in Belgium; Désiré Dondeyne, Ida Gotkovsky and Serge Lancen in France; Paul Kühmstedt, Edmund Löffler, Albert Loritz, Ernest Majo, Hans Mielenz, Gerbert Mutter, Hermann Regner, Peter Seeger and Willy Schneider in Germany; Adrian Cruft, Joseph Horovitz, Paul Patterson, Philip Wilby and Guy Woolfenden in Great Britain; Jean Balissat, Arpad Balázs, László Dubrovay, Frigyes Hidas, Kamilló Lendvay and Iván Patachich in Hungary; Masaru Kawasaki, Kiyoshige Koyama and Toshiro Mayuzumi in Japan; Hank Badings, Gerard Boedijn, Henk van Lijnschooten, Johan de Meij, Jan van der Roost and Kes Vlak in the Netherlands; Juan Vincente Mas Quiles in Spain; Zdenek Jonák, Jindřich Paveček and Evzen Zámecnîk in Slovakia and the Czech Republic; Georgy Salnikov in Russia; and Albert Benz, Robert Blum, Jean Daetwyler, Albert Haeberling, Paul Huber, Stephan Jaeggi and Franz Königshofer in Switzerland.

IV. Brass bands

1. Introduction. 2. Cavalry bands. 3. The British brass band movement. 4. American brass bands. 5. Other brass bands.

1. Introduction. The brass band is an ensemble usually made up exclusively of brass instruments. In Britain the term signifies a specific genre which can be explained in terms of its history, instrumentation, repertory and performance idiom. This British model has been imitated in various parts of the world. A looser usage refers to any ensemble made up primarily of brass instruments, but the term is not synonymous with other commonly used terms such as 'brass quintet' or 'brass ensemble'. Almost always this looser meaning also signifies music making that is amateur and linked with vernacular traditions. So, taking both meanings, it can be said that there are brass bands throughout the world, including many in non-Western countries and cultures. Because all brass bands use valved instruments it follows that none originate – in their present form – earlier than the 19th century.

2. Cavalry bands. Though cavalry regiments in the 18th century occasionally employed a band of woodwind and horns, they did not forsake the traditional corps of trumpets and kettledrums, which has survived in many countries to this day. It also formed the nucleus of the true cavalry band, instituted in France under Napoleon but cultivated with greater enthusiasm in Germany and Austria. Natural trumpets in E♭ dominated this *Trompetenmusik*, but the introduction of trombone or serpent supplied a diatonic bass and horns enriched the middle

range. The KEYED BUGLE, patented by the Bandmaster of the Cavan Militia, Joseph Haliday, supplied a much-needed brass melody instrument; it became a virtuoso instrument in its own right and was favoured especially in the USA.

Stölzel's valve trumpets and valved *Tenorhorn* and *Basshorn* were regarded specifically as cavalry instruments in Prussia. Under Wilhelm Wieprecht the cavalry band grew into the type of combination illustrated in ex.4: the cornet in B♭ ('Cornett in B') is the Berlin type, almost indistinguishable from the flugelhorn, and 'piccolo cornet' is the smaller size; the cornet in E♭ ('Cornett in Es') is the bell-to-front alto horn and the euphonium (*Tenorbass*) is pitched a 4th lower; the trumpets (*Trombe*), the heart of the band, are all valved; and the basses would have consisted of the new Moritz tubas.

Cavalry bands elsewhere varied the pattern: in Austria, Italy and France trumpets were of special importance (a typical French cavalry band of the First Empire had 16 trumpets, six horns, three trombones and kettledrums); in England the cavalry band was constituted like that of the infantry.

3. THE BRITISH BRASS BAND MOVEMENT. Brass bands, in the form by which they are recognized today, originated in the Victorian period. Some writers have sought to establish a continuous link between them and earlier types of communal, instrumental music making such as waits and church choir bands, but such links are tenuous. Though brass bands existed in Britain from at least the 1830s, most of these very early bands were private or professional. The earliest and most celebrated private brass band is probably the Cyfarthfa Band, which was founded in Merthyr Tydfil, South Wales, by the industrialist R.T. Crawshay, in 1838. Amateur, working-class brass bands became popular from the 1840s. The greater availability of piston-valve instruments was an important factor, and the acquisition of the British franchise for Adolphe Sax's design of instruments by the Distin family in 1844 may have been particularly influential in this respect. Valved instruments were easier to play than keyed instruments, and because of economies gained through the scale of production, the availability of hire-purchase schemes, and other favourable economic circumstances, they were affordable to sectors of the population that would previously have been unable to buy sophisticated musical instruments. By the middle of the century many working-class British people had, for the first time, a modest quantity of free time and some disposable income. They were encouraged to engage in music making activities, which were perceived by their social superiors as respectable, rational recreations.

Brass bands were founded in a number of different ways. Some were the recipients of direct industrial sponsorship, as was the Black Dyke Mills Band which was established in Queenshead (now Queensbury), Yorkshire, in 1855 by the textile manufacturer John Foster. Others were formed by public subscription or through an affiliation with a working-class organization, such as a

Ex.4 J. Gungl: *Parade Marsch* (Berlin, *c*1850)

mechanics' institute. From 1859 several bands became attached to the Volunteer Movement, but most of these associations were pragmatic rather than patriotic and were seldom permanent.

By the end of the 19th century most brass bands aspired to a single format and style. Magazines such as *The British Bandsman* (founded in 1887 and still the main specialist periodical) disseminated common musical values, and by this time the term 'brass band movement' was widely used. However, it was the proliferation of contests – the central, identifying feature of the movement – that was the most influential element in raising standards and creating a common idiom.

Contests of the modern type originated in the 1840s as professional entertainment promotions. The composer and entrepreneur Enderby Jackson is credited with being the most important figure in establishing these events. An 'Open' contest was held at the Belle Vue Gardens, Manchester, from 1853 and many national, regional and local contests developed. It was the instrumental line-ups favoured by the three most successful contest band conductors of the 19th century – John Gladney, Alexander Owen and Edwin Swift – that led to the adoption of a standard instrumental line-up which is still used today: soprano cornet in E♭, four solo or 1st cornets, repiano cornet, two 2nd cornets, two 3rd cornets, all in B♭; 1st, 2nd and 3rd tenor horns in E♭; 1st and 2nd baritones in B♭; 1st and 2nd euphoniums in B♭; 1st and 2nd tenor trombones; bass trombone; two basses in E♭ and two basses in B♭. Percussion instruments have frequently been used in concerts and for marching but their use in contests has not always been permitted.

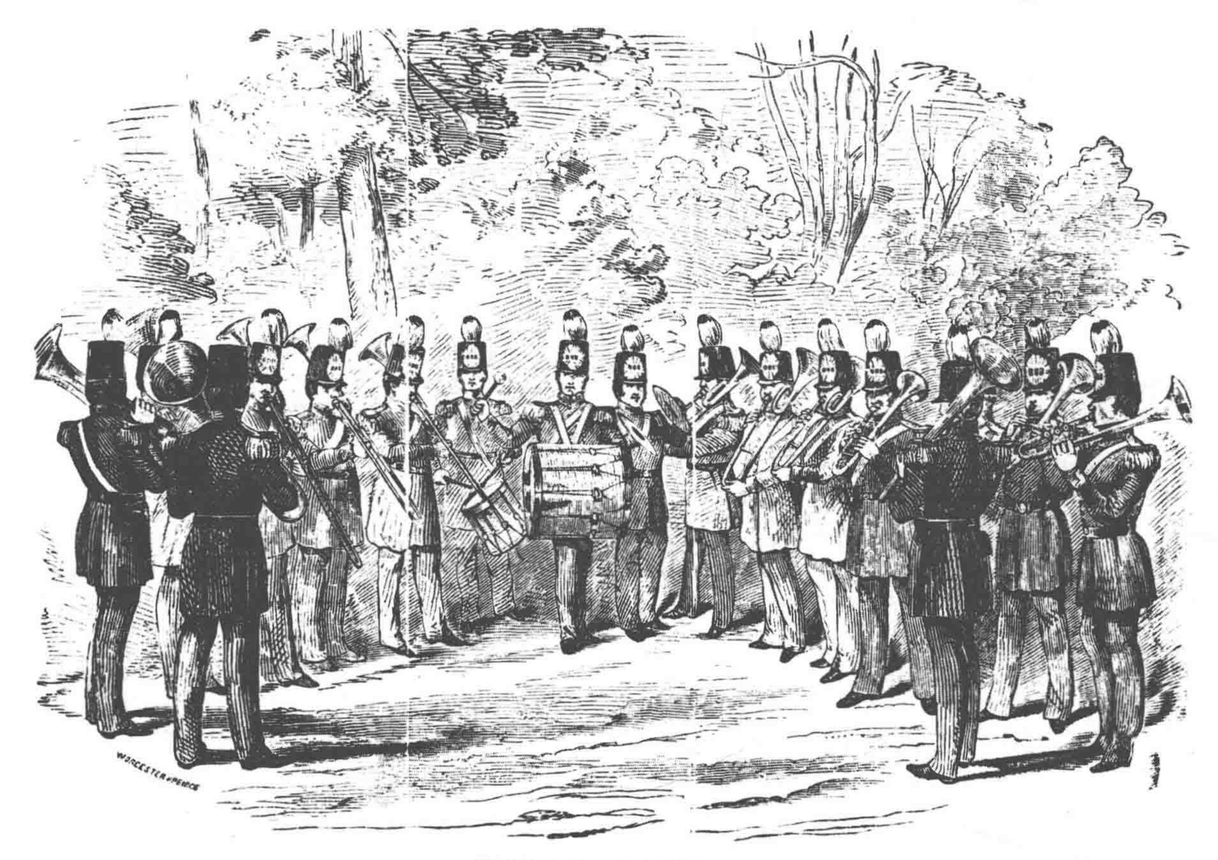
From the late 19th century a printed repertory for this instrumentation replaced local, bespoke arrangements made by bandmasters, and the simple, printed music which had been available as subscription 'journals' from the late 1830s. Arrangements and transcriptions have always been a central feature of brass band repertory but many original pieces have been written too. However, very few original works for brass band were written in the 19th century. The earliest surviving substantial work is probably Joseph Parry's *Tydfil Overture* (*c*1879), written for the Cyfarthfa Band, but other less ambitious pieces such as Enderby Jackson's *Yorkshire Waltzes* (1856) also survive. In the 20th century composers such as Elgar, Holst, Howells, Vaughan Williams, Bantock, Birtwistle and Henze have written for the brass band, but other more specialist composers such as Percy Fletcher, Cyril Jenkins, Eric Ball, Denis Wright, Gilbert Vinter and Edward Gregson have provided the central core of the repertory. Most of the major works for brass bands have either originated as, or become, test-pieces for national contests.

Though brass bands have been particularly strong in the north of England they are found throughout Britain and many receive commercial sponsorship. The most influential figure in the brass band movement in the 20th century was probably Harry Mortimer, a member of a dynasty of brass band musicians, who became a brilliant cornet soloist and an orchestral trumpeter before taking responsibility for the broadcasting of brass bands for the BBC. For the same reason that brass bands were popular with working-class people in the 19th century – the robustness and cheapness of the instruments, the ease with which they could be learned, the fact that when played together they easily produce a homogenous sonority – they have remained a popular and valuable form of music making in schools.

Since the earliest days of its foundation the Salvation Army has used brass bands. The Fry family from Salisbury formed the first Salvationist band in 1878, and since then Salvation Army bands have been formed throughout the world. For almost a century the Salvation Army produced its own instruments and music, but in the mid-1960s the instrument-manufacturing operation was wound up. At that time Salvationist bands, along with brass bands in general, relinquished the characteristic sharp pitch in favour of the standard $a' = 440$.

The high point of the brass band movement, as far as the number of bands and players is concerned, came in the late 19th century. But most of the major developments in the repertory have occurred since then. Despite the many alternative attractions posed by the 20th-century leisure industry, brass bands have retained an important and distinctive place in British musical life. In the 19th century they were an important agency for disseminating instrumental art music to working-class people. In the 20th they have tended to occupy a position somewhere between art and popular music, and some music colleges have incorporated brass band studies into their curricula. Contesting remains a fundamental part of their ethos and many of their musical values and practices are exclusive. It is likely that the vast majority of British professional orchestral brass players in the 20th century had their musical origins in brass bands.

4. American brass bands. In the early 1830s many American bands, among them Thomas Dodworth's City Band of New York (later the Dodworth Band), the Boston Brass Band and the Providence Brass Band, changed to all-brass instrumentation. Such bands included keyed and valved instruments, posthorns, bugles, trombones and ophicleides. Over the next two decades manufacturers such as Thomas D. Paine, John F. Stratton, Isaac Fiske, Samuel Graves, J. Lathrop Allen and E.G. Wright produced a family of conical-bore valved bugles with deep-cupped mouthpieces similar to those developed by Sax in Paris; the new design permitted ease of execution and accurate intonation, and produced an even, mellow timbre throughout the range. This homogeneous brass family soon supplanted mixed woodwind and heterogeneous brass groups. The change to all-brass instrumentation was so swift and complete that by 1856 the editor of *Dwight's Journal of Music* complained that 'all is brass now-a-days – nothing but brass'. The terms used to denote the new instruments were loosely applied; bands using them were called cornet, saxhorn or brass bands. Besides bell-front and bell-upward instruments, a valved over-the shoulder family was developed. Allen Dodworth claimed that these instruments were first introduced by his family in 1838; he explained that they were intended for military bands 'as they throw all the tone to those who are marching to it', but for general purposes those with their bells upward were 'most convenient'. He also advised that 'care should be taken to have all the bells one way'.



After the reduction of US Army infantry bands to ten privates and a chief musician in 1832 these bands became all-brass. In 1845 the regulations authorized an increase to 16 musicians, and since most civilian bands were associated with militia organizations patterned on army

models, this change had a significant impact on the size of these bands as well.

Brass bands flourished in the 1850s: one writer estimated there were some 3000 bands with more than 60,000 members in existence in the years preceding the Civil War (Felts, C(ii)1966–7). While musicianship in amateur groups varied widely, many professional bands performed at the highest level. The Salem (Massachusetts) Brass Band, led in the 1850s by Kendall and later by Patrick S. Gilmore, the Boston Brass Band, led by Eben Flagg (fig.10), and the American Brass Band in Providence led by Joseph C. Greene, were highly reputed. Russel Munger's Great Western Band of St Paul and Christopher Bach's Band of Milwaukee were well known among the many bands organized in the newly settled Midwestern states.

Little printed band music from this period is extant; most bands played from manuscript copies. Published piano music frequently included the statement 'as performed by [some famous band]' to increase sales, and often a note stating that parts for military band – presumably manuscript – were available from the publisher. In 1844 Elias Howe added several brass band arrangements to his collection of dances and other light numbers. In 1846 E.K. Eaton published *Twelve Pieces of Harmony for Military Brass Bands*, an excellent compilation for 17-piece ensemble that demanded advanced technical facility not only from the player of the high E♭ bugle but from the entire group (for instrumentation, see Table 6 above, 1846). To meet the 'increasing demand for such a work, caused by the rapid advancement of the brass bands of our country', Allen Dodworth published his *Brass Band School* in 1853. Besides the rudiments of music, he provided fingering charts, advice on rehearsing and choosing an instrument, and military regulations, tactics and camp duties; he also included 11 popular airs and marches arranged for a band of 12 players, with drums and cymbals (ex.5). The music may be played by as few as six, or, with doubling, as many as 21. In 1854 G.W.E. Friederich published his *Brass Band Journal*, a collection of 24 pieces with similar instrumentation, and in 1859 W.C. Peters & Sons published *Peters' Sax-Horn Journal*. These collections consisted principally of patriotic songs, popular airs, arrangements of songs by Stephen C. Foster, operatic excerpts, waltzes, polkas, schottisches and marches. The music was intended for a large audience and was for this reason not technically difficult. The better professional bands relied on extensive manuscript collections.
